Canadian Railway and Marine World

GENERAL INDEX FOR 1916

ACTON BURROWS LIMITED, PUBLISHERS
70 BOND STREET, TORONTO, CANADA

Items marked with an asterisk are accompanied by maps,
portraits or other illustrations.

STEAM RAILWAY AND GENERAL MATTER

- A**
- Adams Express Co. 126
Air Brake Association 258
Alaska Railways 400
Alberta & Great Waterways Ry.—
 Appointments 62, 104
 Development 10, 49, 106, 281
 Alberta Public Utilities Commission, Rules
 of Practice 51
Algoma Central & Hudson Bay Ry.—
 Appointments 190, 411
 Finance, Meetings, etc. 20, 137, 189, 359, 492
Algoma Eastern Ry.—
 Appointments 411
 Finance, meetings, etc. 179
 Rolling stock 185, 226
American Express Co. 126
American Railway Master Mechanics' Association,—
 Canadian officials at convention 270
 Flange and screw coupling dimensions.... 255
 Fuel economy and smoke prevention.....*268
 Locomotives,—Modernizing existing*266
 Locomotive boilers, design and maintenance 271
 Mechanical stokers 256
 Officials 272
 Pistons, valves, rings and bushes*259
 Powdered fuel on locomotives 255
 Superheater locomotives 257
 Supply exhibits 265
Anglo-American Telegraph Co. 126
Appointments, Transportation.... 22, 62, 104,
 144, 190, 234, 290, 328, 370, 411, 455, 493
Athabasca & Fort Vermillion Ry. 106, 138
Atlantic, Quebec & Western Ry. 290
Atlin Ry. 182
Audit Department and its relation to railway organization 96
- B**
- Birthdays of Transportation Men.... 6, 50, 87,
 133, 172, 216, 278, 309, 355, 394, 434, 479
Blake, W. C., Audit department and its relation to railway organization 96
Blomidon Ry. 281
Board of Railway Commissioners,—
 Car supply for western grain 491
 Collecting cartage tolls by railway companies 43
 Demurrage charges on private cars 183
 Demurrage collection at destination 274
 Eastern freight rates,—judgment 307
 Explosives, shipment by Canadians Northern Ry. 134, 146
 Fire protection on railways 236
 Flagging rules for impassable track.... 188
 Freight rates, application for increase.... 495
 Freight rate on tank and still structural material 129
 Freight tariffs, filing on less than statutory notice 453
 Grain congestion in Goose Lake District.. 140
 Handling milling-in-transit grain 18
 Hand rails for locomotives and tenders.. 407, 435
 Joint freight rates and concurrence notices 45
 Joint tariffs, cancellation forbidden 496
 Lights for cars and locomotives on main track 133
 Lumber on flat cars, minimum weights.... 324
 Orders by, summaries of 289
 8, 65, 90, 149, 192, 220, 292, 314, 356, 398, 440
 Release form for beer shipments 7
 Safety appliances, extension of time for installing 277
 Sittings of 289
 Telegraph tolls 211
 Traffic interchange with Canadian Northern Ry. 136
 Traffic Orders 11, 53,
 99, 146, 179, 237, 282, 329, 372, 402, 450, 497
Book Reviews 87, 211 371
Boston & Maine Rd. 453
- Bridge floor with old guard rails*352
Burard Inlet Tunnel & Bridge Co..49 182, 317, 416
- C**
- Calgary & Edmonton Ry. 138
Campbellford, Lake Ontario & Western Ry.
 Construction Suit 137
Canada's business prosperity 21, 61
Canada Southern Ry. 20, 280
Canada Western Ry. 138
Canadian Car Service Bureau 352
Canadian Express Co. 81, 113, 126, 132, 168, 212, 254, 347, 396, 463
Canadian Freight Association 188, 416
Canadian Government Railways,—
 Appointments 22, 62, 144, 328, 370, 411, 455, 493
 Claims, small, against 230
 Development 184
 Fort William business 313
 Locomotives 316, *435
 Mileage, operation, etc. 180
 Officials' salaries, etc. 183, 233
 Quebec station*360
 Rolling stock 15, 51,
 94, 139, 178, 185, 226, 291, 320, 360, 404, 451
 Snow ploughs 479
 Stock cars*276
 Wages 285
Canadian Northern Alberta Ry. 94
Canadian Northern Express Co.
 126, 168, 243, 254, 306, 347, 463
Canadian Northern Ontario Ry.—
 Development 12, 145, 178, 360, 409, 452, 490
 Finance, meetings, etc. 137
Canadian Northern Pacific Ry.
 12, 54, 145, 178, 278, 361, 409, 452, 490
Canadian Northern Quebec Ry. 12, 490
Canadian Northern Ry.—
 Aid by Dominion Government 224
 Appointments 22, 62,
 104, 144, 190, 234, 290, 328, 370, 411, 455, 493
 Cars,—sleeping, dining and observation, com-

Construction	12, 54, 94, 145, 178, 278, 325, 361, 409, 452, 490
Earnings	17, 54, 99, 141, 185, 236, 274, 320, 371, 401, 451, 495
Explosives, shipments of	134, 146
Finance, meetings, etc.	91, 179, 313, 359, 399, 453
Grain congestion in Goose Lake District	140
Making fill from pontoon bridge	*46
Niagara Peninsula railway interests	117, 153, 221
Passenger cars for transcontinental service	*83
Port Mann shops	108
Report, annual	412
Riviere des Prairies bridge	*2
Rolling stock	15, 51, 94, 139, 185, 226, 320, 360, 404, 485
Securities	289
Step ladder for sleeping cars	*43
Tank cars	*131
Traffic interchange	136
Vancouver station	273, *358
Canadian Northern Telegraph Co.	254
Canadian Overseas Railway Construction Corps	87, 226
Canadian Pacific Ry.—	
Additions and improvements, expenditures on	439
Appointments	22, 62, 104, 144, 190, 234, 290, 328, 370, 411, 455, 493
Bridge engineering features in British Columbia	*367
Changes in names of divisions	454
Colonization plans	146
Developments	10, 49, 91, 138, 182, 222, 285, 331, 361, 403, 441, 492
Earnings, etc.	17, 54, 99, 141, 185, 236, 274, 320, 359, 371, 401, 451, 495
Earnings, remarkable	107
Engineering Department plan room	*349
Finance, meetings, etc.	20, 52, 91, 399
Handling service telegrams and mailgrams	53
Honor roll	16, 98, 232, 324, 410, 440, 481
Inspection trip	404
Mileage, etc.	394
North Toronto station	*287, *361
Officials' meeting at Winnipeg	366
Pension fund	394
Quebec station	*360, *403
Report, annual, and meeting	396, 442
Rogers Pass tunnel construction	15, 61, 103, 137, *169, 176, 315
Rogers Pass tunnel, cost and speed of construction	11, 274, 318, 357
Rogers Pass tunnel, Was tunnel advisable?	183
Rolling stock	15, 51, 94, 139, 185, 226, 320, 451, 485
Scholarships	233, 274
Scientific research work	221
Spokane International Ry., rumored purchase	494
Telegraph efficiency	147
Telegraphs	254, 299, 390, 409, 432, 456
Track section prize competition	16
Traffic statistics	438
Tree windbreaks	7
Wages increase to western shop employees	373
Welding at Winnipeg shops	*395
Canadian Railway Club	102, 176, 184, 233, 439
Canadian railways, gross earnings of	*439
Canadian Society of Civil Engineers	4, 102, 171, 184, 231, 233, 365, 473
Canadian Terminal Ry.	49
Canadian Ticket Agents' Association	103, 131, 177, 289
Canadian Transfer Co.	99
Canmore Ry.	106, 222
Canton & Grand Lake Ry.	138, 182
Cape Breton Ry.	364
Car building plant at Fort William, proposed removal	188
Carroll, J. M. S.—Use of rubber goods in railway service	217
Car supply for western grain shipments	491
Cars.—Passenger car construction and design, improvements in	*92
Carter, G. W.—Handling railway service telegrams and mailgrams	53
Cascade Scenic Ry.	484
Central Canada Ry.—	
Appointments	63
Development	10, 49, 106
Central Ry. of Canada	52, 232, 315, 492
Central Vermont Ry.—	
Appointments	290, 328
Development	222
Finance, meetings, etc.	280
Rolling stock	51
Central Western Canada Ry.	49
Chapman, W. P., Outside frictionless rails for curves	*213
Chicago, Milwaukee & St. Paul Ry.	455
Chicago terminals, electrification difficulties	7
Churchill Southern Ry.	49, 106
Columbia & Western Ry. land grants	176
Commercial Cable Co.	432
Construction battalion for overseas	235, *279
Delaware & Hudson Co.'s report	277
Detroit, Grand Haven & Milwaukee Ry. earnings	108, *127
ings	17, 54, 99, 141, 185, 236, 274, 320, 371, 401, 451, 495
Diamond Coal Co.'s Railway	179
Dominion Atlantic Ry.—	
Appointments	235, 494
Development	364, 447
Finance, meetings, etc.	400
Dominion Express Co.	21, 42, 82, 91, 126, 168, 254, 306, 348, 463
Dominion Government Telegraphs	254, 348
Dominion Telegraph Co.	348
Downey, W.—Spring and summer track work	177
Drawbridge post spindle breakage	*52
Drayton, Sir Henry L.—Analysis of increases in railway operating expenses	351
Duluth, South Shore & Atlantic Ry.	63, 144, 360
Duluth, Winnipeg & Pacific Ry.—	
Appointments	104, 144, 370
Rolling stock	320, 438
Dunn, S. O.—Government versus private ownership of railways	473
Eastern Canadian Passenger Association	50, 53, 183
Eastern British Columbia Ry.	23
Edmonton & South Western Ry.	182
Edmonton, Dunvegan & British Columbia Ry.	
Appointments	23, 63
Development	10, 49, 106, 182, 281, 317, 364, 446
Efficiency testing	403
Engineers' Club of Montreal	278
Esquimalt & Nanaimo Ry.	357, 484
Essex Terminal Ry.	20, 49, 138, 222
Express Companies, Among the	81, 126, 168, 212, 254, 306, 347, 463, 498
Express Companies' statistics	212
Express rates on fruit, Oregon to Manitoba	313
Express Traffic Association of Canada	456
Farnham & Granby Ry.	182
Fort William elevator tracklaying dispute	9
Fort William Terminal Development Co.	280
Fort William terminal facilities for grain	323, 410
Freight and Passenger Traffic Notes	12, 52, 109, 148, 184, 223, 286, 318, 357, 401, 446, 492
Freight classification ratings in U.S.	66
Freight rate increases in U.S.	50
Freight rates and interswitching in British Columbia	64
Freight tariffs, filing on less than statutory notice	453
French State Railways,—Freight cars	*130
Gananogue & Arnprior Ry.	106, 222
Grain congestion in Goose Lake District	140
Grain inspection at western points	103, 143, 188, 233, 277, 330, 413, 449
Grain in store at terminal elevators	20, 122, 148, 185, 252, 305, 371, 430, 443, 496
Grain moved from prairie provinces by railway	66
Grain trade enquiry	291
Grand Lake Ry. & Transportation Co.	446
Grand Trunk Pacific Ry.—	
Aid by Dominion Government	224
Annual meeting	409
Appointments	23, 63
Development	105, 144, 191, 235, 291, 328, 371, 411, 455, 494
Earnings	17, 54, 99, 141, 185, 236, 274, 320, 451, 495
Finance, meetings, etc.	359, 443
Improvements	23
Rolling stock	51, 291, 320
Grand Trunk Pacific Telegraph Co.	30, 254
Grand Trunk Ry.—	
Appointments	23, 63, 104, 144, 190, 235, 290, 328, 370, 411, 455
Apprentices examinations	273, 494
Black Rock station and office building	*330
Bonaventure station, Montreal, fire at	*141
Development	10, 49
Earnings	106, 138, 182, 222, 281, 317, 364, 400, 447, 484
Finance, meetings, etc.	17, 54, 99, 141, 145, 185, 236, 274, 320, 371, 401, 451, 495
First aid work	15
G.T.R. and New York, New Haven & Hartford Rd.	16
Report	220
Rolling stock	15, 94, 139
Steel suburban cars	*44
Track inspection	446
Train men, advice to	214
Grand Trunk Western Ry. earnings	17, 54, 99, 141, 236, 274, 320, 371, 451, 495
Rates	360
Greater Winnipeg Water District Ry.	10, 137, 447
Great Northern Ry.—	
Appointments	191, 235
Development	10, 49, 106, 182, 222, 281, 317, 364, 400, 447, 484
Reports	5, 478
Great Northern Mining & Ry. Co.	52, 315
Great North Western Telegraph Co.	43, 81, 126, 254, 299, 348, 390, 432, 456, 463
Guelph Jct. Ry.	280
Hamilton, Ont., track elevation or depression	108, *127
Harris, R. W. D., What efficiency testing really means	403
Henry, M.—Tie renewals and distribution	6
High River, Saskatchewan & Hudson Bay Ry.	106, 138, 222, 281
Hudson Bay, Peace River & Pacific Ry.	182
Hudson Bay Ry. (Dominion Government)	10, 106, 219, 222, 281, 364, 400, 447, 484
Illinois Central Rd.	191
Imperial Rolling Stock Co.	357
Intercolonial Ry.—	
Appointments	23, 64, 371, 412
Development	10, 106, 138, 182, 231, 281, 317, 364, 400, 447, 484
Elevator at St. John, N.B.	478
Hospital train	23
(See also Canadian Government Railways)	
International Railway Fuel Association	226, 260
Inverness Ry. & Coal Co.	359
James Bay & Eastern Ry.	145
Joliette & Lake Manuan Colonization Ry.	49, 182
Kettle Valley Ry.	10, 49, 182, 222, 317, 364
Klondike Mines Ry.	399
Kootenay & Alberta Ry.	106, 400
Labor problem, co-operation as a means of solving	325
Lachine, Jacques Cartier & Maisonneuve Ry.	484
Lake Huron & Northern Ontario Ry.	138, 182
Lake Superior Corporation's subsidiary transportation companies	477
Lewish Valley Rd.	494
Lewis, S.—Thermit welding in N.T.R. shops	*353
Lights for cars and locomotives on main tracks	137
Live stock transportation in U.S.	18
Lockport Ry.	222
Locomotive flange oiling	482
Locomotive fuel coal tests	483
Locomotives,—French Government double bogie	*363
Hand rails for	401, 419
Relation between tractive effort and adhesive weight	5
Russian, built in Canada	*19
Lumber rates	109
McCooe, D.—Co-operation as a means of solving labor problem	325
McManama, J. W.—Selection and education of section forces	365

Westinghouse

Cross-Compound Steam-Driven Air Compressors

10-inch Westinghouse Cross-Compound Compressor as used in building construction.

Particularly efficient for railroad construction work.

Mechanically strong and self-contained.

Operation simple—no expert attendance required.

Easy to move about, and can be set up almost anywhere; against a wall, on a column or post, or even the trunk of a tree. Many are in use attached to the boiler of a hoisting engine, also installed on steam shovels.

Our nearest office will tell you all about them; write,

Canadian Baldwin Electric Trucks

INTERURBAN SERVICE

Canadian Baldwin Trucks, Class 84-30-AA, built for Lake Erie and Northern Ry., Ontario.

The truck illustrated is designed for high speed on electric railways, and has a rated carrying capacity of 30,000 pounds on the centre plate.

It has frictional side bearings and is of the equalized pedestal type.

Canadian Baldwin trucks, solve the problem of minimum weight, economical maintenance, simple construction, noiseless operation and easy riding.

There is comfort in riding on roads where Canadian Baldwin Trucks are used.

Why employ 20 to 40 men to handle your material? A

BROWNHOIST Locomotive Crane

will do the same amount of work with a decided saving to you. Its cost, including 6% interest on investment, depreciation, and operating costs, is only \$6.00 to \$10.00 per day. It is one man operated, powerful, quick-acting, and built to withstand hard and continuous service. Records prove this.

ADAPTABILITY. The equipment is interchangeable. It only takes a short time to apply the Grab Bucket, Bottom Block, Drag-Line Bucket, Pile Driving Attachment, Lifting Magnet, or Shovel Equipment. This makes practically six machines in one.

RAILROADS all over the country are realizing more and more the advantage and economy of having a Brownhoist Locomotive Crane on the job, because it is always ready to work in case of emergency. A Brownhoist Crane can be relied upon. One road uses thirty of them.

INVESTIGATE TO-DAY. Catalogue I shows
how and where some of these cranes are used.

Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

Garlock High Pressure Piston Rod Packing

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

Where "Time Is The Essence Of The Contract"

you can't afford to let your men use inefficient tools.

Yet the probability is that they are wasting time trying to get the last bit of wear from their files.

And at a certain point in the life-time of a file, the time lost in its use is money wasted.

By using a half-worn file your men may be slowing up a contract that means thousands of dollars to you.

They'll do better work with a new file—in less than half the time. And the saving goes into your pocket.

But, be sure the files used are of the following brands:

**KEARNEY & FOOT
AMERICAN**

ARCADE

(Made in Canada)

**GREAT WESTERN
GLOBE**

465 Railroad Shops in the United States and Canada Use the Thermit Welding Process

Let us send you this pamphlet.

This comprises practically all the shops of importance in North America, and it can be said without exaggeration that the list of railroads using Thermit includes practically every system from the small road having only three or four locomotives to the largest system in the world having many thousand locomotives.

If by any chance your shop is not using Thermit, you should investigate the process and see how effectively and economically it will handle the many repairs on locomotive frames and other sections.

Remember that the greatest railway systems in the world use hundreds of thousands of pounds of Thermit. They do not use it for any reason except that it "delivers the goods" and has proven itself a profitable investment.

Let us mail you our new pamphlet, No. 2144, which contains full information on the use of Thermit in Railroad Shops.

We have a well equipped shop in Toronto, Ont., for the manufacture of Thermit and appliances used with it.

The No. 25 McLain Pressed Steel Headlight

is equipped with triple nickel-plated polished reflector of special parabolic design which centralizes the rays of a concentrated filament Mazda bulb perfectly focused, throwing a straight, strong beam of light down the track, far ahead of the car.

Extremely light—weighing three pounds less than any other Headlight.

No sacrifice has been made to attain this lightness of weight for the McLAIN No. 25 is as strong as any Headlight made, and has an illuminating power in excess of other Headlights employing an incandescent globe.

Has extended dash—Dust and waterproof.

Guaranteed to give good service.

Write for booklet and prices.

The Trolley Supply Co.
Canton, Ohio

Scientific Treatment of Boiler Waters Dearborn Service to Railroads

Every time an engine failure takes place it means a large expense in dollars to the railroad company in time lost, impairment of service, and cost to send another engine to the rescue. Every time a locomotive goes to shop for repairs, it represents many thousands of dollars invested capital which is earning no revenue.

By the use of Dearborn Treatment engine failures due to the boiler foaming or leaking can be entirely eliminated. Dearborn Treatment counteracts the foaming tendency in waters of that type, and prevents scale formation, and the corrosive and pitting action that results in leaks. By thus overcoming the bad effects of the waters used, and

keeping the boiler tubes and sheets free from incrustation, the engine may be kept in service longer between boiler washings, and the period between shoppings for repairs of this character will be much longer. There are also great savings in fuel and lubricating oil, and the engine will always be in condition to haul full tonnage.

25 in.	3 $\frac{1}{2}$	1 $\frac{1}{4}$, 2, 2 $\frac{1}{2}$, 3 in.	7.50	3.00	1 $\frac{1}{4}$, 2, 2 $\frac{1}{2}$, 3 in. 1.25

Prices on larger sizes furnished upon application.

DESIGNED ESPECIALLY to handle pipes spaced closely as in coil work. No. 2 $\frac{1}{2}$ wrench illustrated requires but three-quarter inch space between pipes.

POSITIVE GRIP instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

RATCHET-LIKE ACTION. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

CAN'T CHEW. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

CAN'T CRUSH. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

Fire Tube Marine Superheater--Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler horse power from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

A Clear Track To Promotion

How to get off the side-track—how to break the couplings that hold them near the bottom of the pay roll—is the one big problem that troubles most railroaders.

There's a clear track to promotion—without grade or curve—open to the man that has the backbone and grit to take it. Before you can travel this track to promotion and bigger pay you must "coal up" with knowledge—you must be specially trained.

The Railway Instruction Department of the International Correspondence Schools is able and ready to give you the training you must have. You can get it right at home without losing an hour's time from your present job.

It will not cost anything to find out how the I.C.S. can train you for a better job. Put an "X" near the class of work you would like to follow, in the attached coupon, and mail it to the I.C.S. This won't obligate you in the least. It will simply bring full information by return mail.

January, 1916.

The Building and Operation of the Welland Ship Canal Construction Railway.

By A. C. Harris, Superintendent, W. S. C. C. Railway.

In connection with the construction of the Welland Ship Canal, between Lakes Ontario and Erie, the Department of Railways and Canals has built, and fully equipped, a double track, standard gauge, construction railway along the west side of the ship canal's route from the lower end of section 3, near Merritton, Ont., to Lake Ontario, a distance of 6.3 miles. In addition, there is siding accommodation for 165 cars.

It is not the Department's intention that this railway should compete with commercial railways in the handling of freight and passenger traffic, the road having been constructed, and now being operated and maintained, solely for the free use of the contractors for sections 1, 2 and 3 in hauling excavated material from their respective works to Lake Ontario, where it is deposited to form dykes or embankments on either side of the new harbor at Port Weller; also for moving crushed stone from the crushing plant, and sand from the interchange tracks, near Merritton, to their different works. The contractors also handle structural steel, piling, cement, coal and other materials, which is delivered to them on the interchange tracks with the Grand Trunk, and the Niagara, St. Catharines and Toronto Railways, at Merritton, over the construction railway to points on their sections where these materials are to be utilized.

Style of Construction.—The railway was built in a semi-permanent manner with 60 lb. A.S.C.E. rails on a good class of ties, spaced 2 ft. centres and ballasted with crushed stone and gravel. The maximum gradient against southbound traffic is 1.50%, and against northbound traffic 0.5%, the maximum curvature being 60°, except in yards at Merritton and Port Weller where 12° is used. The contractors for sections 1 and 2 were required, under the terms of their contracts, to do all the grading on the railway within the limits of their contracts, and the contractors for section 2 ballasted the whole line with gravel from a pit located in the canal prism on that section. This was afterwards supplemented by crushed stone. The tracklaying was done by the Department.

Crossings.—The construction railway crosses the Niagara, St. Catharines and Toronto Ry., Lake Shore Division, at Port Weller, the crossing being protected by a 10 lever mechanical interlocking plant.

Just below lock 11, the railway crosses the present Welland Canal, and for this crossing a double track steel railway swing bridge, the superstructure of which was constructed and erected by the Hamilton Bridge Works Co., has been erected. The traffic over the bridge is protected by semaphores and derails, operated by a 2-lever mechanical interlocking plant in the bridge operator's cabin. The bridge is operated by electricity.

At the principal highway crossings of the railway, crossing watchmen are stationed and crossings are further protected by crossing gates.

Track Scales.—A short distance north of the crushing plant the 150-ton railway track scales, which will weigh a train of cars 110 ft. long, are located. All stone

leaving the crushing plant for sections 1 and 2 is weighed over these scales.

Signalling.—The railway is equipped with 11 mechanical interlocking plants, four of which are 4-lever, five 5-lever, one 2-lever

and one 10-lever plants, all connecting parts of which are in accordance with R.S.A. standard drawings and specifications. These plants were supplied and installed by Saxby & Farmer, Ltd., of Montreal. Provision has been made for sealing the locking in such a manner as to prevent interference by any but authorized employees.

Train Dispatching.—The road is fully equipped with a selective telephone train dispatching system and a telephone blocking system, which were supplied and installed by the Northern Electric Co., of Montreal. The equipment is so arranged that connection can be made to any of the block signal offices through the blocking circuits by means of a patching device located in the block offices, thereby making the blocking circuit and the train dispatching circuit interchangeable.

At the several points on the railway where the contractors come on to the road over their own sidings, operator's cabins have been erected and fully equipped for the

housing of the mechanical interlocking levers and telephone train dispatching instruments.

Wrecking Crane.—For the purpose of clearing up of wrecks the railway is provided with a 50-ton capacity Industrial Works locomotive crane, supplied by F. H. Hopkins & Co., Montreal, and fully equipped to safely handle at 30 ft. radius 12,000 lbs., without outriggers, and to swing the load through full circle and move along the track with boom in any position; crane also capable of hoisting and rotating with outriggers fully extended and supported, 100,000 lbs. at 16 ft. radius, the hoisting, travelling and rotating being used simultaneously or independently.

System of Operation.—The railway is operated and maintained by the superintendent of the line, the contractors furnishing their own equipment and necessary train crews, who are required to pass an examination as to hearing, sight, ability to distinguish colors, and as to the meaning of the rules and signals in use, and who are under the superintendent's order in all matters pertaining to the operation of trains over the construction railway.

The normal traffic is controlled by telephone block system, but in case of an accident where one main track is obstructed, the other track is used under single track rules, and trains are operated by train order.

During the summer and autumn, when the contractors along the line of the canal are working at heavy pressure, and day and night, night operation over the road is necessary. During the balance of the year the road is only in operation 12 hours a day.

Following is a statement showing the number of locomotives and the approximate number of the different classes of other rolling stock on the line:

Following is a statement showing the amount of traffic handled over the railway since it was put into operation on June 25, 1914, until Oct. 31, 1915. During the two months of Feb. and Mar., 1915, the contractors were practically closed down on account of cold weather, and consequently the traffic over the road was very light.

Excavated Material.		Total
6-yard cars	161,692	
12-yard cars	1,834	
16-yard cars	1,010	
30-yard cars		
Total cars		238,885
Stone (233,736 tons)	8,178	
Sand	1,131	
Miscellaneous cars ..	411	
Grand total of cars		249,102

The number of trains, loaded and empty handled over the railway since operation commenced is 18,178, and there have been no accidents resulting in personal injuries to employees or other persons and the num-

ber of accidents which have been in the nature of derailments has been comparatively small, and the consequent damage to plant and equipment very low.

There are, at present, five track gangs at work on the line doing the necessary track repairs and other maintenance work. Owing to the abnormal traffic over the road, and the fact that it has been constructed re-

cently, the maintenance work is necessarily very heavy, and much attention must be given to this work at all times.

A storehouse and a small machine and general shop for the handling of necessary repair and maintenance work of the railway are located at Port Weller, the northern terminus.

The Superintendent's headquarters and

dispatching offices, a commodious two story building, is located at Homer, Ont.

The road was constructed by J. F. Pringle, B.A., A.M.Can.Soc.C.E., Resident Engineer, and the operation and maintenance is under the jurisdiction of A. C. Harris, Superintendent, under the direction of J. L. Weller, M.Can.Soc.C.E., Engineer in Charge, Welland Ship Canal.

The Canadian Northern Railway's Bridge Over the Riviere-des-Prairies.

The Canadian Northern Ry.'s Montreal-Hawkesbury section of its main trans-continental line approaches Montreal from the west, crossing the west and main channels of the Riviere-des-Prairies, or what is commonly called the Back River, 12 miles northwesterly from Montreal. The main crossing is composed of two through truss spans 150 ft. c. to c. of bearings, one through truss span, 275 ft. 0¾ in., and one 75 ft. through plate girder span, making a

real and anchored securely in place under the projecting portion of span. Upon the scow was built necessary blocking to reach the lower chords of truss. The counterweight was then removed, and a very heavy truck, running on a standard gauge track, was placed under the extremity of the land end of the truss.

The next work was to pump out sufficient water from the scow to raise it and thus take most of the weight of the truss

further lowering to seats and removing blocking was carried out by the use of powerful jacks. This operation was carried out successfully on Sept. 17, 1914. The erection of the two 150 ft. trusses was carried out on falsework.

The crossing of the west channel, about ½ mile west, is of much less importance, the channel being almost dry for a short period in summer. It is composed of five 80 ft. half through plate girder spans with central piers on the angle of the stream. All the substructure of concrete. The weight of steel in this crossing is about 689,000 lbs., and of concrete 1,600 cu. yds.

All the steel work was designed to the Dominion Government specification, 1908, class heavy loading, and was fabricated and erected by the Dominion Bridge Co., Montreal, with E. Mackinnon, Resident Engineer, in charge. The substructure was built by J. P. Mullarkey, Montreal. We are indebted to W. P. Chapman, M.Can.Soc.C.E., Engineer of Bridges, Mackenzie, Mann & Co., Ltd., for the foregoing information and for the photographs of the main span of the east channel crossing, from which the accompanying illustrations are made.

Railway Electrification in England.—The electrification of a portion of the Lancashire and Yorkshire Ry., between Manchester and Bury, approximately 11 miles, is expected to be ready for operation early in January. The work has been carried out by the company's staff, and the rolling stock has been built in the company's shops at Newton Heath, Manchester. The cars are of all steel construction, and each unit is a 5 car train, of 3 motor cars and 2 trailers. The motor cars are each equipped with four 200 h.p. motors.

Toronto Transportation Club.—The annual dinner was held, Nov. 29. The officers for the current year are,—M. G. Murphy, C.P.R.

Fig. 1.—First Stages of Launching Span, Riviere-des-Prairies Bridge.

total length between face to face of ballast walls of 662 ft. 5¾ ins. The piers and abutments are of the usual concrete type, with spread footings, and are at right angles to the centre line of the track, which track is a tangent and has a level grade over the whole crossing.

The 150 ft. spans are 6 panel through Pratt trusses of the following dimensions: 150 ft. c. to c. end bearings, 18 ft. c. to c. trusses, 30 ft. c. to c. chords. The 275 ft. 0¾ in. span is of the curved top chord type and has the following dimensions: 275 ft. 0¾ in. span c. to c. end bearings, 31 ft. c. to c. chords at the hips, and 45 ft. at the centre of the span, the trusses being 19 ft. c. to c. The 75 ft. through plate girder span is of the standard type with the girders placed 17½ ft. c. to c. The stringers are four to a panel and the distance, base of rail to centre of bottom chord, varies from 3 ft. 8¾ in. for the 150 ft. spans to 3 ft. 4 in. for the 275 ft. 0¾ in. span. The total weight of steel in the channel (275 ft. 0¾ in.) span is 550 tons, and in the whole crossing about 2,000,000 lbs. About 2,100 cu. yds. of concrete were used in the whole crossing.

Owing to the very swift and deep current, the contractors, after considering several methods of erection, decided to adopt the one of launching by use of a scow. The plan followed was to erect the whole span in a temporary position, with slightly more than half of the length projecting over the supports riverward, the land end being held down by a heavy counterweight of steel rails. With the erection practically completed a large scow was taken from Mont-

and at the same time clear the blocking over the forward pier in the stream. This having been successfully carried out, the cables from the scow were attached to a pier beyond the main channel, and taken back to a stationary engine located on the track about 50 ft. east of the end of the truss. At a given signal the engine started and the span commenced to move, being carried slowly by the scow to its position over the

Fig. 2.—Span in Position Over Pier Ready to Lower to Permanent Position, Riviere-des-Prairies Bridge.

piers. In a work of this kind it necessarily follows there must be some adjusting of cables, guys, windlass, etc., but there was no serious hitch or delay, and the span was moved about 120 ft. to its position over piers in about an hour and a half.

It was then necessary to allow water into the scow to sink it about 18 ins. and bring the forward end of the truss down firmly to the blocking on the mid-stream pier. The

M. Copeland, Sick.

Railway Mechanical Methods and Devices.

Cutting Off Rivet Heads in Grand Trunk Railway Shops.

A holder-on for use with the pneumatic rivet-buster for cutting off rivet heads on the sides of boilers, is in use in the G.T.R. shops at Stratford, Ont., which facilitates the work materially, reducing considerably the labor of the operators. The bull and holder-on are shown in the accompanying illustration. The holder-on consists of a small air cylinder hinged to the side of the bull cylinder. The piston rod of the holder-on has a hook at the outer end, by which it is attached to some near by projection of the boiler, such as the ashpan studs in the illustration, so that when the chisel on the end of the bull plunger is placed against the rivet head, by turning on the air in the holder-on cylinder, the chisel is held firmly

Boring Stuffing Boxes in Steam Chests, Grand Trunk Railway Shops.

The tools used in boring out stuffing boxes in steam chests in the G.T.R. shops, at Stratford, Ont., are shown in the accompanying illustration. The holes for the stuffing box and the tail rod are cored in the chest. The chest is first planed on its faces and the stuffing box end, the stud holes are drilled and tapped. The chest is then bolted to a face plate under the radial drill, and squared up. On the stuffing box face is bolted a jig as shown, using the stud holes, cap bolts being used. A reamer of the shape of the stuffing box is forced down through the cored hole, reaming out the hole to the correct shape in one pass. The tail rod hole is finished in a similar manner, the jig on the left of the stuff-

ing box in the illustration being used for the purpose of the block, which is a cast iron body, drilled and reamed with tapered holes, varying in diameter by sixteenths. As the pin is turned it is removed from the lathe, fitted in the block, in the hole marked a particular size, and the distance it enters noted. An allowance is made for drift, so that, if it fits in a hole a predetermined size larger than that for which it is made, up to a certain point, it is correct. The amount the diameter is to be reduced, if too large, is recorded by noting the hole in which the pin will fit.

In the Stratford shops, two of these blocks are mounted on a cast iron pedestal, as shown, which makes it convenient for all the mechanics in the shop. Other shops on the G.T.R. use the same system of blocks, but in the Montreal shops, when last visited by the writer, they were loosely mounted on blocks on the floor.

Pneumatic Holder-on Used With the Bull for Cutting Off Rivet Heads.

Boring Stuffing Boxes in Steam Chests.

Taper Pin Test Block.

against the rivet head, reducing the labor of the operators. In this particular case, the holder-on is applied to a 2 in. bull. Larger holders-on are used with the 4½ in. bull, which is used largely for cutting stay-bolts between the sheets.

In cutting off the heads of rivets along the side of the boiler, a movable trestle frame is used for holding the bull as shown. The bull is suspended from a runway along the top of the frame, so that longitudinal adjustment is thereby obtained, vertical adjustment being secured by the block and tackle which suspend the bull.

ing box in the illustration being used for the purpose. Four holes are drilled and tapped in this end, and the chest bolted to the face plate as before. Another reamer of correct shape is run down through the cored hole, finishing it to size in one pass. This practice is followed in all the sizes of chests used, different jigs and reamers being kept specially for the purpose. A clean job is obtained with a fraction of the labor that would be involved in boring the holes out. Even when the holes are cored slightly eccentric, the reamers appear to perform the work quite satisfactorily, maintaining their cutting edges in spite of the sand in the cored hole.

Taper Pin Test Block in Grand Trunk Railway Shops.

The accompanying illustration shows a taper pin testing block as used in the G.T.R. shops at Stratford, Ont. In locomotive construction, a large number of taper pins of varying sizes, but all of the same taper, are employed. These are made to fit the hole reamed for the purpose, and are driven home with a sledge. To allow

Home Made Tool Bends Reinforcing Bars of Several Sizes.

A small home made bar bender has been used successfully by the writer for bending cold bars up to 1¼ in. diameter, where not greater than 90 deg. bends were required. The apparatus consists essentially of a cast iron plate containing two lugs between which the bar is placed, a steel lever fastened to the plate by means of a steel pin, about which it acts, and a set of fillers, as shown in the accompanying sketch.

The cast iron plate can be cast of coarse metal in any foundry, the top of the plate with which the lever comes in contact being machined. The bolt holes, certain ones of which must be countersunk to allow free action of the lever, may be either cored or drilled. The space between the two lugs should be slightly larger than the largest size bar to be bent. The filler is a device made of strap iron by any blacksmith, which fits around the lug opposite the lever, to insure a tight fit for bars smaller than the maximum. A set of these to accommodate the various commercial sizes of steel bars can be made at small cost. To insure a

Hamilton Contributions to Patriotic Fund.
—Among the principal contributors to the Canadian Patriotic Fund in Hamilton, Ont., recently, are the Steel Company of Canada, \$12,000; Robt. Hobson, Vice President, Steel Company of Canada, \$12,000; Mrs. Robt. Hobson, \$500; Dominion Power & Transmission Co.'s employees, \$7,000; Toronto, Hamilton & Buffalo Railway, \$2,400.

Canadian Pacific Ry. shareholders holding not more than 50 shares each are said to have increased from 14,000 in 1907 to over 36,000.

good fit, the edges of the lug around which the filler is placed should be machined. The lever is made of 1 x 2 in. flat steel forged to shape, with the face engaging the bar slightly upset on the upper side. Its length is about 4 ft.

The operation of the apparatus can be readily seen in the accompanying sketch, in which the lever bar to be bent and a filler are shown dotted. The apparatus is fastened to a bench by means of bolts, and counter-sunk so that the top of the plate is flush with the top of the bench.

Two men can make cold bends under one inch in diameter. On larger sizes three men

An Inexpensive Bar Bender.

are required, unless recourse is had to a pipe extension to the lever. The cost of the apparatus should not exceed \$12 to \$15, and it will readily pay for itself on a small job which will not admit of a more versatile bender.—R. C. Hardman, in *Engineering Record*.

Cutting Out Tubes in Michigan Central Railway Shops.

The usual practice in cutting out flues when the boiler is being stripped for shopping is to mount an air cylinder with reducing gear on a cross bar across the front end of the smoke box, running a shaft with universal joints from the stationary motor to the tube in which the cutter is inserted. This practice has been modified at the Michigan Central Rd. locomotive shops at

that only an angularity in a vertical plane is to be contended with, instead of a combined angularity in both the vertical and horizontal planes.

In the same shops, the cutter used for ripping out superheater flues is as also

containing four pin holes for adjusting the length for varying heights of stacks, the two arms of the crane being readily sprung. A small traveller operates along the horizontal member, to which a block and tackle are attached, which makes it very con-

Stack Crane of Simple Design.

shown in the accompanying illustration. The inner shaft, which has an angular movement through about 120 degrees, has two ball bearing races between it and the encasing shell, so that the heavy strain set up between the shaft and shell, due to the cutting tool piercing the flue, is reduced.

Stack Crane in Canadian Northern Railway Shops.

Stack cranes for locomotive houses and shops are in more or less general use, so that the one illustrated herewith is of

venient for raising and lowering the locomotive cylinder and valve parts without the use of an auxiliary crane.

Transportation Interests and the War Loan.—Among the many subscribers to the recent successful war loan issued by the Dominion Government, the following referred to in the daily press are intimately connected with transportation and allied interests in the Dominion.—Estate of the late James Ross, per J. K. L. Ross, director, C.P.R., \$500,000; R. B. Angus, director, C.P.R., \$100,000; Sir Thomas Shaughnessy, President, C.P.R., \$100,000; Sir Herbert S.

Adjustable Arrangement of Air Motor in Cutting Out Tubes.

St. Thomas, Ont., in such a way as to make the arrangements more flexible, reducing the strain on the transmission shaft with its universal joints.

In the arrangement at these shops, instead of the motor and reducing gear being stationary, the combination is so mounted on a cross bar that it may be shifted from side to side. By this means, the angularity of the connecting shaft is materially reduced, as it is always possible to place the motor vertically opposite the tube being cut, so

interest merely in showing a simple but strong design. The frame is a one piece member, the horizontal section being $2\frac{1}{2} \times \frac{3}{4}$ ins., and the diagonal member 1 in. diameter. The horizontal member has a two piece foot, bracing against the foot of the stack, and the diagonal member has a vertical end to fit down inside the stack. Joining the horizontal and diagonal members near the stack, there is a connecting link, permanently connected to the diagonal member, and with the lower end

Ball Bearing Cutter Head for Cutting Superheater Flues.

January, 1916.]

Relation Between Tractive Effort and Adhesive Weight of Locomotive Driving Wheels.

Contributed by a Subscriber

Capacity is the keynote of present day operation. For the non-technical official, capacity as applied to motive power denotes one comparison only, viz., the ability of the locomotive to grip the rails and handle a certain tonnage. He does not generally consider boiler dimensions, wheel arrangement or the merit of the design involved. It is now the practice for most railways to rate locomotives by the available tractive effort at the drivers. This is a good system to follow, because it is not affected through any factor of resistance, curvature or wheel arrangement, such as would have to be taken into account with the practice of rating in terms of hauling capacity behind the tender.

The effort which a locomotive can exert to haul a train is limited by the adhesion between the driving wheels and the rails. The adhesion is simply friction between the driving wheels and the rails, acting to prevent slipping. If, for instance, the train resistance exceeds the adhesion, the driving wheels will slip, or in other words turn around without advancing.

Some 20 years ago, assuming comparatively good conditions, and for small locomotives, it was the practice to use a factor of 0.20 to denote the adhesive force. As an example, if the weight on the drivers was 40,000 lbs., the adhesive force would be 8,000 lbs. Not until 1904 was an effort made, so far as the writer is aware, to accurately determine the maximum available adhesive force at the rail. At that time one of the large locomotive builders tested six different types of locomotives, embodying the best practice at that time. These six classes comprised orders totalling 143 locomotives. The results of these tests were as follows:

Class.	Max.	Min.	Avg.
Consolidated, 2-8-0	0.283	0.186	0.233
Mogul, 2-6-0	0.222	0.184	0.210
Pacific, 4-6-2	0.246	0.202	0.220
Atlantic, 4-4-2	0.275	0.190	0.229
American, 4-4-0	0.269	0.182	0.231
Ten Wheeler, 4-6-0	0.267	0.172	0.200

The following table gives results of tests on a number of locomotives within the last seven years:

Railway.	Class.	Adhes. Factor.	Remarks.
Chicago, Burlington and Quincy	Prairie, 2-6-2	0.228	Saturated
Atchafalpa, Topeka and Santa Fe	Switcher, 0-6-0	0.202	Saturated
Erie	Pacific, 4-6-2	0.238	Superheated
Chicago and North Western	Pacific, 4-6-2	0.244	Superheated
New York Central and Hudson River	Ten Wheeler, 4-6-0	0.196	Saturated
Baltimore and Ohio	Consolidation, 2-8-0	0.218	Saturated
Chesapeake and Ohio	Mikado, 2-8-2	0.255	Superheated
Southern	Mikado, 2-8-2	0.240	Saturated
Illinois Central	Mikado, 2-8-2	0.236	Superheated
Illinois Central	Pacific, 4-6-2	0.220	Superheated
Grand Trunk	Pacific, 4-6-2	0.230	Superheated
Buffalo, Rochester and Pittsburgh	Pacific, 4-6-2	0.222	Superheated
Buffalo, Rochester and Pittsburgh	Atlantic, 4-4-2	0.255	Saturated

For several years, practically all new locomotives have been equipped with superheaters, brick arches or other appliances which tend to greatly increase the capacity and sustaining power of the boiler. In superheater locomotives, the steam is to some extent wire drawn in the superheater; hence the initial pressure at the beginning of the stroke may not be as high as in the saturated locomotives. On the other hand, owing to the superheat, the mean effective pressure under similar conditions will be higher and more constant, thus ensuring an appreciable reduction in slipping, which may be taken advantage of in designing superheater locomotives.

It is generally considered that a ratio of about 0.22 or 0.23 is the most desirable for

general conditions, but many freight locomotives have been built with a ratio of 0.25, and in some cases as high as 0.27. When the tractive force attains a factor of 0.27 of the weight on the driving wheels, there must be abnormally good rail conditions in order to realize the full power; this probably cannot be done unless plenty of sand is used. With ideal conditions there would be no real difficulty in using a ratio of 0.25.

As a general proposition, where two locomotives have the same comparative boiler capacity, the one locomotive having a ratio of tractive power to adhesive weight of 0.25, and the other of 0.20, in rating it would be feasible to take full advantage of the power up to a ratio of 0.25, unless the rail conditions are out of the ordinary. The above considers maximum conditions only, and should therefore not be exceeded.

Great Northern Railway's Annual Report.

The 26th annual report of the Great Northern Ry. Co. (U.S.A.) for the year ended June 30, 1915, shows that the total capital stock outstanding was \$249,476,722; and the bonded debt \$194,773,909.09, an increase of \$1,649,000. The expenditures during the year on new lines were \$686,788.66, of which \$7,916.08 was on the line south of the International Boundary in Montana, west of Niobe to Surrey; \$1,591.47 on the line from Niobe to a connection with the Grand Trunk Pacific Ry. at Gateway, Sask.; and \$446,095.34 on the line from Wenatchee, Wash., to Oroville, making a junction with one of the sections of the Vancouver, Victoria and Eastern Ry., passing into Washington State.

The company's investments in Canadian lines on account of advances made to pay for property, construction, additions and betterments has been increased during the year as follows: Crowsnest Southern Ry., \$8,289.60; Vancouver, Victoria and Eastern Ry., \$951,524.48; New Westminster Southern Ry., \$2,017.46; Midland Ry. Co. of Manitoba, \$84,203.48, total, \$1,046,035.02.

expenses were \$36,828,274.60 against \$47,769,773.98 for 1913-14. After meeting all fixed charges, paying four quarterly dividends of 1¼% each, and providing for accrued interest and taxes, there remained to be carried to profit and loss account \$2,096,762.32.

The balance sheet shows liabilities of \$687,459,879.11 with assets of various kinds valued at that figure. The assets include the following investments in Canada:—Midland Ry. of Manitoba, \$2,356,773.61; Manitoba Great Northern Ry., \$2,066,000; Brandon, Saskatchewan and Hudson Bay Ry., \$2,150,000; Crowsnest Southern Ry., \$4,218,487.02; Bedlington and Nelson Ry., \$65,000; Nelson and Fort Sheppard Ry., \$2,119,019.51; Red Mountain Ry., \$310,619.07; Vancouver, Victoria and Eastern Ry. and Navigation Co., \$21,881,524.48; New Westminster Southern Ry., \$280,250.27; total, \$35,347,673.96.

The company operated over 8,121.52 miles of line at June 30, 1915, against 7,822.01 miles at June 30, 1914, being an increase of 299.51 miles, which included 25.39 miles of the Vancouver, Victoria and Eastern Ry. between Colemount and Brookmere. The mileage operated included 7,112.99 miles of line owned (the company owns 17.66 miles in addition which are leased to other companies) by the G.N.R.; lines owned by controlled companies 690.93, of which the following are in Canada:—Midland Ry. of Manitoba, (jointly with the Northern Pacific Ry., 6.40 miles; Manitoba, Great Northern Ry., 91.77 miles; Brandon, Saskatchewan and Hudson Bay Ry., 69.45 miles; Crowsnest Southern Ry., 74.18 miles; Bedlington and Nelson Ry., 12.04 miles; Nelson and Fort Sheppard Ry., 58.42 miles; Red Mountain Ry., 9.59 miles; New Westminster Southern Ry., 23.73 miles; Vancouver, Victoria and Eastern Ry., 261.67 miles; the remaining mileage representing trackage rights over other companies' lines of which the following are in Canada:—Canadian Northern Ry., from International boundary at Noyes, Minn., to a connection with the Midland Ry. of Manitoba tracks at Winnipeg, 66.57 miles; Canadian Northern Ry. and Grand Trunk Pacific Ry. at Winnipeg, 1.68 miles; G.T.P. Ry., at Portage la Prairie, Man., 0.99 of a mile; Canadian Pacific Ry., Tramp Jet. to Nelson, B.C., 5.42 miles; Province of British Columbia, New Westminster Bridge, 1.48 miles.

Successful Transportation of Canadian Overseas Expeditionary Forces.

The railway and steamship companies have performed a remarkable service in sending overseas over 100,000 of the Canadian forces without the loss of a single man, and practically without a single hitch in regard to commissariat arrangements for troops en route. Out of all the men who have gone overseas there was only one casualty recorded during transport, and that happened early in the war, when a Canadian soldier was killed by jumping off one of the troop trains.

Up to Nov. 26, the total number of Canadian troops who had actually been transported from Canada was 104,600, of whom 102,245 had been landed in England, while 988 had been sent to Bermuda and 196 to St. Lucia. In addition, nearly 800 nurses have been taken over, also about 20,000 horses. Counting the troops now en route, it is estimated that there are now on active overseas service over 110,000 officers and men from Canada.

The Ontario License Board will, it is said take steps to stop the sale of intoxicating liquor on railway trains in the province.

During the year the Vancouver, Victoria and Eastern Ry.'s line from Coalmount to Brookmere (formerly Otter Summit), 25.39 miles, was completed, and was opened for traffic, June 1. The total addition to spurs, siding and yard mileage was 21.55 miles, of which 3.10 miles represented additions to lines owned by controlled companies in Canada. About half a mile of new right of way fence was built in Canada, and 250 lin. ft. of new crib work were built on the line between Blaine, Wash., and White Rock, B. C. The filling in of the False Creek tide lands at Vancouver, B.C., which was discontinued for a time, has been resumed.

The gross operating revenues were \$67,162,857.66 against \$76,854,937.50 for the year ended June 30, 1914. The operating

Tie Renewals and Distributions.

By M. Henry, Supervisor, C. & E. I. Rd.

The question of tie renewals for the coming season will soon come up. Ties will begin to arrive and their proper distribution is of the greatest importance. In order to properly distribute the ties arriving for use in the next season's renewals a knowledge of the actual condition of the ties now in the tracks is necessary. The only right way to get this information is for the roadmaster, or some other responsible person, and the section foreman to go over all tracks carefully and spot all ties that should be renewed next season. Very often, even when this method is followed, sufficient information is not obtained for distributing ties, as only a record of the total number per section or per mile is made up, which does not show just where the ties are needed. As most roads now number the telegraph poles between each mile post, marking every fifth pole, records can be made and kept for reference, so that ties, when distributed according to the record, will not have to be rehandled and trucked, in fact worn out before they are finally distributed where they should have been when thrown off the cars. The labor that would be required to shift ties to points more or less distant can be used in applying the ties which will mean a considerable saving in time and the cost of the renewals.

Chart for Tie Conditions, etc.

The above merely shows the heading of the columns. Any number of ruled lines can be put in below according to the size of chart used.

I am showing herewith a blank chart that I have used several years, on which a complete record of the tie conditions and the progress of the tie distribution and renewals for each section is made up when ties for renewal are spotted. This is filled in by the track foreman in duplicate. He retains a copy and sends the original to me. From the information shown on the chart it is not a difficult matter to arrive at the actual tie conditions of each section or what is necessary to take care of the tracks for the following season. Column 1 shows locations on main track and the name of each siding. Column 2 shows the number of bad ties between each numbered telegraph pole in main track and in each siding. Column 3 shows the number of ties now on hand, if any, that can be used for renewals. Column 4 shows the number of ties yet needed at that point to complete renewals. Column 5 is a record of the progress of the track foreman which can be kept from his reports. Column 6 can be used to explain why more ties have been applied than are spotted, as often is necessary on account of derailment or other unforeseen reason. The figures at the bottom of the chart give the roadmaster all of the information that he requires for his tie requisitions and for the distribution of his allowance over his subdivision.

The charts for each section can be arranged in section order and bound, to be used for reference all through the season. Often an old foreman will leave the service, or be off duty at the time when ties are arriving, leaving the work of distributing the ties to a foreman who is entirely unfamiliar with the conditions. The chart, if properly

filled out, and put in his hands, will enable him to make the distribution as well as the regular foreman who is away. There will be no excuse for an oversupply at one point or too little at others.

Records kept in this way for several consecutive years are most interesting and instructive as comparisons of the records of the years previous will indicate clearly what progress is being made in bettering the track conditions as far as ties, at least, are concerned. Also whether or not the percentage of tie renewals at certain points is decreasing and gradual improvement is being made. This method will increase the efficiency of the track foreman. It will ensure economy and the track supervisor will know that the ties he is allowed will be distributed and used in such a way that all tracks in his charge will be left safe at all times.—Maintenance of Way Bulletin.

Birthdays of Transportation Men in January.

Many happy returns of the day to:—

J. Abrams, Wharf Freight Agent, C.P.R., Vancouver, B.C., born at Manchester, Eng., Jan. 24, 1870.

W. U. Appleton, General Master Mechanic.

continental Ry., Transcona, Man., born at Forres, Scotland, Jan. 1884.

Gordon Grant, Chief Engineer, National Transcontinental Ry., Ottawa, born at Dufftown, Scotland, Jan. 2, 1861.

G. F. Hichborn, formerly Agent, Great Eastern Fast Freight Line, New York, born at Boston, Mass., Jan. 13, 1875.

D. W. Houston, Superintendent, Regina Municipal Ry., Regina, Sask., born at Bathurst, N.B., Jan. 3, 1879.

Carl Howe, Manager, New York Central Fast Freight Lines, Chicago, Ill., born at Berrien Springs, Mich., Jan. 11, 1870.

H. J. Humphrey, acting Superintendent Car Service, Eastern Lines, C.P.R., Montreal, born at Berrys Mills, N.B., Jan. 26, 1879.

W. C. Hunter, ex-Manager, New Brunswick Coal and Ry. Co., Moncton, N.B., born at St. John, N.B., Jan. 4, 1865.

H. G. Kelley, Vice President, G.T.R., Montreal, born at Philadelphia, Pa., Jan. 12, 1858.

John Macrae, Locomotive Foreman, C.P.R., North Bend, B.C., born at Springburn, Glasgow, Scotland, Jan. 30, 1879.

J. J. Nelligan, Division Freight Agent, Canada Steamship Lines, Ltd., Montreal, born at Hamilton, Ont., Jan. 20, 1876.

G. Pepall, Assistant Foreign Freight Agent, G.T.R., and representing National Despatch-Great Eastern Line, Toronto, born at High Wycombe, Bucks, Eng., Jan. 15, 1849.

W. Phillips, European Railway and Steamship Manager, Canadian Northern Ry., London, Eng., born at Toronto, Jan. 31, 1870.

W. Pratt, General Superintendent, Sleeping and Dining Cars and Hotels, Canadian Northern Ry., Winnipeg, born at Sibbertoft, Northamptonshire, Eng., Jan. 18, 1870.

John Pullen, President, Canadian Express Co., Montreal, born at Shepton Mallet, Eng., Jan. 23, 1863.

L. J. Rouleau, Travelling Freight Agent, G.T.R., and Agent, National Despatch-Great Eastern Line, Montreal, born there, Jan. 6, 1879.

B. G. F. Rutley, ticket agent, Canadian Northern Ry., and Grand Trunk Pacific Ry., Fort Garry Union Station, Winnipeg, born at Chatham, Ont., Jan. 25, 1879.

J. G. Sullivan, M.Can.Soc.C.E., Chief Engineer, C.P.R. Western Lines, Winnipeg, born at Bushnell's Basin, N.Y., Jan. 11, 1863.

Ross Thompson, ex-Chief Engineer and Managing Director, St. John and Quebec Ry., Fredericton, N.B., born at Newry, Ireland, Jan. 1, 1865.

O. C. Walker, Inspector, Refrigerator Service, C.P.R. Western Lines, Winnipeg, born at Newport, Mon., Eng., Jan. 31, 1877.

T. H. White, Chief Engineer, Canadian Northern Pacific Ry., Vancouver, born at St. Thomas, Ont., Jan. 27, 1848.

A. Wilcox, General Superintendent, Central Division, Canadian Northern Ry., Winnipeg, born at Kincardine, Ont., Jan. 2, 1865.

Canadian Railway Club.—A. D. Thornton, Technical Superintendent, Canadian Consolidated Rubber Co., Montreal read a paper before the Club recently, on "Rubber as related to the war," in which he explained Great Britain's action in regard to crude rubber at the outbreak of the war and also of the uses of rubber in the war.

Some interesting facts are being circulated regarding the repairs to the Pacific cable, which was severed by the German raiding vessel Nurnberg, since dealt with, in the early stages of the war. After attacking the cable station at Fanning Island, the Nurnberg severed the cable near shore, and towed the end into deep water, where it was dropped. To locate the end, a glass bottomed vessel was designed, and one of the operators dived in 40 ft. of water, where sharks are frequent, and attached a line and the cable was hauled aboard.

Intercolonial Ry., Moncton, N.B., born there, Jan. 29, 1878.

R. Armstrong, Superintendent, District 4, Manitoba Division, C.P.R., Souris, born at Kingston, Ont., Jan. 27, 1865.

F. X. Belanger, General Freight and Passenger Agent, Temiscouata Ry., Riviere du Loup, Que., born at Chlorydormes, Que., Jan. 20, 1876.

R. H. Bell, General Agent, Canadian Northern Ry., Chicago, Ill., born at Toronto, Jan. 13, 1865.

E. Bower, Travelling Passenger Agent, Canadian Northern Ry., Calgary, Alta., born at Nottingham, Eng., Jan. 17, 1889.

G. McL. Brown, European Manager, C.P.R., London, Eng., born at Hamilton, Ont., Jan. 20, 1866.

R. F. Chapman, Chief Dispatcher, District 1, Saskatchewan Division, C.P.R., Regina, born at Coal Branch, N.B., Jan. 21, 1874.

W. A. Cowan, Division Engineer, National Transcontinental Ry., Cochrane, Ont., born at Galt, Ont., Jan. 22, 1877.

J. E. Dalrymple, Vice President, G.T.R., G.T.P.R., and Central Vermont Ry., Montreal, born there Jan. 1, 1869.

A. Davidson, General Agent, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at St. Henri, Montreal, Jan. 29, 1885.

G. J. Desbarats, C.M.G., Deputy Minister of Naval Service, Ottawa, Ont., born at Quebec, Que., Jan. 27, 1861.

J. E. Everell, Superintendent, Montmorency Division, Quebec Ry., Light and Power Co., Quebec, born at Cap Rouge, Que., Jan. 1, 1863.

J. Gordon, General Electrical Foreman, Motive Power Department, National Trans-

January, 1916.]

Pacific Great Eastern Railway Company's Annual Meeting.

At the fourth annual meeting in Vancouver, Oct. 26, the following report was presented:—Of our securities guaranteed by the Province of British Columbia there were outstanding at June 30, 1914, \$13,991,475.00; on July 17, 1914, £50,000 (or \$243,330.00) of the company's 1st mortgage 4½% guaranteed debenture stock was sold at 96½, making the total securities disposed of \$14,234,605. Since July 17, 1914, the date of the last sale of the company's securities, there has been no market, consequent upon the war. The total securities guaranteed applying on the main line amount to \$16,800,000 secured by a first charge on the line, and \$3,360,000 secured by a second charge, making a total of \$20,160,000.00, of which, as above stated, \$14,234,605 have been issued. The balance of the above securities, \$5,925,195.00, has been pledged to secure a loan of \$4,800,000 obtained by the company in pursuance of the authority granted the directors at the last annual meeting. Applying on the Peace River extension, securities to the extent of \$11,550,000 have been guaranteed by the B.C. Government, but on account of the adverse conditions no disposition could be made of them; and it has been impossible to start work on the grading of this extension. At the next session of the Legislature, your directors propose to apply for an extension of the time in which to commence and carry on that work.

Satisfactory progress, notwithstanding present financial conditions, has been made with the work of construction on the main line. The Chief Engineer reports that the grading of the entire line is finished with the exception of the Howe Sound section between Horseshoe Bay and Squamish, about 30 miles, and about 30 miles of comparatively light work near Horse Lake. During the past year, track has been extended north of Squamish to some miles beyond Lillooet, and the company has been authorized by the Minister of Railways to carry traffic over it between the above named towns. The contractor is operating this train service under his agreement with the company. He is also maintaining train service on the North Vancouver-Horseshoe Bay section to comply with our agreements with the municipality of West Vancouver and various property owners there. Track-laying is still in progress, but the work is proceeding slowly of necessity on account of our having to haul to the site of the structures by rail material for the construction of the bridges, the cost of hauling such a large amount of material by teams, in order to have the structures completed by the time the track reached their sites, being absolutely prohibitive. The track between Squamish and Lillooet has been ballasted. A six-stall locomotive house has been erected at Squamish, and our terminal yard at that place laid out.

Those studying the situation appear unanimously to have reached the conclusion that on the cessation of European hostilities Canada will benefit largely by a great influx of high-class British emigrants. Many of these, on account of the climatic and other advantages that this province affords, will be attracted to British Columbia. As no other line of railway serves the central portion of the province, the importance to the country of the completion of our line is manifest, if British Columbia is to be in a position to take advantage of this expected immigration. The early completion of the railway will continue to be the aim of those charged with that responsibility.

The following comprise the board for the current year:—President, J. W. Stewart;

Vice President and General Counsel, D'Arcy Tate, K.C.; Vice President, T. Foley; Land Commissioner, F. Wilson; other director, E. F. White. The other officers are:—Secretary-Treasurer, R. D. Thomas; Chief Engineer, J. Callaghan; General Manager, A. H. Sperry.

The Pacific Great Eastern Development Co.'s annual meeting was held on the same day. The directors elected are:—J. W. Stewart, T. Foley, P. Welch, D'Arcy Tate, K.C. R. D. Thomas is Secretary, and E. F. White, Treasurer.

Difficulties in the Way of Electrification of Chicago Terminals.

Electrification of railway terminals in Chicago is impracticable for financial reasons, according to advance statements regarding the comprehensive work of the Chicago Terminal Electrification Commission on electrification and smoke abatement. The cost is estimated at \$290,000,000 for 3,356 miles of track which would have to be included in a complete system. This is for the terminal system as a whole, with electric service extended to points 15 to 20 miles distant. Of this amount \$188,000,000 is said to be the direct cost and \$102,000,000 the cost of changes and betterments in connection with the work. The committee has not considered the practicability of electrification for individual roads. As far as the smoke problem is concerned, railway locomotives are said to be a minor factor, and a permanent commission is proposed to study this problem. One conclusion reached is that the complete elimination of steam locomotives is not necessary as a means of smoke abatement. A second finding is that no existing contact system is well adapted to some of the Chicago trackage. A third point is that the longer electrification is delayed the more the technical difficulties will be reduced through developments of the art.

Release Form for Beer Shipments West of Lake Superior.

Sir Henry L. Drayton, Chief Commissioner, Board of Railway Commissioners, gave the following judgment, Nov. 19, which was concurred in by Commissioner McLean: A complaint was made by the Fernie-Fort Steele Brewing Co., Ltd., of Fernie, B.C., as to the heated car service supplied by the C.P.R. It appearing in consideration of that case that, although the circulars issued by the railway governing shipments west of Lake Superior of perishable freight liable to be easily damaged by frost, required the movements to be made at the owner's risk, the railway in that case affected and which had received a revenue of \$1,171.89, nevertheless paid out on claims for damages by frost no less than \$2,134.52. Taking 67% as the operating ratio then applying, although that ratio as applied to the l.c.l. movements will be low, it cost the railway, in the first instance, \$784.06 to earn the freight charges of \$1,171.89, resulting in an apparent profit of \$386.72. In view of the amount actually paid for damage claims the railway, after having performed the service, was as a result some \$1,747 out of pocket. For reasons set out in a considered judgment, relief was given the railway.

Based on this judgment, the railway has issued a general form of release, which in terms applies to the movement of all perishable freight, such as beer, fruit, and vegetables during the cold periods, west of Port Arthur. Clause 2 of the original order, however, limited the effect of the judgment as follows: "That this order ap-

ply only to shipments of the Fernie-Fort Steele Brewing Co., Ltd., and the Elk Valley Brewing Co., Ltd., and any others who may apply for the same service on the lines of the C.P.R. west of Port Arthur, during the winter of 1915-1916."

Complaints have been made by different boards of trade on behalf of shippers. The Board is not in a position to determine, from the record as developed merely on complaints of the Fernie-Fort Steele and Elk Valley Brewing Companies, whether or not the order which was intended to deal with that specific case, resulting as it did in a specific hardship to the railway company which could not be justified, should be extended in like manner to other perishable commodities. I am of the opinion that order 23997, July 22, 1915, should be amended, so as to confine the portion of the release form there considered solely to shipments west of Lake Superior of beer in less than carload quantities, in cold or stormy weather.

Tree Windbreaks on the Canadian Pacific Railway.

Canadian Railway and Marine World for Sept., 1913, contained information as to trees to replace portable snow fences being tried on a large scale on the C.P.R. lines between Winnipeg and Calgary. The Superintendent of the Forestry Branch of the Department of Natural Resources has given us the following additional information:

"The work was started in 1908 and it took two years to get the ground ready for planting. The prairie sod had to be broken the first year, then backset and summer fallowed in order to accumulate sufficient moisture for tree growth. The conditions affecting tree growth east and west of Moose Jaw were found to be absolutely dissimilar. East of Moose Jaw trees planted three years can be left without any further maintenance; west of Moose Jaw it is necessary to cultivate each year in order to keep the trees free from weeds, which would deprive them of needed moisture. The district west of Moose Jaw is in what is known as 'The Dry Belt.' In territory similar to this in the United States one of the railways tried watering the trees, but that is a mistake; cultivation is all that is needed.

"The cost of the portable panel snow fence anywhere in Western Canada, Minnesota, Dakota, or other western states is from \$2.39 to \$2.51 per 16 ft. panel. The depreciation and annual maintenance per 16 ft. panel is 47c. The cost of 16 feet of tree snow fence, including three years maintenance, is \$1.95. The three years cost of maintenance is necessary before the fence may be said to be established; west of Moose Jaw it may take five years.

"The tree snow fence has been remarked upon by hundreds of tourists, and has helped very considerably in demonstrating to intending settlers the possibilities of proper cultivation in the dry areas. The tree snow fence also is just as good, if not better, than the panel fencing.

Australian Transcontinental Railway.—A progress report to the Australian Government shows that track has been laid for 660 miles and grading completed for 662 miles, on the line from Kalgoorlie to Port Augusta. The telegraph line has been erected for 656 miles. Progress has been somewhat slower on the western end owing to bad weather. On that end 1,190 men are employed, and 1,200 on the south. The contract for the supply of portable telephones and contact rods has been awarded to the Western Electric Co.

Steam Railway Freight Statistics.

The aggregate tonnage of freight carried by Canadian railways during the year ended June 30, 1914, was 101,594,753 tons, against 106,992,710 tons in 1913-14, and 89,444,331 in 1912-13. Of the total tonnage carried during the last statistical year 57,873,657 tons originated on home lines, 19,904,087 were received from other lines in Canada, and 23,553,833 were received from U. S. lines.

Name of Railway.	Originating on own line.	Received from other lines in Canada.	Received from U.S. lines.
	Tons.	Tons.	Tons.

Orders by the Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the orders were drawn.

24441. Nov. 16.—Authorizing C.P.R. to use bridge 3.5, Outlook Subdivision, Sask.

24442. Nov. 16.—Authorizing C.P.R. and St. John Ry. to operate trains and cars over crossing on Main St., St. John, N.B., without first stopping; speed not to exceed 10 miles an hour.

24443. Nov. 16.—Approving Edmonton, Dunvegan & British Columbia Ry. location from mileage 0 to 25.51, through tps. 73 and 75, r. 5 and 6, w.6.m., Alta.

24444. Nov. 17.—Ordering G.T.R. to build special drain for subway under its tracks at Ste. Anne de Bellevue, Que., from subway northerly along Pacific St., into river; 20% to be paid out of railway grade crossing fund; remainder, 15% each by Ste. Anne de Bellevue and Senneville, Que., and 35% each by G.T.R. and C.P.R.

24445. Nov. 13.—Relieving G.T.R. from providing further protection at crossing of Carling Ave., Ottawa.

24446. Nov. 15.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to build its Grande Prairie Branch across 22 highways, mileage 0 to 25.51.

24447. Nov. 15.—Authorizing C.P.R. to build its Chippen ballast pit spur across road allowance along east boundary n.e. ¼ Sec. 13-40-21, First Ave., and road allowance on south boundary of s.e. ¼ Sec. 13-40-21, w.3.m., Sask.

24448. Nov. 17.—Relieving Vancouver, Victoria & Eastern Ry. and Navigation Co. (G.N.R.) from lighting main line switches from sunset to sunrise, on its lines between Port Kells and Hazlemere, not including Port Kells, and between Guichon and Huntington, B.C., both included, March 1 to Oct. 14, inclusive; providing lamp equipment be not removed from controlling stations or section foreman's headquarters; present schedule of trains to remain in effect; no extra trains to be run over said portion of line from sunset to sunrise.

24449. Nov. 17.—Authorizing Alberta Public Works Department to build highway crossing over C.P.R. in n.w. ¼ 4-52-24, w.4.m.

24450. Nov. 17.—Authorizing G.T.R. to rebuild bridge 61, at mileage 171, District 31, Ottawa Division, across C.P.R. siding; applicant's

siding and roadway near Arnprior, Ont.; fence to be erected between C.P.R. tracks and roadway, and rescinding order 17475, Sept. 11, 1912.

24451. Nov. 17.—Authorizing Canadian Northern Ry. to divert road allowance between Sec. 6, Tp. 22, and Secs. 31 and 32-21-15, w.p.m., Man., and to cross highways at right angles.

24452. Nov. 17.—Authorizing Alberta Public Works Department to build highway over Grand Trunk Pacific Ry. in s.e. ¼ 4-42-21, w.4.m., cost of construction and maintenance to be paid by G.T.P.R., and rescinding order 13218, Mar. 14, 1911, in so far as it authorizes crossing of road allowance east of Sec. 4.

24453. Nov. 16.—Ordering C.P.R. to partition off portion box car, now used as station building at Vidora, Sask., for waiting room of about 8 by 18 ft. and to supply same with seats for accommodation of passengers, leaving other portion for agent's office and perishable goods and express; also to fit up dismantled box car body, so that freight may be housed properly; to build steps to approach to waiting room and platform; level platform off with cinders; build cinder walk across right of way to main street of village; work to be completed by Dec. 1, station agent not to be removed without Board first being notified, giving reasons and statement of earnings.

24454. Nov. 17.—Relieving Canadian Northern Ry. from providing further protection at crossing of highway about 1½ miles from Shawinigan Falls, Que.

24455. Nov. 18.—Authorizing Saskatchewan Board Highway Commissioners to build extension to Dufferin St. across C.P.R. in Ked-dleston, Sask.; original road allowance to be closed.

24456 to 24458. Nov. 18.—Approving Bell Telephone Co.'s agreements with Yarmouth Rural Telephone Co., Nov. 9; and with Tay Tp., Ont., Nov. 5, and Bolton Telephone Co., Nov. 4.

24459. Nov. 20.—Amending order 23392, Mar. 4, re release of responsibility on beer, etc., shipments west of Lake Superior.

24460. Nov. 19.—Ordering Canadian Northern Ry. to regrade north approach to bridge on public road between Sec. 9 and 10-6-23, w.p.m., to conform with Board's regulations, work to be done in spring, as soon as frost is sufficiently out of ground to permit; when bridge is renewed, it is to be placed on a line with road allowance and widened to 20 ft.

24461. Nov. 19.—Approving proposed change in location of G.T.R. siding for Frost Wire Fence Co., Hamilton, Ont.

24462. Nov. 19.—Ordering G.T.R. to sell tickets for Canadian Northern Ry. at ticket office operated by G.T.R. and C.P.R. jointly on train floor in Union Station, Toronto, and to exchange Canadian Northern tickets for orders, the Canadian Northern to pay one third of the cost of operating the ticket office, including salaries and actual disbursements, but no rental charges.

24463. Nov. 19.—Authorizing Canadian Northern Ry. to cross road allowance between Secs. 8 and 17-22-29, and cross and divert highway between Secs. 17 and 18-22-29, w.4.m., Alta., after which it may close road between Secs. 17 and 18 with its right of way fences; and rescinding order 17308, Aug. 26, 1912, in so far as it authorizes crossing and diversion.

24464. Nov. 22.—Authorizing Canadian Northern Ry. to build three tracks across Coteau St., Moose Jaw, Sask., and carry highway across track overhead; and rescinding order 20259, Sept. 4, 1913.

24465. Nov. 22.—Authorizing C.P.R. to open for traffic diversion tunnel at mileage 40.4, Boundary Subdivision, B.C.

24466. Nov. 22.—Amending order 24414, Nov. 8, re connection between Regina Municipal Ry. and C.P.R. at Arcola Ave., Regina, Sask.

24467. Nov. 22.—Authorizing C.P.R. to build spur for German, Clancey & Grindley, Ltd., Calgary, Alta.

24468. Nov. 22.—Authorizing Grand Trunk Pacific Ry. to build farm crossing over its tracks in s.e. ¼ Sec. 17-36-5, w.3.m., Sask.; cost and maintenance to be paid by Saskatchewan City Golf Club.

24469. Nov. 23.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur for Dominion Steel Foundry Co., Hamilton, Ont., and authorizing clearances.

24470. Nov. 19.—Authorizing Canadian Northern Ry. to carry traffic, temporarily, pending completion of ballasting, over its line from Yorkton, Sask., to end of track, 16 miles, speed of trains limited to 15 miles an hour.

24471. Nov. 23.—Approving turnout of Edmonton, Dunvegan and British Columbia Ry. Grande Prairie Branch at point shown on plan, Nov. 15, filed with the Board.

24472. Nov. 23.—Authorizing Canadian Northern Ry. to build siding extension across public road between Lot 11, Con. B, and Lot 11, Con. A, Mara Tp., Ont.

24473. Nov. 23.—Authorizing Canadian Northern Ontario Ry. to open for traffic its line from Rideau Jct. to Pembroke.

24474. Nov. 23.—Extending to Dec. 31 time within which Toronto Suburban Ry. may cross C.P.R. temporarily, for construction purposes only, near Guelph, Ont., between 6.30 a.m. and 6.30 p.m.

24475. Nov. 19.—Authorizing Canadian Northern Ry. to cross highway between Sec. 1, Tp. 21, R. 29, and Sec. 36-20-29; cross and divert highway between Sec. 1-21-29, and Sec. 6-21-28, w.4.m. Alta.; and rescinding order 17764, Oct. 16, 1912, in so far as it authorizes crossing and diversion.

24476. Nov. 22.—Approving Bell Telephone Co. agreement with Goodwood Rural Telephone Co., Nov. 11.

24477. Nov. 25.—Relieving Vancouver, Victoria & Eastern Ry. and Navigation Co. (G.N.R.) from erecting fences, gates and cattle guards on its Coalmont-Otter line, B.C., between mileage 215.37 and 237.25.

24478. Nov. 25.—Authorizing G.T.R. to build two spurs for Gull River Lumber Co., near Co-boconk Station, Ont.

24479. Nov. 26.—Authorizing C.P.R. to build siding for W. Rennie & Co., Chatham, Ont.

24480. Nov. 26.—Authorizing courtenay Electric Light, Heat & Power Co. to erect wires across Esquimalt & Nanaimo Ry. at Lake Trail Road, near Courtenay, B.C.

24481, 24482. Nov. 25.—Relieving Kettle Valley Ry. from maintaining fences, gates and cattle guards along portions of its right of way, between Midway and Merritt; mileage 6.97 to 18.85, Penticton to Princeton; and mileage 2.95 to 133.41, Midway to Penticton, B.C.

24483. Nov. 23.—Authorizing C.P.R. to build spur for Morin, Gareau & Beaudoin at mileage 15.1, St. Lin Subdivision.

24484. Nov. 25.—Approving clearances of umbrella roof to be built at C.P.R. North Toronto station.

24485. Nov. 25.—Substituting plan of Oct. 29, showing bridge over C.P.R. at road between Secs. 29 and 30-16-11, w.3 m., Sask., for plan B-14-38, referred to in order 24424.

24486. Nov. 24.—Relieving Grand Trunk Pacific Ry. from maintaining fences, gates and cattle guards from mileage 164 to 467, Prince Rupert East, B.C.

24487. Nov. 24.—Approving Bell Telephone Co. agreement with New Glasgow Telephone Co., Nov. 16, 1915; and rescinding order 8238, Oct. 5, 1909.

24488. Nov. 24.—Authorizing C.P.R. to charge \$1.75 a car for additional service of switching between dock and land team tracks and private sidings at Kelowna, B.C., and ordering it to file amendment to its tariff C.R.C. no. W-2027 accordingly.

24489. Nov. 27.—Rescinding order 24313, Oct. 16, and ordering that Dominion Atlantic Ry. tariffs, C.R.C. 454 and 455, become effective Dec. 10.

24490. Nov. 27.—Ordering that the Junior Judge of Carleton County be appointed sole arbitrator to determine value of land taken by Canadian Northern Ontario Ry. from H. Ray, and damage, if any, according to Railway Act, to Henry Ray's remaining property, due to construction and operation of railway thereon, with suitable farm crossing underneath tracks; each party to pay his own costs of arbitration and half costs of arbitrator.

24491-24493. Nov. 27.—Extending, to July 1916, time for approval of tolls of Grand Trunk Pacific Telegraph Co., C.P.R. Telegraphs and White Pass and Yukon Ry. Telegraphs.

24494. Nov. 25.—Authorizing City of Hull, Que., to build highway over C.P.R. at Montclair Ave.; trees to be removed so that there shall be a clear view of approaching trains in either direction from any point on highway within 100 ft., and to any point on railway within half a mile, of crossing. Crossing authorized under order 5110, July 29, 1908, to be closed.

24495. Nov. 30.—Relieving Canadian Northern Alberta Ry. from speed limitation of 25 miles an hour from St. Albert to Peace River Jct., Alta. 2 1/2 miles.

24496. Nov. 29.—Authorizing C.P.R. to build highway diversion in s.e. 1/4 Sec. 25-17-3, and s.w. 1/4 30-17-2, w. 3 m.; and to build main track at mileage 35.34, Swift Current Subdivision, and one other track, at grade across same, also to close portions of road allowance within its right of way.

24497. Nov. 29.—Approving plans and specifications of Orford Tp., Ont., of Gosnell drain under Michigan Central and Pere Marquette Rds.

24498. Nov. 29.—Authorizing Canadian Northern Ry. to build across highways between Secs. 3-4, and Secs. 4-5-35-7, w. 2 m., Sask.

24499. Nov. 29.—Extending, to Jan. 1, 1916, time within which gates be installed by G.T.R. at Barton St., Barton Tp., Ont.

24500. Nov. 29.—Relieving Grand Trunk Pacific Branch Lines Co. from maintaining switch lights on certain branch lines, as long as present schedule continues, between sunset and sunrise; lamp equipment to be kept available at controlling station or sectionmen's headquarters.

24501. Nov. 29.—Authorizing G.T.R. to build new station at Mimico, Ont., to be completed by Dec. 31, and rescinding order 24114, Aug. 24.

24502. Nov. 30.—Extending, for 30 days from date, time within which London and Port Stan-

ley Ry. shall install bell at Warren St., first crossing north of Port Stanley, Ont.

24503. Nov. 30.—Authorizing Hamilton St. Ry. to operate over crossing of Toronto, Hamilton and Buffalo Ry., used for serving Grasel Chemical Co., and National Steel Car Co., at its crossing of Burlington (Gilkinson) St., pending installation of half interlocking plant.

24504. Nov. 30.—Ordering C.P.R. to remove gates and to erect standard crossing signboards, and otherwise make crossing of Second St. at Golden, B.C., conform to standard regulations.

24505. Nov. 30.—Authorizing Town of Sandwich, Ont., to build Wright Place across Essex Terminal Ry.; crossing at Chippawa St. to be closed.

24506. Nov. 30.—Authorizing Canadian Northern Ontario Ry. to build spur for Hocken Lumber Co., mileage 170.7, Lot 6, Con. 9, Burpee Tp.

24507, 24508. Nov. 29.—Approving Bell Telephone Co. agreements with Ernesttown Rural Telephone Co. and Ste. Sabine Rural Telephone Co., Nov. 18.

24509. Dec. 2.—Substituting Board of Grain Commissioners of Canada's plan B, showing branch line to connect Grand Trunk Pacific Ry. with elevator at Moose Jaw, Sask., for plan approved under order 24080.

24510. Nov. 30.—Extending, to July 1, 1916, time for approval of Great North Western Telegraph Co.'s tolls.

24511. Dec. 1.—Authorizing Canadian Northern Ry. to build highway crossing over its tracks at St. Joseph St., La Tuque, Que., in lieu of two adjacent crossings to be closed, cost and maintenance to be paid by La Tuque.

24512. Dec. 1.—Authorizing Canadian Northern Saskatchewan Ry. to cross and divert road between Sec. 35-25 and Sec. 2-26-1, w. 2 m., diversion to be graded.

24513. Nov. 30.—Authorizing R. H. Johnson, Omamee, Ont., to lay drain across G.T.R. property and tracks.

24514. Nov. 22.—Relieving Ottawa and New York Ry. from providing further protection at Landry's Crossing, near milepost 29, near Cambridge station, Ont.

24515. Dec. 3.—Ordering that gates at crossing of 7th Line at Oakville, Ont., be operated by watchmen between 7 p.m. and 7 a.m., daily; wages to be paid, one third each, by Oakville, G.T.R., and Trafalgar Tp.

24516. Dec. 3.—Ordering G.T.R. to install certain lights at Lorne Park station, Ont.

24517. Dec. 1.—Authorizing C.P.R. to build spur for Dominion Cartridge Co. at mileage 1.9 on Staynerville Branch.

24518. Dec. 1.—Authorizing C.P.R. to build two sidings for British Pacific Engineering and Construction Co. in British Columbia.

24519. Dec. 1.—Authorizing C.P.R. to build extension to siding for F. Davis, at mileage 14.5, St. Gabriel Subdivision.

24520. Dec. 3.—Authorizing Esquimalt and Nanaimo Ry. to build highway over its tracks near Coombs station, B.C.; cost and maintenance to be paid by British Columbia Government.

24521, 24522. Dec. 3.—Relieving C.P.R. from providing further protection at first crossing east of Osago station, and at crossing 1/2 mile east of Sintaluta station, Sask.

24523. Dec. 3.—Authorizing C.P.R. to build siding for R. G. Dryden, West Toronto, Ont.

24524. Dec. 3.—Authorizing C.P.R. to build extension to siding for Rocsand Co. at Erin, Ont.

24525. Dec. 3.—Ordering Canadian Northern Ontario Ry. to build farm crossing for Wm. McCoy, Richmond, Ont.

24526. Dec. 1.—Extending, to Jan. 6, 1916, time within which C.P.R. shall install gates, in the meantime crossing of Symington Ave., Toronto, to be protected by day and night watchmen, wages to be paid, half each, by C.P.R. and City of Toronto; and reserving question of C.P.R. indemnifying city against damages during said extension.

24527. Dec. 3.—Authorizing G.T.R. to rebuild bridge carrying road over main line at mileage 326.14 from Montreal, near Scarborough Jct., Ont.

24528. Dec. 4.—Relieving C.P.R. from providing further protection at highway at mileage 21.4, Sharbot Lake, Oso Tp., Ont.

24529. Dec. 4.—Amending order 24327, Oct. 18, re Canadian Northern Ontario Ry. crossing of Front St., Trenton.

24530. Dec. 1.—Authorizing C.P.R. to divert road allowance at mileage 62.4, Swift Current Subdivision.

24531. Dec. 4.—Ordering that rebuilding by C.P.R. of crossing on its Reston-Wolsley Branch, between Secs. 4 and 9-11-33, w. 1 m., conform to standard regulations and be completed by May 1, 1916.

24532. Oct. 13.—Extending, for one month from date, time within which independent telephone companies may apply for leave to appeal to Supreme Court of Canada in respect of any question of law which, in opinion of the Board, may arise in connection with general order 149, Sept. 14.

24533. Dec. 9.—Authorizing independent telephone companies to appeal to Supreme Court of Canada upon certain questions of law.

24534 to 24540. Dec. 4.—Approving Bell Telephone Co. agreements with Ste. Cecile de Whitton La Compagnie de Telephone Ste. Cecile Telephone Co., Nov. 5; Wroxeter Rural Telephone Co., Nov. 8; Norfolk County Telephone Co., No. 9; Aldborough Farmers' Telephone Association, Nov. 16; Hawthorne Hill Rural Telephone Co., Oct. 19; Conn Telephone Co., Nov. 23; and Prescott Rural Telephone Co., Nov. 9.

24541. Dec. 9.—Dismissing application of D. D. Campbell, Claims Agent, Winnipeg, on behalf of H. H. Blackburn, for adjustment of freight charges on 18 cars of ties from Bannock, Sask., to Pas, Man.

24542. Dec. 9.—Amending order 23190, Jan. 20, authorizing Nelson and Fort Sheppard Ry. (G.N.R.) to discontinue stopping its trains on flag at Benson and Ross spur, B.C., and authorizing it to stop there on flag.

24543. Dec. 11.—Ordering that 10 days prior notice of any change in a railway company's passenger train service, as provided by circular 139, be dispensed with in application of Great Northern Ry. to change time of leaving of train no. 385 out of Rossland, from 10 to 9 a.m.

24544. Dec. 9.—Authorizing Canadian Northern Ry. to build highway over the Northern Pacific and Manitoba Ry. Hope Farm spur along southerly limit of Dominion Government road allowance lying to north of Lot 191, St. Agathe Parish, Montcalm municipality; cost and maintenance to be paid by Montcalm municipality, Man.

24545. Dec. 9.—Authorizing Canadian Northern Ry. to build highway over its line along westerly limit of Lot 78, St. Norbert Parish, Fort Garry municipality; cost and maintenance to be paid by Ft. Garry municipality; work to be completed by June 1, 1916.

24546. Dec. 7.—Authorizing Bell Telephone Co. to make certain charges in case telephone installations for clergymen and religious institutions.

24547. Dec. 9.—Extending, to Feb. 1, 1916, time within which Esquimalt and Nanaimo Ry. shall install bell at Comox Road, Nanaimo, as required by order 24158, Sept. 8.

24548. Dec. 9.—Relieving Campbellford, Lake Ontario and Western Ry. (C.P.R.) and Canadian Northern Ontario Ry. from maintaining night signalmen to operate interlocking plant at crossings at mileage 1.05 and 0.55 of spur, on east side of Trent River, Trenton, Ont.; home signals and derails be set clear for, and key of tower left with C.N.O.R.

24549. Dec. 10.—Amending order 24211, Sept. 27, re Canadian Northern Ry. crossing of May St., Port Arthur, Ont.

24550. Dec. 13.—Deferring until further order the effective date of item on page four of C.P.R. Supplement 59, to C.R.C. no. W-1806, providing for minimum of 35,000 lbs. on fir, spruce, hemlock and common cedar lumber, and articles taking lumber rates, in cars under 36 ft. long.

24551. Dec. 9.—Authorizing C.P.R. to build siding for French Government Remount Depot at mileage 156.9, Quebec Subdivision, crossing Bell's Road at grade.

Elevator Track Laying Dispute at Fort William.

Winnipeg press dispatch, Dec. 21: "Canadian Pacific Ry. officials are incensed at the action taken by the Canadian Government Railways officers at Fort William on Dec. 20. The Superintendent of the Canadian Government Railways proceeded with a gang of men to lay a track across private property to a terminal elevator on the C.P.R. tracks, in the face, officials claim, of the repeated decisions of the Board of Railway Commissioners that such action would not be tolerated on the part of any railway company. The C.P.R. had the Government Railways officers arrested, and secured an injunction restraining them from further procedure. The C.P.R. people contend that storage in terminal elevators on its tracks, apart from the Government elevators, should be reserved for farmers loading grain at interior points on its lines. The C.P.R. also contends that the Canadian Government Railways has enough grain in sight to fill the Grand Trunk Pacific elevator at Fort William, and arbitrarily decided to avail itself of storage located on C.P.R. tracks, which would have the effect of preventing shippers on the C.P.R. loading for Fort William for lack of storage. C.P.R. officials state they will fight the matter to a finish."

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—Track laying is reported to be in progress since Nov. 20. Work was started at mileage 135, about 27 miles north of Lac La Biche. The whole of the grading on the line is reported to have been completed with the exception of some cuts at Fort McMurray, work on which is in progress. (Dec., 1915, pg. 469.)

Canadian Pacific Ry.—The superstructure of the new station which the company is building in North Toronto for joint occupation with the Canadian Northern Ry., is rapidly taking shape. The Lyall Construction Co. has the contract. A full description of the building, with perspective and ground floor plans, was given in Canadian Railway and Marine World, Aug., 1915, pg. 292.

We are officially advised that track has been laid easterly from Foremost, Alberta, to Pakowki, 22.3 miles, on the Weyburn-Lethbridge branch.

The Calgary and Edmonton Ry. Co. is applying to the Dominion Parliament for an extension of time for building the following lines:—From its Macleod branch in tp. 19, 20 or 21, westerly to the south branch of Sheep Creek, range 4, west 5th meridian, with a branch to the north branch of Sheep Creek in ranges 2, 3 or 4 west 5th meridian, and a second branch to Trap Creek, range 6 west 5th meridian.

The junction between the east and west headings of the tunnel at Rogers Pass, was made Dec. 19, in the main tunnel. The boring of the pioneer tunnel was completed some time ago.

A contract for the reroofing of the freight shed on pier A, Vancouver, at an estimated cost of \$10,000, is expected to be let at an early date, according to a press report.

The Dominion Parliament is being asked to extend the time for the building of the following lines: From the Pheasant Hills branch in tps. 36 or 4, range 19 or 20 west 3rd meridian, northerly and westerly to Battle River, on to a junction with the Calgary and Edmonton Ry.'s Lacombe extension in tp. 36, 37 or 38, range 11, 12 or 13 west 4th meridian, 180 miles; from tp. 6, 7, 8 or 9, range 30 west 2nd meridian, westerly to a junction with the Crownsnest Pass line, 350 miles, or to a junction with the Alberta Ry. and Irrigation Co.'s line at Sterling, Alberta; from Sedgewick, on the Hardisty subdivision, southerly, to tp. 39 or 40, range 11, 12 or 13 west 4th meridian, Alberta; from Irricana easterly and south easterly to tp. 20 or 21, range 11 or 12 west 4th meridian, Alberta; from Killam, northwesterly to Strathcona, Alberta. (Dec., 1915, pg. 469.)

Central Canada Ry.—We are officially advised that track laying was completed to mileage 43, from McLennan, the junction with the Edmonton, Dunvegan and British Columbia Ry., on Nov. 26, and would be completed to Heart River, mileage 48, a few days thereafter. Track laying was then to cease, pending the erection of the bridge across Heart River, which it was expected would occupy a couple of months. A later press report stated that work on the erection of the bridge was started early in December, but we were officially advised Dec. 13 that the Board of Railway Commissioners had not agreed to the plans. (Dec., 1915, pg. 469.)

Dominion Government Ry. to Hudson Bay.—Grading is reported to be fully completed from Manitou Rapids, mileage 242 from Pas, Man., to which point a weekly train service is in operation, for a further distance of 50 miles to Kettle Rapids, Nelson River. The steel work for the superstructure of this bridge will, it is reported, be taken in overland during the winter, and assembled ready

for erection as soon as the Manitou Rapids bridge is completed.

Since the above was put in type we are officially advised that work on the line is practically closed down for the winter, with the exception of the erection of the steel superstructure for the bridge across the Nelson River at Manitou Rapids. All the material has been delivered and the Canadian Bridge Co., which has the contract, is proceeding with the erection. (Dec., 1915, pg. 469.)

Edmonton, Dunvegan and British Columbia Ry.—We are officially advised that the contract for the substructure of the bridge across Big Smoky River, mileage 297.3, from Edmonton, Alberta, has been let to McPherson and Quigley, Edmonton. This consists of eight pedestals and two abutments of reinforced concrete. The contract for the steel superstructure has been let to the Dominion Bridge Co. This consists of the following spans: One 88 ft. 5 in. deck plate girder; 5 rivetted deck truss spans of 128 ft. each; 1 through truss span of 125 ft.; one 128 ft. rivetted deck truss span, and one 88 ft. 5 in. deck plate girder, a total length of 1,059 ft. 10 in. The bridge is approached from Edmonton by a 7 degree curve, terminating about 500 ft. from the first abutment. The base of the deck plate girder spans is 13 ft. 1 in.; the deck truss spans 7 ft. 2 in.; and the through span over the main channel, 16 ft. 7 in., above extreme high water level. The erection of the bridge is being proceeded with, and it is expected to have it completed early in the spring.

A press report states that tracklaying is being proceeded with on the west side of the Smoky River towards the Spirit River.

Grading on the Grande Prairie branch is reported completed with the exception of a couple of small cuts of about 500 yards long at mileage 24. (Dec., 1915, pg. 469.)

Grand Trunk Ry.—We are officially advised that the new freight shed at St. Catharines, Ont., is practically completed, and the team tracks in connection with it entirely so. (Dec., 1915, pg. 469.)

We are officially advised that the steel and brick freight house, nearing completion at St. Catharines, Ont., is 300 x 40 ft. There is a machinery platform at one end 50 x 40 ft.; and 2 additional team tracks have been installed with a capacity of 20 cars each. The freight office is inside the shed.

Grand Trunk Pacific Ry.—We were officially advised recently that the company expected to lay the track on its spur line to connect with the Dominion Government elevator at Moose Jaw by Dec. 31, 1915.

Great Northern Ry. Lines in Canada.—A bridge has been erected at a reported cost of \$60,000 on the Vancouver, Victoria and Eastern Ry. branch to the Granby smelter.

Preparatory work on the site of the new station at False Creek, Vancouver, was started Nov. 25, when test piles were driven at various spots. (Dec., 1915, pg. 469.)

Greater Winnipeg Water District.—The Department of Public Works' sanction is being asked to the plans under which the Greater Winnipeg Water District water supply works are being constructed. The works already completed include a railway of 95 miles from St. Boniface to Shoal Lake, a branch of the Lake of the Woods. (Dec., 1915, pg. 470.)

Intercolonial Ry.—We are officially advised that grading, track laying and ballasting has been completed on the branch line from near Dartmouth, N.S., to the Musquodoboit Valley, except one span of a bridge

which was expected to be done by Dec. 31. It is expected that construction will be started at an early date on the station houses and water tanks. W. A. Hendry, Dartmouth, N.S., is Engineer in Charge.

We are advised that about a year ago the Canadian Government Railways' engineering department made a survey for a line from Sydney via the shore of the Bras d'Or Lakes to St. Peters, N.S., the terminus of the Cape Breton Ry. Further surveys are reported to have been made in 1915. They are for the purpose of securing a better line than the existing one between the Strait of Canso and the Sydneys. (Dec., 1915, pg. 470.)

Kettle Valley Lines.—The Dominion Parliament is being asked to extend the time for the building of the following lines:—From near Otter Summit to the Aspen Grove mineral district, not exceeding 30 miles; from a point 50 miles from the north fork of the Kettle River to Fire Valley, northwesterly through the valley to Vernon, and on to a junction with the Nicola, Kamloops and Similkameen Ry., near Quilchena; from the junction of the east and west fork of the north fork of the Little River, on the last mentioned line, northwesterly to Franklin camp, and on to Killarney; from Hedley, on the line authorized to be built between Midway and Hedley northerly along Twenty Mile Creek for 20 miles. (Dec., 1915, pg. 475.)

We are officially advised that there are now less than 2 miles of track to be laid on the Coquihalla section. When this is completed the company will have a continuous track from Midway, the present terminus of the C.P.R. Crownsnest line, to a connection with the C.P.R. transcontinental line, about 2 miles west of Hope station, in all about 300 miles. This is entirely new construction, as also is the branch from Brodie to Merritt, 23 miles, giving connection with the C.P.R. branch from Spences Bridge to Merritt.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Track was laid during 1915 on a branch line in North Dakota, from Van Hook to Sanish.

Moncton and Buctouche Ry.—We are officially advised that the company has in prospect a project for the extension of the line from Buctouche to Loggieville, N.B., 59 miles. Some surveys for this line have been made. E. G. Evans, Moncton, N.B., is General Manager.

Naas and Skeena Rivers Ry.—The British Columbia Legislature is being asked to extend the time for the building of this projected railway from Nasoga Gulf or Naas Bay on Portland Inlet, to the headwaters of the Skeena River. The provisional directors named in the act of incorporation which was passed in 1911, are:—G. H. Barnard, H. B. Robertson, Victoria; R. Campbell-Johnston, Vancouver; L. Benoit, Winnipeg; J. G. Scott, J. T. Ross, L. P. Pelletier, P. A. Choquette, G. LeMorne, Hon. N. Garneau (since deceased), A. E. Doucet, A. Gauvreau, O. E. Gauvreau, A. Hardy, J. G. Dube, C. E. Taschereau, W. Doheny, G. Proteau, Quebec, and B. Newgass, London, Eng. (Dec., 1911, pg. 1,139.)

Newfoundland Ry. and Train Ferry Syndicate.—The Newfoundland Legislature last session passed an act providing that in computing the time for the commencement and completion of the works authorized by sec. 4 of the act of 1914, and the lines limited by sections 12, 16, 17 and 19 of the same act, with regard to importation of supplies, plant, exclusive franchise and determination of rights respectively, the period between Aug. 4, 1914, and the date of the

issue of a proclamation that a state of war no longer exists between Great Britain and the countries with which hostilities are at present pending, shall not be counted or taken into consideration.

The original act provided that the syndicate, whose representative is H. C. Thompson, should have power to construct a railway across the isthmus of Avalton from Rantem or some other suitable point on Trimby Bay to Little Southern Harbor on Placentia Bay, and to operate a train ferry therefrom to Louisburg, N.S.; to construct a railway from Humbermouth, Bay of Islands, to South West Arm, Green Bay, with a branch to White Bay, and to operate a train ferry to Gaspé, Que. The act set out that this latter railway had been approximately located, and provided for the granting of a right of way 200 ft. wide for the same from unoccupied crown lands, a block of land five square miles in extent, with a sea frontage of one mile, if available, at each of the proposed terminal points, such lands not to be granted until the completion of the railway line or lines. The first line to be commenced within three years (sec. 4), and to be completed within four years from the date of the passing of the act; the second line to be commenced within five years from the completion of the first, and to be completed within three years from the date of its commencement. All construction plant and equipment necessary for the construction and establishment of the railways, train ferries, and train ferry slips is to be admitted free of duty, except in so far as they are to replace original stock. For 20 years (sec. 12) from the date of passing of the act the syndicate can import, free of duty, the plant necessary for the original construction of cold storage and other purposes in order to develop traffic for its line. The syndicate, by sec. 16, is to furnish plans for its projected lines within two years, and by sec. 17, the Government agrees not to grant franchises to any other company or companies for lines within these areas. The syndicate may assign its rights to any company necessary for the carrying out of the plans.

The effect of the act passed last session is to substitute for the date of the passing of the act of 1914, the date of the proclamation of the ending of the present war, as the initial date for the commencement of the franchise. (May, 1914, pg. 214.)

Ontario Niagara Connecting Bridge Co.—The Dominion Parliament is being asked to incorporate a company with this title, to construct a railway and general traffic bridge with approaches and terminal facilities, over the Niagara River, at some point between the intersection of the northerly boundary of Welland County with the Niagara River, and the intersection of a line running east and west parallel to such boundary line, and distant 6,000 ft. southerly therefrom. A. Fraser, Niagara Falls, Ont., solicitor for applicants.

Pacific Great Eastern Ry.—Tracklaying was reported, Dec. 14, to have reached to within half a mile of Clinton, B.C., about 47 miles northeasterly from Lillooet, to which point track was laid in 1914. Construction is reported as being practically completed on the two bridges on the Squamish side of Clinton. (Oct., 1915, pg. 392.)

Peace River Tramway and Navigation Co.—The Dominion Parliament is being asked to extend the time for the building of the projected tramways, at Peace River Chutes, and Slave River Falls, Alta. (Sept., pg. 346.)

Quebec Central Ry.—In 1906 the Quebec Legislature passed an act, in the preamble of which it was stated that owing to the spring inundations and floods in the Chandiere Valley, the portion of its line from

Beauce Jct. and Beauceville could not be operated satisfactorily, and the enacting sections gave the company power to build and operate the Quebec Chandiere Extension, "by diverting and rebuilding that portion of the present line from Beauce Jct. to Beauceville," and thence on to a junction with the Temiscouata Ry., 175 miles. In accordance with this act the Beauce Jct.-Beauceville Branch was abandoned, and a new line built, the connecting point with the main line being now known as Valley Jct. Up to the end of 1914, track had been laid on this line to St. Camille, 61 miles from Valley Jct., and during 1915 track was laid for a further distance of 14 miles to English Lake. Application is now being made to the Quebec Legislature for an extension of time for the completion of the line to Cabano. The next section to be built, we are officially advised, will be that from English Lake to Droune Tp., L'Islet County, 25 miles. J. H. Walsh, Sherbrooke, Que., is General Manager. (Sept., 1914, pg. 419.)

Quebec, Montreal and Southern Ry.—The Dominion Parliament is being asked for an extension of time for the construction of the projected extension of the Q., M. and S. R. from Noyan Jct. to the International Boundary, and for the completion of any line which the old South Shore Ry. was authorized to construct.

Reid Newfoundland Ry.—Of the branch line construction authorized by the act of 1912, there are still uncompleted:—Baie de Verde Branch from Carbonear to Grates Cove, 45 miles; Fortune Bay Branch, from Goobies to Terranceville, 60 miles, and Bonne Bay Branch, from Deer Lake to Bonne Bay, 45 miles. Track has been laid on the first of these three branches, and a temporary train service is being operated, but the snow fences, sidings and station platforms are not completed. On the Fortune Bay Branch track has been laid for 43 miles, but no construction was done during 1915. Some grading has been done on the Bonne Bay Branch, but nothing was done during 1915. (Sept., 1915, pg. 341.)

St. John and Quebec Ry.—Tenders for the construction and equipment (without rolling stock) of the uncompleted portions of this railway were received by I. R. Todd, President, Dec. 30. The tenderers were asked to submit a price per mile for a complete line of railway, ready for operation, in accordance with plans, profiles and specifications preferred and approved by the New Brunswick Government which is financing construction, and by the Dominion Government which will operate the line under lease. The sections for the building of which tenders were asked are:—Gageville to St. John, N.B., 52.00 miles, and Centreville to Andover, N.B., 25.5 miles. (Oct., 1915, pg. 396.)

Toronto Terminals Ry. Co.—Considerable work has been done on the foundations for the new union station on Front St., Toronto, by the Lyall Construction Co. The rock to which the foundations are being carried is 6 ft. below water level. About 200 caissons have been prepared and sunk into position, and the greater part of the concrete filling has been put in place. It is expected that the basement section of the building will have been finished by Mar. 1, and that actual erection of the superstructure will be started in the spring.

Reduction of Scotch Railway Service.—A London, Eng., press dispatch, Dec. 23, stated that, as an effect of the war, there has been a drastic curtailment in passenger service on all railways in Scotland. From Jan. 1, it is stated, practically all passenger traffic will be suspended after 9 p.m., owing to depleted staffs and to shortage of locomotives.

Traffic Orders by the Board of Railway Commissioners.

Switching Cars at Kelowna, B.C.

24480. Nov. 24. Re complaint of Kelowna Board of Trade against the charge of \$2.50 a car made by C.P.R. for switching cars between the car barge and land team tracks, or private sidings, at Kelowna, B.C., it is ordered that the C.P.R. be authorized to make a charge of \$1.75 a car for the additional service of switching cars between the dock and land team tracks and private sidings at Kelowna, and to publish and file an amendment to its Tariff C.R.C. no. W-2027 accordingly.

Apple and Potato Rates to Halifax.

24489. Nov. 27. Re complaint of United Fruit Growers, the Nova Scotia Fruit Growers, and the King's County Board of Trade against the advanced rates on apples and potatoes to Halifax for export; and order 24313, Oct. 16, 1915, suspending the said rates as published in the Dominion Atlantic Ry. tariffs, C.P.R. 454 and C.R.C. 455. Upon hearing the complaint at Kentville, N.S., Oct. 22, 1915, the complainants, the railway company, fruit growers, and apple dealers being represented at the hearing, and upon the report of the Chief Traffic Officer of the Board, it is ordered that the said order 24313 be rescinded; and that the said tariffs may become effective on Dec. 10, 1915.

Suit Over Rogers Pass Tunnel Construction.

The Vancouver Province says:—"The damage claim which McIlwee & Sons, tunnel borers, of Denver, Col., have brought against Foley Bros., Welch & Stewart over the boring of the tunnel at Rogers Pass in the Selkirks, has been increased from \$527,000, which it was at the original trial, to \$642,000. The enlargement in the amount claimed, which was consented to by Mr. Justice Macdonald, is said to be the result of observations on the character of the rock encountered in the big bore. McIlwee & Sons claim that if they had been allowed to complete their contract they would have made larger profits than they at first anticipated owing to the easy nature of the rock encountered. As profits on the pioneer bore the plaintiffs at first claimed at the rate of \$7.63 a foot. This is increased to \$11.44 a foot. Their estimated profits on the centre heading they had placed at \$7.44 a foot; this is increased to \$10.08 a foot. In addition they claim the full amount of the \$250,000 bonus promised for rapid construction.

"At the original trial Mr. Justice Clement found in favor of the defendants for under \$40,000, holding that it was the duty of McIlwee & Sons to return and resume the contract after the defendants had agreed to allow them to resume, six weeks after having cancelled their contract. The Court of Appeal took the contrary view of the law, and held that McIlwee & Sons was not obliged to resume, and sent the case back to the Supreme Court again to assess damages on the basis of the whole contract. This action is being appealed to the Privy Council by Foley Bros., Welch & Stewart.

"In the case preparing for the Supreme Court the defendants have abandoned their original plea that they were justified in cancelling the contract, and are now working entirely on pleas for the mitigation of damages. The plaintiffs amended claim for damages is \$642,000 for loss of profits."

The Northern Pacific Ry. has been sued by the Royal Trust Co., for \$1,200 for two months rent of officers in the Dominion Building, Vancouver.

Canadian Northern Railway Construction, Betterments. Etc.

Canadian Northern Quebec Ry.—We are officially advised that the company is building a line from Arundel to St. Remi, Que., 11 miles, with its own forces and that track has been laid on the first two miles, from Arundel to Rouge River.

Canadian Northern Ontario Ry.—A track at mileage 249.75 from Todmorden, to facilitate the transfer of cars between the C.N.O.R. and the G.T.R. at Ottawa was built some time ago, but has not been used, until the issue of an order by the Board of Railway Commissioners, recently, the G.T.R. having seriously objected.

The Dominion Parliament is being asked to confirm an agreement between the company and the Canadian Pacific Ry. respecting the operation of joint tracks and terminals in Toronto. This agreement covers the building and use of the tracks across the northern part of Toronto, and the new union station in course of construction on Yonge St. (north). The tracks which are joint tracks, and those which are C.N.O.R. or C.P.R., are specifically defined, and the conditions upon which they are to be used by both companies are fully set out, as also are the terms. An agreement for this purpose was before Parliament for ratification last year, but was withdrawn.

The Dominion Parliament is being asked to extend the time for the construction of the following lines: From Toronto via Hamilton and London to Windsor, with a branch to St. Thomas and Sarnia; from near the head of Long Lake northwesterly to a junction with the Transcontinental Ry. east of Lake Nipigon.

The Dominion Parliament is also being asked to approve an agreement between the company, and the Canadian Northern Ry., on the one hand and the Canadian Pacific Ry. on the other, respecting the use of joint tracks at Port Arthur. Among the lines affected by this agreement are the two miles of the C.P.R., which are being operated over and connecting the Canadian Northern eastern terminal with the westerly end of Canadian Northern Ontario. The switch connecting the C.N.R. with the C.P.R. was reported installed Dec. 4.

Toronto, Niagara and Western Ry.—The Dominion Parliament is being asked to extend the time for the building of the following lines: From Toronto to Hamilton; from Hamilton to the International Boundary near Grand Island, or Niagara Falls, Ont., and, with the consent of the proper authorities, to a point in New York State, with branch lines from St. Catharines to Welland; and from Hamilton, via Brantford, Woodstock, London and Chatham, to Windsor.

Canadian Northern Ry.—In a recent interview at Port Arthur, Ont., M. H. MacLeod, General Manager and Chief Engineer, is reported to have said that from time to time improvements would be made on the roadbed, as the necessities of traffic demanded. The attention of the officers of the line would have, he is said to have added, to be given very shortly to the necessity for building second track between Port Arthur and Winnipeg.

The Dominion Parliament is being asked to extend the time for the building of the projected line from near Grosse Isle on the company's Oak Point branch, northerly and westerly to Grand Rapids, with a branch to Sturgeon Bay, Man.

We are officially advised that the company has under construction the following lines in Saskatchewan: An extension of the Elrose branch from its present terminus at Eston, westerly for 35 miles; an extension

of the line now terminating at Preeceville, Sask., for 25 miles westerly.

We are officially advised that track has been laid on 43 miles of the extension of the line southeasterly from Camrose, the grading on which has been completed to the Battle River, 60 miles from Camrose, Alberta. A press report says that track-laying work will be completed to the Battle River before the work is stopped. We are also advised that grading is in progress for a further distance of 23 miles. The line is projected southeasterly to a junction with the Saskatoon-Calgary line near Sibbald, and is being built under the Canadian Northern Western Ry.'s charter. Under this charter there is also being built a line from Oliver to St. Paul de Melis. R. H. Douglas, engineer, Alberta Department of Railways, is reported to have said recently that 80 miles had been practically completed on the Oliver-St. Paul de Metis branch, and that it was expected to complete the grading on a further eight miles by Dec. 1. This would take the grading to between ranges 13 and 14.

The line to Peace River branches off from the transcontinental line at Onoway and is in operation to San Guido on the Pembina River, 65 miles from Edmonton. A second lift of ballast was given during the past season. The bridge across the Pembina River is completed and some track is reported to have been laid from the bridge towards the MacLeod River, the grading to which point is completed.

The other line in Alberta upon which work is in progress is from Calgary to Pincher Creek, 141 miles.

The contractors engaged on the several lines are: Northern Construction Co., Winnipeg and Western Construction Co., W. J. Cowan, and D. F. McArthur, all having headquarters in Winnipeg.

Canadian Northern Pacific Ry.—A press report states that an arrangement has been reached between the company and the authorities interested in the Vancouver area respecting the manner of carrying the company's tracks across the harbor. The method of crossing will, it is said, be by a bridge.

A writ was issued, Dec. 2, at the instance of Champion and French, against the C.N.P. Ry., and the Vancouver City Council, asking for a declaration that the plaintiffs were entitled to the unrestricted use of the foreshore adjoining lots 33 to 36, block 23 on False creek, and for an injunction restraining the company from building a seawall, the contract for which has been let. The plaintiffs own a wharf on the creek, which it is claimed was erected without the permission of the Dominion Government, and that therefore they have no riparian rights. The railway company and the city, however, have a crown grant, and the sea wall is being built under an agreement between the company and the city. The Vancouver Harbor Board passed a resolution on Dec. 3 requiring Champion and White to remove their vessels and scows from the area in question, and authorized the Harbor Master to remove them after a specific date, if they had not then been removed. The case came to a hearing Dec. 9, when Justice Morrison dissolved the injunction. He decided that the building of the sea wall is for the public benefit, but the plaintiffs may be entitled to recover damages.

The Lulu Island branch is located from the westerly approach to the New Westminster bridge, to Steveston, 15.35 miles. It is built from mileage 5.42 to Steveston.

We are officially advised that the uncompleted portion will be proceeded with and completed at an early date. Track connection between the mainland and Lulu Island will be made by an opening span bridge over the north arm of the Fraser River.

Vancouver Island Lines.—We are officially advised that rails for the Victoria-Patricia Bay line, 15.22 miles, will be laid, and the line completed at an early date.

As to the docking facilities to be provided for the car ferry traffic with the mainland, we are informed that all details are not yet settled, but it is expected that wharfage accommodation will be provided both at Patricia Bay and at Woodward, Lulu Island, during next summer. (Dec., 1915, pg. 474.)

Freight and Passenger Traffic Notes.

The C.P.R. proposes to improve its service to Owen Sound, Ont., by running the Hanover-Saugeen Junction train through to that port.

Edmonton, Dunvegan and British Columbia Ry. trains are being operated by telephone, the dispatching office being at Edmonton, Alta.

The Canadian Northern Ry. Peace River Branch bi-weekly service from Onoway to Bangor, Alberta, is, it is reported, to be made a daily service.

The Dominion Government Railway to Hudson Bay is operating a weekly train service from Pas, Man., to the Manitou Rapids, Nelson River, 242 miles.

The extension of the Canadian Northern Ry.'s Saskatoon-Elrose branch, from Elrose to Eston, Sask., 35 miles, is said to have been given a bi-weekly service.

The C.P.R. train service between Lardo and Gerrard, B.C., and the steam boat service on Trout Lake was discontinued, Nov. 30. It is reported that the rolling stock is to be removed and the service abandoned indefinitely.

The Canadian Government Railways management is said to be arranging for the through haulage of wheat from Winnipeg, Man., to Moncton, N.B., by the National Transcontinental Ry., and then on to St. John, N.B., by the Intercolonial Ry.

The G.T.R. has inaugurated a new sleeping car service between Sherbrooke and Montreal, each night, including Sundays. The cars are ready for occupancy at 10 p.m., and the train leaves Sherbrooke at 3.15 a.m., arriving at Montreal at 7.25 a.m.

The Canadian Northern Ry.'s liability to pay a business tax on offices in Winnipeg has been questioned. The company claims it is exempt under an agreement made when it took over the old Red River Ry. The question is before Judge Macdonald as referee.

The Canadian Northern Ry. has opened a downtown ticket office on Hastings St., Vancouver, B.C., adjoining the Great Northern Ry. office. A temporary ticket office has been opened at 172 Hastings St. West. Freight matters will be attended to at a temporary office in the Metropolitan Building.

The Intercolonial Ry. freight office in Quebec City was transferred from the terminal at the foot of Jarvis St., to the C.P.R. Palais station, on Dec. 1. When the new union station now under construction is completed the entire freight business of the Canadian Government Railways will, it is said, be concentrated there.

A steel truss bridge over the Spokane River at Spokane, Wash., collapsed on Dec. 18 under two passing electric cars. Seven persons were killed and 10 injured.

Mainly About Railway People Throughout Canada.

Sir Thomas and Lady Tait celebrated the 25th anniversary of their wedding at Montreal, Dec. 10.

C. C. Goodrich, President, Twin City Rapid Transit Co., died at Minneapolis, Minn., Dec. 21.

F. J. Moss, Emigration Agent, Canadian Northern Ry., London, England, has joined Canadian Pay and Record Office staff, temporarily.

Hugh Fleming, who has been appointed a captain in the Army Service Corps, is a son of the late **Sir Sandford Fleming**, a director of the C.P.R.

Mrs. A. H. Dunlap, who died in Toronto, Dec. 14, aged 86, was the mother in law of **Hon. Frank Cochrane**, M.P., Minister of Railways and Canals.

H. G. Elliott, formerly General Passenger Agent, Grand Trunk Ry., has been elected an honorary member of the American Association of Passenger Traffic Officers.

James Dunsmuir, director, C.P.R., has promised to contribute \$1,000 a month, during the continuation of the war, to the Patriotic Aid Society in British Columbia.

Countess Jacques de Lesseps, daughter of **Sir William Mackenzie**, President, Canadian Northern Ry., is giving her services as a nurse in one of the military hospitals in Paris, France.

T. W. Connette, Assistant Superintendent of Transportation, Buffalo Division, International Ry., Buffalo, N.Y., has been appointed Superintendent of Transportation of the division.

R. H. Crew, General Yardmaster, G.T.R., Mimico, Ont., died suddenly, following an attack of apoplexy, Dec. 7, aged 55. At the time of the seizure he was inspecting the company's East Toronto yards.

T. H. White, M.Can.Soc.C.E., Chief Engineer, Canadian Northern Pacific Ry., Vancouver, B.C., has been elected Chairman of the Canadian Society of Civil Engineers' recently organized British Columbia division.

Wm. L. Crawford, who was for many years associated with the late H. M. Flagler in the development of Florida, and was for many years General Manager of the Florida East Coast Ry., died in Garwood, N.J., Nov. 13, aged 74.

Wm. Downie, formerly General Superintendent, Atlantic Division, Canadian Pacific Ry., St. John, N.B., who was operated on in Toronto, Nov. 1, for gall stones, was able to leave the hospital on Dec. 16 and to return to his home at Whitby, Ont.

G. Goodwin, who died at Ottawa, Nov. 29, aged 72, was, before he retired from active life, a general builder and contractor, and was at various times connected with the construction of railways, canals, locks and other transportation facilities.

Mrs. Goodfellow, wife of **John Goodfellow**, Superintendent, Esquimalt and Nanaimo Ry., Victoria, B.C., died there, Dec. 5, after a year's illness. She was a native of Dalhousie, N.B., and resided in Vancouver for a short while before removing to Victoria in 1905.

Mrs. Johnson, widow of the late **Lacey R. Johnson**, General Welfare Agent, Canadian Pacific Ry., Montreal, is taking an active part in providing Christmas cheer for the wives and families of men of the Montreal Heavy Artillery Brigade who are on active service.

Mrs. Alfred T. Shaughnessy, of Montreal, has left for England with her children to join **Capt. Shaughnessy**, son of **Sir Thos. G. Shaughnessy**, and who is in the 60th Bat-

talion. One of **Sir Thomas'** sons in law, **Lieut. R. M. Redmond**, is with the same battalion.

Paul F. Sise, Vice President, Northern Electric Co., Ltd., Montreal, is on service with the 148th Battalion, Canadian Overseas Expeditionary Forces, with the rank of captain and adjutant. The battalion's present headquarters are the old High School building on Peel St., Montreal.

D. A. MacDonald, who died at Regina, Sask., Dec. 11, aged 58, was engaged on construction work on the C.P.R., when the line to the west was being built. He gave up this work in 1882, when the line had reached Moose Jaw, and returned to Regina, where he settled.

T. E. Doyle, who died recently at Kenora, Ont., worked on the construction of the C.P.R. in its early days, between Fort Wil-

Gordon St. G. Sproule,
Engineer of Tests, Canadian Pacific Railway.

liam and the Rockies, and was section foreman at Kenora, Ont., for 15 years, and Roadmaster, Banff, Alta., for some time before retiring from active service.

L. C. Ord, Assistant Works Manager of Car Shops, C.P.R., Montreal, having been appointed a Lieutenant on No. 1 Overseas Battery of Siege Artillery, Canadian Expeditionary Force, has been granted extended leave of absence. He sailed from Halifax, N.S., for Europe, Nov. 22.

W. H. Williams, Vice President, Delaware & Hudson Co., has been elected Chairman of the Board of Directors and Chairman of the Executive Committee of the newly reorganized Wabash Co. He will continue his work as Vice President of the Delaware & Hudson.

Lieut. H. F. H. Hertzog, Jr., M.Can.Soc.C.E., of the Royal Canadian Engineers, who is on active service in Europe, and who has been promoted to the rank of Captain, is a son of **A. L. Hertberg**, M.Can.Soc.C.E., Division Engineer, C.P.R., Toronto, and was formerly with the Trussed Concrete Steel Co. of Canada, Walkerville, Ont.

Hon. Frank Cochrane, Minister of Railways and Canals, left Ottawa, Dec. 30, for England to see his two sons before they go to the front in France. He will probably visit the front before returning, and is expected back in Ottawa about the end of January.

Thos. R. Burpee, who was secretary to the late **Sir Sandford Fleming**, when the latter was Chief Engineer of the Intercolonial Ry. and of the Canadian Pacific Ry. prior to the latter road passing into the hands of the present company, and who was subsequently Deputy Dominion Lands Commissioner at Winnipeg for some years, died in Ottawa, Dec. 1.

Edward FitzGerald, Assistant General Purchasing Agent, Canadian Pacific Ry., who has been acting, since May, 1915, as Purchasing Agent for the British War Office, has removed with his staff from 114 Windsor St. Station, Montreal, to Ottawa, where he is also acting in connection with the Imperial Munitions Board.

The Hon. Angus McDonnell, who has been living in Vancouver, B.C., for several years, during part of which time he was a partner in the railway contracting firm of **Grant Smith and McDonnell**, has left for his family's seat, **Glenarms Castle**, County Antrim, Ireland. **Lord Dunluce**, his eldest brother, was killed recently in France, and **Mr. McDonnell** intends to join the army.

W. P. Hinton, Traffic Manager, Grand Trunk Pacific Ry., and Western Traffic Manager, Canadian Government Railways, was the guest of the Winnipeg Transportation Club, Nov. 30, on his return to Winnipeg, to take up his new appointments. From Apr., 1909, to Oct., 1914, he resided in Winnipeg, where he occupied the positions of General Passenger Agent and Assistant Passenger Traffic Manager, G.T.P.R., consecutively.

Sir Thomas Tait, President, **Fredericton and Grand Lake Coal & Ry. Co.**, is President of the Citizens Recruiting Association (English speaking section), which has its headquarters in Montreal, and of which **Sir Thos. G. Shaughnessy** is Honorary President. He is taking a very active part in the work, which covers the 4th divisional area, that is the western part of the Province of Quebec.

Edward James Worth, who has been appointed Car Service Agent, Atlantic Division, C.P.R., St. John, N.B., was born at Toronto, July 29, 1887, and entered C.P.R. service, Apr. 5, 1905, since when he has been, to June, 1907, operator at various points on the Ontario Division; June, 1907, to Mar., 1908, operator, Moose Jaw, Sask.; Mar. to July, 1908, operator at various points on the Ontario Division; July, 1908, to Apr., 1914, dispatcher, London, Ont.; Apr., 1914, to Jan., 1915, Train and Station Inspector, Toronto; Jan. to Dec. 1, 1915, dispatcher, London, Ont.

A. J. Gayfer, whose appointment as Division Engineer, Canadian Northern Ry., **Hornepayne**, Ont., was announced in a recent issue, was formerly on **Mackenzie, Mann and Co.**'s engineering staff, and from 1898 to 1899, was engaged on surveys between **Fort Frances**, Ont., and **Winnipeg**; 1899 to 1902, office assistant to Division Engineer of Construction for the same territory. From 1902 to 1911 on construction work, **Grand Trunk Pacific Ry.**, and returned to **Mackenzie, Mann and Co.**'s staff, working on the **Canadian Northern** main line east of **Port Arthur** until 1912, when he was appointed Division Engineer on construction, **Port Arthur District**, which position he held until his present appointment.

Thomas James Hennessey, formerly Division Master Mechanic, Michigan Central Rd., Bay City, Mich., died Dec. 4. He was born at London, Ont., Jan. 1, 1845, and entered M. C.R. service in October, 1872, since when he was, to Apr., 1874, locomotive foreman; Apr., 1874, to Sept. 1, 1889, locomotive driver; Sept. 1, 1889, to May 20, 1893, Travelling Engineer; May 20, 1893, to May 1, 1896, Division Master Mechanic, Detroit, Mich.; May 1, 1896, to Jan. 1, 1902, Division Master Mechanic, Jackson, Mich.; Jan. 1, 1902, to Feb. 1, 1915, Division Master Mechanic, Bay City, Mich. On account of reaching the age limit, he retired from active service Feb. 1, 1915.

Kenneth deSola Joseph, whose appointment as Assistant Trainmaster, District 1, Atlantic Division, C.P.R., Brownville Jct., Me., was announced in our last issue, was born at Quebec, Que., Oct. 6, 1892, and entered C.P.R. service, May 6, 1910, since when he has been, to Aug. 31, 1912, chairman, Marquette, Man.; May 1, 1913, to Nov. 15, 1915, transportation student, Eastern Lines, C.P.R., and following the special course of training in connection with the engineering course at McGill University, except for the period from Nov. 1, 1913, to Apr. 1, 1914, when he was telegraph operator, Lake Superior Division, C.P.R.

W. P. Wilgar, B.A.Sc., M.Can.Soc.C.E., who was on the National Transcontinental Ry.'s engineering staff from 1905 to 1914 as locating engineer, Division Engineer and Assistant District Engineer respectively, and who was appointed in Sept., 1914, as Professor of Civil Engineering, Queens University, Kingston, Ont., is now performing military service. On Mar. 15, 1915, he was appointed Captain in the Canadian Engineers, and on Sept. 11, 1915, was appointed temporary Major while commanding the 5th Field Company, Canadian Engineers, at Kingston. He is now Officer Commanding Instruction, Canadian Engineers Training Depot, Ottawa.

Albert Charles Harris, Superintendent, Welland Ship Canal Construction Ry., whose article describing the line appears on another page of this issue, was born at Stratford, Ont., Jan. 23, 1888. He entered railway service May 17, 1905, since when he has been consecutively, to Oct. 18, 1908, machinist, Grand Trunk Ry. shops, Stratford; Oct. 19, 1908, to July 10, 1909, assistant agent, G.T.R., Drumbo, Ont.; July 10, 1909, to Aug. 1910, telegraph operator, G.T.R., Ridgeway, Ont.; Aug., 1910, to July 18, 1912, operator and ticket agent, G.T.R., Goderich, Ont.; July 18, 1912, to April 21, 1914, operator and relieving dispatcher, G.T.R., Stratford; May 4, 1914, to date, Superintendent, Welland Ship Canal Construction Ry., Homer, Ont.

Henry Eugene Haanel, who was appointed Trainmaster, District 1, Saskatchewan Division, Regina, recently, was born at Cobourg, Ont., Nov. 2, 1880, and entered transportation service, April, 1901, since when he has been, to July, 1901, stenographer, Canadian Northern Express and Telegraph Cos., Winnipeg; July, 1901, to Sept., 1903, chief clerk, same companies, Winnipeg; Sept., 1903, to Aug., 1904, chief clerk in yard office, Canadian Northern Ry., Winnipeg; Aug., 1904, to Apr., 1905, West Yard Agent, C.N.R., Winnipeg; Apr., 1905, to May, 1906, chief clerk, District 2, C.N.R., Winnipeg; May, 1906, to Jan., 1907, chief clerk, Winnipeg Terminals, C.P.R., Winnipeg; Jan. to June, 1907, chief clerk, District 4, C.P.R., Brandon, Man.; June to Sept., 1907, chief clerk, Car Service Department, Western Lines, C.P.R., Winnipeg; Sept., 1907, to Dec., 1910, chief clerk to General Superintendent, Central Division, C.P.R., Winnipeg; Dec., 1910, to Dec., 1912, Trainmaster, District 3, Manitoba Division, Brandon;

Dec., 1912, to Feb., 1913, acting Superintendent, District 3, Manitoba Division, Brandon; Feb., 1913, to the date of his present appointment, Trainmaster, District 1, Manitoba Division, Kenora, Ont.

F. L. Wanklyn, General Executive Assistant, C.P.R., was plaintiff in a recent action against O. Asselin, Montreal, claiming \$15,000 damages for slander while he was a member of the Montreal Board of Control. The action was taken on an article in L'Action, condemning the conditions in the Board of Control as being corrupt and rotten, and naming Mr. Wanklyn as largely responsible. In delivering judgment Justice Greenshields said that citizens sensible of their reputations and jealous of their fellow citizens' regard, will not enter into a public office, feeling that through no fault of theirs, when they issue forth, their reputation will be but a thing of shreds and patches. In awarding nominal damages of \$150, with costs, based on a \$15,000 case, he stated that the plaintiff did not seek a money condemnation, and it must not be thought that the amount awarded was the judge's appreciation in dollars and cents of the value of a public man's reputation.

Harry Thornton Ruhl, whose appointment as Division Engineer, Canadian Government Railways, Moncton, N.B., was announced in our last issue, was born at Mifflinburg, Pa., Sept. 29, 1882, and entered railway service, Sept. 1902, since when he has been, to June, 1904, rodman, C.P.R., Nominigue, Que.; June, 1904, to July, 1905, transit man, Construction Department, C.P.R., Residency 3, Toronto-Sudbury Branch; July to Aug., 1905, transit man on location, C.P.R., Ingersoll, Ont.; Aug. to Oct., 1905, transit man, bridge surveys, C.P.R., Coldwater, Ont.; Oct., 1905, to Jan., 1906, transit man, bridge surveys, Parry Sound, Ont.; Jan. to May, 1906, transit man on location, Parry Sound, Ont.; May, 1906, to Jan., 1908, Resident Engineer on Construction, C.P.R., Point au Baril, Ont.; Jan. to Oct., 1908, Resident Engineer on Construction, C.P.R., Muskoka, Ont.; Oct., 1908, to Nov., 1909, transit man, Maintenance of Way, C.P.R., North Bay, Ont.; Nov., 1909, to Oct., 1911, Resident Engineer, Maintenance of Way, District 1, Sudbury, Ont.; Oct., 1911, to Sept., 1913, Resident Engineer, District 1, Eastern Division, C.P.R., Farnham, Que.; Sept., 1913, to Nov. 20, 1915, Resident Engineer, Maintenance of Way, Intercolonial Ry., New Glasgow, N.S.

W. H. Grant, Manager of Construction, Mackenzie, Mann and Co., Toronto, whose additional appointment as Tie and Timber Agent, Eastern Lines, Canadian Northern Ry., was announced in our last issue, was born at Acton, Ont., Dec. 8, 1858. He commenced railway construction with D. D. Mann in 1882, and with the exception of eight years spent in Winnipeg, Calgary and British Columbia, he has since been continuously engaged in railway work, first with D. D. Mann, and later with Mackenzie, Mann and Co. During this time he acted as accountant, Superintendent, and Manager of Construction, and was with Mr. Mann on his contracts on the C.P.R. main line on the prairies and in the British Columbia mountains, and built 75 miles of the Manitoba and Northwestern Ry. main line and the Russell and Rapid City branches. He laid the track on the 40 miles of the old Winnipeg and Hudson Bay Ry., and had charge of one section of Mackenzie and Mann's contracts on the C.P.R. short line through Maine. During the construction of the Ontario and Rainy River Ry. he was Superintendent of the grading and bridging from Port Arthur to Fort Frances, and after completion of that line, in 1902, he was sent to Nova Scotia, where he built 247 miles of a line which is now comprised in the Halifax

and South Western Ry. He was appointed Manager of Construction, Mackenzie, Mann and Co.'s lines east of Port Arthur, in 1907, and altogether, has had charge of 680 miles of that company's system.

Gordon St. George Sproule, who has been appointed Engineer of Tests, C.P.R., Montreal, as mentioned in Canadian Railway and Marine World for December, and whose portrait appears in this issue, was born there, April 23, 1885, and is a son of the late Wm. J. Sproule, M.A.E., for many years Chief Assistant Engineer, Montreal Harbor Commissioners. He was educated at St. Lambert Academy, Montreal Business College, and Montreal High School, with periods of employment with Canadian Fairbanks Co., Milton L. Hersey, analyst, and H. C. Stone, architect. Matriculated in applied science, McGill University, 1903. Spent vacation of 1904 as junior under the late Cecil B. Smith, Resident Engineer, Canadian Niagara Power Co.; vacation 1905 and term 1905-06 under Mr. Smith, first in his consulting offices, then as Secretary of Hydro-Electric Power Commission of Ontario, of which he was Chief Engineer. Vacation 1907 on conducted trip through mines and smelters of Southern British Columbia, and on practical work in Hall Mines Lead Smelter, Nelson, B.C. Graduated 1908 as B.Sc. in mining engineering, with honors in design and machinery. Granted Milton Hersey research fellowship in metallurgical engineering. Obtained M.Sc. in 1909 and Governor-General's medal for research work. 1909-10 continued research work at McGill and demonstrated in physics and metallography. Entered C.P.R. employ, June, 1910, as Assistant Wheel Inspector, becoming in succession Wheel Inspector and Assistant Engineer of Tests, till E. B. Tilt's resignation in May, 1915, since when he has been Engineer of Tests. In Jan., 1912, he married Miss Helen L. Freeze, B.A., of St. John, N.B., and has two sons. Is fond of rifle and pistol shooting, photography, handicrafts, swimming, etc.

Toronto, Hamilton and Buffalo Ry. asks power to make agreements.—Application is being made to the Dominion Parliament to authorize the company to make with the Canada Southern Ry., the Michigan Central Rd., the New York Central Rd., the Canadian Pacific Ry., or any of them, any of the agreements authorized to be made between railway companies by Sec. 364 of the Railway Act, for 50 years. This section provides for the making of any agreement for the interchange of traffic, and for the division and apportionment of tolls, for the running of trains over each other's tracks, for the management and working of railways, and to provide for the appointment of joint committees, provided such agreements are not inconsistent with the special acts of the companies party to it, that they have received the consent of the shareholders, and are sanctioned by the Board of Railway Commissioners.

The Terminal Commission of Massachusetts visited Montreal, Dec. 9, the members being entertained to dinner there, after inspecting the railway terminals and port facilities. The chief object of the visit was to study general conditions with a view to improving freight handling conditions at Boston. Among those who spoke at the dinner were: W. G. Ross, Chairman, Montreal Harbor Commissioners; G. M. Bosworth, Vice President (Traffic), C.P.R., and Chairman Canadian Pacific Ocean Services, Ltd.; J. E. Dalrymple, Vice President (Traffic), G.T.R. and Grand Trunk Pacific Ry., and L. C. Fritch, Assistant to President, and General Manager, Eastern Lines, Canadian Northern Ry.

Steam Railway Track Laid in 1915.

The preliminary table of new track laid in 1915 by railways throughout Canada, made up from official replies to our annual circular, and from estimates made from information otherwise obtained, is given below. The total mileage is considerably below what it has been for the previous 10 years or more, but it is higher than was anticipated a year ago would have been the case. Tracklaying was done on 14 lines during the year, 44 miles being in Eastern Canada, 58 miles in Manitoba, and the balance in Saskatchewan, Alberta and British Columbia.

The mileage on the railways marked with an asterisk (*) has been estimated, and is subject to revision.

	Miles.	Miles.
Alberta and Great Waterways Ry.:		
Mileage 135 to 175, Alberta.....	40.00	
Canadian Northern Ontario Ry.:		
Between Ottawa and Pembroke.....	1.55	
Between Pembroke and Capreol.....	7.41	
Canadian Northern Ry.:		8.96
Grand Manas to Victoria Beach.....	14.07	
Canora to Sturgis, Sask.....	21.44	
Bienfait to Estevan, Sask.....	8.91	
Elrose to Eston, Sask.....	34.81	
Wroxton to Willowbrook, Sask., Canadian Northern Sask. Ry.....	41.01	
Camrose, south easterly, Canadian Northern Western Ry.....	43.00	
Canadian Pacific Ry.:		163.21
Coronation, Sask., west.....	0.75	
Foremost to Pakowki, Alta.....	22.30	
		23.05
Central Canada Ry.:		
McLennan to Heart River, Alta. Edmonton, Dunvegan, and B.C. Ry.:		46.00
Mileage 243 to 325.....		82.00

Mileage 120 to Clinton.....		46.00
Quebec Central Ry.:		
From 5 miles east St. Camille to English Lake.....		14.00
St. John and Quebec Ry.:		
From Fredericton, N.B., south.....		1.24
Total.....		547.47

Outside Canada, the only mileage of new track laid by any of the subsidiaries of Canadian lines, was 8.91 miles by the Minneapolis, St. Paul and Sault Ste. Marie Ry., from Van Hook to Sanish, N.D.

No return has been received from the Canadian Northern Pacific Ry., and we are therefore unaware what track it laid.

Fire in G.T.R. shops.—A fire started in the tube department of the G.T.R. shops at Point St. Charles, Montreal, at noon, Dec. 10, and caused considerable damage to the tube, blacksmith and erecting shops before it was checked. The cause has not been ascertained.

Shell Making at Transcona Shops.—In connection with the press reports stating that the National Transcontinental Ry. shops at Transcona, Man., had been leased to a private company for shell making, we are advised that the Grand Trunk Pacific Ry. had a shell contract, which it was carrying out at the Transcona shops before they were taken over by the Government in connection with the National Transcontinental Ry. The G.T.P.R. was given permission to continue the shellmaking, but has since transferred its contract to the Transcona Shell Co. The Canadian Government Railways supplies light, heat and power on a percentage basis.

Railway Rolling Stock Notes.

The Canadian Northern Ry. has received 7 steel underframe tourist cars from Crossen Car Co.

The Canadian Pacific Ry. will probably change the lighting of some 130 passenger cars to electricity.

The French Government is reported to have ordered 2,000 freight cars from the Canadian Car and Foundry Co.

Canadian Government Railways has received 105 steel flat cars from Nova Scotia Car Works, and 1 consolidation locomotive from Canadian Allis-Chalmers, Ltd.

The Nigerian Ry., West Africa, has ordered through the Crown Agents for the Colonies 100 ten ton end tipping coal wagons from Canadian Car & Foundry Co.

The Canadian Pacific Ry.'s passenger car shops, at Angus, Montreal, are running at full capacity putting passenger equipment in condition to meet the increased business.

The Canadian Northern Ry., during November, received 2 dining cars and 11 sleeping cars from Canadian Car and Foundry Co., and 7 tourist cars from Crossen Car Co.

The Grand Trunk is having 1,500 steel freight cars repaired. The American Car and Foundry Co., Detroit, Mich., is doing the work on 300 cars, with the option of doing the other 1,200.

The Canadian Locomotive Co. has shipped 3 locomotives to the Russian Government. General details of these locomotives were given in a previous issue and a full description appears in this issue.

The Canadian Pacific management is considering the addition of some passenger locomotives. Details of type and number are not yet available, but the order may amount to about 50. Whether they will be built at the company's Angus shops, or ordered outside, has not been announced. Since the foregoing was put in type, a Kingston, Ont., press dispatch states that the C.P.R. has ordered 25 locomotives from the Canadian Locomotive Co.

The Canadian Government Railways, according to an unconfirmed Ottawa press dispatch of Dec. 27, has given "a large order" for locomotives for use principally, if not altogether, on the National Transcontinental Ry. It is also said that the Canadian Government Railways has leased from 30 to 40 Grand Trunk Pacific Ry. locomotives for use on the National Transcontinental. Since the foregoing was put in type, we have been officially advised that 25 locomotives have been ordered from the Canadian Locomotive Co.

The Canadian Pacific is going to build at its Angus shops, Montreal, 1,000 freight cars on replacement account. The details are not yet available, but there will probably be 800 standard box cars and 200 automobile cars. Two hundred freight refrigerator cars and 50 passenger refrigerator cars are also to be built, and there will also be some miscellaneous cars, probably 76 stock, 18 coal, 6 ore and 3 furniture. Some passenger equipment is also being considered, and will probably include the following cars: 12 mail, 1 mail and express, 4 baggage, 1 dining.

The Imperial Oil Co., Ltd., Sarnia, Ont., has ordered 100 tank car underframes and trucks, 80,000 lbs. capacity, and tank trimmings, from National Steel Car Co., and has also ordered 100 from Canadian Car and Foundry Co. The underframes will be composed of heavy 12 in. ship channels with top and bottom cover plates. At the bolsters will be half saddles which will form the side bearing, and at the same time support the tank. The trucks will be of the

Tank mountings will consist of the usual appliances on a steel tank car, comprising running board brackets, tank bands, hand rail piping and fittings, side steps, grab handles, etc. The frames will be equipped with Westinghouse air brakes and friction draft gear. The tanks will be supplied and placed in position by the Imperial Oil Co. at Sarnia.

Progress of Rogers Pass Tunnel Construction. Canadian Pacific Railway.

The following table, for which we are indebted to J. G. Sullivan, M.Can.Soc.C.E., Chief Engineer, C.P.R., Winnipeg, shows the progress made from Oct. 28 to Dec. 2, also the total progress to Dec. 2:

	Progress.	Total.
EAST END.		
Main heading.....	1,129 ft.	11,858 ft.
Main tunnel.....	806 ft.	8,053 ft.
WEST END.		
Main heading.....	783 ft.	11,912 ft.
Main tunnel.....	840 ft.	6,950 ft.

A Glacier, B.C., press dispatch of Dec. 13 says the borings from the east and west ends met at 11.30 that day, giving a continuous passage through the mountain.

Quebec and Saguenay Ry.'s Future.—Ottawa press dispatch Dec. 14.—A number of petitions have been received by the Government from the communities served by the Quebec and Saguenay Ry., an uncompleted line running from the city of Quebec to Murray Bay, to have the road taken over by the Dominion Government. The suggestion is made that with this railway the Government could establish a winter port on the St. Lawrence, either at Murray Bay or beyond. The road has been constructed for from 90 to 100 miles, and is one of the group of enterprises associated with the Quebec Railway, Light, Heat and Power Co. It handles a large tourist as well as a local passenger and freight traffic between Quebec and points in Montmorency and Charlevoix Counties. Government engineers have examined the railway and have reported, and during the past summer a personal inspection of the property was made by the Minister of Railways. No decision has been reached regarding the proposed transfer.

First Aid Work on Grand Trunk Ry.—E. J. Chamberlin, President, has presented a silver shield for annual competition amongst first aid teams on the G.T.R. Elimination contests have been held recently at Montreal, Toronto, Stratford and Battle Creek, in which men representing the various terminals and shops on the line competed. The judge was an expert in first aid work, chosen by the St. John Ambulance Association, and the team receiving the greatest number of marks at each examining point competed in the final competition for the shield. The tests were of a complete character, including handling of the apparently drowned, treatment of wounds, bleeding and poisoning, temporary management of fractures, dislocations, sprains, etc., and methods of transporting injured persons. Women's teams were examined in home nursing instead of stretcher work.

International Engineering Congress.—The proceedings of this Congress, held at San Francisco Sept. 20-25, 1915, will be printed in eleven volumes. Members are entitled to receive the index volume and any other single volume according to choice, and extra volumes can be secured by members at special rates. Persons wishing to become members can still do so by remitting \$5 to W. A. Cattell, Secretary-Treasurer, Foxcroft Building, San Francisco, Cal., but prompt action will be necessary as the membership list will close at a very early date.

The New York, New Haven and Hartford Road and the Grand Trunk Railway.

In the trial of the New Haven and Hartford Rd. directors, proceeding before the Federal Court in New York, C. S. Mellen, formerly President, in the course of his evidence, stated, Dec. 2, that the company spent probably \$120,000 to block the G.T.R.'s proposed extensions into southern New England. The G.T.R. proposed to build a line from a junction with the New London Northern, operated by the Central Vermont Ry., a G.T.R. subsidiary, at Palmer, Mass., to Providence, R.I. An agreement was reached in 1910, with the late C. M. Hays, then President, G.T.R., that if the New London Northern was sold to the N.Y., N.H. & H.R., the latter would transfer the control of the New York, Ontario and Western to the G.T.R. Immediately after that, the G.T.R. announced that it would build from Palmer to Providence, but because it was proposed to use the New Haven facilities in Providence and to eliminate grade crossings, entailing heavy expense on the New Haven, the proposal was opposed in the Rhode Island Legislature. For the collection and dissemination of information tending to show that the G.T.R. was violating obligations to the Dominion Government in building that extension, a further \$50,000 was spent. An additional \$60,000 was spent in opposing another G.T.R. project, viz., the building of a line from White River Jct. to Boston, Mass., and steps were at once taken to extend the Sullivan County Rd., a Boston and Maine subsidiary, to parallel the Central Vermont Ry. After C. M. Hays' death an agreement was arrived at with E. J. Chamberlin, his successor, whereby presumably the G.T.R. was to stop work on the Providence extension in return for trackage rights over the New Haven. Mr. Mellen considered that the Providence extension would never have been profitable, and that it was not designed for legitimate competition, but as a threat. In 1908 the New Haven entered into an agreement with the C.P.R. whereby all the New Haven territory was opened to that company through Newport, Vt., and the Boston and Maine, and he was ready to give the G.T.R. the same advantage, but much more was wanted. In concluding his statement, he said: "The route from New York to Boston by the New Haven, from Boston to Portland by the Boston and Maine, from Portland to Bangor by the Maine Central, and from Bangor to St. John, N.B., by the C.P.R., is the most important military base line in the country. It is a most useful thing to the country at large to have it nearly all under one control."

Pere Marquette Rd. to Be Sold.—Detroit, Mich., press dispatch, Dec. 20: "Judge Tuttle, in United States District Court today, fixed April 5, 1916, as the date for the sale of the P.M.R. to satisfy creditors. The road has been in receivers' hands since 1912. At a previous hearing in July, 1915, Judge Tuttle fixed the upset price at \$14,000,000, subject to the underlying bonds and interests, which it was said would bring the price to approximately \$42,000,000."

Increased Freight Rates to Southwestern United States Points.—The Interstate Commerce Commission decided at Washington, D.C., recently that the proposed increased rates on grain from points on the Great Northern Ry. in Minnesota and South Dakota to points on the Kansas City Southern Ry. in Kansas, Missouri, and Oklahoma and points on the Union Pacific Rd. in Kansas, found are justified, and the order of suspension was vacated.

Track Section Prize Competition on the Canadian Pacific Railway Eastern Lines.

The third annual track section prize competition on the Eastern Lines of the Canadian Pacific Railway has been concluded and 69 prizes have been awarded. The conditions governing the awarding of the prizes were the same this year as in the past, general efficiency being the keynote of a foreman's work. The condition, throughout the season of the ditches, drainage, surface, line, gauge, spiking, bolting, rail wear as controlled by the section forces, switches, sidings, right of way, station grounds, track signs, cattle guards and fences, was given careful consideration. The amount of work done was checked against the hours of labor, both regular and extra, and a standard of merit arrived at, the physical characteristics of the section, grades, alignment, nature of roadbeds, climate, etc., being taken into consideration.

Some idea of the care exercised in judging a foreman's work can be formed by following the work in connection with the selection of a prize section. Toward the end of the season, on each of the 43 roadmasters' territories, a section is picked out as the most deserving in point of work done during the season with the material and labor available. These are carefully inspected by the superintendent and resident engineer who select the best one on each district for inspection by the general superintendent and division engineer. All districts of a division are covered by these two officers, and the section selected which they consider eligible for the General Manager's prize. The judging for the General Manager's prize is done personally by the

General Manager, the Engineer, Maintenance of Way, the Assistant Engineer, Maintenance of Way, and division officers.

The winners of the principal prizes for 1915 are as follows:—General Manager's prize: Foreman F. Patritti, Dorion, Ont., section 16, Nipigon Subdivision, Lake Superior Division. General Superintendent's prizes: Atlantic Division, Foreman M. Phillips, Rooth, N.B., section 10, St. John Subdivision; Eastern Division, Foreman A. McArthur, Apple Hill, Ont., section 13, Smiths' Falls Subdivision. Ontario Division, Foreman W. R. Bradley, Bothwell, Ont., section 9, Windsor Subdivision. Lake Superior Division, Foreman A. Melaire, Heron Bay, Ont., section 11, Schreiber Subdivision.

Western United States Freight Rates Increased.—Washington, D.C., Dec. 23: "Further increases in freight rates were granted the railways in western territory by the Interstate Commerce Commission. Under this decision, which is the third during the past six months granting increases to the western carriers, the railways will be allowed to increase their charges on agricultural implements 2c. per 100 lbs. and on canned goods 1c. per 100 lbs. They were also given permission to increase their rates on boots and shoes. Increases were allowed on dried fruits in portions of the territory, as well as on shipments of flue lining. The carriers were denied permission to increase rates on eggs and on cider and vinegar."

The Great North Western Telegraph Co. has opened offices at Dumblane and Eston, Sask., Carrot, Evansburg and Onoway, Alta., and has closed its offices at Charlesbourg and Reid's Station, Que., Alfred Centre, Beaumaris and Odessa, Ont., and Algar, Man.

The Canadian Pacific Railway's Roll of Honor.

C. H. Buell, Staff Registrar and Secretary, Pension Department, C.P.R., has issued list 7, which is prefixed as follows:—"Several thousand officers and employees of this company enlisted for active military duty with the Canadian Expeditionary Forces, and the majority of them are now in Europe, bravely battling for Canada and the Empire. As particulars of army reservists are not available, these lists of those who have given up their lives for their country, or been wounded in action, are necessarily incomplete, and do not therefore indicate fully the extent to which the Company's officers and employees have participated in the great struggle."

January, 1916.]

Winter Grain Rate on National Transcontinental Railway to Atlantic Ports.

Ottawa press dispatch, Dec. 24: "A winter grain rate practically as low as the summer rate by water has been declared by the Minister of Railways for the National Transcontinental Ry. The new rate strikes a new low level for the winter movement of wheat between the head of the lakes and tide water. The change will be 6c a bushel between Armstrong, on the National Transcontinental, and Montreal and Quebec. Armstrong is the competitive point corresponding most closely with the rate points of other lines. An important feature of the new arrangement is that Halifax is to have absolutely equal opportunity with other Atlantic ports so far as the wheat traffic is concerned, and will no longer be handicapped by an adverse differential rate. The National Transcontinental, it is expected, will handle 100 cars of grain a day. It is believed that the new low rate will have to be met by competing private roads. Special arrangements are being made by the Railways Department to store the grain which will be carried east over the Transcontinental and the Intercolonial."

"A statement announcing the new rate was issued today as follows: 'On account of the very large amount of grain still in farmers' hands and in country elevators in Western Canada and the terminal elevators at Fort William and Port Arthur taxed to their capacity with what is already stored and in transit, the Canadian Government Railways are completing arrangements, as an emergency measure, in order to enable shipments to continue freely throughout the winter, to move this grain over the Transcontinental Ry. to elevators at Montreal and Quebec on through all rail rates, which will be based approximately on the all water cost from Fort William to Montreal during the summer season, in other words, using the Transcontinental as the all water carrier during the winter. There will be about 5,000,000 bush. elevator capacity for the reception of this grain at Montreal and Quebec, and in order to increase available space many times over arrangements have been made to reshipe as required to winter ports on the Atlantic seaboard. Halifax is also made a common point with other Atlantic seaports. Formerly, a higher rate prevailed to Halifax, but now that the Government Railways control the entire route from shipping points to Halifax they are able to announce a reduction, making Halifax basis of export rates the same as to other Atlantic winter ports.'"

A Quebec Quarry Spur Line Suit.—The right to use a spur line connecting a quarry with the C.P.R. at St. Francis de Sales, Que., was involved in the case of Bellefleur against Labelle, decided in a court at Montreal, Dec. 10. The quarry was originally owned by the defendant, and he still owns part of the land over which the spur line runs. The quarry was sold with the right of using the spur line. The judge held that defendant could not prevent the plaintiff using the line, and awarded \$1,197 for accrued damages.

The Dominion Government and Grain Shipments.—An Ottawa press dispatch, Dec. 20, states that the Dominion Trade and Commerce Department has arranged with James Carruthers & Co., Grain Shippers, to take over the transporting overseas the grain which the Government commandeered recently between the elevators and the seaboard.

Shell Making at National Transcontinental Railway Shops.

We are officially advised that previous to the Dominion Government taking over the National Transcontinental Ry. east of Winnipeg, including the Transcona shops, the Grand Trunk Pacific Ry. had arranged with the Shell Committee at Ottawa for the manufacture of high explosive shells and received contracts to produce 72,000 eighteen pounder shells. The company, previous to the acquisition of the shops by the Government, fitted out a small section of the Transcona shops with a complete outfit of machinery, tools, etc., to manufacture about 200 shells a day. The machinery and appliances were nearly all the property of the G.T.P.R. Not having experience in shell manufacture, naturally it took time to organize a force to enable the company to turn out the complement of shells it considered the shop fitted up was capable of producing 20 hours a day. When the Government took over the actual operation of the shops on July 1, 1915, the company, of course, had no further control over the manufacture of the shells and the conditions under which it would have had to carry out the work would not have been satisfactory to the company. It was then decided to complete the contracts in the G.T.R. shops in the east, but permission to do this was refused, and the plant was sold out to the Transcona Shell Co. Nov. 3, 1915.

Railway Construction in Mexico Contemplated.—The early construction of a large mileage of railways in Mexico is contemplated by the Carranza government, according to statements given out by R. E. Musquiz, inspector of that country's consulates in the United States. The most important construction planned is a 500-mile line from Nuevo Laredo to Piedras Negras, along the Rio Grande, and thence to a connection with the Matamoros-Monterrey Division of the national railways. A 450-mile road from Monclova to the city of Chihuahua, which will traverse a region said to be rich in coal deposits and valuable minerals, is also proposed. Construction will, it is said, be resumed very soon on the Tampico to the city of Mexico cut off, which was being built when the revolutionary troubles commenced.

Safety Appliances Equipment for U. S. Railways.—The Interstate Commerce Commission decided at Washington, D.C., recently, that the time within which common carriers shall make their freight cars conform to the standards of equipment described by the Commission in order of Mar. 31, 1911, be further extended for one year from July 1, 1916. J. Coleman, Superintendent Car Department, and J. Powell, Chief Draughtsman, Motive Power Department, represented the Grand Trunk at the hearing; W. H. Flynn, Superintendent Motive Power, representing the Michigan Central.

Railway Lands Patented.—Letters patent were issued during November covering Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

Calgary and Edmonton Ry.	322.30
Canadian Northern Ry.	236.27
Canadian Northern Western Ry.	289.35
Canadian Northern Pacific Ry.	134.80
Canadian Pacific Ry.68
Edmonton, Dunvegan and British Columbia Ry.	13.29
Grand Trunk Pacific Ry.	63.80
Grand Trunk Pacific Branch Lines Co.	6.34
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	3,676.00
Total	4,741.83

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, for Western Lines, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,206,100	\$821,000	\$385,100	x\$145,400
Aug.	1,192,800	954,000	238,800	x3,000
Sept.	2,014,600	1,358,000	661,600	1,900
	\$4,413,600	\$3,227,000	\$1,186,600	x\$79,300
Decr.	\$ 658,300	\$ 579,000	\$79,300

x Decrease.
Mileage in operation at Sept. 30, 1915, 4,965, against 4,670 at Sept. 30, 1914.

Commencing with October, the figures show the earnings of the entire system, both eastern and western lines.

	Gross Earnings	Expenses	Net Earnings	Increase
Oct.	\$3,678,500	\$2,421,500	\$1,257,000	\$ 537,800
	\$3,678,500	\$2,421,500	\$1,257,000	\$ 537,800
Incr.	\$1,100,200	\$ 562,400	\$ 537,800

Approximate earnings for November, \$3,535,200, against \$2,228,000 for Nov., 1914, and for three weeks ended Dec. 21, \$2,428,700, against \$1,345,300 for same period 1914.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$7,895,375.47	\$5,094,972.35	\$2,800,403.12	x\$78,042.71
Aug.	8,801,451.52	5,359,176.80	3,442,314.72	79,157.02
Sept.	1,273,165.45	5,527,864.81	4,475,300.64	378,252.25
Oct.	13,433,206.88	6,863,780.29	6,579,434.59	3,258,106.79

	\$40,413,206.88	\$22,845,754.25	\$17,567,452.63	\$2,737,472.35
Incr.			\$2,747,255
Dec.	\$23,597.38	\$3,761,069.73	

Approximate earnings for Nov., 1915, \$13,114,000, against \$7,823,000, and for two weeks ended Dec. 14, \$6,101,000, against \$3,473,000 for same period 1914.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings for the G.T.R. (including the Canada Atlantic Ry.), the G.T.W.R. and the D.G.H. & M.R. for October, compared with those for October, 1914:—

	1915.	1914.
Earnings	\$3,591,305	\$3,593,350
Expenses	2,527,500	2,533,100
Net earnings	\$1,063,805	\$ 976,250
	1915.	1914.
Earnings	\$ 781,944	\$ 639,909
Expenses	562,392	602,000
Net earnings	\$ 219,552	\$ 39,900
	1915.	1914.
Earnings	\$ 293,442	\$ 255,100
Expenses	212,887	224,800
Net earnings	\$ 80,555	\$ 30,300

Approximate earnings for Nov., 1915, \$4,190,871, against \$3,770,406 for Nov., 1914, and for two weeks ended Dec. 14, \$2,035,759, against \$1,736,014 for same period 1914.

TRAFFIC RECEIPTS OF THE SYSTEM

Aggregate from Jan. 1 to Nov. 30:—

	1915	1914	Incr.	Decr.
G.T.R.	\$36,085,580	\$38,490,371		\$2,404,791
G.T.W.R.	6,085,046	6,575,654	\$500,892	
D.G.H. & M.R.	2,581,360	2,348,095	233,765	
Totals	\$44,752,486	\$47,409,320		\$2,656,834

Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section, 916 miles, for November, 1915, were \$845,168, against \$101,155 for Nov., 1914. The aggregate earnings for five months ended Nov. 30, were \$2,706,726, against \$2,069,000 for same period 1914.

The Grand Trunk Ry. employees at Toronto have appointed a committee of ten to look after the families of former fellow employees now engaged on active service. W. H. Farrell, Terminal Superintendent, is chairman.

Handling of Milling in Transit Grain at Moose Jaw, Saskatoon and Calgary.

Sir Henry L. Drayton, Chief Commissioner, Board of Railway Commissioners, has given the following judgment, concurred in by Commissioner McLean:—

An application has been made by the R. B. McLean Grain Co., Ltd., of Saskatoon, Sask., asking, in effect, that the milling in transit privilege be extended to the government elevator at Saskatoon, Sask. In principle, the application also covers the government elevators at Calgary and Moose Jaw. The present milling in transit, of course, only allows for the one stop off, and the applicants were anxious that an additional stop off be given, which would enable farmers and grain dealers to have their grain treated and weighed at the government elevator and then proceed in the easterly movement at the through rate plus the usual stop over charge, instead of moving at the local rate, the effect of which would be, of course, to practically prevent the additional stop off. The case was heard at the recent sittings in Saskatoon, Calgary and Regina, so that the facts might be developed, although the Board had already held that such a privilege is one which it has no jurisdiction to order, the Board's jurisdiction as to privilege being confined to questions of discrimination. At the conclusion of the last hearing the Board requested the railways to take up the question with a view of providing a remedy, and W. B. Lanigan, Assistant Freight Traffic Manager, C.P.R., has now written stating that the Railways have arrived at the following, which they believe to be the only practical solution:

"Grain stored in transit in Dominion Government interior elevators at Calgary, Moose Jaw, and Saskatoon, and forwarded under transit regulations, will be granted an additional stop off at any intermediate milling point for grinding only, in the direct line of transit to Winnipeg or Fort William, or points east thereof. An equivalent tonnage of the product thereof, when forwarded within a period of six months after receipt, may be waybilled at the balance of the through rate from such interior elevator point to destination after deducting the rate paid from the government elevator point to the milling point, plus 1c. per 100 lbs. for the additional stop off."

I do not know that the solution requires any confirmation by the Board. It will, however, enable the business to obtain the two stop overs desired. The arrangement appears fair and equitable, and should be approved.

Steel Rail Orders Placed.

The Canadian Pacific will, during next year, lay 30,000 tons of new 85-lb. steel rails at various points over the system. Of these, 5,000 tons were rolled some little time ago by the Algoma Steel Corporation, at Sault Ste. Marie, Mich., and are now being delivered. In addition to this, the same mills have an order for 25,000 tons, to be delivered 5,000 tons a month during May, June, July, August and September.

The Grand Trunk has ordered 20,000 tons of 90 and 100-lb. A. C. A. type, A section from the Algoma Steel Corporation, to be delivered 5,000 tons a month during June, July, September and October.

Western Canada Railway Club.—At the monthly meeting at Winnipeg, Dec. 14, W. C. Blake, chief clerk to General Auditor, Canadian Northern Ry., read a paper on the audit department in relationship to railway organization.

Eastern Live Stock Case Decided by Interstate Commerce Commission.

The Interstate Commerce Commission gave a decision at Washington, D.C., Dec. 2, of which the following is the official summary:

Proposed increased rates for transportation of live stock, except horses and mules, in Central Freight Association territory, found justified to the extent found reasonable in this report.

Certain proposed increased carload minima applicable to live stock when transported between points in Central Freight Association territory, found justified; others not justified.

Proposed increased rates for transportation of cattle from points in Central Freight Association territory to points in trunk line and New England Freight Association territories, found justified.

Proposed increased rates for transportation of hogs and of sheep or goats in single deck and double deck cars from points in Central Freight Association territory to points in trunk line and New England Freight Association territories, found justified.

Certain proposed increased carload minima applicable to live stock when transported from points in Central Freight Association territory to points in trunk line and New England Freight Association territories, found justified; others not justified.

Increased rates for transportation of packing house products, packed, and packing house products, loose, from points in Central Freight Association territory to points in trunk line and New England Freight Association territories, which would exceed the classification rates on these commodities, found not justified.

Proposed increased rates for transportation of fresh meat from points in Central Freight Association territory to points in trunk line and New England Freight Association territories, found justified.

Proposed increased carload minima applicable to fresh meat and packing house products, loose, when transported from points in Central Freight Association territory to points in trunk line and New England Freight Association territories, found justified.

Proposed increased rates for transportation of live stock between points in trunk line territory east of the western termini of the trunk lines, found not justified.

Proposed increased rates for transportation of packing house products between points in trunk line territory east of the western termini of the trunk lines, found not justified.

Proposed increased carload minima applicable to live stock and packing house products, when transported between points in trunk line territory east of the western termini of the trunk lines, found not justified.

Sleeping Car Conveniences.—The Canadian Northern Ry. some time ago provided its sleeping cars with combination clothes hangers. The Pullman sleeping cars operating on the Grand Trunk have been similarly equipped.

The Board of Railway Commissioners and the Quebec Public Utilities Commission sat jointly at Montreal, Dec. 20, to consider the Montreal Electric Commission's application for approval of its plans for the construction of underground conduits in Montreal, sections 6 and 7. Previous applications were made to the Board of Railway Commissioners alone, but this joint sitting was arranged to do away with any possibility of an appeal on the ground of jurisdiction.

Increase in Passenger Fares in Western United States Territory.

The Interstate Commerce Commission, after consideration of proposed increases in passenger fares in western territory, gave a decision, Dec. 7, of which the following is the official abstract:

In the states of Illinois; Wisconsin; Michigan, upper peninsula; Minnesota; Iowa; Nebraska; Missouri, north of the Missouri River; and in Kansas on and north of the main line of the Union Pacific Rd. from Kansas City to the Colorado state line, proposed increased fares not justified, but a basis for interstate fares of 2.4c. a mile is justified.

In the state of Missouri south of the Missouri River, and in the state of Kansas south of the main line of the Union Pacific Rd., proposed increased fares not justified, but a basis for interstate fares of 2.6c. a mile is justified.

Proposed increased fares from points in territory in which these fares are authorized to points on the main lines of these respondent carriers in California, Utah, Nevada, Colorado, Wyoming, Arizona, New Mexico, Arkansas, Oklahoma, and Texas are not justified in those instances where such proposed increases result in higher fares than would be obtained by using for the construction of such fares the bases herein authorized in the states of Michigan, Illinois, Wisconsin, Kansas, Minnesota, Iowa, Nebraska, and Missouri, and a basis of 2½c. a mile in the states of North and South Dakota, and a basis of 3c. a mile in the states south and west thereof.

Proposed increase charges for mileage tickets in territory north of the Missouri River in Missouri and on and north of the main line of the Union Pacific Rd. in Kansas to 2¼c. a mile, and in territory south of the Missouri River in Missouri and the main line of the Union Pacific Rd. in Kansas to 2½c. a mile are justified.

Proposed increased fares from points in Michigan, upper peninsula; Illinois; Iowa; Minnesota; Wisconsin; Nebraska; Missouri; and Kansas, to points in states east thereof, which result from the construction of such fares by the use of the bases herein found reasonable and the use of the lawfully published and filed fares in eastern territory are justified.

Theft from the G.T.R. at Toronto.—W. A. Mason, a G.T.R. ticket agent, who pleaded not guilty recently to a charge of theft of \$1,500 from the G.T.R., in connection with cash received on the sale of tickets, withdrew his plea at Toronto, Dec. 17, and pleaded guilty. His counsel asked for an adjournment of the case to enable restitution to be made. Sentence was postponed until the end of the court sittings, and in the meantime he was allowed liberty on \$3,000 bail.

Hastings St. Viaduct, Vancouver.—The building of this viaduct was ordered by the Board of Railway Commissioners on the Vancouver City Council's application, the Great Northern Ry. being ordered to pay 50% of the cost. The railway company owns certain properties in the vicinity, and not only claims to be exempt from being taxed to meet the city's portion of the cost of the viaduct, but has put in a claim for compensation for alleged damages to its property by the building of the viaduct.

C.P.R. Land Sales.—During November, 2,193 acres in Alberta were disposed of through the Edmonton office. The land was taken up by 14 persons, the majority of whom came from British Columbia and Montana.

January, 1916.]

Canadian Built Locomotives for Russian Imperial Railways.

The Russian Imperial Railways are having 50 decapod type locomotives built by the Canadian Locomotive Co. at Kingston, Ont., the first lot of which have already been shipped. These locomotives are of interest, not only because of their design, which is a combination of Russian and American practice, but because of their being the first locomotives exported from Canada. The prin-

Boiler	Straight
Working pressure	180 lbs. per sq. in.
Outside diameter of first ring	70 in.
Firebox, length and width	108½ in. by 86 in.
Tubes, number and outside diameter	195-2 in.
Flues, number and outside diameter	28-5½ in.
Tube and flues, length	17 ft.
Heating surface, tubes and flues	2,393 sq. ft.
Heating surface, firebox (including arch tubes)	208 sq. ft.
Heating surface, total	2,601 sq. ft.
Superheater heating surface	563 sq. ft.

ready built by American locomotive builders.

The fuel used is a low grade of soft coal and is burned on a rocking four sections grate with two dump bars. The firebox is of the wide type extending out and over the driving wheels, and is also equipped with a security brick arch supported on water tubes. The boiler is of the straight type, with a mud ring made up with cast steel ends, and forged steel sides welded together. An auxiliary safety valve dome is provided, which carries 2 safety valves

Decapod Locomotive for Russian Imperial Railways.

cipal dimensions of the locomotives and tenders are as follows:

Gauge	5 ft.
Service	Freight
Fuel	Soft coal
Tractive effort	51,500 lbs.
Weight in working order	192,000 lbs.
Weight on drivers	172,000 lbs.
Weight on leading trucks	20,000 lbs.
Weight on locomotive and tender in working order	132,000 lbs.
Wheel base, driving	18 ft. 8 ins.
Wheel base, total	27 ft. 10 ins.
Wheel base, locomotive and tender	60 ft. 1 in.

Equivalent heating surface*	3,446 sq. ft.
Grate area	64.5 sq. ft.
Tender tank	Water bottom
Tender frame	Channel
Tender wheels, diameter	36 in.
Tender journals, diameter and length	5½ in. by 10 in.
Tender water capacity	7,400 gal.
Tender coal capacity	8 metric tons
*Equivalent heating surface equals total evaporative heating surface plus 1.5 times the superheating surface.	

The locomotives are designed for operation on a 5 ft. track, and which is largely

and the whistle. This dome is also used as an inspection dome. A third safety valve is applied to the cover of the main steam dome.

The firebox is of copper, as also are the staybolts used in the water legs. The front end of the firebox is supported by 3 rows of expansion stays, the nut on the upper end of the radial stay is seated in a die forged stirrup, which is screwed into the roof-sheet.

Details of Decapod Locomotive for Russian Imperial Railways.

Wheels, driving journals, main, diameter and length	10½ in. by 12 in.
Wheels, driving journals, others, diameter and length	8½ in. by 12 in.

used as the standard gauge by the Russian railways. The axle loads are limited to 35,000 lbs. per axle, but engines are of considerable capacity, having a tractive effort of 51,500 lbs. (at 85% boiler pressure). They are designed to haul 1,000 metric tons up a grade 0.8% at a speed of about 10 miles an hour. Special material and equipment have been used to a great extent in these locomotives, and the construction is in accordance with the best American practice, many of the details are interchangeable with the locomotives of the same type and size al-

The locomotives are equipped with Schmidt superheater and outside steam pipes; superheaters have 28 elements with a superheater surface of 563 sq. ft. Forty nine are equipped with the Rushton power screw reverse gear, and the Casey-Cavin screw reverse gear is to be applied to the remaining one, both gears being operated by air.

The machinery, frames and cylinders are designed after American practice. The pistons are solid rolled steel with three cast iron packing rings sprung in, and are sup-

ported by an extension on the piston rod with a guide attached to the front cylinder head. The cylinder heads are of cast steel, single bar guides of I section being used. The main driving wheels have plain tires, while all the others are flanged, and the wheel base is such that the locomotive will traverse a curve of 350 ft. radius.

The locomotives are fitted with a wide running board of steel plate, diamond tread, having a handrail around the edges and continuing around the front deck plate in accordance with the Russian railway practice.

The cab is of steel, with side doors, the front end of tender is enclosed with a hood projecting under the cab of engine protecting the crew from the weather. The couplers are of the hook and screwed type of the European practice, as are also the spring buffers. Russian-Westinghouse automatic air brakes are used, along with the special design of the American Brake Co.'s foundation brake. A plug type of by-pass valve is fitted to the cylinder and operated by a cam attached to the throttle lever, which in turn opens a globe valve allowing steam to pass to a small cylinder closing the by-pass. When steam is shut off a tension spring operates the opening of the by-pass.

The tender is carried on two four wheeled trucks of the arch bar type with solid rolled steel wheels. The bearing and boxes are of the M.C.B. type, tender frame is of steel construction, made up of heavy 10 and 12 in. channels, with built up pressed steel bolsters.

After the locomotives have been erected and tested by running on a specially prepared track by the builders, the locomotives and tenders are dismantled, crated and packed for shipment to Vladivostock, Russia.

The United States Government and the Railways.—Commenting on President Wilson's recent message to Congress, the Engineering News says:—"Though his language is carefully guarded, it seems evident that the President at the end of his address was pleading for a cessation of antirailway legislation. He does not say that the railways have been persecuted, he does not antagonize the radical element that has mercilessly persecuted the carriers; he pleads only for fairness, a study of the whole problem 'in the full light of a fresh assessment of circumstance and opinion.' He asks that a commission be appointed to investigate the railway situation and that legislation await its conclusions. In theory, no one could differ with this proposal. In practice one despairs of any good result, not only because the problem is so tremendous, but because any such commission appointed through Government agencies is sure to be overloaded with theorists. Practical railway men seem to be taboo as advisers of the Government in its dealings with the railways."

Union Station for St. Paul, Minn.—The plan submitted by the united railways to the city and Federal Government has been withdrawn in its entirety, following the rejection of the harbor details of the scheme by the Chief of Engineers, U.S.A. The plans were drawn under an act of Congress providing for the bettering of river navigation and river transportation facilities at St. Paul, the harbor line and river being moved a maximum of 400 ft. for 6,000 lin. ft. The U.S. engineers declined to approve the plans on grounds which to the railway companies seemed fundamental, and new plans will be drawn which will not require the approval of the Federal Government. This will mean the selection of a new site and the purchase of grounds.

Railway Finance, Meetings, Etc.

The Algoma Central and Hudson Bay Ry. Co. and the receivers—T. J. Kennedy and V. Harcourt—are applying to the Dominion Parliament for the confirmation of the sale of certain lands for terminal purposes at Sault Ste Marie and Michipicoten Harbor, Ont., to the Algoma Central Terminals; for the confirmation of the lease of terminal properties by the A.C. Terminals to the A. C. and H.B. Ry., and for the confirmation of an agreement for the reorganization of the A.C. and H.B. Ry., and the adjustment of the relations between the two companies, and authorizing all the parties interested to give full effect to the terms of the agreement.

Canada Southern Ry.—A meeting of shareholders was called for Dec. 30, to consider an agreement for the sale to the C.S. R. of all the property, buildings and rights of the London and South Eastern Ry. in London, Ont., considering an agreement between the London Railway Commission and the Michigan Central Rd., as lessees of the C.S. Ry., for hauling by the L.R.C. of the freight traffic of the M.C.R., over the L. & S.E.R. tracks and terminals in London and the L. and P.S. Ry. tracks between St. Thomas and London; and to consider an agreement between the Toronto, Hamilton and Buffalo Ry., the Michigan Central Rd., the Canada Southern Ry., the New York Central Rd., and the Canadian Pacific Ry., in relation to the proposed issue of Toronto, Hamilton and Buffalo Ry. consolidated first mortgage bonds.

Canadian Pacific Ry.—The Dominion Parliament is being asked to amend and extend the company's powers in respect of the issuance of preferred shares now or hereafter issued by the conversion thereof into denominations of Canadian currency.

Essex Terminal Ry.—The officers for the current year are:—F. C. McMath, President; Wm. Woollatt, Vice President and General Manager; J. H. Coburn, Secretary and Solicitor; C. F. Doherty, Treasurer; F. B. Thompson, Auditor.

Ottawa and New York Ry.—St. Lawrence and Adirondack Ry.—Duplicate originals of the leases of these two railways, dated Sept. 27, 1915, were deposited with the Secretary of State for Canada, Dec. 11.

White Pass and Yukon Route.—Gross earnings for ten months ended Oct. 31, 1915, \$1,449,383, against \$1,415,149 for same period 1914.

Alleged Plot to Destroy C.P.R. Property.—It is reported from the Pacific Coast that an organized conspiracy has been unearthed in San Francisco and British Columbia, in which the German Consul at San Francisco, and other Germans are implicated, to destroy certain munition plants, and portions of the C.P.R. It is stated that a man of German birth, at present stated to be serving a two years imprisonment at Calgary, Alta., for forgery, was used by C.P.R. officials to gain evidence, and this man in an affidavit, credited F. W. Peters, General Superintendent, British Columbia Division, W. C. Orchard and — Tweedale, of the C.P.R., with assisting in the discovery.

The Lehigh Valley Rd's New Freight Terminal at Buffalo, N.Y., which was formally opened Dec. 15 consists of a team track yard and 2 buildings—a 2 story office building, 111 x 60 ft., and a fireproof shed, 700 x 60 ft. The office building contains two storage rooms, one for damaged shipments and the other for perishable freight. Of the 700 ft. length of the shed, 600 ft. is taken up by floor space. There are three sections which have fireproof walls, with doors protected by automatic fireproof steel curtains.

European Business Representative - **J. MEREDITH McKIM**
16 Regent St., London, S.W., Eng.

Authorized by the Postmaster General for
Canada, for transmission as second class mat-
ter.

Entered as second class matter, July 25, 1913,
at the Postoffice at Buffalo, N.Y., under the
Act of Congress of March 3, 1879.

SUBSCRIPTION PRICE, including postage
anywhere, \$2 a year.

SINGLE COPIES, 20 cents each, including
postage.

The best and safest way to remit is by express
money order. Where one cannot be obtained, a
post office money order, or bank draft, payable
at par in Toronto, may be sent. Cheques or
drafts not payable at par in Toronto cannot be
accepted. Remittances should be made payable
to Canadian Railway and Marine World.

The Unmistakable Return of Canada's Business Prosperity.

One of the most reliable barometers of general business conditions is undoubtedly railway earnings, which clearly indicate the state of trade. In the latter half of 1914, consequent on an unsatisfactory crop in the prairie provinces, and on the dislocation caused by war, Canadian railway receipts fell off at an alarming rate, and for the year ended June 30, 1915, Canadian Pacific net earnings were \$8,851,300 less than in the previous 12 months. Other lines also showed similarly heavy decreases. But shortly after the commencement of the C.P.R.'s current fiscal year the tide turned. For the first month, July 1915, there was a decrease from July 1914 of \$978,042.71 in net earnings, but in August there was an increase of \$79,157.02, in September of \$378,252.25, in October of \$3,258,105.79, and in November of \$3,710,340.86. For the four months ended Oct. 31 the increase in net earnings over the corresponding period was \$2,737,472.35. Indisputable evidence of the remarkable manner in which the management grappled with the situation, created by falling revenues in the latter part of last year and the early part of this year, is shown by the way in which working expenses have been cut down. While for the first four months of this fiscal year gross earnings decreased \$23,597.38, working expenses decreased no less than \$2,761,069.73, thus giving an increase of \$2,737,472.35 in net profits. For the five months ended Nov. 30, the increase in net profits was \$6,447,813.21, working expenses having been decreased \$1,177,485.97 during that period. December will also show up well, the approximate traffic earnings from Dec. 1 to 7 having increased \$1,280,000, from Dec. 7 to 14 \$1,348,000, and from Dec. 14 to 21, \$1,341,000.

The Canadian Northern earnings cannot be dealt with as fully, as on Oct. 1 it started to give out its figures for the whole system, instead of west of Lake Superior as previously, and no comparisons are available prior to that date. For October the increase in net earnings was \$537,800, and for November \$618,400, a total of \$1,156,200 for the two months.

The Grand Trunk and the Grand Trunk Pacific are also showing satisfactory increases, details of which appear on another page among the statements of railway earnings. The Intercolonial figures are not given out until the end of the fiscal year, but it is said that its earnings for the past four months have broken all records.

October was a remarkable month, the gross earnings of the three principal railways, Canadian Pacific, Canadian Northern, and Grand Trunk, being \$21,654,191, against \$16,134,717 in Oct. 1914, an increase of \$5,519,474 or over 34%. There is only one month in Canada's railway history when the combined gross earnings of the three lines exceeded Oct. 1915, viz., Oct. 1913, when the stringent conditions in the west made the farmers market early and the month's gross earnings were \$22,090,000.

While much of the increase in railway earnings, particularly those of the C.P.R. and Canadian Northern, is attributable largely to the magnificent grain crop in the prairie provinces, a good deal of it comes from the general improvement in business throughout the country.

The official estimate of Canada's 1915 wheat crop is 336,258,000 bushels, of which there will be an exportable surplus of nearly 230,000,000.

Two of Canada's highest agricultural authorities, after careful study of the field crops for Canada for 1915, estimated their

value in excess of 1914 at \$250,000,000.

The exports from Canada during Nov. 1915 were about \$92,000,000, or nearly double those of Nov. 1914. The exports for the eight months ended Nov. 30, 1915 were \$863,000,000, against \$766,000,000 for the corresponding period of the previous fiscal year.

Canada's bank clearings for Nov. 1915, \$891,284,701, not only exceeded those of any other November on record, but were the largest ever reported for any month. They were 13% over Oct. 1915, 38% over Nov. 1914, and 5% over Nov. 1913.

The Canadian banks' October statements show an increase of deposits of \$41,000,000 over Sept. 1915 and of \$85,000,000 over Sept. 1914.

Canada's revenue for eight months to Nov. 30, 1915, was \$104,750,000 against \$90,400,000 for the corresponding period of the previous fiscal year.

The facts given above are full of significance, and present unmistakable evidence of a tremendous revival in business conditions throughout the Dominion generally.

Canadian Ambulance Train for Overseas Service?

A cablegram from the Montreal Star's London, Eng., correspondent, Dec. 14, said: Arrangements are practically completed for the Canadian ambulance train built in Canada for service on the western front by a large railway corporation, which, it is reported, will practically donate specially built cars, and several patriotic associations in the Dominion will fit it out complete even to the tail lamps. It has been suggested to me also that a Canadian built engine, specially built to the different gauge of the French lines, be sent over. An all Canadian train, which is the idea of Lady Brooke, will make the Dominion represented in every department of army medical work in France."

Enquiry of the three leading Canadian railways, and of the Railways Department at Ottawa, have failed to elicit any confirmation of the cablegram quoted above.

The late Sir Wm. Whyte's portrait, life size, presented by his family to the Winnipeg School Board, was unveiled at the William Whyte School, one of the new schools in Winnipeg, on Dec. 23, by A. M. Nanton, one of the C.P.R. directors, and Vice President, Winnipeg Electric Ry., who was one of his closest friends. A large number of representative citizens were present, including members of the school board, C.P.R. officials and representatives of the various railway employees' brotherhoods.

Thos. L. Wilson, of Ottawa, Ont., who died in New York, Dec. 21, aged 55, was chiefly known by his patented processes in connection with the manufacture of carbide, and the use of acetylene gas, particularly of marine buoy lighting.

The Dominion Ex. Co. was charged at Moncton, N.B., Dec. 14, with a first offence in violation of the Canada Temperance Act, in carrying intoxicating liquors into prohibition territory. The magistrate, in dismissing the case, said that there was no intention on the part of the company to violate the law. In referring to the "personal use" clause of the act, he said that there would be trouble over shipments so long as that clause remained. He would make no order for the disposition of the liquor seized, as he believed that it was illegally in court, having been seized without a search warrant.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Government Railways.—F. W. ROBERTSON has been appointed District Passenger Agent, Halifax, N.S., vice D. M. Condon, assigned to other duties in the head office, Moncton, N.B.

(See also Intercolonial Ry., and National Transcontinental Ry.).

Canadian Northern Ry.—JAMES W. JOHNSON, heretofore Assistant Electrician, Western Lines, Winnipeg, has been appointed Electrician, Eastern Lines. Office, Toronto.

The organization of the Mechanical Department, Ontario Division, is now as follows:—

J. H. McALPINE, heretofore District Master Mechanic, Parry Sound, Ont., has been appointed Master Mechanic. Office, Toronto.

W. C. MOORE, heretofore District Master Mechanic, Trenton, Ont., has been appointed Assistant Master Mechanic. Office, Toronto.

R. A. MILLER, heretofore General Foreman, Trenton, Ont., has been appointed Locomotive Foreman, there.

W. H. LONG, Car Foreman, Trenton, Ont. S. L. TRACEY has been appointed Locomotive Foreman, Toronto.

W. F. MILLER, heretofore Car Foreman, Parry Sound, Ont., has been appointed Car Foreman, Toronto.

J. H. THOMPSON has been appointed Locomotive Foreman, Ottawa, Ont.

T. REDMOND has been appointed Car Foreman, Ottawa, Ont.

A. A. TAGGART, Locomotive Foreman, Brockville, Ont.

J. WEBB has been appointed Locomotive Foreman, Bancroft, Ont.

O. C. GRANT has been appointed Locomotive Foreman, Parry Sound, Ont.

A. FOURNIER has been appointed Locomotive Foreman, Sudbury, Ont.

A. MALLINSON, heretofore machinist, Ogden Shops, C.P.R., Calgary, Alta., has been appointed Locomotive Foreman, Capreol, Ont.

C. T. DOCTOR has been appointed Locomotive Foreman, Foleyette, Ont.

J. H. WILSON has been appointed Locomotive Foreman, Hornepayne, Ont.

G. CANFIELD has been appointed Locomotive Foreman, Jellicoe, Ont.

The Master Mechanic to the General Superintendent in respect to transportation matters and to the Superintendent Rolling Stock in respect to shop operations, maintenance of equipment, etc.

A. H. MANSFIELD, heretofore Chief Dispatcher, C.P.R., Brandon, Man., has been appointed Chief Dispatcher, District 1, Central Division, C.N.R., vice T. J. Brown, whose appointment as Superintendent, District 2, Western Division, Saskatoon, Sask., was announced in our last issue. Office, Port Arthur, Ont.

G. A. NORTH, heretofore Passenger Agent, Brandon, Man., has been appointed Travelling Passenger Agent, Winnipeg, vice J. F. McGuire, transferred.

E. H. DREW has been appointed Inspector of Sleeping and Dining Cars, Winnipeg.

C. N. JONES, heretofore Inspector in charge of linen room, Sleeping, Dining and Parlor Cars and News Service, Winnipeg, has been appointed Assistant Storekeeper, main storeroom, same department, Winnipeg.

A. PATRICK has been appointed Inspector

in charge of linen room, Sleeping, Dining and Parlor Car and News Department, vice C. N. Jones, transferred. Office, Winnipeg.

D. MAIN has been appointed Assistant Car Foreman, Winnipeg, vice A. Grey, transferred.

A. TAYLOR has been appointed Night Locomotive Foreman, Winnipeg, vice J. Black, transferred.

J. DUNCANSON has been appointed Assistant Locomotive Foreman, Winnipeg, vice A. Mays, Shop Foreman, transferred.

R. M. MILLIKEN, heretofore City Freight Agent, Winnipeg, Man., has been appointed District Freight Agent, Brandon, Man., vice R. B. McIntosh.

E. C. DICKERSON, heretofore in Union Station ticket office, Regina, Sask., has been appointed Passenger Agent, Brandon, Man., vice G. A. North, promoted.

J. HERRING has been appointed Car Foreman, North Battleford, Sask., vice A. H. Sweetman, transferred.

J. BLACK, heretofore Assistant Locomotive Foreman, Kamsack, Sask., has been appointed Locomotive Foreman there, vice S. Vincent, transferred.

A. MAYS, heretofore Shop Foreman, Winnipeg, has been appointed Locomotive Foreman, Edmonton, Alta., vice W. M. Armstrong, transferred.

G. H. CULLINGFORD has been appointed Sleeping and Dining Car Agent, Edmonton, Alta.

M. A. CARDELL, heretofore in the Construction Department, has been appointed Locomotive Foreman, Tollerton, Alta.

G. CLARK, heretofore coach carpenter, Winnipeg, has been appointed Car Foreman, Tollerton, Alta.

D. R. CAMPBELL, whose appointment as General Superintendent, Pacific Division, was announced in our last issue, has been appointed Assistant General Manager, Pacific Division, Lines West of Tollerton, Alta. Office, Vancouver, B.C.

T. YOUNG, heretofore in the Construction Department, has been appointed Locomotive Foreman, Lucerne, B.C.

A. GREY, heretofore Assistant Car Foreman, Winnipeg, has been appointed Car Foreman, Lucerne, B.C.

H. N. LUKES, heretofore Assistant Air Brake Inspector, has been appointed Locomotive Foreman, Blue River, B.C.

S. VINCENT, heretofore Locomotive Foreman, Kamsack, Sask., has been appointed Locomotive Foreman, Kamloops, B.C.

A. H. SWEETMAN, heretofore Car Foreman, North Battleford, Sask., has been appointed Car Foreman, Kamloops, B.C.

S. HICKS, heretofore Locomotive Foreman, Portage la Prairie, Man., has been appointed Locomotive Foreman, Boston Bar, B.C.

W. M. ARMSTRONG, heretofore Locomotive Foreman, Edmonton, Alta., has been appointed Locomotive Foreman, Port Mann, B.C.

J. F. McGAIRE, heretofore Travelling Passenger Agent, Winnipeg, has been appointed Travelling Passenger Agent, Vancouver, B.C.

E. E. McLEOD, heretofore in Passenger Department, Winnipeg, has been appointed City Passenger Agent, Vancouver, B.C.

S. C. SYKES has been appointed Sleeping and Dining Car Agent, Vancouver, B.C.

Canadian Pacific Ocean Services, Ltd.—The following organization covering the operation of the C.P.R. steamships and those of the Allan Line Steamship Co., is effective from Jan. 1:—

G. M. BOSWORTH, Vice President (Traf-

fic), C.P.R., Montreal, Chairman.

H. MAITLAND KERSEY, heretofore Manager in Chief, Ocean Services, C.P.R., Managing Director. Office, 8, Waterloo Place, London, S.W., Eng.

J. A. MARTIN, heretofore Agent, Allan Line Steamship Co., Glasgow, Scotland; Assistant Manager. Office, London, Eng.

Capt. J. T. WALSH, R.N.R., heretofore Chief Marine Superintendent for Canada, C.P.R., Montreal, Assistant Manager. Office, Montreal.

Capt. J. V. FORSTER, R.N.R., heretofore Chief Marine Superintendent, C.P.R., Liverpool, Eng., General Superintendent. Office, Liverpool, Eng.

H. S. CARMICHAEL, heretofore General Passenger Agent, Atlantic Steamships, C.P.R., London, Eng., Passenger and Freight Manager, in charge of all passenger and freight matters. Office, London, Eng.

W. G. ANNABLE, General Passenger Agent, Atlantic Steamships, C.P.R., Montreal, has been appointed General Passenger Agent, Atlantic Service, Canadian Pacific Ocean Services, Ltd. Office, Montreal.

C. E. BENJAMIN, General Passenger Agent, Pacific Steamships, C.P.R., Montreal, has been appointed General Passenger Agent, Pacific Service, Canadian Pacific Ocean Services, Ltd. Office, Montreal.

Canadian Pacific Ry.—E. J. WORTH has been appointed Car Service Agent, Atlantic Division, vice A. E. Prince transferred. Office, St. John, N.B.

T. C. CHOWN has been appointed acting Assistant Works Manager, Car Department, Angus Shops, Montreal, during absence of L. C. Ord on active service overseas.

H. J. HUMPHREY, heretofore Superintendent Car Service, Western Lines, Winnipeg, has been appointed acting Superintendent Car Service, Eastern Lines, vice W. Tansley transferred. Office, Montreal.

W. TANSLEY, heretofore acting Superintendent of Car Service, Montreal, has been appointed Assistant Superintendent, Montreal Terminals, vice W. Coulter transferred.

W. COULTER, heretofore Assistant Superintendent, Montreal Terminals, has been appointed Assistant Superintendent, District 5, Eastern Division, vice C. W. Lott. Office, Smiths Falls, Ont.

C. W. LOTT, heretofore Assistant Superintendent, District 5, Eastern Division, Smiths Falls, Ont., has been appointed Chief Dispatcher, Districts 1, 2, 3 and 4, Ontario Division, vice J. W. Wansborough. Office, Toronto.

G. T. ROOKE, heretofore Inspector of Dispatching Offices, has been appointed Car Service Agent, Ontario Division, vice C. Hudson transferred. Office, Toronto.

C. HUDSON, heretofore Car Service Agent, Ontario Division, Toronto, has it is said been appointed Chief Clerk to General Superintendent, Ontario Division, vice A. U. BAIN, transferred.

A. U. BAIN, heretofore Chief Clerk to General Superintendent, Ontario Division, Toronto, has it is said been appointed Assistant Car Service Agent there.

T. HAMBLY has been appointed acting Road Foreman of Locomotives, District 1, Lake Superior Division. Headquarters, Sudbury, Ont.

D. McINTYRE, heretofore Roadmaster, District 3, Manitoba Division, Brandon, has been appointed Roadmaster, Fort William Terminals, Fort William, Ont., vice J. P. Gray.

J. McREA has been appointed acting Roadmaster, District 3, Manitoba Division, with jurisdiction over Rapid City, Minn., and

G. MOTH, heretofore District Master Mechanic, Revelstoke, B.C., has been appointed District Master Mechanic, Cranbrook, B.C., vice L. Fisher, transferred.

T. J. JONES, heretofore Superintendent, Moberly Division, Moberly, Mo., has been ap-

Intercolonial Ry. Hospital Train.—Reference has been made in the daily press to a special hospital train in operation by the Intercolonial Ry. We are officially advised that no special rolling stock has been provided for this purpose. The first train left St. John, N.B., Nov. 29, consisting of 1 combined baggage and colonist car, 3 tourist cars, 1 standard dining car, and 5 sleeping cars. The military officer in charge of the returning soldiers reported that all the cars were most comfortable and well equipped, and gave excellent service. Every possible attention was paid by the Canadian Government Railways officials to make the men comfortable.

Electric Railway Department

Report on Radial Railway Entrances and Rapid Transit for the City of Toronto.

The Toronto City Council on Feb. 22, 1915, appointed the Commissioner of Works, R. C. Harris; the Chief Engineer, Toronto Harbor Commissioners, E. L. Cousins, B.A. Sc., A.M. Can. Soc. C.E., and the Chief Engineer of the Hydro Electric Power Commission of Ontario, F. A. Gaby, to prepare a comprehensive plan for a proper rapid transit system with radial entrances. The three officials above named met on Feb. 26, 1915, and having secured Mr. Cousins' consent to act as Engineer in Charge, obtained the Harbor Commissioners' permission to permit him to supervise the work in addition to his other duties. The result is embodied in a report which was submitted to the City Board of Control on Dec. 6 as follows:

General Conditions Underlying Study.—The future growth and development of the city will be largely dependent upon the provision of adequate transportation facilities, properly located. The extension of these facilities should, and usually does, precede the population, but in Toronto of late years the conditions have been reversed. Any policy which results in such reversal will fail to develop the resources of the city to the fullest extent. The growth of Toronto beyond the limits of the areas served by car lines has been remarkable. There are at present approximately 85,200 people residing without the city limits of 1891, and 31,400 of an interurban population, outside, but adjacent to, the present city limits, totalling 116,600 people, the equivalent of almost a quarter of the entire population of the city. Future expansion may be directed, and largely controlled, by the establishment of a broad, definite transportation policy, providing for the control of all electric railway lines, radial and local, operating within the city limits.

Existing Conditions.—The present situation in Toronto is briefly as follows: The Toronto Ry. Co. holds the franchise, expiring in 1921, for exclusive surface railway rights (subject to certain exceptions) on the streets of the city as of 1891. The railway company, many years since, objected that under its charter, it was not required to extend its lines beyond the city limits of 1891, and was upheld by decision of the Imperial Privy Council. During the period intervening between that and the present the city continued to increase in population and area, until now, as hereinbefore stated, there are approximately 85,200 people living without the limits of 1891, and within the limits of 1914. In addition there are some 31,400 persons residing adjacent to, but outside the city limits, and within the limits of approximately an eight mile radius from the corner of King and Yonge Sts. The municipality in 1911, and succeeding years, constructed civic car lines in outlying districts, along Gerrard St., Danforth Ave., St. Clair Ave., and Bloor St., west from Dundas St. At present there are 18.28 miles of single track civic line in operation, with a graduated fare, the maximum being 2c. The revenue derived pays operating expenses. There are still districts without the limits of 1891 lacking adequate means of transportation. This condition can only be relieved by the construction of additional civic lines, always keeping in mind the necessity for ultimate unification of the lines so built, with the present street railway system upon its acquisition by the city in 1921. This is the

only economical and reasonable form of quick relief to be given these districts.

Radial Railway Entrance.—We have carefully studied the question of radial railway entrance, assuming the following bases: 1. The acquisition by the city of the Toronto Ry. on the termination of the franchise in 1921. 2. The construction of the waterfront viaduct by the Grand Trunk and Canadian Pacific Railways. The main principle governing our studies has been the creation of a comprehensive plan for entrance and terminal facilities for all radial railways, of the present and future, and to provide those facilities on such a scale as to embrace probable requirements for the next 25 years; i.e., to provide forthwith lands for ultimate requirements as to terminals and rights of way of the various main trunk lines, but developing and constructing on the unit principle as conditions

E. L. Cousins, B.A. Sc., A.M. Can. Soc. C.E.,
Chief Engineer, Toronto Harbor Commission.

necessitate and finance permits. In investigation of possible radial entrances, we have surveyed and contoured in detail approximately 150 miles of line, radiating from the centre of the city, in northerly, westerly and northwesterly, easterly and northeasterly directions. These activities have not been confined to the area lying within the city limits. While on the presentation plans we indicate areas to be served by these trunk radial railway lines, we desire to emphasize that, while detailed alternative locations have been made in every case, we have refrained from indicating exact locations, in order to prevent real estate exploitation at the expense of the citizens generally, and this project in particular. Fortunately, we were able, both on the east and west, from the waterfront north, to locate several lines, all of which would afford satisfactory alignment and gradients. While in the estimates liberal allowance has been made for the cost of right of way, we are of opinion, that if prudently handled, especially in the outlying districts, such right of way may be

secured at little expense, by reason of the fact that large real estate owners will, in all probability, dedicate same, because the benefit accruing to their properties from modern transportation facilities, will handsomely repay them for any land so contributed. If real estate owners hold their lands at prohibitive prices, then, under the scheme presented, it will be easy to adopt other locations, which will equally well serve the requirements. This phase of the problem involved detailed study of the following, viz.: Present and future radial railway situation and probable volume of business. The physical location of the trunk line entrances within the city limits, adequate for present and future requirements. The location, size and character of terminal, having always in mind the fact that it should be located, if possible, on the axis of maximum movement. Provision for future expansion both as to trackage for trunk line entrances and terminal facilities. Provision for proper interchange of traffic with steam railway lines. The co-ordination of rail and water transportation. The possibility of locating the trunk line entrances, so as to permit of their use for serving suburban districts adjacent to the city. The economics of the whole question.

Rapid Transit System.—The object of the study has been, in the main, to secure by survey and research all useful data pertaining to the economic and physical conditions of the problem. We have attempted by a combination of practical and theoretical analysis, to estimate the probable future growth, distribution, and density of population, for the city and surrounding territory, i.e., as applied to residence, light and heavy industries, wholesale, warehouse and general business. To obtain these results, we have made a comparative study of the past growth of the city, and contrasted such with like data from other cities of similar size, and some that now have several times our present population. It is well known that, generally speaking, the growth of most cities, having relatively similar characteristics, follows well defined lines, which, graphically plotted, are of considerable use in projecting probable future population. The density of population is controllable, requiring only adequate transportation facilities, properly placed, together with such legislation as will prevent improper housing.

Rapid transit is not necessary in any city until such time as the congestion, due to vehicular, pedestrian and surface railway traffic on the streets, in the central section, has reached or is rapidly approaching the point of saturation, and then only after every other effort has been exhausted to improve existing surface transportation facilities. If this proves futile, then and then only, should serious consideration be given rapid transit. This term is generally misapplied. To many, it portends the elimination of all overcrowding conditions, and the final solution of transportation problems. As a matter of fact, there is as marked overcrowding on rapid transit lines as one encounters on the majority of surface railways at the rush hour periods. It means, in effect, the accomplishment of maximum distance in minimum time, and the amelioration of surface congestion. To provide such, the following methods are usually employed: Underground subway or tunnel construction. Elevated track structures. Combination of

January, 1916.]

both elevated and subway systems. Complete grade separation by elevation or depression. Suburban steam railway service. Its adoption is usually indicated by the population of the city and its environs, the physical and economic features of the situation, and the riding habit of the people. Rapid transit service, in the true sense of the term, has never been provided in cities of less than 1,000,000 population, mainly for the reason that the initial cost is so excessive that the average riding habit is insufficient at a 5c. fare to produce the revenue necessary to recoup the investor.

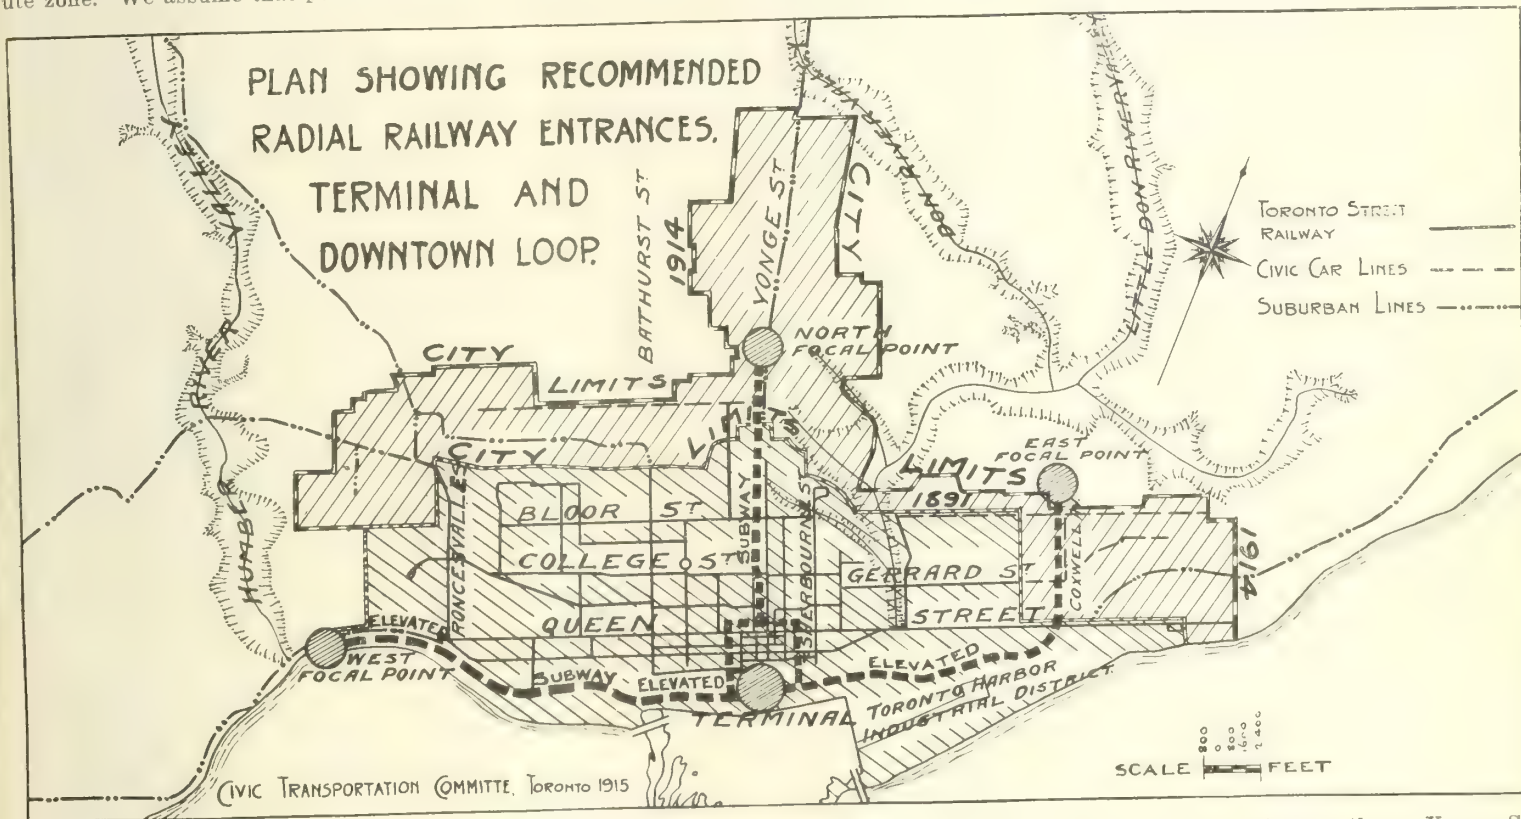

Toronto is not in a position to construct a rapid transit system in the strict sense of the term, but may, when conditions demand, institute a semi rapid transit service, by using the radial railway entrance lines. We have developed the radial entrance plan so as to permit of such joint use. By so doing, adequate and rapid service may be furnished that portion of the population living outside of what we have termed the 35 minute zone. We assume that persons who can

of present city streets. Is the present street railway system being operated at maximum capacity? The economics of the whole situation.

The problem resolves itself into three main phases, viz.: Can the immediate future transportation demands be best met by: The extension and more efficient operation of the existing street railway system? A separate rapid transit service without attempt to improve the present system? A combination of rapid transit and surface feeder system, i.e., surface feeders in the areas beyond the limits of 1891, and rapid transit by means of subways within the limits of 1891? Out of the foregoing arise the following: Are the streets in the central area capable of handling future traction and vehicular demands, or will other rights of way be required to relieve them? Analysis of the present speed schedules. Possible improvement in time travel, either by more efficient operation, better routing, improved track and equipment, or a combination of all. Present volume of traffic,

Toronto Ry., if provided with improved equipment, and operated at higher service efficiency, can be made to adequately serve the city within the limits of 1891. As traffic officers become more efficient in direction, and citizens better appreciate the functions of such officials, the movement of rail, vehicular and pedestrian traffic will be greatly facilitated, with consequent saving of time and added safety to all. If a sufficient number of cars of modern type were provided, thereby minimizing overcrowding, and the public educated to embark and debark with reasonable speed, it would result in more rapid operation of the railway system, and the facilitation of other classes of traffic. There is comparatively little congestion in Toronto streets. This may be further minimized by regulation of slow moving, heavily laden traffic from main heavily trafficked thoroughfares in the central area.

That the following railways entering the outlying portions of Toronto viz.: The Toronto & York Radial Ry., embracing the

travel from the central area to their abode, or vice versa, in 35 minutes, do not require more rapid transport. We shall show in this report that, within the limits of the city as at present constituted, adequate extension of the existing street railway lines, coupled with improved rolling stock and efficient operation, would bring the extreme outlying portions of Toronto within the 35 minute zone, wherein the necessity for other than surface transportation, as aforesaid, is not indicated. The study of this section involved detailed consideration of the following, viz.: Existing street railway situation and preparation of time zone maps. Do existing conditions warrant rapid transit service? Distribution of present population, general business and industries. Past growth of the city as applied to population, heavy and light manufacturing, wholesale and general business distribution. Probable future growth of the city as applied to the preceding sentence with resultant distribution. Past and existing topographical and other barriers to proper growth and distribution. Capacity and use

with origin and destination. Counts of passenger traffic to determine lines of heaviest movement, and points between which the public require other than direct movement to or from the central area. Street traffic counts to ascertain the degree of congestion in the portion of main thoroughfares lying within the central area. Determination of increased volume of future passenger business, and the possibility of handling same by larger car units. Consideration of advisability of changing gauge of present system from 4 ft. 10½ ins. to standard gauge of 4 ft. 8½ ins.

Conclusions.—After detailed consideration of the various factors entering into and affecting the problem as hereinbefore recited, we have concluded that: Additional civic car lines laid between now and 1921 without the limits of 1891, but within the limits of 1915, will, after acquisition of the Toronto Ry. by the city, in 1921, adequately serve all sections within the present city limits; the maximum time necessary to reach extreme destination being 35 minutes. The existing surface system of the

Metropolitan, running north on Yonge St., and the Kingston Road line from the Woodbine; the Port Credit line from Sunnyside; the Toronto Suburban to Lambton, Weston and Woodbridge, from Keele and Dundas Sts., cannot be considered rapid transit interurban lines, as in all cases they operate mainly on the highway at low speeds. The people of Toronto and the province have not had the advantages of modern rapid interurban service, such as is operated in many parts of the United States. When the hydro radial railways project becomes an accomplished fact, the system of which the section operating between London and Port Stanley is a happy augury, the entire population of the province will derive therefrom tangible benefits, which result to a community from a modern, high speed, properly equipped and efficiently operated system.

That the most feasible entrances from the east and west lie along the waterfront route. The entrance from the north may be readily effected by subway construction. The foregoing conclusions were arrived at

after careful reconnaissance of the possible routes of entrance for radial railways, in the city and its environs, and detailed survey of one hundred and fifty miles of line.

From the view point of economy of operation and utility, it is essential that the terminal be located on the axis of maximum movement. Having regard for the past suggestions for an uptown terminal, we thoroughly investigated this possibility, with the result, that aside from operating considerations, the additional cost of \$8,000,000, embracing a four track subway from the waterfront to College St., and the erection of a terminal at the latter point, proved it unfeasible. The foregoing indicates the necessity for location on waterfront route. The same consideration applies also to the location of yards on the waterfront property, in view of its natural advantages.

It is prudent to make present provision for future expansion, covering trackage for trunk line entrances and terminal facilities, therefore the necessary sites should now be provided for ultimate development. It is necessary to make ample provision for the co-ordination of rail and water transportation, and the proper interchange of all traffic. The radial railway trunk lines should, as the future demands, and the city extends, provide for the operation of semi rapid transit lines to serve outlying districts.

The streets in the central area are sufficient to care for future traction and vehicular demands, provided reasonable regulations are enacted and enforced governing vehicular and pedestrian traffic. Traffic may be much facilitated by an increase in speed of the existing Toronto Ry. units. This entails improved equipment, track, routing and operation, together with the adoption of up to date loading and unloading facilities, and the much needed education of the public to embark and debark speedily. The accomplishment of this, together with adequate extension of surface lines, will make it possible to travel from the centre to the present city limits within a 35 minute period. We have been assisted to the foregoing conclusions by the study of drawings 8 to 15 inclusive, showing present volume of traffic with origin and destination, lines of heaviest movement, and street traffic counts.

In relation to the matter of change of gauge, notwithstanding that almost every economic consideration declares against it, the dominant factor is that of future traffic unification, between radial, semi rapid, and city surface lines, and this is impossible without the reduction of the present gauge from 4 ft. 10½ ins. to 4 ft. 8½ ins.

As hereinbefore indicated, there is no justification whatever for the construction in Toronto of a rapid transit system in the strict sense of the term.

Recommendations.—We beg to respectfully recommend that: The city acquire the Toronto Ry. at the expiration of the franchise in 1921, and thereafter operate same as a municipal railway. The city should at once make a definite declaration of policy in this regard. If the decision be to municipalize the service, preparatory steps should immediately be taken, in order that upon the date of franchise expiry the city may enter into occupation and operation without overhanging tenure complications. A transportation commission should be at once appointed, consisting of representatives from the city, the Toronto Harbor Commission and the Hydro Electric Power Commission of Ontario, so constituted as to afford the city majority representation. This commission should be vested with all necessary power to plan, control and direct all transportation and terminal facilities of every kind whatsoever (exclusive of exist-

ing steam railways), including present or projected municipal lines within the corporate limits of the municipality, and to prepare and arrange for the acquisition and operation of the Toronto Ry. Company as a municipal utility upon expiry of the franchise rights of said company; the powers of this commission to be sufficiently inclusive to embrace all railway transportation facilities as aforesaid, and to be implemented from time to time, in order to accomplish the full intent of this recommendation. The Harbor Board and the Hydro Electric Power Commission of Ontario should be represented upon this commission in extension of the policy of council already expressed in the appointment of the board charged with the duty of making this report, and for the same reasons which guided that body in the constitution of such board, viz.: That the future transportation facilities within Toronto should be co-ordinated with regard to the services, rights and holdings of the bodies aforementioned, with particular reference to radial entrance and railways, the operations of the Harbor Commission as trustees for the city, and local street railway service within the city limits. Hydro Electric Power Commission of Ontario, through its municipal radial railway project, is at present undertaking the construction and development of some 1,000 miles of radial railways, with Toronto as a main terminal focal point; the Harbor Commission, as trustees for the city, control the proposed east and west trunk radial railway entrances, together with the proposed terminal site, contemplated team track delivery yards and general sorting yard, while the city has jurisdiction over all public streets, embracing surface, elevated and underground rights. Even cursory consideration will demonstrate the necessity of harmonizing all these interests, if transportation problems are to receive adequate and effective treatment. This can best be accomplished by the creation of a commission constituted as recommended. The construction of the three trunk radial entrance lines, with necessary yards and terminal, as shown on drawing 18, be proceeded with when conditions warrant and finance permits. A rapid transit system in the strict meaning of the term be not adopted. The radial railway trunk line entrances be used for a semi rapid transit service, as conditions warrant, to serve the population in the districts lying at present without and adjacent to the existing city limits. It may be necessary to procure legislation amending existing acts, in order to give effect to the foregoing. The use of any of the lines, yards, terminals, and anything whatsoever, in any way relating or appertaining thereto, by any other railway, than those of the Hydro-Electric Railway Union and the city, shall not at any time be permitted, until such railway shall have obtained the consent of the Hydro-Electric Power Commission of Ontario thereto. We do not make suggestion as to finance and reimbursement, feeling that this does not lie within our jurisdiction, but is for each to take up with his respective principals.

Estimate of cost radial railway entrances, terminal and yards.

West line, from terminal to west focal point, 5.2 miles	\$ 4,076,000
East line, from terminal to east focal point, 4.7 miles	3,120,000
North line, Queen St. to north focal point, 3.2 miles	7,696,000
East and west yards and freight facilities	1,365,000
Terminal station, and car house	2,560,000
	\$18,817,000

The foregoing estimates cover land acquisition and permanent construction, exclusive of value of lands vested in Harbor Commission and city, and property rentals for ter-

minal and yards. These estimated costs provide for ultimate construction, with the exception of the additional two tracks for four track construction. The work to be undertaken in units as conditions warrant and finance permits.

Plans and Charts.—Accompanying the report are a number of elaborate colored plans and charts as follows:—Annexation map showing dates at which various districts were annexed to the city; franchise map; plan showing built up area of Toronto at different periods; topographical barriers affecting same; population dot maps at various periods from 1879 to 1914; isometric projection showing density of population per acre per block within present city limits; classified occupancy in built up area in and surrounding city; past growth of central business area; street traffic map showing volume of vehicular and street railway movement in central section; analysis of passenger movement during morning rush hour period, showing requirements for car service in various sections of city; diagram showing homeward movement during evening rush period; diagram showing volume and distribution of daily passenger traffic on street car routes; diagram showing riding necessity or habit of the population in various sections of city; plan exemplifying conditions arising from confinement of Toronto Ry. lines within, and the growth of Toronto beyond city limits of 1891; time zone diagrams, present and attainable service; probable future occupancy maps showing topographical barriers unbroken and broken; plan of existing surface systems, radial railways and proposed radial railway entrance lines and terminal; perspective sketch of proposed water front terminal between Bay and Yonge Sts.; population of townships, villages, towns and cities in Southwestern Ontario; value of farm and manufacturing products for townships, villages, towns and cities in Southwestern Ontario. An appendix to the report contains a large amount of descriptive matter dealing with the plans and charts.

Result of the Use of Meters on Brandon Municipal Railway.

Thos. Boden, Superintendent, Brandon Municipal Ry., Brandon, Man., has presented the following figures showing the power consumption without meters for the year ended Sept. 30, 1914, and with meters for the year ended Sept. 30, 1915:

	Without Meters.	With Meters.
Power consumed in k.w.h.	607,996	491,900
Car miles	268,244	278,044
Average k.w.h. per car mile ..	2.266	1.769
Cost of power per year	\$12,159.82	\$9,838

The cost of meters was \$200; installation \$10; repairs, nothing. Power costs 2c per k.w.h. The above figures include all losses.

American Electric Railway Association Committees. The following officials of Canadian electric railways have consented to serve on the committees mentioned: Taxation matters, G. Kidd, General Manager, British Columbia Electric Ry.; P. Dube, Secretary-Treasurer, Montreal Tramways Co.; J. W. Crosby, Manager, Halifax Electric Tramway Co.; Wilford Phillips, Manager, Winnipeg Electric Ry.; R. J. Fleming, General Manager, Toronto Ry. Transportation, P. Dube, Wilford Phillips, H. G. Matthews, General Manager, Quebec Ry., Light and Power Co.; E. L. Milliken, Local Manager, Cape Breton Electric Co. Buildings and Structures (Engineering Association), H. G. Salisbury, Architect and Structural Engineer, Toronto Ry.

The Hydro-Electric Power Commission of Ontario's Proposed Electric Railway from Toronto to London.

Some details respecting the electric railway, which the Hydro Electric Power Commission of Ontario proposes to build between Toronto and London, on behalf of the municipalities concerned, have already appeared in Canadian Railway and Marine World. Draft bylaws have been prepared for submission to the vote of the ratepayers in the different municipalities, showing that the estimated cost of the completed line, including equipment, is \$13,734,155. The amount which is estimated to be required for the maintenance of the railway, apart from operating expenses, is \$214,583 a year. The operating revenue is estimated at \$1,692,175 a year, and operation and maintenance at \$817,025. The annual amount required for interest for the first 10 years after the issue of bonds would be \$686,708, and for the next 40 years the amount required for sinking fund charges and retirement would be \$137,342, and for interest, \$686,708.

Under agreements which it is proposed the municipalities shall enter into with the Commission, the latter is to build, equip and operate the railway according to an agreed route, and to issue bonds covering the cost, and it retains power to regulate fares and tolls to be charged for all classes of service. The municipalities agree to issue debentures for the proportions of the total amount of construction assigned by the Commission, maturing at 50 years, the period for which the agreements are to run, and these debentures will be held by the Commission as security, and as guarantees for the Commission's bonds, issued from time to time, and they may be disposed of in such proportions and at such times as the Commission may determine. The municipalities are debarred from making any agreement with, or bonusing any other railway or transportation company, and are to furnish free right of way over any municipal property at the Commission's request. In the event of the revenue derived from the operation of the railway being insufficient in any year to meet the operating expenses, including power, the cost of administration and the annual charges for interest and sinking fund on bonds, and for the renewal of any works, any such deficit shall be paid to the Commission on demand by each municipality in proportions to be adjusted by the Commission, and on the failure of any municipality to pay such proportion of deficit, the Commission may dispose of debentures held as security. If any municipality should fail to perform its obligations, the service to that municipality may be discontinued without notice, but the municipality shall not be relieved from the effects of its default. In any differences between the municipalities concerned, the Commission shall hear representations, and its decision shall be final.

The general route, as settled by the Commission's engineers, but which is subject to slight changes, is as follows:

Toronto Terminal-Humber River Section.—From the passenger terminal to be located near the foot of Yonge St., westerly to Sunnyside, using Toronto Harbor Commission's property and private right of way wherever possible, thence to the Humber River, paralleling the G.T.R.

Humber River-Port Credit Section.—From the westerly limits of Toronto at the Humber River, westerly parallel to the G.T.R., crossing the Credit River between the Lake Shore Road and the G.T.R.

Port Credit-Milton Section.—From Port

Credit, crossing the G.T.R. about a mile west of the village, to a point north of Sheridan post office and thence direct to Milton.

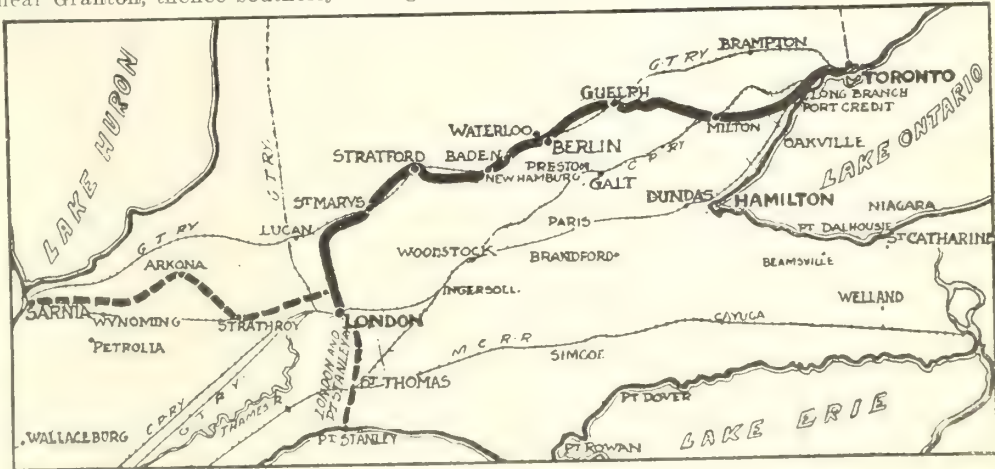

Milton-Guelph Section.—Crossing the C.P.R. west of its station at Milton, to Esquesing Tp., Nassagaweya Tp., Puslinch Tp., and thence in the general direction of the Eramosa River, to Guelph.

Guelph-Berlin Section.—From Guelph westerly to Berlin, entering the latter city on the northeast, running north of the G.T.R. between the two cities.

Berlin-Stratford Section.—From Berlin, paralleling the G.T.R. to Baden, and thence south of the G.T.R. to a point east of Stratford, crossing the G.T.R. and entering the city.

Stratford-St. Marys Section.—From Stratford westerly, paralleling the G.T.R. to a point north of St. Marys.

St. Marys-London Section.—Southwesterly through St. Marys and thence westerly, crossing the C.P.R. at grade, and the Thames River, and thence paralleling the G.T.R. to near Granton, thence southerly through Bid-

Route of Proposed Electric Railway from Toronto to London.

dulph Tp. to the northern boundary of London Tp., thence southeasterly from Con. 14 to Con. 10, and thence southerly through Cons. 9 to 4, and following the Thames River through Cons. 3 to 1, to a point between the Sarnia Road and Thames River, a short distance west of Warnclyffe Road, outside the northwest boundary of the City of London, thence southeasterly over private property and city streets, crossing the Thames River to Bathurst St., and easterly along Bathurst St. to the London and Port Stanley Ry., which at present terminates on Bathurst St., just east of Richmond St.

As previously mentioned, the total amount of debentures to be issued is \$13,734,155, and the Commission has apportioned the following amounts to the various municipalities:

Township of London	\$630,389
" " " " " "	578,921
" " " " " "	521,903
" " " " " "	462,509
" " " " " "	479,065
" " " " " "	118,735
" " " " " "	316,262
" " " " " "	315,355
" " " " " "	313,147
" " " " " "	361,025
" " " " " "	401,235
" " " " " "	248,585
" " " " " "	142,166
" " " " " "	91,822
" " " " " "	70,300
" " " " " "	12,150
" " " " " "	31,130
" " " " " "	33,100
" " " " " "	39,000

City of Toronto	1,210,196
" " " " " "	1,109,303
" " " " " "	774,040
" " " " " "	731,862
" " " " " "	651,735
Town of Waterloo	193,900
" " " " " "	153,940
" " " " " "	65,000
Village of Mimico	111,200
" " " " " "	82,250
" " " " " "	54,050
" " " " " "	66,250

Total amount of bonds to be issued. \$13,734,155

The majority of these municipalities have agreed to submit bylaws to the vote, early in the year, some in January, and others later. At the time of writing, the following have decided not to submit such votes: South Easthope, \$316,262; Ellice, \$33,100, and Puslinch, \$70,300.

With regard to the Toronto end of the projected line, some misapprehension seems to have existed in connection with the operation of the line on city streets, and also as to the free right of way through municipal property. Sir Adam Beck, on Dec. 7, explained these points to the Board of Control, at a private meeting, after which, he

is reported to have stated that the bylaw would be submitted in its present state, but that legislation would be introduced later to make it clear that the city's rights on its streets would not be jeopardized. The right of way matter referred to easements through public parks and other lands, he stated, and not to the purchase of land.

At Berlin, some discussion has taken place regarding the route through the city, and it was decided, Nov. 29, that the main passenger line should pass through by way of Victoria and Wilmot Sts., and the question as to whether the line should pass through New Germany, Bloomingdale and Bridgeport, or through Breslau, was left to the Commission's discretion. It was also recommended that a spare line for freight traffic should be built through the northerly section of the city, between Berlin and Waterloo. The tentative apportionment for Berlin is \$774,000, but it was stated that if the Commission's recommendations for the rerouting had been accepted, the city's share would have been \$970,000, but owing to the changes since agreed upon, the amount would have to be reapportioned.

It will be noticed on reference to the accompanying map that the location of the proposed line between Toronto and Port Credit is practically the same as that of the Toronto and York Radial Ry., operating between these points. In discussing this and other similar matters in Toronto, Dec.

8, Sir Adam Beck is reported to have stated that the Mackenzie and Mann interests had offered to sell the Metropolitan section of the Toronto and York Radial Ry. to the city, and that those interests and the Commission have discussed an agreement whereby the Commission may possibly purchase their interests in the province. While nothing has been definitely settled, he stated that arrangements have reached the point where both parties have practically agreed on a price. The Toronto Board of Control passed a resolution, Dec. 15, to the effect that the Commission be requested to negotiate for the purchase of the Metropolitan Division of the Toronto & York Radial Ry., under the provisions of the Hydro Electric Railway Act.

Saskatoon Municipal Railway Finances.

The report of the City Commissioner of Saskatoon, Sask., on the city finances for 1915, contains the following information respecting the operation of the municipal electric railway: During the first 10 months the revenue showed a considerable falling off as compared with the same period of 1914. The total number of passengers carried was 2,099,360, against 2,083,408; the operating expenses, excluding fixed charges, were \$85,938, against \$105,229.02, the principal reductions being made in wages and the cost of power. The loss was \$31,748, against \$26,743. It is estimated that the total loss for the year will not exceed \$33,000. The following statistics are added:

	1914.	1915.
Miles of track	14	14
Miles of track reduced to single ..	16½	16½
Miles run	579,583	590,876
Traffic receipts per car mile ..	22.27c	17.72c
Operating expenses	19.27	15.53
Average miles per car per day ..	150	165
Average cars operating daily ..	14	12
Percentage operating expenses to receipts	86%	87½%
Average fare per passenger ..	4.518c	4.93c
Average number of employees ...	90	84

The average daily receipts for the first 14 days of Nov. were \$442. With respect to the Sutherland line the report says: "For the first nine months of the year the traffic showed a considerable falling off, but the receipts now show a decided improvement. For the first 10 months of the year the total operating expenses on this line were \$6,782.39 and the receipts \$6,056.32, a loss of \$726.07."

The Jitney Situation in Canada.

The number of jitneys operating in Toronto shows a considerable diminution, and it may be said that with the exception of certain of the more crowded thoroughfares, they have ceased to be a factor in city traffic. We are advised that there were recently 21 or 22 cars operating in competition with the Toronto and York Radial Ry.'s Metropolitan Division, and a somewhat larger number operating on Yonge St., in competition with the Toronto Ry. This does not mean that there are 50 or more jitneys operating on Yonge St., but that slightly over 20 of those operating extend their routes so as to come in competition with the suburban electric railway service. The Lake Shore road and the West Toronto-Weston jitney services appear to have been abandoned.

The only other part of Canada in which there appears to be any activity in the jitney business is on the Pacific Coast. The jitney operators in New Westminster are applying to a British Columbia court to have the by-law prepared by the City Council recently, quashed. The action is being taken by the Big Five Jitney Co., which alleges, among

other things, that it is being discriminated against in favor of the Blue Funnel Motor Co.'s cars, a new company running cars between New Westminster and Vancouver started operating Dec. 5, cutting the fare from 25c to 20c. Only five cars were put in service on Dec. 5, but C. Gowan, who is managing the new line, is reported to have said that 20 will be put in operation, on a 5 minute schedule, and with a return fare of 25c. It is reported locally that the British Columbia Electric Ry. is interested in the new venture. The South Vancouver municipal council took up the question of the regulation of jitney traffic, Nov. 30. A jitney service was started Dec. 7, from the Hollyburn landing place of the Fourteenth St. ferry to Dundarave.

Three Rivers Traction Company's New Line Opened.

The electric railway which has been built in Three Rivers, Que., recently has about 3 miles of track and forms a belt line, starting at the C.P.R. station, passing through the residential district, thence along the river front, and returning to the station, via the main business thoroughfares. An extension to the Wayagamack Pulp and Paper Co.'s plant is nearing completion, and will be in operation early in January. This line will connect the Wayagamack, and other industries situated at the mouth of the St. Maurice River, with the city. Next it is intended to build a line of 2.5 miles to Cap de la Madeleine, a popular pilgrimage centre.

The roadbed is of crushed stone, and on the important streets the roadway is of concrete, and was laid at the same time as the railway track. A 60-lb. T rail is laid on cedar ties on the tangents and hemlock ties on the curves. The overhead material equipment is standard. The construction is of the span wire type supported on steel poles. The steel poles carry, in addition to the tramway trolley circuit, the lighting distribution wires, both primary and secondary, and also street lighting series circuits. The poles are placed in such a way as to serve both the Shawinigan Power Co. and its subsidiary, the Three Rivers Traction Co.'s needs wherever possible. Some of the steel poles are perhaps somewhat unusual, being 55 ft. high at points where they carry wires over running road bridges. The trolley wire is grooved 3.0 B. & S. wire. The size is larger than actually required, and as there are no feeders on the system it is larger than usual, but this was installed because of the fact that no feeders were provided.

Power is obtained from the North Shore Power Co. from its central station. To take care of this load it installed two 250-k.w. 600 volt d.c. motor generator sets. The power is generated at Shawinigan and taken into Three Rivers at 50,000 volts over 4 transmission lines, and transformed down to 2,200 volts.

The car barn is of steel, brick and galvanized iron construction, and provides for 7 cars. The repair shop, of brick, is incorporated in the same building, and will accommodate two cars. It is provided with a single track constructed over an inspection pit. The shop is equipped with the usual small tools; power and lighting being furnished at 110 and 220 volts. It is electrically heated. There are also the Superintendent's office, store room and carmen's room.

The 6 single end, single truck, one man, rear fill cars, and the single truck combination sweeper and tower car, with which the line is equipped, were fully described and

illustrated in Canadian Railway and Marine World for December.

The city belt line was formally opened Dec. 11, the first car being run nominally under the direction of Hon. J. A. Tessier, M.L.A., Mayor of Three Rivers, and Minister of Roads for Quebec. At a subsequent reception to the company's officials at the city hall, the Vice President, Julian C. Smith, spoke on the company's behalf, and Hon. Jacques Bureau, M.P., and W. Y. Soper, of Ottawa, also spoke. Among the company's officials present were Howard Murray, W. S. Hart, and G. C. Hiam, of Montreal.

The Lake Erie and Northern and the Grand Valley Railways.

A bylaw is to be voted upon by the ratepayers of Brantford, Ont., Jan. 3, to ratify the sale of the section of the Grand Valley Ry., from Paris to Galt, 13.07 miles, for \$30,000. We are officially advised that the agreement to sell was passed by the railway committee, which comprises a majority of the city council. The property to be sold consists of the right of way and tracks for the mileage named, the city council to have the right to lift the tracks, etc., from the Blue Lake branch. This agreement was ratified by the city council, Nov. 30, with the condition that the bylaw be ratified by the ratepayers. The council also decided to allow the Lake Erie & Northern to repair the track from the diamond to the south of Galt, where the L.E. and N.R. tracks cross, about 3,500 ft., which will enable that company to operate the line as soon as it is ready to do so. The company is electrifying the line between Brantford and Galt, and will also electrify the line from Brantford to Port Dover, 31.4 miles, the track laying on which has just been completed. This work is being done as part of the consideration involved.

The Grand Valley Ry. was part of the property acquired by the city, on the winding up of the G.V.R. Co. The city retains the lines within Brantford, and the section of the G.V.R. from Brantford to Paris, 7.68 miles. The Paris-Galt section is in a bad state of repair, and it was estimated that it would cost \$43,000, with a further outlay in the immediate future of \$30,000 for new steel rails, to put it in a position to meet the competition of the L.E. and N.R. This section of the line is being operated by three passenger cars and one freight car, entrance being obtained into Galt over the Galt, Preston and Hespeler St. Ry. tracks. The revenue for the six months ended June 30 was \$6,675, and the operating expenses were \$8,230. After making provision for interest, sinking fund and depreciation, the total deficit for the six months was \$2,674. The value of the section, as estimated by J. C. Royce, consulting engineer, is, exclusive of right of way, \$21,000.

In connection with the operation of the line, it is understood that connection will be made with the Galt, Preston and Hespeler St. Ry. (which is also leased to the C.P.R.) at Galt, and that an agreement for the issue of through tickets has been made with the Brantford and Hamilton Ry. It is further said that the company has entered into an agreement with the Brantford and Hamilton Ry. for the erection of a union terminal at the foot of Lorne Bridge, Brantford.

The Montreal Tramways Co. informed the city council Dec. 7 that a through service, without transfer, from the city to Cote St. Paul, would be run during the winter, but would be discontinued as soon as navigation was reopened on the Lachine Canal.

Jitney Regulations in Toronto.

The bylaw regulating jitney operation in Toronto was enacted as an amendment to bylaw 69 relating to owners of cabs and other vehicles used for the conveyance of passengers and the drivers thereof.

The latter bylaw is amended by adding at the end of sec. 14 the following words:—

"Where the application is for a license to operate an automobile for the conveyance of passengers (commonly called a jitney), it shall state the number of passengers it is intended to carry, and the number of passengers shall be mentioned in the license, and shall in no case exceed seven, exclusive of the driver, and it shall be subject to inspection at any time by the Chief Constable or any person appointed by him to perform such duty, and shall at all times be kept in a condition satisfactory to the Chief Constable."

Bylaw 69 is also amended by inserting after sec. 14 the following sections:

"14a. An applicant for a license to operate an automobile for the conveyance of passengers (commonly called a jitney), shall take out a policy of insurance in a company satisfactory to the City Treasurer against accidents to the amount of \$1,000, and deposit the same with the City Treasurer with an assignment to the Corporation of the City of Toronto in trust, and shall during the currency of his license keep such insurance in force and shall deposit therewith and undertaking in writing to do all things necessary to recover compensation from the company in the event of any accident arising from the operation of any such vehicle, and also to permit the city to do so. Such policy of insurance shall be held by the city as a guarantee that all just claims against the licensee will be paid and the city may settle all such claims up to the said amount out of any money paid under any such policy. The city shall not be responsible for any accident or damage to persons or property arising from the operation of any such vehicle."

"14b. No licensee shall carry in any vehicle licensed under the foregoing section a greater number of passengers than such vehicle is intended or allowed to seat."

"14c. No person shall be allowed to stand on the running board or step of any such vehicle while the same is in operation."

"14d. No driver of any such vehicle shall smoke while driving any passenger or passengers."

The London and Port Stanley Railway and Michigan Central Rd. Traffic.

Under old conditions, the Michigan Central Rd. obtained an entrance into London, Ont., by an arrangement with the Pere Marquette Rd., the lessee of the London and Port Stanley Ry., and utilized for terminals an area of land leased from the London and South Eastern Ry. With the expiry of the L. and P. S. R. lease a new arrangement had to be made. Under the new agreement, the L. and P. S. R., according to a press report, agrees to run two freight trains a day, the charge to the M.C.R. being at the rate of \$3, \$4 or \$5 a car, according to the number of cars per train, the minimum charge to the M.C.R. being \$25,000 a year. The whole of the M.C.R. passenger business between St. Thomas and London, will be handled by the L. and P. S. R. The agreement is to run for 30 years, and provides that only electric traction will be used in the M.C.R. yard in London. The electrification of the spur connecting with the M.C.R., and of the tracks in the M.C.R. yards is being proceeded wth.

Calgary Municipal Railway Department Organization.

The Calgary, Alberta, City Council, passed a bylaw Nov. 22, appointing Commissioner A. G. Graves, Supervisor of the Street Railway Department, to hold office as long as he continues in the official capacity of Commissioner, or unless it is sooner repealed by the Council. The bylaw creates a department of the city to be known as the Street Railway Department, to be in charge of one of the city's commissioners, which shall have the administration, control and management of the city's street railway. The City Council will appoint a superintendent who shall be in direct charge and have the care and management of the property, business and affairs of the department, including the operation of the railway, subject to the supervision of the commissioner. The Superintendent is authorized to engage all officers, agents and employees required to operate the railway, and conduct the business of the department, at such rates of pay as are approved by the commissioner. The Superintendent shall submit all rules and regulations for the internal management of the department for approval to the commissioner; shall discipline or dismiss employees for breaches of the regulations, subject to the employees right to appeal to the grievance committee appointed under the existing agreement with the employees, and to the further right of appeal to the Board of Commissioners, or after the expiry of the agreement to the commissioner at the head of the department. Notices and bulletins to the employees shall be approved by the commissioner, before being issued. Subject to the approval of the commissioner the superintendent may enter into agreements with the employees defining the terms and conditions of their employment, provided that all schedules of wages shall be approved by the council before they are finally adopted. The commissioner is given power to carry out the council's orders affecting the department; shall approve all proposed rules and regulations for the internal management of the department, and is to report on all questions of policy to the Board of Commissioners, which shall be finally decided by the city council. All expenditures on capital account are to be settled by the city council; the construction of new lines or the alteration of existing lines have to be approved by the council, and questions involving the working up of any deficit or the disposal of a surplus shall be decided by the council.

Montreal Tramways Co. manufacturing ammunition.—The Montreal Tramways Co.'s shops have been at work for some months making a number of parts of shells for the Russian Government. The company has received recently a contract for machining and assembling eight inch howitzer shells to the value of over \$1,000,000, and it is expected that further orders will follow. The machinery necessary to turn out the number of shells mentioned within 12 months has been ordered at a cost of some \$150,000 and will be installed at the company's Youville shops.

Parcel Distribution by Street Railways.—Several cities in England, where street railways are municipally controlled, have adopted a system of parcel distribution, which adds considerably to the receipts. A report states that the receipts for the past year in Lancaster from this source were \$67,500, with a net profit of \$18,000, and an average distribution of 24,000 parcels weekly. Some horse drawn vehicles are used, but it is expected that storage battery trucks will be installed shortly.

London and Port Stanley Railway Car Barn.

The plans for the car barn at London, Ont., provide for a building approximately 220 x 88½ ft., of which the section being erected will be 145 x 88½ ft. The main part of this erection will consist of a car barn, having a frontage at the northern end of approximately 54 ft.; a length of 145 ft., and a height of 24 ft. There will be 4 sets of tracks running the entire length of the building, with the necessary pit under each set of tracks. On the west side of the car barn proper, and at the north end, will be a two story building under which will be a basement approximately 36 x 30 ft., the main entrance to which will be on the west side. The hallway, 8 ft. wide, in which will be a stairway to the second floor, will give access to an office on either side, and to the men's room and lavatory in the rear. The second floor will be divided by lath and plaster partitions into 4 rooms, with a lavatory. South of the office section and on the west side of the building, will be the transformer room, 24 x 20 ft., and further south a store room of approximately the same size. The remainder of the space will be given over to workshop purposes. The southern wall of the building will be a temporary one made of galvanized iron sheeting. The foundation work, the pits, and the main floor will be of reinforced concrete. The roof will be supported by 7 columns on the north and south ends, with 4 columns at the east and west ends connected by steel girders. The barn will be lighted by two windows in each bay of the east and west elevations, by 6 windows at the temporary south end, and by a series of lights in the monitor extending the length of the barn over the westerly bay. The inside height of the monitor from the main floor will be 28¼ ft.

Vandalism on Electric Railways.—Mention was made in Canadian Railway and Marine World for December of various acts of vandalism in suburban stations and shelters on the British Columbia Electric Ry. Similar acts are committed in practically all shelters erected at points in the suburbs and country served by electric railways throughout the Dominion. It is difficult to catch the perpetrators, but by some systematic effort by the companies and their patrons, something might be done to minimize and eventually wipe out the nuisance. The International Ry. is offering a reward of \$25 for the apprehension of persons cutting seats on its cars.

The Detroit United Ry. matters, which have for some time occupied prominent attention, pending the decision of the Detroit taxpayers as to the municipalization of the city lines, have, since the defeat of the proposals, dropped to their normal position in local affairs. The Board of Street Railway Commissioners closed its office in Detroit, Dec. 1, and accepted the secretary's resignation, but announced that for the next eight months at least, they would continue to act, but would be governed more or less by the requests of the City Council.

South East Calgary Electric Ry.—An order for the liquidation of this company was made by the Master in Chambers at Calgary, Alta., Nov. 19, under which the Trusts and Guarantee Co. (Calgary office) was appointed liquidator. Creditors were asked to send in details of their claims up to Dec. 27, and Jan. 4 was fixed as the date upon which the Master in Chambers would receive the liquidator's report.

The Toronto Ry., after considerable experimenting, has decided to equip all its cars with 24-watt Tungsten lamps. About 24,000 are being installed.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—The differences between the company's engineer and the city's engineer as to the safety for electric railway traffic of the temporary trestle at the fire damaged Connaught Bridge, Vancouver, have been practically settled. Some additional parts of the damaged steel work are being removed and additional braces are being put in. (Dec., 1915, pg. 482.)

Edmonton Radial Ry.—The City Commissioners have recommended the extension of the radial railway tracks along Brandon Ave., so as to make connection with the Edmonton Interurban Ry. tracks, at an estimated cost of \$3,000. The matter is still under consideration. (Oct., 1915, pg. 404.)

Chatham, Wallaceburg and Lake Erie Ry.—We are officially advised that the company has under consideration the construction of over 200 ft. of siding. W. Norris is General Superintendent, Chatham, Ont.

Hamilton Radial Ry.—The work of straightening the tracks in the neighborhood of the Inlet, at Hamilton, Ont., which has been in progress for some months, is reported completed. The new piece of construction cuts out some curvature and shortens the route somewhat.

Lacombe and Blindman Valley Electric Ry.—We are officially advised that the Alberta Government guaranteed the company's bonds for \$7,000 a mile for building 39.1 miles of line. The bonds were left in the hands of the Province, and the proceeds of the entire issue were subsequently placed to the credit of the Provincial Treasurer, who has paid out a considerable sum to the company as construction progressed. No work has been done on the line this year. (Dec., 1915, pg. 482.)

London and Lake Erie Ry. and Transportation Co.—We are officially advised that there is no foundation for the recent press report that the company is arranging for an extension of its line from Lambeth to Delaware, Ont. (Aug., 1915, pg. 318.)

London and Port Stanley Ry.—We are officially advised that there is under construction an extension from Richmond St. to Ridout St., London, Ont., about a mile. The car repair barns under construction, a description of which appears on another page, are expected to be completed by Feb. 1.

The bylaw for \$100,000, which London ratepayers will vote on Jan. 1, is to provide money to lay industrial spurs; to electrify the portion of the Michigan Central lines in London and St. Thomas, over which the Commission has control, and for other purposes. J. J. Callahan, London, Ont., is Manager of Transportation. (Nov., 1915, pg. 441.)

Moncton Tramways, Electricity and Gas Co.—We are officially advised that the company will probably undertake the construction of about a mile of new city and suburban track, connecting the existing lines with the suburb of Sunny Brae. It is expected that 60 lb. T rail will be used on the extension. A. B. Coryell is Superintendent Tramways and Electricity and Purchasing Agent, Moncton, N.B. (Dec., 1915, pg. 482.)

Montreal and Southern Counties Ry.—The extension of the line from St. Césaire, mileage 31-23 to Abbottsford, mileage 37-88, was opened for traffic Dec. 15. The remaining section into Granby, mileage 46-63, will be opened for traffic Jan. 15. This will give the company a through line from Montreal to Granby of 46.63 miles. (Dec., 1915, pg. 422.)

Niagara, St. Catharines and Toronto Ry.—A press report states that the company pro-

poses to erect a new steel bridge on its line in Stamford Tp. during this year.

The Dominion Parliament is to be asked, at its next session, to extend the time within which the company may build the following lines: From Port Colborne to Fort Erie, and Niagara Falls; from Niagara Falls to Niagara, and from Niagara to St. Catharines; from Welland to Brantford; an extension of the St. Catharines and Niagara Central Ry. to the Niagara River at Fort Erie, and an extension to Toronto, passing through or near Hamilton. (July, 1915, pg. 277.)

Sarnia St. Ry.—We are officially advised that the following extensions of line in Sarnia, Ont., are projected: St. Clair St. to Clifford St., and from Clifford St. to River Road, 2,500 ft. Nothing has been settled as to when these extension will be built. G. E. Wadland, Sarnia, Ont., is Manager. (July, 1915, pg. 277.)

Schomberg and Aurora Ry.—We are officially advised that the electrification of this line has been completed, and it was expected to start operating it by electric power Jan. 1. The line runs from near Bond Lake, Ont., and the Toronto and York Radial Ry.'s Metropolitan division, to Schomberg, 14.40 miles, and has hitherto been operated by steam locomotives.

Toronto Civic Ry.—We are officially advised that there is under construction a double track line on Lansdowne Ave., from St. Clair Ave. to the C.P.R. tracks, 0.634 mile.

The question of the provision of car repair shops is under consideration, and a report respecting the same is being prepared by Works Commissioner Harris. The site of the proposed shops is on the extension of the St. Clair Ave. line to Avoca Ave. (Nov., 1915, pg. 441.)

Toronto Suburban Ry.—H. T. Hazen, Chief Engineer, is reported to have stated that the Toronto-Berlin line will be opened from Lambton to Georgetown by Feb. 1, and on to Guelph by Mar. 1, making a total extension from Lambton of 45 miles. Track is laid between Lambton and Guelph, and a large portion of the overhead work is completed. An hourly service will, it is said, be given between Toronto and Georgetown, and a two hourly service between Georgetown and Guelph. Cars will, it is reported, start from north of the C.P.R. tracks on Bathurst St., Toronto, and run along the T.S.R.'s existing line, via. Davenport Road, Keele St. and Dundas St., to Lambton Park, where the new line starts. The points touched by the new line are, Lambton Mills, Islington, Summerville, Dixie, Cooksville, Meadowvale, Churchville, Huttonville, Norval, Georgetown, Limehouse, Acton, Blue Springs, Eden Mills and Guelph. The main car barn at Lambton is well advanced towards completion. There will be power transformer stations at Islington, Georgetown and Guelph. (Nov., 1915, pg. 441.)

The Windsor, Essex and Lake Shore Rapid Ry., we are officially advised, may do some paving on its lines during this year. A. Eastman is Vice President and General Manager, Kingsville, Ont. (Sept., 1915, pg. 359.)

Winnipeg Electric Ry.—We are officially advised that during 1915 the company laid 2.10 miles of new track upon various extensions in Winnipeg. (Nov., 1915, pg. 440.)

The Grand Trunk Pacific Telegraph Co. intends, as soon as financial conditions warrant, to erect additional wires throughout its system.

Regina Municipal Railway Operations.

Following are the figures for November, 1915, against those for November, 1914:

	1915.	1914.
Revenue	\$15,982.62	\$14,561.57
Operating expenses	14,659.93	15,406.23
Operating surplus	1,322.69
Operating deficit	844.66
Capital charges	8,466.61	7,476.54
Total deficit	7,143.92	8,321.20
Passengers carried	349,370	316,365
Expenses per car mile with-out power	14.53c.	15.10c.
Expenses per car mile with power	19.59c.	19.57c.
Power per k.w.h.	2.02c.	2.00c.
Power per k.w.h. per car mile	5.04c.	4.50c.
Platform wages per car hour	73.14c.	78.77c.
Expenses, percentage of earnings without capital charges	91.72%
Expenses, percentage of earnings with capital charges	144.70%

Electric Railway Track Laid in 1915.

Below is a preliminary table showing track laid on electric railways in Canada during 1915. It is not published as a complete one, owing to the fact that some of the companies have not replied to the circular sent, but it is believed to be approximately correct. The * mark indicates that the figures given are estimated:

	Miles.
Brantford Municipal Ry.:	
Extensions in city	1.25
*Lake Erie and Northern Ry.:	
Brantford to Waterford, and from Waterford to Port Dover	20.40
London and Port Stanley Ry.:	
London to Port Stanley	23.60
Montreal and Southern Counties Ry.:	
St. Césaire to Granby, Que.	15.67
Montreal Tramways Co.:	
Four extensions	1.18
Peterborough Radial Ry.:	
Park St. to Monaghan Road	0.38
Three Rivers Traction Co.:	
Lines in Three Rivers, Que.	4.00
Toronto Civic Ry.:	
On Bloor St.	0.75
Toronto Suburban Ry.:	
From Lambton, mileage 1.82, to Mimico Creek, mileage 3.61	1.79
From the Speed River, mileage 45.11, to Guelph, mileage 48.29 ..	3.18
	4.97
Winnipeg Electric Ry.:	
Extensions in city	2.10
Total	74.30

The London & Port Stanley Ry., which was formerly a steam road, is included above, as it was reconstructed and electrified during the year.

The Lake Erie & Northern Ry. was originally supposed to be a steam road. The first section from Galt to Brantford, and a section from Waterford to Simcoe, together 30 miles, were laid with steel in 1913, and were included in our report on steam railway track laid in that year; the additional mileage between Brantford and Waterford, and Simcoe and Port Dover, is included in the above electric table, as the road is to be operated by electricity.

The Three Rivers Traction Co. is another new enterprise.

Accident on Montreal & Southern Counties Ry.—Following is the official report of an accident on Dec. 18:—"Car 102, leaving St. Lambert at 7.37 a.m., collided with car 103, which left Montreal at 7.20 a.m. Cars met between spans 19 and 20, Victoria Bridge, in dense fog. Car 103 was delayed on Mill St. 6 minutes, and car 102 left Front St., St. Lambert, at 7.43. Accident happened on account of misunderstanding of orders by crew of car 102." One motorman had two legs broken, and the other motorman had two legs broken. Several passengers were injured.

January, 1916.]

Answers to Questions on Electric Railway Topics.

Questions addressed to the American Electric Railway Association's Question Box, have elicited replies from Canadian electric railway officials, as follows:—

Overloading of Motors.—Electric car with four 95 h.p. motors has three pairs of 32 in. wheels and one pair 34 in. wheels. Is the motor on the 34 in. wheels overloaded?

W. R. MacRae, Master Mechanic, Toronto Ry.—In my opinion the motor attached to the 34 in. wheels is overloaded.

Life of Steel Underframes.—We are operating a lot of 36 ton cars built with 5 in. steel under frames. They have been in operation nine years and we find that the steel work is corroding badly. (a) What method has been adopted to protect the steel under frames of cars from corrosion? (b) What has the life of these frames proved to be?

M. Power, Master Car Builder, Toronto Ry.—(a) The only method I know of is to have the exposed parts properly protected by a suitable iron paint. Before applying same, the steel should be cleansed by a sand blast. When this cannot be obtained, a wire brush can be used to advantage. (b) I know of no set life of a steel car. From the experience of those using them, it appears to be little longer than wood. In order to have steel construction stand, it requires more care than wood.

Life of Car Axles.—What mileage should $4\frac{1}{4}$ in. heat treated non-keyseated car axles average under double truck four-motor car of approximately 43,000 lbs. weight?

W. R. MacRae, Master Mechanic, Toronto Ry.—At least 250,000 miles.

Car Wheel Guarantee.—What material is purchased under a contract guaranteeing cost per 1,000 car miles?

W. R. MacRae, Master Mechanic, Toronto Ry.—Car wheels.

Lighting of Suburban Stations.—We have installed at a great many of our suburban stations electric lamps fed from the trolley and feed wires. It is a problem to keep these lights in repair, have them lighted when they should be and turned off when they are not needed. We would like very much to get the experience of other companies. (a) Does good service demand that railway companies install fixed lights at suburban stations where there are no agents to care for them? (b) If so, what is the best way to protect and operate them?

C. L. Wilson, Assistant Manager, Toronto and York Radial Ry., Toronto.—Regarding the practice of installing lights at way stations, I may say that this is done only at points where we have a ticket agent or an employee acting in the capacity of an agent or watchman, and it is not customary for us to make this practice general at waiting points.

Automobiles for Employees.—Should utility companies furnish automobiles exclusively to the individual employee, or should there be a garage where cars are subject to assignment?

F. G. Clark, Chief Engineer, Toronto Ry.—The furnishing of automobiles depends largely upon local conditions and the type of organization. Our practice is as follows: Certain officials have cars and drivers furnished for their exclusive use. These cars are kept in the company's garage, and if there happens to be an emergency requirement, the superintendent of garage calls upon the officials to find if the cars may be used for a specific purpose and for a given length of time. Certain other cars are designated for the use of certain officials and are the cars usually used by these men, be-

ing driven by them and to a certain extent are under their care. These cars may be used by the garage superintendent for certain emergencies without the permission of the men who ordinarily use the cars, but for ordinary service are not to be taken out of the garage except by permission of the men to whom they are assigned. Certain other cars are for general use and are assigned upon requisition and are charged for with or without a driver, as would be the case with any livery or public garage.

Competition on Contracts.—How many proposals are necessary on a contract to get full benefit of competition?

F. G. Clark, Chief Engineer, Toronto Ry.—The number of proposals necessary to get the benefit of competition depends upon the nature of the contract, the apparatus and material being purchased, the standing of the companies competing for the contract, etc. In some cases, competition is unnecessary to get proper results; in other cases, two proposals are sufficient, and in certain others, a considerable number of proposals may be desirable. Suitable knowledge of the requirements of the case and common sense appear to be what are necessary in this connection.

Electric Railway Finance, Meetings, Etc.

Brantford Municipal Ry.—The Brantford City Council is applying to the Dominion Parliament for authority to carry on the Grand Valley Ry. under the name of the Brantford Municipal Ry., with all the powers of the G.V.R., and the power to sell any portion of the same absolutely or conditionally, subject to the Board of Railway Commissioners' approval.

British Columbia Electric Ry., and allied companies:

	Oct. 1915	Oct. 1914	July 1 to Oct. 31, 1915	July 1 to Oct. 31, 1914
Gross earnings	\$38,826	\$361,000	\$2,073,095	\$2,679,351
Expenses	180,051	511,877	1,328,330	2,060,681
Net earnings	58,775	149,123	145,167	618,670

The percentage due to the City of Vancouver for November was \$3,323.14, against \$6,145.51 for Nov., 1914. The number of passengers carried on the city and suburban lines for November was 2,269,542, against 2,611,978 in Nov., 1914.

Cape Breton Electric Co.

	Oct. 1915	Oct. 1914	July 1 to Oct. 31, 1915	July 1 to Oct. 31, 1914
Gross earnings	\$84,152.20	\$50,751.49	\$122,536.88	\$122,753.15
Expenses	16,891.18	18,324.05	70,900.79	73,491.06
Net earnings	17,261.02	12,227.46	61,436.09	49,262.09

Edmonton Radial Ry.—The Mayor of Edmonton, Alta., at the annual public meeting for the discussion of civic affairs, Dec. 1, made a statement as to the city's finances, in the course of which he said: "In the street railway department a decided improvement has taken place, resulting in a very large decrease of the deficits. The total operating expenses and capital charges for the 10 months were \$547,263, a saving over 1914 of \$186,521. The deficit showed a reduction of \$63,506 for 1915, as compared with the corresponding period of last year. Since August the department had been making a decided better showing, and it was clear that under proper handling and normal conditions the system would pay its own way."

Guelph Radial Ry.—Guelph, Ont., press dispatch, Dec. 15: "The Radial Railway Board has paid the City Treasurer more than \$10,000, the surplus over operating expenses from the street railway for 1915. This figures out at 6% on the amount the city has invested in the railway. A few shares were taken over recently from pri-

vate holders, and from these the amount may be made even larger. This is an increase of more than \$2,000 over the amount that the railway earned for the city in 1914."

London and Port Stanley Ry. Earnings.—

An estimate of net earnings for six months ended Dec. 31, 1915, states that they will amount to \$10,277.64. During July and August, 65,739 and 89,529 passengers were carried respectively.

London St. Ry.

	Nov. 1915	Nov. 1914	Jan. 1 to Nov. 30, 1915	Jan. 1 to Nov. 30, 1914
Gross earnings	\$91,843.90	\$29,057.50	\$692,199.36	\$631,395.06
Expenses	22,085.48	21,089.50	259,755.85	243,416.06
Net earnings	69,758.42	7,968.00	432,443.51	387,979.00

Toronto Ry.—The receipts from Jan. 1, and the percentages paid to the city, for 1915, compared with those for 1914, are as follows:

	1915	City percentage	1914	City percentage
January.....	847,226	870,185	\$501,844	\$555,255
February.....	446,314	66,491	461,274	73,638
March.....	488,468	36,141	510,531	102,150
April.....	467,702	93,540	501,435	100,284
May.....	468,954	93,791	534,406	106,896
June.....	450,582	90,116	515,883	103,177
July.....	449,108	89,822	507,912	101,582
August.....	447,369	39,166	525,295	42,091
September.....	489,553	36,935	487,689	39,274
October.....	461,685	46,301	465,055	46,563
November.....	472,729			
	\$5,108,238	\$808,339	\$5,537,088	\$804,520

Toronto Ry., Toronto and York Radial Ry., and allied companies.

	Oct. 1915	Oct. 1914	Jan. 1 to Oct. 31, 1915	Jan. 1 to Oct. 31, 1914
Gross earnings	\$792,001	\$849,656	\$7,942,406	\$8,471,744
Expenses	358,957	426,536	3,566,309	4,333,990
Net earnings	433,044	423,120	4,376,097	4,137,754

Winnipeg Electric Ry.

	Oct. 1915	Oct. 1914	Jan. 1 to Oct. 31, 1915	Jan. 1 to Oct. 31, 1914
Gross earnings	\$286,146	\$330,562	\$2,799,595	\$3,407,362
Expenses	181,176	195,465	1,848,025	1,970,095
Net earnings	104,970	135,097	951,570	1,437,267

Winnipeg, Selkirk, and Lake Winnipeg Ry. Bonds.—The Dominion Securities Corporation, Toronto, has issued a circular from which the following is reproduced:—

In 1905 we marketed \$400,000 1st mortgage bonds of the Winnipeg, Selkirk & Lake Winnipeg Ry. Co., the price then representing approximately a 4.70% basis for 5% bonds, due July 1, 1933. The company completed recently and put into operation 17½ miles of additional road, making a total mileage of approximately 40 miles. In order to repay advances made by the Winnipeg Electric Ry. Co. (which owns the entire capital stock of the Winnipeg, Selkirk & Lake Winnipeg Ry. Co.), and to provide for redemption of the above mentioned mortgage bonds, \$1,400,000 of 5% general mortgage and refunding bonds have been issued, dated July 1, 1915, and maturing July 1, 1925—these bonds having been guaranteed both as to principal and interest by the parent company. We have already arranged for the redemption of the greater portion of the first mortgage issue—over \$300,000—practically all holders of these bonds having taken the new bonds in exchange. After reserving sufficient new bonds to retire the present small outstanding portion of the first mortgage issue, we offer the now unsold balance of approximately \$700,000. The bonds are offered at 92.56, and interest will therefore yield 6%.

Passenger Shelter at Sunnyside, Toronto.

The question of providing a shelter at the junction of the Toronto Ry. and the Toronto and York Radial Ry. at Sunnyside came before the Ontario Railway and Municipal Board, Dec. 1, and it was arranged that a heated car will be provided temporarily, the cost to be borne equally by the railways and the city. The portion of the Toronto and York Radial Ry. concerned, formerly the Toronto and Mimico Ry., was nominally acquired by the city on the expiration of the franchise some time ago, but no money has passed, and it is being operated by the T & Y.R.R. at the city's request.

Mainly About Electric Railway People.

W. H. Maxwell has been appointed Roadmaster, Montreal & Southern Counties Ry., Office, St. Lambert, Que.

H. B. Fleshman, Maintenance of Way and Structures Engineer, Montreal & Southern Counties Ry., St. Lambert, Que., has resigned.

G. J. Meyer, heretofore Electrical Engineer, Montreal & Southern Counties Ry., has been appointed Chief Engineer. Office, St. Lambert, Que.

N. H. Brown, Superintendent of Transportation, Buffalo Division, International Ry., Buffalo, N.Y., has been appointed General Manager of Transportation.

Duncan MacDonald, ex General Manager, Montreal Tramways Co., and now one of the Montreal city controllers, will, it is said, be a candidate for the mayoralty this year.

J. H. McNeil, who had charge of the construction of the Three Rivers Traction Co.'s line in Three Rivers, Que., has been appointed acting Superintendent in charge of operation.

Mrs. Rothery, of Weston, Ont., is suing the Canada Accident and Guarantee Co. for \$15,000, alleged to be due under a policy on her late husband, J. E. Rothery, formerly Manager, Toronto Eastern Ry.

W. G. Murrin, General and Mechanical Superintendent British Columbia Electric Ry., has been appointed Chairman of a sub-committee of the Vancouver Returned Soldiers' Welcome Committee.

G. D. Archibald has been appointed Superintendent, Saskatoon Municipal Ry., Saskatoon, Sask. For some time past the duties of Superintendent of the municipal railway have been carried out by E. Hanson, City Electrician.

Mrs. J. C. Grace, wife of the Secretary Treasurer, Toronto Ry. Co., died suddenly at Toronto, Nov. 30, from cerebral hemorrhage. She was a sister of the late Jas. Ross, of Montreal, and an aunt of J. K. L. Ross, one of the C.P.R. directors.

Lt. Col. G. D. Fearman, Chief Accountant, Dominion Power and Transmission Co. of Hamilton, Ont., has been appointed to the command of the 120th Battalion, but still retains his position with the company. His assistant, G. N. Kendall, is discharging the duties of Accountant.

Major Geo. C. Royce, General Manager, Toronto Suburban Railway, who has been in command of the Depot Battalion at Toronto Armories, has been appointed commandant of the camp for interned alien enemies at Kapuskasing, Ont., on the National Transcontinental Ry., with the rank of Lieutenant Colonel.

James D. Fraser, Director and Secretary-Treasurer, Ottawa Electric Ry., and President, Canadian Street Railway Association, who has recovered recently from a severe attack of la grippe, was to leave Ottawa, Dec. 30, with Thos. Ahearn, President, Ottawa Electric Ry., for a short trip to Havana and other southern points.

A. C. Johnston, who has succeeded J. E. Richards as Accountant, Chatham, Wallaceburg & Lake Erie Ry., Chatham, Ont., commenced railway work with the Canadian Northern Ry. in Dec., 1896, leaving in 1904 to enter the Lackawanna Steel Co.'s service at Buffalo, N.Y., where he remained for several years, returning to the Canadian Northern in June, 1912.

Col. H. H. McLean, K.C., M.P. for Queens-Sunbury, N.B., and President, St. John Ry. Co., who commanded a cavalry brigade at Valcartier during last summer, has been ap-

pointed a special recruiting officer for the Maritime Provinces, and will assist in raising battalions there. Later on he will probably be sent to the front in command of a brigade.

Edward L. Cousins, A.M.Can.Soc.C.E., one of the engineers entrusted with the preparation of a report on a proposed rapid transit system for Toronto, which appears, with his portrait, elsewhere in this issue, was born at Toronto, June 11, 1883, and was educated at the public schools there, St. Andrew's College, and Toronto University, graduating B.A.Sc. in 1907. From 1902 to 1907 he was assistant engineer, Resident Engineer's office, G.T.R., Toronto; 1907 to 1910, Engineer in Charge Middle Southern Division, G.T.R., Toronto; 1910 to 1912, Assistant City Engineer, Department of Railways, Bridges and Docks, City of Toronto. In 1912 he was appointed Chief Engineer, Toronto Harbor Commissioners, which position he still holds.

Manfred Freeman was elected Public Utilities Commissioner for Lethbridge, Alta., Dec. 13, by a majority of 36 over Arthur Reid, who held the office for the last term. Three candidates went to the poll, with the result that Reid received 410 votes, Freeman 319, and McKenzie 246, but as the retiring Commissioner did not receive 51% of the votes polled, a counting of the second choice ballots was necessary, the name of the third candidate being eliminated. The second choice ballots gave Freeman 152 votes and Reid 25, giving Freeman a total of 471 and Reid 435. Mr. Freeman is a native of Hamilton, Ont., and has lived in Lethbridge since 1890. He was at different times Chief Engineer, Manager, and Secretary of the Lethbridge Waterworks and Electric Light Co., during its existence as a private company. As Public Utilities Commissioner he has charge of the Lethbridge Municipal Ry.

Electric Railway Notes.

Moose Jaw Electric Ry., Moose Jaw, Sask., has ordered a rotary circulating water pump in the United States.

The **Sarnia St. Ry.** may be in the market for about 5,000 ft. of 60-lb. rails early in the spring. G. E. Wadland, Sarnia, Ont., is Manager.

The **Windsor, Essex and Lake Shore Rapid Ry.** has become a party to the Eastern Canadian Passenger Association's certificate plan regulations.

The **British Columbia Electric Ry.** issued an order, effective Dec. 15, reducing the service on the Lulu Island and Burnaby Lake lines from one car an hour to one car every two hours.

The **British Columbia Electric Ry.** received entries up to Dec. 15, in a competition for a design emblematic of supplying transportation, light, power and heat. Prizes of \$50 and \$25 were offered.

The **Manitoba Court of Appeal** started on Dec. 15 hearing the **Winnipeg Electric Ry.**'s appeal against Judge Metcalfe's decision that the company must pay for clearing snow from the tracks when ordered to do so by the City Engineer.

The **British Columbia Electric Ry.**'s office staff's annual dinner was held in Vancouver, Dec. 4, G. Kidd, General Manager, being present. The speeches were chiefly of a complimentary character, but special reference was made of the fact that 144 of the company's employes are in the Canadian Overseas Expeditionary Forces.

A cablegram from London, Eng., Dec. 20, to the city attorney of Montreal, stated that the application of D. Robertson, Purchasing Agent, Montreal Tramways Co., for permission to appeal to the Imperial Privy Council to have the franchise of the Canadian Automobile Co. declared illegal had been refused. The action has been before the courts for some two years.

The **Sandwich, Windsor and Amherstburg Ry.** has received two single truck city cars from the Preston Car and Coach Co. They are mounted on 21-E trucks, and are single end, p.a.y.e. type, with longitudinal seats upholstered in pantasote, folding steps, mutually operating doors under the control of the conductor and motor man, and equipped with sign boxes and forced circulation heaters.

The only decision rendered to date in the various suits arising out of the Montreal tramways franchise matter is one brought by J. A. Thibeaudeau to have Controller McDonald unseated. The decision was rendered by Justice Lafontaine, Dec. 2, the petition being dismissed with costs. The other actions are still before the courts. Ex Controller Hebert, who was the central figure of the disputes, has made an assignment to his creditors, and is reported to be seriously ill.

An Alberta court on Dec. 7 granted an injunction restraining the **Edmonton City Council** from entering into an agreement with the **Edmonton Power Co.**, granting a franchise for the supply of power in the city. The agreement was endorsed by the ratepayers, but the third reading of the bylaw was defeated in the City Council Nov. 24, by the casting vote of the Mayor, and referred back for further consideration. The case came up for hearing Dec. 10, and was concluded on the following day, when Judge Hyndman decided that the bylaw could be passed by the council, and accordingly dissolved the interim injunction. The bylaw, he said, did not confer a franchise, but was simply an agreement to go to the Legislature, asking it to sanction the granting of a franchise, the terms of which had been arranged.

One-Man Cars in Calgary.—The **Calgary Municipal Ry.** has placed some one-man cars in operation running from the city centre to outside points, as an accommodation where large cars with two men would not pay. Five of the one-man cars are being operated largely on inside and stub lines satisfactorily, and it is proposed to operate more of them at rush hours on long hauls where only one trip will be made. These cars are single truck p.a.y.e., 6 ft., rear vestibule type, and have been converted by closing up the rear end and making it into a smoking room seating 10 passengers, and by adding one additional seat in the body, where 28 passengers are seated, the total capacity being 38 passengers. The front bulk head door has been removed, and also the window, which is used as a wicket, the fare box being inside this window. We are indebted to T. H. McCauley, Superintendent, for these particulars.

Toronto Ry. and Overcrowding.—Information was received in Toronto, Dec. 21, that the Imperial Privy Council had granted the **Toronto Ry. Co.** leave to appeal against the Ontario Appeal Court's decision confirming the conviction for maintaining a nuisance in permitting overcrowding of cars.

Dominion Power and Transmission Co.—W. C. Hawkins, Managing Director, is reported to have stated that the **Hydro Electric Power Commission of Ontario** is not negotiating for the company's electric railways and power plants.

Marine Department

Intercolonial Railway's Car Ferry Steamship, Scotia 2.

A very complete advance description of this vessel was published in Canadian Railway and Marine World for Nov., 1913. The route which she is to serve is the trying one which traverses the Strait of Canso, between the mainland of Nova Scotia and Cape Breton Island. There is considerable ice-flow along this route in winter and, therefore, the Scotia 2 has been constructed to break up the ice, in order to keep the passage open for railway service. The vessel, which has several interesting features, left the Tyne Aug. 31 last, under the command of Capt. Manning, and, in spite of heavy weather on the voyage, arrived at Port Mul-

duced in order to break up the ice in front arrangement aft is for a single screw propeller with the ordinary rudder. The hull is specially strengthened at the water line, fore and aft, and water ballast tanks are arranged at the forward and after ends. These can quickly be filled in order to increase where necessary the downward thrust for the breaking up of the ice.

To facilitate navigation, a superstructure has been built. This gives a clear headway for the railway cars traversing the track on the deck, and affords a good outlook for navigation purposes. The pilot house on the navigation bridge contains the steam steer-

of one large mess room, four rooms for the officers and engineers, one for the steward, two separate rooms for the day and night captains, and two for the chief engineers. The crew's quarters include a mess room, one room for 6 seamen, and one for 8 firemen. A complete installation of electric light is fitted throughout the vessel. The generating machinery consists of two direct coupled plants, each capable of giving an output of 25 kw. at 80 volts, when running at a speed of 350 revolutions a minute. A searchlight of 20 in. diameter and 16,000 candle power, is fitted on top of the pilot house, with the necessary controlling

Bow View, Car Ferry Steamship, Scotia 2.

grave, N.S., Sept. 15, proving the structural strength of the hull and the fact that vessels of this character can safely cross the Atlantic. The principal dimensions are:—

Length over all	300 ft. 0 ins.
Length between perpendiculars ...	286 ft. 6 ins.
Breadth, extreme, over fenders	50 ft. 0 ins.
Depth, moulded	20 ft. 0 ins.
Draught of water	14 ft. 2 ins.
Displacement at 14 ft. 2 in. draught	3665 tons

The vessel is of the single deck type; and increased strength has been introduced in the framing of the deck in order to support the weight of heavy locomotives on the centre track. The vessel conforms to the conditions of Lloyd's highest classification and also with British Board of Trade requirements. The main deck has three lines of track laid to standard 4 ft. 8½ in. gauge, and the cars will be shipped and discharged over the forward end only. The four bunkers with which the vessel is fitted are so arranged that they can be loaded from cars on the railway track on deck. The fore part of the vessel is of the ram form, intro-

duced in order to break up the ice in front arrangement aft is for a single screw propeller with the ordinary rudder. The hull is specially strengthened at the water line, fore and aft, and water ballast tanks are arranged at the forward and after ends. These can quickly be filled in order to increase where necessary the downward thrust for the breaking up of the ice. To facilitate navigation, a superstructure has been built. This gives a clear headway for the railway cars traversing the track on the deck, and affords a good outlook for navigation purposes. The pilot house on the navigation bridge contains the steam steer-

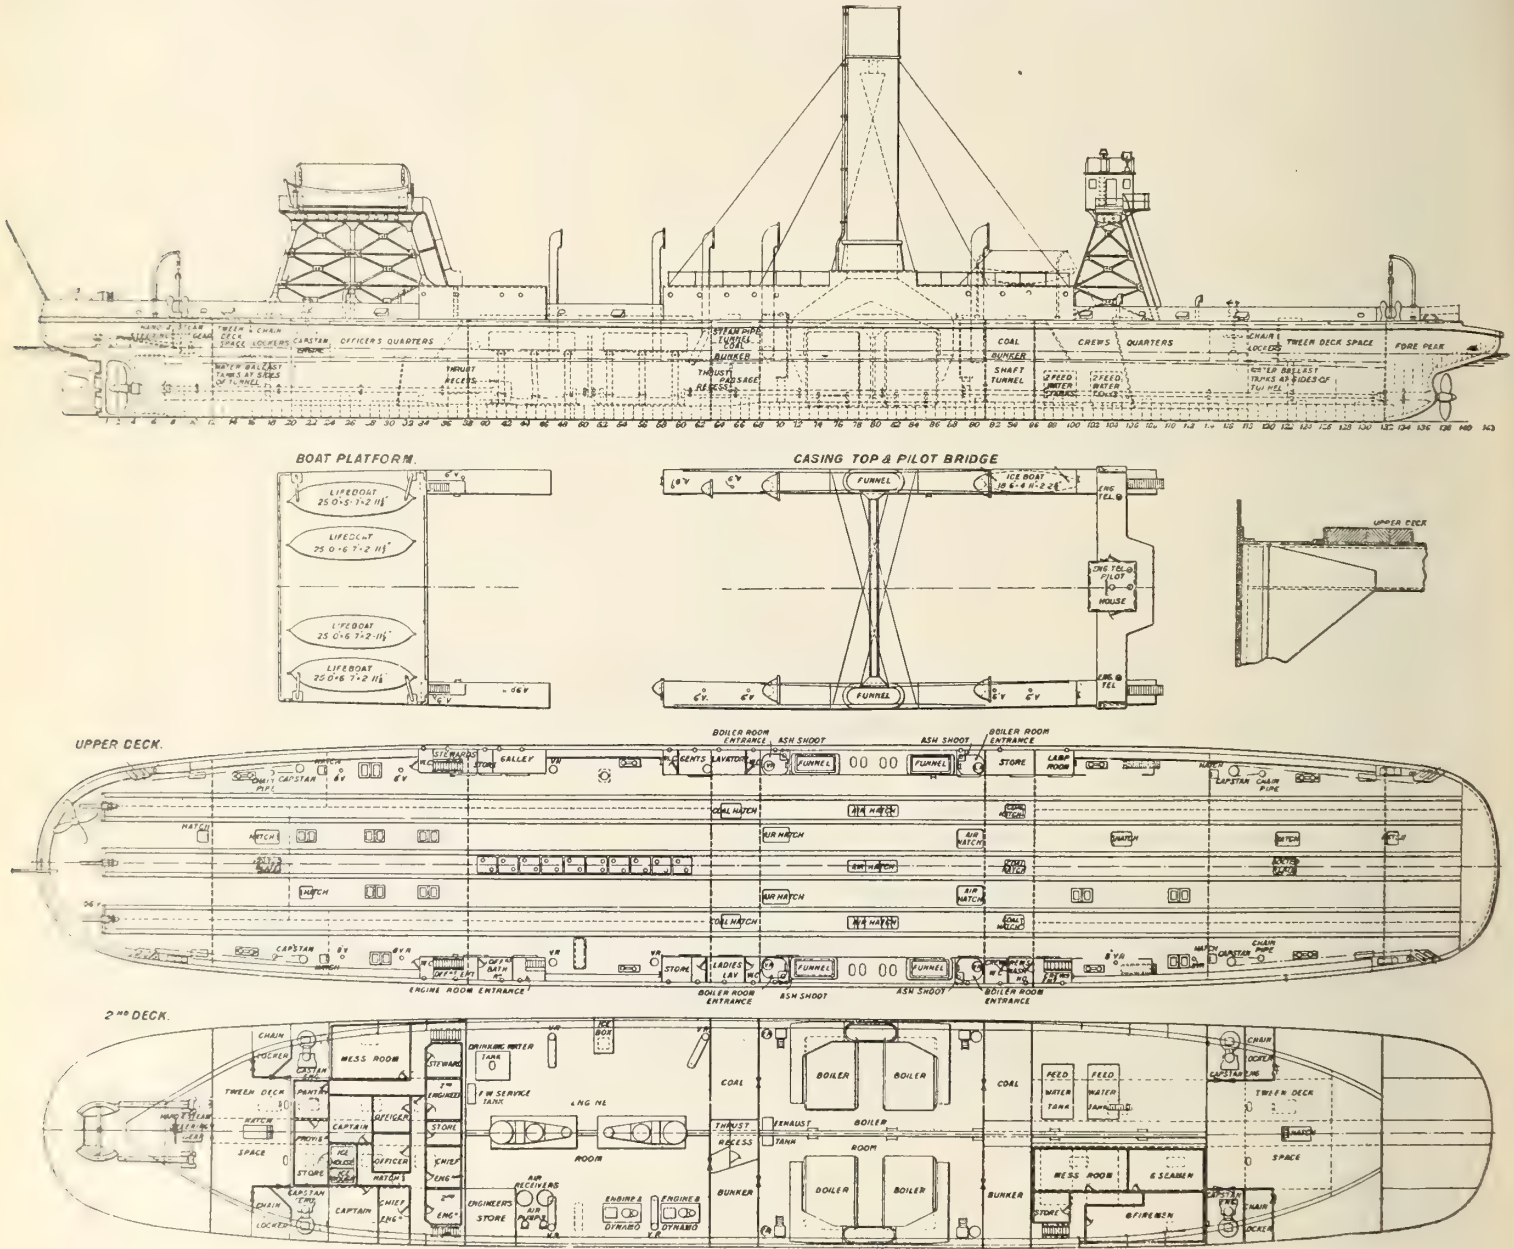

gear and connections therein. There are 8 electric fans fitted in the stokehold and engine room ventilators. An air compressing plant, consisting of two Westinghouse air pumps, with receivers, is placed in the engine room. Connections are led to each end of the vessel for providing power for pneumatic tools used for effecting repairs to the hull or machinery.

The propelling machinery is fitted amidships and consists of two sets of engines on the fore and aft line, the forward engines being arranged to work the bow propeller, and the after engines the stern propeller. A suitable coupling was fitted so that the two engines may work either together or independently. The engine room ventilators are placed in the wings, in order to afford the maximum of deck space for the accommodation of the railway trains. The boilers are also arranged in the wings of the ship, enabling the uptake to be easily and suitably connected to funnels at the side of the ship. There are 4 single ended boilers.

which are each $15\frac{1}{4}$ ft. in diameter by $10\frac{3}{4}$ ft. long, constructed for a working pressure of 160 lbs. per sq. in. under natural draught. More than adequate tube surface is provided, as a considerable amount of heating is required for ship's purposes, and special connections are led from the boilers to various parts of the ship. Each boiler has an independent connection with the main steam pipe, so that any one boiler may be put out of action. The coal bunkers are ar-

ly 21, 34 and 54 ins. in diameter, with a stroke of 30 ins. The crank shafts are of the built up type, $10\frac{3}{4}$ ins. in diameter, each shaft being in 3 interchangeable pieces. The thrust shafts are of forged ingot steel, $10\frac{3}{4}$ ins. in diameter. The thrust blocks are of cast steel of special design, to withstand shock; the line shafting is also forged ingot steel, 10 ins. in diameter, and the propeller shafts are of forged ingot steel, 12 ins. in diameter. Each propeller has 4 blades, and

the general service pumps and other auxiliaries. The whole of the auxiliaries connected with the propelling machinery are placed on the port wing, the starboard wing being reserved for the electric generating set, air pumps, and air receivers, for ship service, and for engineer's stores. The machinery was designed to indicate 3,000 horse power, and on trial this was easily attained. The foregoing description is reproduced from Shipping Illustrated. The car ferry

Longitudinal Section and Deck Plans, Car Ferry Steamship, Scotia 2.

anged at the forward and after ends of the boiler rooms, and these are filled from hatches from the upper, or train, deck. The main engines have been designed and constructed in accordance with experience for this type of vessel, and special consideration has been given to provide against the shocks due to sudden stoppages of the propellers when working against ice. The engines are of the single screw, triple expansion, inverted direct acting surface condensing type, each working on three cranks. Normally they will be coupled up to work together the bow and stern propellers, but there is a short portable length of shafting between the two engines, by the withdrawal of which they can be operate independently. The cylinders in each engine are respective-

ly made of nickel steel, extra thick, for working amongst ice. There is one condenser common to the two engines. It is placed on the port side centrally, being carried on the columns of the two high pressure cylinders. The method of support simplifies greatly the exhaust pipe arrangement from each of the low pressure cylinders. The air pumps are separate, and are $18 \times 10 \times 15$ ins. Two sets of independently driven $12\frac{1}{2}$ in. centrifugal pumps are fitted; one of them is sufficient for the maximum duty, the other serving as a standby. The feed pumps are located at the forward end of the main engine room on the port side. These are $7 \times 9\frac{1}{2} \times 24$ ins. stroke. Alongside are placed the fire and bilge pumps, which are $7\frac{1}{2} \times 7\frac{1}{2} \times 6$ ins. stroke, while in the wings are

has been built by Sir W. G. Armstrong, Whitworth & Co., Walker Shipyard, Newcastle-upon-Tyne, Eng.

A view of the cross section of this vessel is given on the next page.

Canada Steamship Lines, Ltd., according to press dispatches, during the past season effected a saving in operating charges of approximately \$420,000, to the end of September, and it is stated that when the accounts for the complete season are made up, the saving will be over \$440,000. This saving, it is said, is more than sufficient to provide the full interest on the debenture stock and a portion of the preference dividend.

January, 1916.]

The Canadian Atlantic Ocean Mail Port.

As announced in Canadian Railway and Marine World for December, the schedule of Atlantic sailings for the C.P.R. mail steamships for the winter shows St. John, N.B., as the Canadian port. In previous years a call was made at Halifax, N.S., where mails were landed, after which the vessels proceeded to St. John. The decision to make St. John the sole port this winter has aroused considerable opposition in Halifax, and immediately the official announcement was made the matter was taken up by the Halifax Board of Trade, and the Dominion Premier was appealed to with the view of getting Halifax reinstated as a port of call. The Premier promised to interview the President of the C.P.R., and as a result received the following letter from Sir Thos. Shaughnessy explaining the company's attitude:—

"I wish that it were possible to comply with your request to have our passenger ships call at Halifax on the inward and outward trips this winter, but as I said to you personally, I am convinced that it cannot be done in the interest of the country. The war has brought upon us a condition of things with reference to our Atlantic steamship service, that could not have been foreseen, and that it will be difficult for us to satisfactorily meet, even with our greatest efforts. As you know, a great many of our ships have been taken by the Admiralty, and we have found it impossible to charter a sufficient number to replace them. In these circumstances, we must either utilize such steamships as are available to the utmost, or we must permit a substantial percentage of our Canadian exports to be diverted from our Canadian ports. Apart from all other considerations, the Halifax call would involve a delay to our passenger ships of from two to three days on each round voyage, with a like reduction in their freight carrying efficiency. Our endeavor must be this winter to avoid unnecessary detention of a single hour, so as to secure the fullest advantage of their carrying capacity. By running direct to and from St. John, in these exceptional circumstances to which I have referred, no precedent is being established. When normal conditions return, the Halifax mail service and the terms upon which it is to be conducted, will be open for consideration."

This letter was discussed at a public meeting at Halifax, together with a letter from Sir Robt. Borden, wherein he stated that "under the circumstances the Government will take into immediate consideration the forwarding of mails by the Admiralty transports sailing to and from Halifax during the winter."

As a result of the discussion a telegram was sent to the Premier, stating that both communications were considered unsatisfactory, and alleging that the contention that vessels would lose three days on each round trip cannot be borne out by facts. In backing up this statement, it is stated that the vessels work on a 35 day schedule for the round trip, and that it can be done in 34 days, including the call at Halifax. This is explained as follows:—Liverpool to Halifax, 10 days; stop at Halifax, 1 day; Halifax to St. John, 1 day; stop at St. John, 5 days; St. John to Halifax, 1 day; stop at Halifax, 1 day; Halifax to Liverpool, 10 days; stop at Liverpool, 5 days; total, 34 days.

The Premier subsequently replied to the Board of Trade stating that no subsidy arrangements had been made with the C.P.R. for the winter, and that the company can, of course, control the destination of its vessels, but that the Government controls the disposition of subsidy, an equal portion of

which will be allocated to the direct transmission of mails to and from Halifax by the best vessels that can be procured.

A further meeting was called at Halifax to discuss the whole situation, and a resolution was passed protesting against the elimination of Halifax from the mail route, and calling upon the Government to compel mail steamships to call there.

On Dec. 3, a deputation waited on the Premier, Minister of Trade and Commerce, Minister of Railways and Canals, and the Postmaster General, to press the Halifax protest, and was given to understand that the matter will be taken up again with the C.P.R., and that the Government will do everything possible to get the company to continue the Halifax call.

The Loss of the s.s. Constance.

An investigation into the cause of the loss of the s.s. Constance, which foundered in the Gulf of Georgia, Oct. 2, 1915, was held at Vancouver, B.C., recently, by Capt. J. D. Macpherson, Wreck Commissioner for

Cross Section, Car Ferry Steamship, Scotia 2.

British Columbia, assisted by Commander C. Unwin, R.N.R., and Capt. R. C. Proctor, as nautical assessors. Following is the judgment:—The evidence was in most instances of a most contradictory and evasive nature, that of the master, Harry Smith, being particularly so. The court is unanimous in its opinion that the loss was solely due to the Constance being, under her master's direction, improperly loaded to such an extent that she was unable to cope with the heavy weather met with when she got into the Gulf of Georgia. It is also of the opinion that the master showed little judgment and less prudence in not seeking shelter under the existing conditions, before it was too late, more especially as not only had he 6 extra persons on board, which he somewhat ingeniously described as stowaways, but he had also a gasoline launch in tow, with 7 persons on board, making a total of 13 persons, in addition to his own crew, whose lives and personal belongings were under his charge. The court therefore considers the master solely to blame for the loss of the Constance, and suspends his certificate of competency as master, no. 3299,

for 3 months, from Oct. 2, 1915, to Jan. 2, 1916. The court considers that it has shown a considerable amount of leniency to the master in suspending his certificate for this period only, but it has taken into consideration the fact that he has lately been fined \$100 in the Vancouver police court for carrying the 6 persons before mentioned on board the Constance, when she was not licensed to carry passengers, thus contravening sec. 671, chap. 113, part 7 Canada Shipping Act. Had this fine not been imposed the court would have suspended his certificate for a considerably longer period, not only for the reasons already mentioned, coupled with the evasive and unsatisfactory manner in which he gave his evidence, but also as a warning and a deterrent to all interested in the shipping business on this coast, that the laws as laid down in the Canada Shipping Act cannot be violated with impunity.

Decision as to Use of Family Tickets.

The right of a ferry company to determine the extent of use of a family ticket was upheld by Chancellor Boyd in Toronto recently, on a motion by the Village of Fort Erie to have the Fort Erie and Buffalo Ferry Co. act upon a decision of the trial judge, who, on the asking of the village, compelled the ferry company to revert to an old custom. Under regulations the company was bound to provide residents with family tickets, but when the company found that the public were abusing the privilege by permitting others than members of a family to make use of the tickets, they imposed certain restrictions. The village took action and got a verdict against the company. Chancellor Boyd agreed that the whole question rested upon the interpretation of the word "family," and he decided that "family" in the sense intended by the ferry company meant parents and children of parents living in one home. Servants, he decided, were barred from use of a family ticket, and he found for the ferry company, which has the right to name those who should use such tickets.

Wreck Commissioners' Investigations in 1914.—During 1914, 26 formal, 10 preliminary and 1 departmental investigations into causes of wrecks and marine casualties were held. As results of these, 3 masters' certificates were suspended for one month, 2 for three months, 1 for six months and 1 for a year; 1 master was fined and 9 reprimanded or censured. Two mates' certificates were suspended for three months, 1 mate was cautioned and 1 exonerated; 2 second mates' certificates were suspended for three months, 1 cautioned and 1 exonerated; 3 pilots' certificates were suspended for three months, and 1 was cancelled. Regarding four wrecks, no blame was attributed. The total casualties were to 257 vessels of 212,842.85 tons, and the loss of \$5,211,700 and 1,114 lives.

The Interstate Commerce Commission and Lake Traffic.—In connection with the recent cases dealt with by the Interstate Commerce Commission under the Panama Canal Act, whereby railway companies operating in the United States have been compelled to cease ownership of lake lines, the commission on Nov. 30 dismissed applications on behalf of seven of the companies concerned, for a rehearing involving permission to continue such operation, and making the order to discontinue, effective Dec. 15. The railway companies affected are Pennsylvania Rd., Northern Central Ry., New York Central Rd., Erie Rd., Grand Trunk Ry., Lehigh Valley Rd., and Delaware, Lackawanna and Western Rd.

Hudson Bay Navigation and the Port of Quebec.

J. G. Scott, ex-General Manager, Quebec and Lake St. John Ry., has written to the Quebec Chronicle, defining his attitude on the matter of the navigation of Hudson Bay, on the completion of the Dominion Government's railway from Pas, Man., to Port Nelson, and of the harbor at the latter place. He says:

"At the Board of Trade's general meeting yesterday, Mr. Nesbitt drew attention to the fact that the railway to Port Nelson is to be finished next year, that the terminals at Port Nelson are to be pushed to completion, and that it is said to be the intention of the Government to put on a line of steamships, specially built to contend with the ice, so as to carry the western grain through Hudson Straits to Europe, and that, therefore, we, in Quebec, should insist upon our port being properly equipped with docks and elevators, so as to be ready to handle our share of the business coming over the National Transcontinental Ry. As your reporter does not seem to have fully understood what I said in reply, will you allow me to repeat, namely, that I thought that as the Government had built the railway in response to the pressure of public opinion in the west, it is only reasonable that they should give the project every opportunity to prove its usefulness or otherwise. I pointed out that it would seem to be in the interests of Quebec that the Government should build those ice breaking steamships because, even if the experience of navigating Hudson Straits for two or three months in the year should be successful, the steamships would then be available all the rest of the year for the St. Lawrence route, because any steamships able to cope with the ice in Hudson Straits in September and October would have no trouble in coming up the St. Lawrence to Quebec, all through the winter.

"The great difficulty that Canadian ports have to contend with is the high rate of marine insurance. It is true that the rate from Quebec, Halifax and St. John is 10% cheaper than from Montreal. Nevertheless, it is still so high that steamships charge much higher rates for freight from Canadian than from United States ports. The consequence is that half the grain from our western provinces went by the U. S. route last year, and more than half is going this year. The improvements of the lower St. Lawrence are helping to reduce the insurance rates. The new deep channel, now nearly completed, east of the Island of Orleans, will help still further. If the Government will guarantee the marine underwriters in making our St. Lawrence rates the same as New York all the year round, and will show their confidence in the route by putting on the steamships now spoken of, the battle will be won, and Canadian ports will handle all the Canadian grain that is intended for export instead of seeing the humiliating spectacle of 63,000,000 bush. of it diverted to Buffalo, as was done last year. But, as Mr. Nesbitt says, we must have docks and elevators to handle the traffic, or we won't get it."

German Vessel Tonnage.—At the annual meeting of one of the British steamship companies recently, it was announced that of the 5,459,296 tons of German shipping existing at the commencement of the war, 230,000 tons have been captured by the British Navy; 38,000 tons by other allies; 117,000 tons have been sunk, and 397,000 tons interned in various British ports. The remainder, with the exception of a few small traders in the Baltic Sea, are detained in German harbors, or interned in neutral ports.

Dominion Government s.s. Minto for Icebreaking Service in Russia.

The Dominion Government s.s. Minto has followed the s.s. Earl Grey, for service in the White Sea in keeping the port of Archangel open for navigation throughout the winter. The Minto was specially designed for ice service between Prince Edward Island and the mainland, and was built at Dundee, Scotland, in 1899. She is of steel and classed 100 A1 at Lloyd's. Her dimensions are, length between perpendiculars 225 ft., breadth moulded 32.7 ft., depth moulded 21 ft.; tonnage 1,090 gross, 496 register. For her special ice service she was constructed with extra heavy scantlings for the keel, stern, stern frame, keelson and stringer plates, these being about 50% heavier than required by Lloyd's, and similar strengthening was provided at other points where experience had shown that it was required. There is a cellular double bottom from the forward bulkhead in the fore hold under the boilers and engines to the after bulkhead of the engine room, all made 6 ins. deeper than customary for better cleaning room. The hull is divided into compartments by seven watertight bulkheads, and the shaft tunnel is fitted with a watertight sliding door. Accommodation is provided for seamen and firemen in 20 berths under the forecastle deck, and the officers' quarters are arranged in the deckhouse, as is also the passenger accommodation.

The propelling machinery consists of direct acting surface condensing tri-compound engines with 3 inverted cylinders, 216 n.h.p. and 2,900 i.h.p., supplied with steam by 2 double ended cylindrical return tubular boilers at 160 lbs. Other machinery equipment includes steam and hand steering gear, donkey engines and complete electric lighting system for 150 lights and large searchlight.

The official report concerning the operation of the Minto for the fiscal year 1914-15, states that she made 60½ round trips, carried 14,526,314 lbs. of freight, 476,410 lbs. of express matter, 3,186 passengers, and provided 2,963 meals and 1,118 berths to passengers; with total earnings of \$18,049.33. During the summer of 1914 she was sent to Hudson Bay ports for the Government, and in the winter of 1914-15 she was run between Pictou, N.S., and Georgetown, P.E.I.

Judgment re Insurance, Empress of Britain-Helvetia Collision.

Judgment was given recently in the Court of Appeal, London, Eng., on a matter affecting insurance in connection with the collision between the C.P.R. s.s. Empress of Britain and the British Chilean Steamship Co.'s s.s. Helvetia, under charter to the Dominion Coal Co., in the St. Lawrence River in 1912. The appeal was on behalf of the Helvetia's owner against judgment in a case where the Thames and Mersey Insurance Co. claimed to have been subrogated by the owners, in respect of the sum recovered from the C.P.R. as a result of the action for damages suffered by the collision.

The Helvetia was insured for £45,000, and was chartered by the Dominion Coal Co. for seven years, from 1911 to 1917 inclusive. As a result of the collision the Helvetia was sunk, and the insurance company paid for a total loss. The responsibility for the collision was divided between the two vessels concerned, the Empress of Britain being condemned to pay five-twelfths of the loss. Under the collision clause of the policy the insurance company was called upon to pay £19,560. In the enquiry to ascertain the amount payable by the Empress

of Britain, in the first instance, the Registrar's report, when he fixed £65,000, was based on the value of the vessel at Nov. 15, 1912, which was not the date of the collision, but the end of the first season of the charter. He took the loss of charter up to the same date and assessed it at £2,000. An appeal resulting from this decision, it was decided that the value of the vessel should have been taken as at Nov., 1917, the date of the expiry of the charter, but it was subsequently agreed as between the respective owners, that the lump sum of £67,000 be fixed without dividing the amount as between vessel and charter. The five-twelfths for which the Empress of Britain was liable, and which has been paid, is approximately £26,900, and the insurance company claims to have been subrogated to the position of the owner of the Helvetia in respect of that sum, and to recover it. The defence of the owners against that claim is that as by the decree of the Admiralty Division they were entitled to recover five-twelfths of their loss, the amount to which the insurance company was subrogated is five-twelfths of £45,000. The lower court had decided in favor of the insurance company on that point, hence the recent appeal. On this main point, the court decided that the insurance company is entitled to recover from the owners all sums which they received in respect of the vessel, up to £45,000, the amount of the policy.

Order re British Vessels Trading Between Foreign Ports.

A British order in council has been issued, directing that from and after Dec. 1, 1915, no British steamship registered in the United Kingdom, exceeding 500 tons gross tonnage, shall carry any cargo from any foreign port to any other foreign port, whether or not such vessel while carrying such cargo calls at any intermediate port within the British Empire, unless the owner or charterer of such steamship has been granted exemption by license. The expression "foreign port" covers any port outside the British Empire.

A committee, appointed by the President of the British Board of Trade, has been formed to carry this order into effect, with power to grant exemption licenses in favor of owners and charterers, which may be general in reference to classes of ships or their voyages, or special.

The Sick and Distressed Seamen Fund for the financial year ended Mar. 31, 1915, showed receipts \$72,602.43, and expenditures \$65,397.85. The number of seamen treated was 3,030, and the number of hospital treatment days was 22,140. Under the provisions of the Canada Shipping Act, dues of 1½c. a ton, are levied on the registered tonnage of all vessels entering any port in Quebec, Nova Scotia, New Brunswick, Prince Edward Island and British Columbia. Vessels of 100 tons and less pay once a year, and those of over 100 tons three times a year. No dues are collected from Ontario, as the act does not apply to that province. The number of vessels paying dues was 3,148, and the number of men employed on them was 65,221.

Removal of Navigation Obstructions.—The Marine Department, during the past fiscal year, expended \$8,528.94, on the removal of obstructions and dangers to navigation in various parts of the Dominion. The chief expenditures were, \$4,900 for removing the s.s. City of London wreck near Amherstburg, Ont.; \$1,450 for removing the wreck of the Charles Crawford in Lake St. Clair, and \$1,273.81 for removing the Rhoda wreck near Lachine, Que.

January, 1916.]

Atlantic and Pacific Ocean Marine.

The British s.s. Carleton, bound from New York to Queenstown, Ireland, with sugar, put into Halifax, Dec. 6, with fire in no. 2 hold.

The White Star-Dominion Line's winter sailings are weekly from Portland, Me., to Liverpool, with the steamships Auchendale, Ardgorm, Irishman, Michigan and Norseman, and from Portland to Avonmouth with the s.s. Englishman.

The British s.s. Oakfield, which was reported to be drifting in a disabled condition about 600 miles southeast of Cape Race, Nfld., was taken into a British port, Dec. 3, in tow by the s.s. Lady Ninien, having lost her propeller blades.

The British s.s. Queen Margaret, owned by the Dunlop Steamship Co., was brought into St. John's, Nfld., Dec. 6, having suffered some damage in striking ground near Cape Race, Dec. 3, in a fog, while bound from London, Eng., to Boston, Mass.

The American International Corporation, organized in New York recently, has purchased the remaining seven steamships of the Pacific Mail Steamship Co. W. R. Grace and Co., shipping agents on the Pacific coast, are interested in the matter.

Robert Reford & Co. have chartered the United States s.s. Morris Adler for trans-Atlantic service. On sailing from Montreal early in December, she changed her name to Tip Top, and passed under the British flag, after which she proceeded to New York, to load grain for Europe.

The Norwegian s.s. Tellus, which was reported stranded at Nemuro, near Yokohama, Japan, when bound from Comox, B.C., to Vladivostok, Russia, is owned by W. Wilhelmson, Tonsberg, Norway. She was built in 1911, is 7,395 tons, and insured on a value of £70,000. She was at one time under charter to the Nova Scotia Steel and Coal Co.

The British Canadian Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with \$10,000,000 authorized capital and office at Montreal, to carry on a general steamship owning and operating business. The incorporators are all connected with Meredith, Macpherson, Hague, Holden, Shaughnessy and Heward, Solicitors, Montreal.

In answer to a question in the British House of Commons recently, the percentage of tonnage of various steamship companies which have been requisitioned for war purposes was given, the C.P.R. having 46.5%

requisitioned up to Jan. 1, 1915, and on Oct. 1, 1915, 41.3% of its total tonnage. Of these percentages, 41.3% and 30%, respectively, were requisitioned by the Indian Government.

The C.P.R. s.s. Empress of Japan has resumed her regular sailings across the Pacific Ocean. During her period of requisition by the Indian Government, she was engaged in patrol work chiefly, on the Pacific and elsewhere, and carried eight 4.7 in. guns. She was on duty at Cocos Island after the German s.s. Emden was destroyed, and also took part in some fighting at Bab-el-Mandeb, near the entrance to the Red Sea.

Canada Steamship Lines, Ltd., announces it has completed arrangements for the chartering of the Canada Atlantic and Plant Line Steamship Co.'s s.s. Evangeline, for operation during the winter, from New York to Bermuda, in conjunction with the s.s. Bermudian. It is stated that the intention is to give a service of two trips a week between the points named. The Evangeline has for some time been operated between Halifax and Boston.

William Thomson & Co., Ltd., has been incorporated under the New Brunswick Companies Act, with an authorized capital of \$25,000, and office at St. John, N.B., to acquire as a going concern the business now carried on there by William Thomson & Co., and to carry on the general business of steamship and vessel agents, tugboat owners, managers and agents, stevedores, etc. Among the incorporators are, P. W. Thomson, shipowner, and D. W. Ledingham, steamship manager, St. John.

The steamships Ocamo and Oruro, formerly operated by Pickford and Black, Ltd., between Halifax, St. John and the West Indies, have been sold to United States parties, with whom, it is reported, C. W. Morse, at one time connected with the Eastern Steamship Co., is associated. It is stated that they will be drydocked at Halifax, and then placed in service between New York and Archangel, Russia. The Ocamo was built at Glasgow, Scotland, in 1877, and is 300 ft. long, the Oruro, was also built in Glasgow, in 1878, and is 301 ft. long, with a tonnage of 1,919 gross.

The Allan Line winter passenger sailings between St. John, N.B., and Liverpool, are being undertaken by the steamships Corsican, Pretorian and Scandinavian, three sailings being made each month by each vessel, except during February, when the Pretorian will not be in service. The steamships Sicilian and Corinthian run from St. John to London, via Havre, and the s.s. Carthag-

inian will run from Portland, Me., to Glasgow, monthly, except January. Freight service is given by the steamships Pomeranian and Sardinian, between Portland and Glasgow, and vessels are being chartered for a freight service between Boston and Glasgow.

The Great Northern Steamship Co.'s s.s. Minnesota, formerly operated across the Pacific Ocean, and which, it was announced recently, was taken to England to be sold, is now stated to have been sold to a company with headquarters in London, Eng., for \$2,000,000. She was built in 1904, and was the largest passenger vessel running on the Pacific. Her dimensions were,—length 630 ft., beam 73½ ft., depth from keel to saloon deck amidships 56 ft., from keel to upper navigation bridge 88 ft. 4 ins.; displacement 37,500 tons. She has accommodation for 318 cabin, and 1,500 third class passengers, with a crew of 250.

Maritime Provinces and Newfoundland.

During the St. Lawrence navigation season of 1915, the Dominion Coal Co. shipped 1,600,000 tons of coal to Montreal, about 300,000 tons less than in 1914. The main reason for the reduction is that Government transports bunkered at Sydney this year instead of Montreal.

The s.s. Beatrice, owned by John and James Yorston, Pictou, N.S., is reported to have been sold to the Nova Scotia Steel and Coal Co., New Glasgow, N.S. She was built at Stockton-on-Tees, England, in 1889, and is screw driven by engine of 99 n.h.p. Her dimensions are,—length 208 ft., breadth 29.1 ft., depth 13.4 ft.; tonnage, 712 gross, 353 register.

The whaling steamer Nascopie, owned by Job Bros., St. John's, Nfld., is reported to have been chartered by the Russian Government for service between Archangel, Russia and Naples, Italy. The steamships Adventure and Bellaventure, negotiations for the sale of which were mentioned in our last issue, are also reported to have been acquired by the Russian Government.

The s.s. Senlac, bound from Charlottetown, P.E.I., to St. John's, Nfld., was reported from Sydney, N.S., Dec. 14, to have been destroyed by fire, together with part of her cargo. The crew and part of the cargo were saved. She was built at St. John, N.B., in 1904, and was screw driven by engine of 66 n.h.p., and her dimensions were: length 182 ft., breadth 33 ft., depth 16.1 ft.; tonnage, 1,011 gross, 615 register.

Province of Quebec Marine.

The figures for the recently closed season of St. Lawrence navigation show that 41,352,876 bush. of grain passed through the Lachine Canal, against 67,343,952 in 1914. The number of vessels using the canal was 590, against 615, but their combined tonnage was 249,050, an increase in tonnage of 19,795 tons.

The s.s. Lady of Gaspé was sold at public auction at Quebec recently, to J. C. Fectau, for \$10,200. She was owned by the Gaspé Steamship Co., Quebec, and ran ashore, Oct. 13, near the site of the Quebec Bridge. She was floated and taken to Pointe a Carcy wharf, Quebec, where, owing to defects in her pumping machinery, she again sank, and was abandoned. She was refloated by the Quebec Harbor Commissioners.

Ontario and the Great Lakes.

The traffic handled at Port McNicoll, during the past season, was, freight westbound, 53,783 tons; flour eastbound, 108,624 tons; grain eastbound, 22,760,479 bush.

The underwriters extended insurance on hulls and cargoes to Dec. 12. Sailings which took place after midnight on that date were entirely at owners' risk.

Two steam tugs, C. M. Bowman and Maud L., were destroyed by fire at Owen Sound, Dec. 12. They were together at anchor, and the fire arose on board the former while the flues were being cleaned.

Canada Steamship Lines s.s. W. Grant Morden cleared from Port Arthur, Dec. 10, with a cargo of 760,000 bush. of oats for Port McNicoll, which is said to be the largest single grain cargo ever shipped from any port.

Between Sept. 1 and Dec. 11, 166,346,965 bush. of grain were shipped from Port Arthur and Fort William. This is the highest amount shipped in a similar period, the nearest approach being in 1913, when 128,000,000 were shipped.

The C.P.R. lake steamships Alberta, Assiniboia, Athabasca, Keewatin and Manitoba have been laid up for the winter at Owen Sound, where it is stated extensive repairs will be undertaken, contracts for which have been let in the locality.

Canada Steamship Lines, Ltd., which press reports credit with having arranged a contract with the United States Steel Corporation for transportation of ore, has, we are officially advised, made no such arrangements with that corporation. It will, however, carry U.S. ore from private parties.

The United States Lake Survey reports the levels of the Great Lakes in feet above tidewater, for November, as follows:—Superior, 602.89; Michigan and Huron, 579.52; Erie, 571.46; Ontario, 244.94. As compared with the average November levels for the past ten years, Superior was 0.42 ft. above; Michigan and Huron, 0.77 ft. below; Erie, \$\$.35 ft. below, and Ontario, 0.69 ft. below.

Goderich, Ont., press dispatch, Dec. 24:—The steamboat Mariska, which stranded in the centre of the channel while entering Harbor Beach in a northwesterly gale on her last trip down, completed temporary repairs here today after unloading her grain cargo, and left again for Collingwood, accompanied by the Reid Wrecking Co.'s tug, Fischer, and on arrival there will enter drydock for a thorough examination and repairs.

An examination of the entrance to Key Harbor, Lake Huron, where the s.s. W. D. Rees struck a rock recently, shows that a rock was found close to the black spar buoy no. 15, which was found to be northward of its proper location. The rock had a

least depth of 17½ ft. of water over it, at the present stage of water, or 1½ ft. less than the datum of the chart. The spar buoy has been moved to its charted position immediately south of the danger.

The lake underwriters have sold the wreck of the s.s. W. C. Moreland, which was wrecked on the Sawtooth Reef, in Lake Superior, in 1910, to R. M. Wolvin, Winnipeg, for \$55,650. The salvaging work was carried out by the Reid Wrecking Co., Sarnia, Ont., who will receive 65% of the net proceeds of the sale. We are advised that no decision has been arrived at by the present owner as to what will be done with the vessel, it having been bought as a speculation.

The Northern Navigation Co.'s s.s. Majestic was destroyed by fire, while lying at the old elevator dock at Point Edward, Dec. 15. The fire commenced in the hold and soon got beyond control. It was then decided to take the burning vessel to Sarnia Bay alongside some old wrecks, where no harm could be done, and while being towed, the lines parted and she drifted alongside the same company's s.s. Saronic, which caught fire. The loss on the Majestic is placed at \$100,000, with \$90,000 insurance, and on the Saronic at \$20,000. The s.s. Majestic was built at Collingwood in 1895, and was screw driven by engine of 123 n.h.p. Her dimensions were: Length, 209 ft.; breadth, 35 ft.; depth, 12.6 ft.; tonnage, 1,578 gross, 1,073 register. Repairs to the Saronic will be carried on at Sarnia during the winter, but the Majestic is a total loss.

British Columbia and Pacific Coast.

The Chilean ship Carelmapu was wrecked and lost off the west coast of Vancouver Island, during a storm towards the end of November, and 17 of the crew, with 1 passenger, were drowned, 4 of the crew and 1 passenger being saved.

The C.P.R. s.s. Princess Maquinna, which was repaired and overhauled at Esquimalt recently, has replaced the s.s. Princess May on the Granby route, the latter taking the place of the s.s. Princess Sophia, which will likely be laid up for the winter.

The Dominion Government grain elevator at Vancouver is expected to be completed and ready for business about the middle of January. Construction work was reported early in December to be in its final

stages. There will be capacity for 1,500,000 bush.

The Grand Trunk Pacific Coast Steamship Co.'s winter schedule, which was put into effect, Dec. 20, between Seattle, Victoria, Vancouver and Prince Rupert, is undertaken by the steamships Prince George and Prince John. The Prince Rupert has been laid up.

The s.s. Curacoa, which was wrecked at Warm Chuck, Alaska, June 21, 1913, salvaged in Aug., 1914, and after being repaired, tied up at Vancouver, pending a sale, has been sold by the Vancouver Dredging and Salvage Co., to the Pacific Coast Steamship Co., her owners before the wreck.

At a meeting of the West Vancouver Council ferry board recently, W. C. Thompson was appointed Manager, West Vancouver Ferry Co., vice T. Campbell, whose attitude and statements regarding the conduct of the business by the ferry board were considered detrimental to the interests of the service.

The Canadian Northern car ferry, which is being built at Levis, Que., will probably run between Port Mann, on the south side of the Fraser River above New Westminster, down the Fraser River and across the Strait of Georgia to Patricia Bay, Vancouver Island, instead of from Steveston, at the mouth of the Fraser River, as previously stated. Steveston is said not to be suitable for a harbor standpoint.

The School of Navigation at Queen's University, Kingston, Ont., started its third session Dec. 14 for a three months course, which is open without charge to all seamen desiring instruction in navigation and seamanship, and especially prepares for certificates as tug boat captain, minor mate, minor master, inland mate, inland master, coasting mate and coasting master. The chief instructor is Capt. H. H. McMaster, Assistant Superintendent, Montreal Transportation Co. The course includes five lectures on electrical and magnetic effects in the earth and atmosphere, including storms and weather predictions, by A. L. Clark, Ph.D., Professor of Physics, and also five lectures on practical astronomy by D. Buchanan, Ph.D., Associate Professor of Mathematics. The examinations for the different certificates will be conducted in Kingston by Capt. H. W. King, Dominion Supervisor of Marine Examinations.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during November.

January, 1916.]

Mainly About Marine People.

Phillip Dorman, formerly Lloyd's Agent at Buenos Ayres, Brazil, died at Toronto, Dec. 14, age 73.

Capt. A. V. Tremaine, who has been seriously wounded in action in Europe, is a son of A. DeB. Tremaine, Superintendent of Agencies, Marine Department, Ottawa.

J. L. Nelson, Superintendent of dredging for British Columbia, under the Dominion Public Works Department, since March, 1913, was reported, Dec. 10, to have resigned.

F. W. Lewis, of Furness Withy and Co., has been appointed one of the members of the Ship Licensing Committee, appointed by the British Government to license vessels to engage in trading between foreign neutral ports.

Capt. J. H. Brown, of the Donaldson Line s.s. *Marina*, was presented recently with a gold watch and chain, on behalf of the President of the United States, for rescuing the shipwrecked crew of the U.S. schooner *Fulmer Palmer* in the Bay of Fundy.

J. S. Byrom, Superintendent, Great Lakes Steamship Service, C.P.R., was entertained to dinner by the Owen Sound Board of Trade, on the occasion of the wintering of the company's vessels at Owen Sound for overhaul and repairs, after an absence of four years.

Capt. A. A. Johnson, of Toronto, formerly chief officer of the Toronto Ferry Co., and latterly first officer on the British s.s. *Calgary*, was killed on board his vessel, Dec. 15, during a stormy voyage from Bathurst, N.B., to New York, when a deck load of lumber went overboard.

Capt. W. McGregor, formerly commanding one of the G.T.R. car ferries operating between Windsor and Detroit, has had his left leg amputated, owing to having been run over by a switching locomotive in the Windsor yards, Dec. 6. He is over 70 years old, and was connected with the car ferries for about 40 years.

Capt. H. W. LaRush was buried at Mount Pleasant cemetery, Toronto, Dec. 6, when W. E. Burke, Assistant General Manager, and the entire local staff of Canada Steamship Lines, Ltd., attended. Capt. LaRush was in charge of the company's tug *Frank C. Barnes*, which left Port Dalhousie, Nov. 1, and foundered with her crew of six during a storm during the first few days of November. Only two bodies, one of which is unidentified, have been recovered.

J. T. Walsh, heretofore Marine Department, C.P.R., Montreal, who has been appointed Assistant Manager, Canadian Pacific Ocean Services, Montreal, is said in a press dispatch to have had service under the Elder-Dempster Co. in West Africa, where, in addition to his other duties, he raised and commanded a volunteer force during the native revolt of 1898, receiving the West African medal. He was a member of the Legislative Council there in 1900, and was mentioned in dispatches by Col. Willcocks for embarkation services during the Ashantee war.

Capt. W. Murchison, one of the oldest lake captains running out of Toronto, died there, Nov. 26, aged 65. His first marine experience was as a deck hand on the *Rossie Castle*, sailing between Toronto and Hamilton, about 1875. He was at a later date captain of the vessels *Steinhoff* and *Victoria*, sailing between Toronto and Victoria Harbor. He subsequently purchased the sidewheel steamboat *Niagara*, and was later in the service of the Doty Ferry Co., which was taken over by the Toronto Ferry Co. and acted as master of the ferry *Island Queen*. He retired from active service a few years ago, and engaged in fruit farming.

Charles Tupper Knowlton, whose appointment as Superintendent of Ferries, Canadian Government Railways, Moncton, N.B., was announced in our last issue, was born at Advocate Harbor, N.S., Aug. 26, 1849, and commenced a seafaring life in July, 1868, since when he has to 1887, occupied all positions from sailor to captain in square rigged vessels sailing between various United States and Canadian ports to South America, West Indies, Great Britain and the European continent, and from 1887 to the date of his present appointment, he has commanded six different cruisers of the Fisheries Protection Service, at various points on the Atlantic coast.

Batiscan-Bengore Head Collision.—The actions between the owners of these two vessels for damages sustained in a collision in the St. Lawrence, Aug. 1, were heard by the Admiralty Court, in Montreal, Dec. 7, when it was held that the s.s. *Batiscan* was to blame for the collision, as the captain had disobeyed the international rules of the road, whereas the captain of the s.s. *Bengore Head* was shown to have complied with the rule. It was ordered that the damage to the *Bengore Head* be assessed by the Registrar, and the action by the *Batiscan* was dismissed with costs. The *Ulster Steamship Co.*, owning the s.s. *Bengore Head*, sued the *Sydney, Cape Breton and Montreal Steamship Co.*, owning the s.s. *Batiscan*, for \$150,000, and there was a counter action for \$50,000. In connection with this casualty, strong representations are being made to the British Government, which has the power to revise the sentence on the captain of the s.s. *Batiscan*, to have the case reconsidered. The Dominion Wreck Commissioner, in placing the blame on the captain and the pilot, suspended the former's certificate for two years, allowing a mate's certificate to be granted at the end of the first 12 months, and fined the pilot \$300.

The Loss of the Tug *Edward Long* at Ottawa.—A formal enquiry into the sinking of the steam tug *Edward Long*, while moored at the Rideau Canal locks at Ottawa, Nov. 12, was held at Montreal, recently, at the request of the owner, Capt. Long, who claimed that the loss was caused by the Public Works Department's tug *Blanche*. Capt. L. A. Demers, Dominion Wreck Commissioner, in giving judgment, found that the *Blanche* came into contact with the *Edward Long* and forced her against the corner of the pontoon, causing a parting of the seams, resulting in an inlet of water, which led to the eventual sinking of the vessel. He states that had there been some one on the *Edward Long*, who could have examined the damage, the vessel might have been beached and saved, but no attempt seems to have been made, either to save, or salvage the tug, and therefore finds that the *Blanche* was primarily the cause of the damage, and that Capt. Long, of the tug *Edward Long*, is equally to blame. As the master of the *Blanche* holds no certificate, he cannot be dealt with by the court. The decision was concurred in by Capt. F. Nash and C. Lapierre, nautical assessors.

Montreal Harbor Traffic.—At a dinner to the Massachusetts Terminal Commission at Montreal, Dec. 9, W. G. Ross, Chairman, Montreal Harbor Commissioners, stated that while in 1907 the port's business amounted to 1,000 cars a week, more than that number are now handled daily. The tonnage has increased since 1908 by 110%, compared with Boston's increase of 16%, while in 1914, Montreal's exports and imports exceeded those of Boston, which once held the lead, by \$13,000,000. During 1914, Montreal shipped five times as much grain as Boston.

Lake Freight Steamships Sold for Ocean Service.

The lake freight steamships, *G. R. Crowe*, owned by the St. Lawrence and Chicago Steam Navigation Co., Toronto, the *Algonquin*, owned by the Port Colborne and St. Lawrence Navigation Co., a subsidiary of the Maple Leaf Milling Co., Toronto, and the *Seguin*, owned by the Parry Sound Transportation Co., Toronto, have been sold to A. B. Mackay, Hamilton, Ont. It is stated that the former vessel will be converted into an oil tank vessel for service to the Gulf of Mexico, and that the latter vessel will be overhauled and prepared for trans-Atlantic operation.

The s.s. *G. R. Crowe* was built at Dundee, Scotland, in 1907, and lengthened 72 ft. at Collingwood, Ont., in 1910. She is of steel, with steel tank top, three watertight and two non-watertight bulkheads, steel boiler house, and is equipped with triple expansion engines with cylinders 18, 29½, and 48 ins. diam., by 36 ins. stroke, 1,079 i.h.p. at 81 r.p.m., and supplied with steam by two Scotch boilers 13¼ by 10½ ft. at 180 lbs. pressure. Her dimensions are: length 324 ft., breadth 43¼ ft., depth 26 ft.; tonnage, 2,939 gross, 2,346 register.

The s.s. *Algonquin* was built at Glasgow, Scotland, in 1888, for the Canadian North West Steamship Co., Port Arthur, Ont., Thomas Marks & Son, Managing Owners, and was purchased some years later by the St. Lawrence and Chicago Steam Navigation Co., and in 1912 was sold to the Port Colborne and St. Lawrence Navigation Co. She is of steel and is equipped with triple expansion engines with cylinders 21, 33, and 54 ins. diam., by 36 ins. stroke, 1,000 i.h.p. at 70 r.p.m., and supplied with steam by two Scotch boilers under forced draught, 13 by 9 ft., at 160 lbs. pressure. Her dimensions are: length 245 ft., breadth 40 ft. 1 in.; depth 20½ ft.; tonnage, 1,806 gross, 1,172 register.

The s.s. *Seguin* was built at Owen Sound, Ont., by Polson Iron Works, Ltd., Toronto, in 1890, and is of steel, with well deck, two watertight bulkheads, wooden sheathing on steel bottom, with hatches at 24 ft. centres. She is equipped with triple expansion engines with cylinders 17, 28, and 46 ins. diam., by 30 ins. stroke, 550 i.h.p. at 86 r.p.m., supplied with steam by two Scotch boilers 10¼ by 10 ft. at 160 lbs. pressure. Her dimensions are: length 207 ft., breadth 34 ft. 2 ins., depth 13 ft.; tonnage, 1,141 gross, 771 register.

A contract is reported to have been awarded for the alterations to the s.s. *G. R. Crowe*, which it is stated will be carried out at Midland, Ont. As the vessel is too long to pass through the Welland Canal, the alterations required are considerable.

The Dominion Government and Wheat in Elevators.—The action of the Dominion Government in commandeering all the nos. 1, 2 and 3 northern wheat in store at elevators at Port Arthur and Fort William, Ont., and points east, at the end of November, caused a little uneasiness among vessel owners on the Great Lakes, as the unexpected action toward the close of the season would, it was feared, cause an earlier closing of navigation than was otherwise anticipated. Arrangements were subsequently made with the Government whereby certain of the commandeered grain was released in order that contracts might be fulfilled, and any possible inconveniences which might arise were eliminated.

The Panama Canal, through which traffic has been suspended for some time owing to land slides, was reopened, Dec. 19, for vessels of 20 ft. draught, the obstructions in the Gaillard cut having been removed.

Dominion Government Icebreaking Steamship for the St. Lawrence.

We are officially advised that the icebreaking steamship for St. Lawrence River service will probably be launched at Montreal about the reopening of navigation, and that it is expected to have it ready for service about the end of September. An extension of time for the construction of this vessel, the contract for which was awarded to Canadian Vickers, Ltd., Montreal, prior to the war, has been granted by the Dominion Government. The contractors some time ago advised the Dominion Government that their yards had been requisitioned by the British Government, thus necessitating the suspension of the work, which was well in hand. It is announced that they have shown to the Government's satisfaction, that, at the time of the application for the extension, they were unable to proceed with the building. This vessel will be built under Lloyd's special survey, and in accordance with the Dominion Steamboat Inspection Act, to class 100 A1 at Lloyd's. The hull will be divided by transverse and longitudinal watertight bulkheads, and the propelling machinery will consist of two sets of triple expansion surface condensing engines with working parts 60 to 35% in excess of Lloyd's requirements, supplied with steam by two double ended, and four single ended Scotch boilers, at 180 lbs. pressure. Her dimensions will be,—length over all 292 ft., length between perpendiculars 275 ft., extreme breadth 57½ ft., depth 32 ft., draught 19 ft. A full description of her was given in Canadian Railway and Marine World for June, 1915.

Hamburg-American Line Officials Convicted.—The trial of a number of officials of the Hamburg-American Line concluded at New York, Dec. 3, when Karl Buenz, Managing Director; G. Katter, General Superintendent; A. Hachmeister, General Purchasing Agent, and J. Poppinghaus, a former Germany navy officer, were found guilty on each of two indictments for conspiracy to deceive and defraud the United States Government. The evidence showed that the law had been violated by those charged, in sending coal and other supplies to German cruisers in the South Atlantic in the early stages of the war. Sentence was deferred pending the hearing of a motion to set aside the verdict and arrest judgment, and in the meantime, each of the prisoners is out on bail of \$5,000. The maximum penalty on each indictment is two years imprisonment and \$10,000 fine.

Plot to Destroy the Welland Canal.—The United States Government is proceeding against a number of German subjects and United States citizens of German birth or origin for conspiring to commit an act of war, with the United States as a base, against a friendly country, the Dominion of Canada. It is stated that the parties have been under observation for some time, and that it was intended to blow up certain locks on the Welland Canal, to prevent shipments of grain passing through from the Great Lakes. Paul Koenig, Chief of Police, Hamburg-American Steamship Co., New York, who is spoken of as being very intimate with the German Ambassador and other German officials at Washington, D.C., appears to have been the chief organizer of the conspiracy.

Close of St. Lawrence Navigation Season.—The s.s. Port Dalhousie, owned by Forwards Limited, Kingston, Ont., in sailing from Montreal, Dec. 8, created a record for the closing of the St. Lawrence season. She was bound for England, calling at Pictou, N.S.

Results of Canada Steamship Lines, Limited, for 1915.

Montreal press dispatch, Dec. 14:—"At the monthly meeting of directors of Canada Steamship Lines, Ltd., today, J. W. Norcross, Managing Director, stated that business during the past three months had been very satisfactory, and he had great confidence in the outcome of the entire season's business. While he would not commit himself as to the amount of net earnings, he gave the impression that some of the optimistic prophecies made recently on the "street" were not far short of the mark. He expressed himself as being pleased with the outlook for winter business of the ocean vessels, stating that the Bermuda passenger trade had been in excess of the corresponding period last year, and to cope with the increased tonnage offering the company had chartered another passenger steamship, the Evangeline, to be used solely on that route. The West Indies freight tonnage was also heavier than could be handled by the company's ocean fleet, and it had been necessary to send one of the lake steamships, the Canadian, to the Atlantic coast to help carry the tonnage. Freight, both north and south bound, was congested. Mr. Norcross would not confirm rumors that very large economies in operation had been effected but admitted that expenses had been reduced considerably."

Prize Court Cases at Halifax.—A sitting of the Prize Court was held at Halifax, N.S., Dec. 1, to deal with the steamships Hamborn and Hocking, seized recently as lawful prizes. It is claimed that though operating under the United States flag, they are owned by the enemy. Notice of requisition under an order of the Prize Court, has been served, pending final condemnation. On Dec. 6, on the application by cable of the British Secretary of State for the Colonies, the case was transferred to England to be dealt with. In the case of the s.s. Hamborn, an appeal to the Imperial Privy Council has been allowed.

Dredging Disputes in British Columbia.—Press reports state that a number of contractors' accounts have been held up, on account of over classification in dredging. The amounts involved are stated to reach \$150,000. Complaints are also made regarding alleged padding of accounts for dredging in Victoria harbor. These matters came out in the course of a case in court at Victoria recently to determine the ownership of certain documents. The documents were ordered impounded for three months, pending further investigation.

Toronto Harbor Contracts.—The Minister of Public Works is reported to have announced, Dec. 9, that all matters in dispute in connection with defective work on certain subcontracts of the Toronto Harbor improvement works had been settled, and that the Canadian Stewart Co., the general contractors, had undertaken to make good the defective construction, without cost to the Government and to proceed with all possible speed.

The British Government and the Mercantile Marine.—In the British House of Commons, Dec. 23, the First Lord of the Admiralty announced that the Government was considering the advisability of taking over the mercantile marine service. The demand for vessels is far outrunning the supply, and this is contributing to the rising prices of the necessities of life.

Government Aid to Shipbuilding in British Columbia is occupying the attention of the recently reorganized provincial government, according to the new Premier.

Shipbuilding Conditions and Prospects in Canada.

The Toronto Globe having published an article representing the outlook for shipbuilding in Canada as being very poor, the Collingwood Shipbuilding Co., Collingwood, Ont., wrote that paper recently as follows:—"United States papers have for some weeks past been dealing largely with the new orders booked by U.S. shipbuilders on the Great Lakes and coast shipyards. Canadians, therefore, interested in the shipbuilding business would naturally, on reading your article, assume that there was very little work for them in their own trades in this country and make their way across the border. Dealing with our own business, we were never busier, and we have been using your columns to let our wants for skilled and unskilled mechanics be made known. We have also advertised in perhaps some 20 or 30 local newspapers for help of all kinds. We are building three oil tank steamers for the Imperial Oil Company, and a 550 ft. bulk freighter for the Montreal Transportation Co., and recently had to refuse an order for a large steamship, not being able to make quick enough delivery. In addition, we have had inquiries for tonnage from Great Britain, United States, and Australia, which will surely indicate to you that the demand for ships is very great indeed. Apart from new tonnage, we are now assured of a full supply of winter repairs. From the above you will see that the information given in your article is not applicable to Canadian shipbuilding in general, and we believe that you should give equal publicity to the other side of the story in order to rectify the harm you may possibly have done in discouraging shipyard help from remaining in Canada."

New Brunswick-Prince Edward Island Winter Steamship Service.—On Dec. 22 we were officially advised as follows: "The Charlottetown Steam Navigation Co.'s vessels are still running between Point du Chene and Summerside and between Pictou and Charlottetown. When weather conditions necessitate their withdrawal the Marine Department will place the s.s. Stanley in service between Cape Tormentine and Summerside, and the new car ferry steamship Prince Edward Island between Pictou and Charlottetown. The Stanley will remain on the Cape Tormentine-Summerside service as long as the Prince Edward Island can make one round trip each day between Pictou and Charlottetown, or until ice conditions prevent landing either at Cape Tormentine or Summerside. When ice conditions get such that the Prince Edward Island cannot make one round trip a day between Pictou and Charlottetown, the Stanley will be put on and the two boats will run alternate days. When ice conditions in Charlottetown harbor prevent landing at Charlottetown the Prince Edward Island and the Stanley will run between Pictou and Georgetown."

Settlement of Claims in the Titanic Loss.—It was announced in New York, Dec. 20, that the claims against the Oceanic Steam Navigation Co., in respect of the loss of the s.s. Titanic, were to be settled on a basis of \$664,000, which is to be divided pro rata amongst claimants.

A press report states that the British Government has requisitioned all the refrigerating space in British steamships registered in the United Kingdom, for the transportation of frozen meat.

Twenty seven car loads of halibut were forwarded from Prince Rupert, B.C., by Canadian Express during one month recently.

January, 1916.]

Among the Express Companies.

C. Potter has been appointed agent, Dominion Ex. Co., Cranbrook, B.C., vice J. E. Dicks, transferred.

The Dominion Ex. Co. has opened offices at Brechin, Ont.; Howell, Carseland, Ensign, Jenner, Pearce and Tudor, Alta.

The Canadian Ex. Co. has opened offices at Algar and Deloraine, Man., Palmer and Yorkton, Sask., and Rumsey, Alta.

W. J. McGuire has been appointed agent, Dominion Ex. Co., Farnham, Que., vice J. O'Hara, who has enlisted for active service in Europe.

J. E. Dicks, heretofore agent, Dominion Ex. Co., Cranbrook, B.C., has been appointed agent at Lethbridge, Alta., vice G. A. Taylor, transferred.

Z. M. Middleton, heretofore chief clerk to Superintendent, Canadian Northern Ex. Co., Winnipeg, has been appointed agent at the company's newly established office at Vancouver, B.C.

The Board of Railway Commissioners has approved the Central Canada Ex. Co.'s by-law providing that Peter McArthur, General Superintendent, Edmonton, Alta., shall issue tariffs of tolls to be charged by the company.

The Canadian Northern Ex. Co. has extended its service to Vancouver, B.C., and has opened offices at Evansburgh, Onoway and Tollerton, Alta., Blue River, Boston Bar, Chilliwick, Hope, Kamloops, Lucerne, Port Mann and Vancouver, B.C.

The Canadian Ex. Co.'s operating statistics for July, 1915, compared with those for July, 1914, are as follows:

	1915.	1914.
Mileage of lines covered	10,264	9,676
Charges for transportation	\$307,574	\$318,758
Express privileges, Dr.	157,121	163,167
Operations other than transportation	5,262	5,142
Net operating revenue	18,805	17,982
Express taxes	1,200	1,000
Operating income	11,605	13,982

Telegraph, Telephone and Cable Matters.

The Board of Railway Commissioners has extended to July 1, 1916, the time for the approval of tolls to be charged by telegraph companies in Canada.

E. Trower, chief accountant, Great North Western Telegraph Co., Toronto, who resigned recently, to enlist for overseas service, was presented with a wrist watch by the staff, Dec. 2.

The Militia Department is asking for the enlistment of telegraphers for overseas duty with divisional signalling companies. After enlistment the men will be given a brief training and sent forward as soon as competent. The different code in use in Europe makes some training necessary.

The Western Union Telegraph Co. has announced that from Jan. 1 all employees will receive annual holidays with pay, on the stipulation that they shall be used for rest and recreation, and not for other employment. It is stated that the cost to the company will be about \$2,000,000.

A press report from St. John's, Nfld., Dec. 2, stated that four of the trans-Atlantic cables to Europe were broken, and that three cable ships have been engaged on repairs for some time, without success, on account of heavy storms, and that it is possible that the work will have to be abandoned until the spring.

The Bell Telephone Co. has been authorized by the Board of Railway Commissioners, in cases of telephone installations for clergymen and religious institutions, where telephone is listed in the name of an institu-

tion, or in such other manner as to indicate it is desired for other than domestic purposes, to charge business rate. Where it is listed in the name of an individual, to charge residence rate, except where it appears that the telephone is used, or is to be used, for business purposes and direct financial gain of person or institution using the instrument, in which event business rate may be charged.

The Board of Railway Commissioners has authorized independent telephone companies to appeal to the Supreme Court of Canada, on the questions as to whether the Board has power to authorize toll or charge outside established rates applicable to Bell Telephone Co. as compensation for use of long distance lines; to give compensation in respect of loss to Bell Telephone Co.'s local exchange business; and to authorize payment of special toll as condition precedent to companies competing with Bell Telephone Co., obtaining long distance connection with Bell Telephone Co., while not subjecting non-competing companies to like toll in view of provisions of the act relating to discriminations.

R. B. McMicking, who died at Victoria, B.C., Nov. 27, aged 73, was, in his early days, a telegraph operator, Montreal Telegraph Co., at Queenston, Ont., and was transferred to the Pacific coast in 1862. In 1863 he was engaged by the Collins Overland Service, which had the object of opening telegraph communication with Europe by way of Behring Strait and then over land. This project was abandoned in 1866. Between that year and 1870 he served at Yale, B.C., and was then transferred to the Western Union Telegraph Co.'s office at Victoria, B.C., in conjunction with Barnard's Express. In 1871 he was appointed Superintendent, Dominion Government Telegraphs, at Yale, in charge of the cables between the mainland and Vancouver Island. From 1875 to 1880 he was in charge of Dominion Government Telegraphs at Victoria, B.C., and since 1870 was connected with telephone service on Vancouver Island, latterly with the British Columbia Telephone Co.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Galena-Signal Oil Co.—Robt. McVicar, who has been connected with the company a great many years, and has represented it at St. Paul, Minn., has been given charge of the company's Canadian office, 603 Shaughnessy Building, Montreal, succeeding J. C. Tipton who has been transferred to St. Paul.

Standard Underground Cable Co. of Canada.—William Andrew Conner, of Plainfield, N.J., died suddenly, Dec. 6, at his office in Perth Amboy, N.J. He was born in Baltimore, Sept. 12, 1859. He began his business career in 1876, in Pittsburgh, in the oil refining business, in which he reached the position of Assistant Manager for the Standard Oil Co. In 1885 he took charge of the first plant built by the Standard Underground Cable Co. in Pittsburgh, and from then to the time of his death he was the head of the manufacturing business of that company, including large plants planned and built by him in Pittsburgh, Pa.; Perth Amboy, N.J.; Oakland, Cal., and Hamilton,

Ont. He was a director for 10 years and first Vice President since 1909. He was Vice President of the Perth Amboy Trust Co., in the inception of which he had an active part. He was a cousin of Orville T. Waring, of the Standard Oil Co.; E. J. Waring, of the Standard Underground Cable Co., and of the late Richard S. Waring, founder of the Standard Underground Cable Co., and the inventor of the Waring cables. He was also a Vice President and director of the Standard Underground Cable Co. of Canada, Ltd., whose factories were planned and built by him in Hamilton, Ont., in 1911-12. He was a 32° Scottish Rite Mason, and a Knight Templar; a member of the Duquesne Club of Pittsburgh; the Hamilton Club, Hamilton, Ont., and the Plainfield Country Club. He moved from Pittsburgh to Plainfield in 1904, since when he resided at the latter place. He leaves his widow, who was Miss Tupper, of Michigan; a brother, Edward Conner, of Orange, N.J., and a sister, Mrs. Roak, of Brooklyn, N.Y. Funeral services were held at his late residence, 999 Hillside Ave., Plainfield, N.J., by his pastor, Rev. Dr. Phillip B. Strong, of the First Baptist Church of Plainfield, and by his former Pittsburgh pastor, Rev. Dr. Lemuel C. Barnes, of New York, now Secretary of the Board of Home Missions of the Baptist Church. This service was attended by the officers and many of the leading employes of the Standard Underground Cable Co., and by numerous business acquaintances, thus testifying to the love and esteem in which he was held by all who knew him, for his sterling qualities as a man and friend.

Transportation Conventions in 1916.

THE TORONTO, NIAGARA AND WESTERN RAILWAY COMPANY.

Notice is hereby given that The Toronto, Niagara and Western Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time wherein the company may construct the lines of railway authorized by section 2 of chapter 112 of the Statutes of Canada for 1914.

GERARD RUEL,
Chief Solicitor.

Toronto, 10th December, 1915.

CANADIAN NORTHERN RAILWAY COMPANY.

Notice is hereby given that the Canadian Northern Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time wherein the company may construct the line of railway authorized by paragraph (a) of section 8

of chapter 56 of the Statutes of Canada for 1911, shortly described as follows:—

From a point on the Oak Point Branch of the C.N.R. at or near Grosse Isle, northerly and westerly to Grand Rapids, with a branch to a point on Sturgeon Bay.

GERARD RUEL,
Chief Solicitor.

Toronto, 10th December, 1915.

CANADIAN NORTHERN ONTARIO RAILWAY COMPANY.

Notice is hereby given that the Canadian Northern Ontario Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time wherein the company may construct:—

(a) The line of railway authorized by the Statutes of Canada for 1911, chapter 57, section 2, paragraph (a), item (v), shortly described as follows:—

From a point east of Toronto via Hamilton and London to Windsor, with a branch to St. Thomas and Sarnia.

(b) Also the line of railway authorized by the Statutes of Canada for 1914, chapter 79, section 2, subsection 1, paragraph (a), shortly described as follows:—

From a point on the Port Arthur-Sudbury line near the head of Long Lake, north-westerly to a junction with the National Transcontinental Railway east of Lake Nipigon.

GERARD RUEL,
Chief Solicitor.

Toronto, 10th December, 1915.

THE TORONTO, HAMILTON AND BUFFALO RAILWAY COMPANY.

NOTICE IS HEREBY GIVEN that The Toronto, Hamilton and Buffalo Railway Company will apply to the Parliament of Canada at its next session for an Act permitting the Company to make with the Canada Southern Railway Company, the Michigan Central Railroad Company, the New York Central Railroad Company and the Canadian Pacific Railway Company, or with any of such Companies, any of the arrangements authorized to be made between Railway Companies by section 364 of The Railway Act, for a term of fifty years, and for other purposes.

Dated at Hamilton this 6th day of December A.D. 1915.

E. D. CAHILL,
Solicitor for the Applicants.

NIAGARA, ST. CATHARINES AND TORONTO RAILWAY COMPANY.

Notice is hereby given that the Niagara, St. Catharines and Toronto Railway Company will apply to the Parliament of Canada at its next session, for an Act extending the time wherein the company may construct the lines of railway authorized by section 2, chapter 159 of the Statutes of Canada for 1913.

GERARD RUEL,
Chief Solicitor.

Toronto, 10th December, 1915.

BRAKE SHOE SCRAP REDUCED TO THE ABSOLUTE MINIMUM

The Steel Back Brake Shoes here pictured were all worn down practically to the steel back.

The average weight of 100 shoes taken at random from this pile was about 5½ lbs.

The roads using these shoes received about twice as much brake shoe service as could have been gotten from ordinary unreinforced shoes. It paid them and it will pay your road to use Steel Back Brake Shoes.

Manufactured in Canada.

It Pays

to carry an advertisement in the Canadian Railway and Marine World every issue of the year because you obtain proportionately better

Results

In making this comparison, very conservative figures have been used; they are based upon average conditions in flat and mountainous country and with the allowance that building work, fuel stations, water stations and way-lands are practically sufficient for the purpose.

This facilitation of traffic which the A. P. B. System gives, approaches the results from double track operation and is secured at about 1-10 the cost of an additional track.

Consider some of the other advantages—protection against broken switches—no special apparatus required—and finally the annual saving on the maintenance of the additional track.

With all these advantages inherent in the A. P. Block System is double tracking warranted? Then why not consider the proposition in the same way one superintendent did whom we know of. This superintendent, of an important railway, recommended to his management an appropriation of a large sum of money for a second track. After careful investigation, it was found that the expense of the second track could be avoided by an installation of our A. P. Block System: this authority was granted, the system has been installed, and it has postponed double tracking that particular line for many years to come.

You can make the same postponement.

Flange Lubrication Should be Automatic

Flange lubrication to be efficient should be automatic, absolutely independent of your engineer, and at the same time the device itself should be so simple and yet so accurate that it will be practically trouble proof. The

Detroit Automatic Flange Lubricator (Pendulum Type)

is absolutely automatic and at the same time simple. It is all in the pendulum. Any lateral movement of the locomotive causes the pendulum to swing. This oscillation rotates, rocker-like, the pendulum shaft, which produces alternating strokes of the two plungers in the pumping unit.

The use of the Detroit Automatic Flange Lubricator insures positive lubrication just when it is needed. May we send booklet F-O 81? It contains all the facts as well as drawings. Write to-day.

National Motor Trucks

The existence of a great demand in Canada for a reliable and economical Motor Truck is the reason behind the manufacture of the NATIONAL Truck. Securing a staff of the most experienced and competent engineers obtainable and giving instructions that a Master Truck must be produced, has resulted in a product that is unexcelled. Improvements that would naturally come about in the next few years have been anticipated and embodied in this NATIONAL TRUCK—national in scope and use, as well as in name.

Write for illustrations, specifications and prices.

Adjustable Taps for Shell Work

Accuracy is one of the principal requirements demanded in the production of shells. To maintain it in solid taps is too expensive for modern practice.

The simple adjusting device illustrated on this page gives greatly increased life to your taps and ACCURACY at a very reasonable first cost.

We will be glad to tell you about our other lines of adjustable taps which embody

Why employ 20 to 40 men to handle your material? A

BROWNHOIST Locomotive Crane

will do the same amount of work with a decided saving to you. Its cost, including 6% interest on investment, depreciation, and operating costs, is only \$6.00 to \$10.00 per day. It is one man operated, powerful, quick-acting, and built to withstand hard and continuous service. Records prove this.

ADAPTABILITY. The equipment is interchangeable. It only takes a short time to apply the Grab Bucket, Bottom Block, Drag-Line Bucket, Pile Driving Attachment, Lifting Magnet, or Shovel Equipment. This makes practically six machines in one.

RAILROADS all over the country are realizing more and more the advantage and economy of having a Brownhoist Locomotive Crane on the job, because it is always ready to work in case of emergency. A Brownhoist Crane can be relied upon. One road uses thirty of them.

INVESTIGATE TO-DAY. Catalogue I shows
how and where some of these cranes are used.

SERVICE

SERVICE is one of the greatest words in the English language. The true test in the value of any device is the service it renders. Model 2A Signals are rendering unequaled service on 85 railways of North America. Among many features which account for the successful service of the Model 2A Signal are these:

It has neither **slot—dash-pot—fan** nor **governor**.

The fact is recognized by the best signal authorities that the signal slot is a delicate, complicated and unreliable part of any signal, that it is subject to residual magnetism, improper adjustment, battered stop pins and worn bearings.

The elimination of the slot increases the simplicity and results in reliable service of the Model 2A Signal.

Shunting the motor circuit is the substitute for the dash-pot—fan or governor and is a means of retarding the movement of the semaphore blade in moving from proceed to caution and stop positions. It is a highly satisfactory method and the simplest one known.

Bulletin 115-C on request.

The Wonderful Single Service Chilled Iron Car Wheel

Chilled Iron means the sudden cooling of molten iron poured against a cold iron ring which is part of the mold.

A 725-pound M. C. B. chilled iron car wheel is poured in 12 seconds and by this quick cooling process a transformation of structure takes place and the result is a clear white iron from one-half to three-quarters of an inch in depth in the tread and flange, which is harder than tempered steel.

The chilled tread is so hard that it will carry a heavier load than the steel rail will carry without deformation of the metal.

Scientific tests have demonstrated the difference in structure between the chilled iron wheel and steel rail because a load can be placed on a chilled iron wheel that will cause it to sink into the rail without deformation of the wheel structure.

There is less wear in the brake shoe and steel rail when chilled iron wheels are used; therefore chilled iron possesses the ideal structure for service.

The plates are soft, because the iron in the plates is cooled gradually in a sand mold; therefore they can withstand temperature stresses due to brake heating.

The hub is soft and easily machined; therefore a strong and perfect axle fit is assured.

Note carefully the combination of graded iron structure in the single piece chilled iron wheel namely:

Hard Tread,
Soft Plates,

Soft Hub, and each part of the wheel ideally adapted to service conditions.

Chilled iron Wheels were Standard in the year 1850.

Chilled Iron Wheels are Standard
25,000,000 now running.

Today.

Association of Manufacturers of Chilled Car Wheels
1214 McCormick Building, Chicago, Ill.

Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

A Standard Design With O-B Improvements

Type E High-Speed Trolley Frog

Made along the general lines of the standard Dunc or Detroit design, but equipped with 6 inch renewable bronze Cam Tips. These tips in shorter length have proved a decided success on Type D Frog and other devices.

Body is made of malleable iron and is provided with extra long extensions to steady the trolley wheel and relieve wires of side wear.

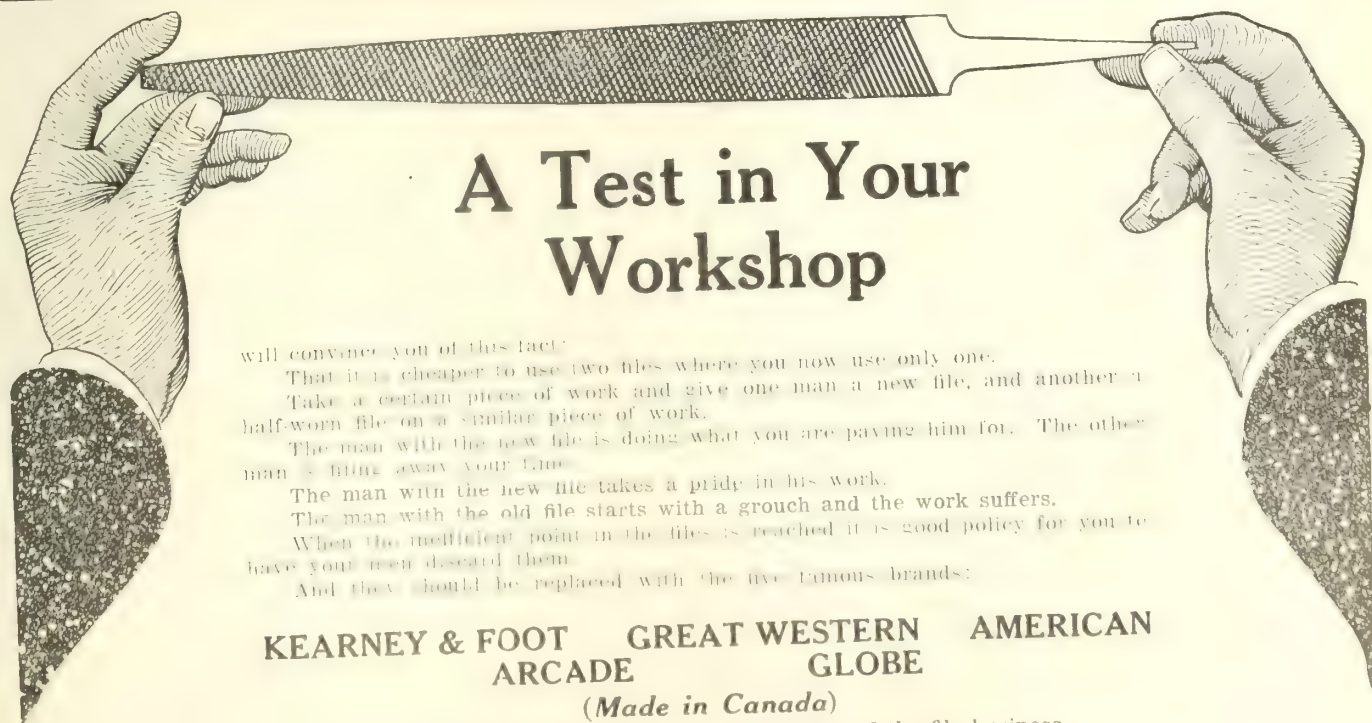

A groove in the pan guides the wheel and overcomes tendency to take turnout when car is passing on a straight line.

Deflector bar prevents wild trolley from catching in the acute angle formed by the turnout wire.

Small number of parts and rugged design mean ease of installation and long life.

Furnished for 0 to 4-0 Round and Grooved wires and for either right hand, left hand or "V" turnout.

THE OHIO BRASS COMPANY, Mansfield, Ohio, U.S.A.

A Test in Your Workshop

will convince you of this fact:

That it is cheaper to use two files where you now use only one.

Take a certain piece of work and give one man a new file, and another a half-worn file on a similar piece of work.

The man with the new file is doing what you are paying him for. The other man is taking away your time.

The man with the new file takes a pride in his work.

The man with the old file starts with a grouch and the work suffers.

When the inefficient point in the files is reached it is good policy for you to have your men discard them.

And they should be replaced with the five famous brands:

KEARNEY & FOOT GREAT WESTERN AMERICAN
ARCADE GLOBE

(Made in Canada)

Made in Canada by a plant controlling 90 per cent. of the file business.

Backed by 50 years' experience in the making of efficient files.

Garlock High Pressure Piston Rod Packing

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

Style No. 200.

465 Railroad Shops in the United States and Canada Use the Thermit Welding Process

Let us send you this pamphlet.

This comprises practically all the shops of importance in North America, and it can be said without exaggeration that the list of railroads using Thermit includes practically every system from the small road having only three or four locomotives to the largest system in the world having many thousand locomotives.

If by any chance your shop is not using Thermit, you should investigate the process and see how effectively and economically it will handle the many repairs on locomotive frames and other sections.

Remember that the greatest railway systems in the world use hundreds of thousands of pounds of Thermit. They do not use it for any reason except that it "delivers the goods" and has proven itself a profitable investment.

Let us mail you our new pamphlet, No. 2144, which contains full information on the use of Thermit in Railroad Shops.

We have a well equipped shop in Toronto, Ont., for the manufacture of Thermit and appliances used with it.

Scientific Treatment of Boiler Waters Dearborn Service to Railroads

Every time an engine failure takes place it means a large expense in dollars to the railroad company in time lost, impairment of service, and cost to send another engine to the rescue. Every time a locomotive goes to shop for repairs, it represents many thousands of dollars invested capital which is earning no revenue.

By the use of Dearborn Treatment engine failures due to the boiler foaming or leaking can be entirely eliminated. Dearborn Treatment counteracts the foaming tendency in waters of that type, and prevents scale formation, and the corrosive and pitting action that results in leaks. By thus overcoming the bad effects of the waters used, and

keeping the boiler tubes and sheets free from incrustation, the engine may be kept in service longer between boiler washings, and the period between shoppings for repairs of this character will be much longer. There are also great savings in fuel and lubricating oil, and the engine will always be in condition to haul full tonnage.

TORONTO, CANADA.

DESIGNED ESPECIALLY to handle pipes spaced closely as in coil work. No. 2 $\frac{1}{2}$ wrench illustrated requires but three-quarter inch space between pipes.

POSITIVE GRIP instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

RATCHET-LIKE ACTION. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

CAN'T CHEW. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

CAN'T CRUSH. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

An Announcement of Special Importance to Signal and Maintenance Men

THE COLUMBIA R.S.A. SIGNAL CELL

TYPE 72

is the latest development in primary batteries for all classes of open circuit or closed circuit work.

This cell is designed to operate satisfactorily under all service conditions. It has a high ampere capacity that is not affected by severity of weather conditions.

It is simple, yet very rugged in construction, and a minimum amount of labor is necessary in setting up this cell.

The copper oxide element is made of loose, flaky material contained in a perforated holder. This insures free circulation of the solution and constant internal resistance.

The cell is self oiling—it does not require the addition of any oil.

It is being successfully used by over 30 railroads in Canada and the United States.

We want to send you detailed information. Will you write for it?

Fire Tube Marine Superheater--Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler horse power from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

February, 1916.

Standard Lettering of Freight Cars.

Certain definite regulations regarding the marking to be used for freight cars were made by the Master Car Builders' Association in a report presented at its convention in 1905. This report covered the style of letters and figures to be used, so that uniform stencils might be prepared and used on all freight cars, and, secondly, uniform height of letters and figures for specified

truck as the lettering will permit, preferably to the left of the centre line on side of car.

Various refinements in detail of marking freight cars have been carried out year by year, but several serious objections were not eliminated. As the matter developed, the American Railway Association issued circular to all owners of freight equipment on May 18, 1910, and Nov. 20, 1912, in reference

latter retains the old marking without infringement. Each road acknowledges its official reporting marks by having them appear on all of its freight cars.

The standard marking jointly agreed to by the Master Car Builders' and American Railway Associations is shown by the accompanying drawing, fig. 1, which is reproduced from the Railway Age Gazette. Fig.

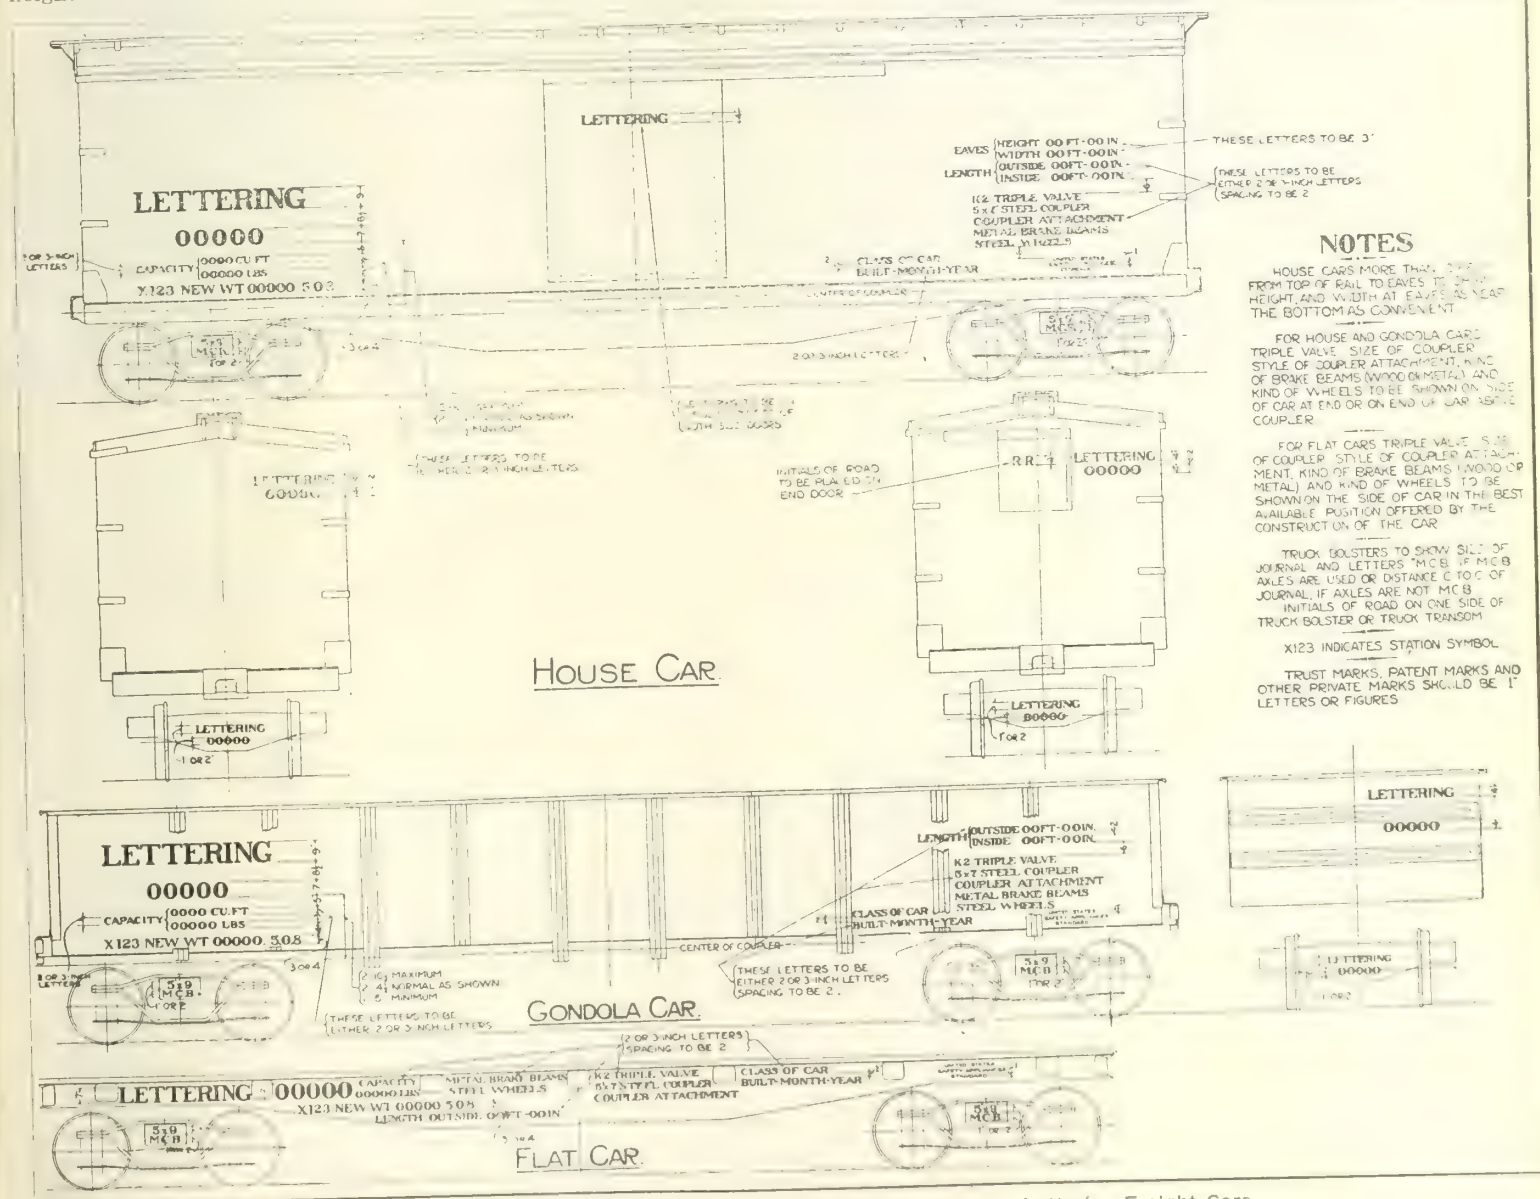

Fig. 1.—Master Car Builders' Association Recommended Practice for Lettering Freight Cars.

markings, so that in a general way these markings would be standard for all freight equipment cars. No particular location was recommended at that time, as to where the various markings were to be placed, allowing each ownership to use its own judgment in the matter to a certain extent. At the 1909 convention, it was decided to have the markings on sides of cars, wherever possible, carried out in the following order: 1. Lettering (initials or name of road); 2. Number; 3. Capacity; 4. Light Weight. This marking to be located as nearly over the

to the uniform marking of freight cars, and immediately following this a suitable list of official reporting marks was prepared covering each identical road or private owner and arranged in such a way that there could be no possible ground for confliction, as was the case under the old scheme, where perhaps two or more roads persisted in using the same marking. For instance, the Intercolonial Ry. and the Illinois Central Rd., both used the reporting mark "I.C.R." for a long time and under the new system, "I.R.C." applies to the first road and the

Railway Companies Collection of Cartage Tolls Considered by Board of Railway Commissioners.

Sir Henry L. Drayton, Chief Commissioner, Board of Railway Commissioners, gave the following decision Nov. 22, which was concurred in by the other commissioners:—

Several complaints have been made as to the practice of railway companies in collecting cartage tolls from consignees. The complaints are complaints really made by the consignees against the consignors, as the collection of cartage charges, which from time to time are disputed, are invariably charges which the consignor has instructed the railway company to collect from the consignee. The railway makes no profit out of the transaction, and it is a matter of indifference to it whether it collects from the consignee the cartage charges which have been charged against the railway by the cartage company, or whether the consignor pays them in the first instance.

It is perfectly clear that cartage is not covered under the maximum toll which railways may collect for the service of transportation as contemplated by the act. By this I mean it is not included in any filed tariff applicable to the line haul. It is entirely a separate and distinct matter, and has nothing to do with the factors making up the railway transportation rates as popularly and properly understood. Some of the English acts make the point perfectly clear. The London, Brighton, and South Coast Ry. Act, 26-27 Vic., chap. 218, sec. 51, provides that the maximum rate of charges to be made by the company for the conveyance of animals and goods shall not exceed certain sums prescribed, and especially excepts a reasonable sum for, among other things, delivery and collection. In the case of *Sowerby vs. G.N. Ry.*, 60 L.J., Q.B. 467; 65 L.T. 546, C.A., it is expressly held that a railway performing a cartage service is entitled to be paid for it.

The Board has dealt with the matter similarly. The considered judgment of the Assistant Chief Commissioner will be found in *Stewart vs. C.P.R. Co.*, 11 C.R.C. 197. In that case, the charge had been made for carting a marble slab to the railway company's freight sheds from the consignor's premises. The cartage was included in the railway company's freight bill and paid by the consignee at Hamilton. On it appearing that the company's cartage tariff, which had been approved by the Board, did not include a charge for carting marble slabs in Montreal, but, as pointed out in the judgment, expressly excluded marble slabs, the charge was disallowed, on the ground that it was a charge collected as a toll within the meaning of the railway act not appearing in a tariff, a practice prohibited by sec. 314, ss. 5.

The act itself contemplates charges for cartage. The amendment of 1908 substitutes a new section for sec. 2, ss. 30. This subsection, defining the word "toll" or "rate," specifically includes charges for cartage. Railway companies have since filed proper and appropriate tariffs for cartage service. The practice which has been followed for years has in effect been that the railway companies have advanced cartage charges on outward shipments to the cartage companies, and have included in their freight bills under the caption of "Cartage charges" the amount advanced.

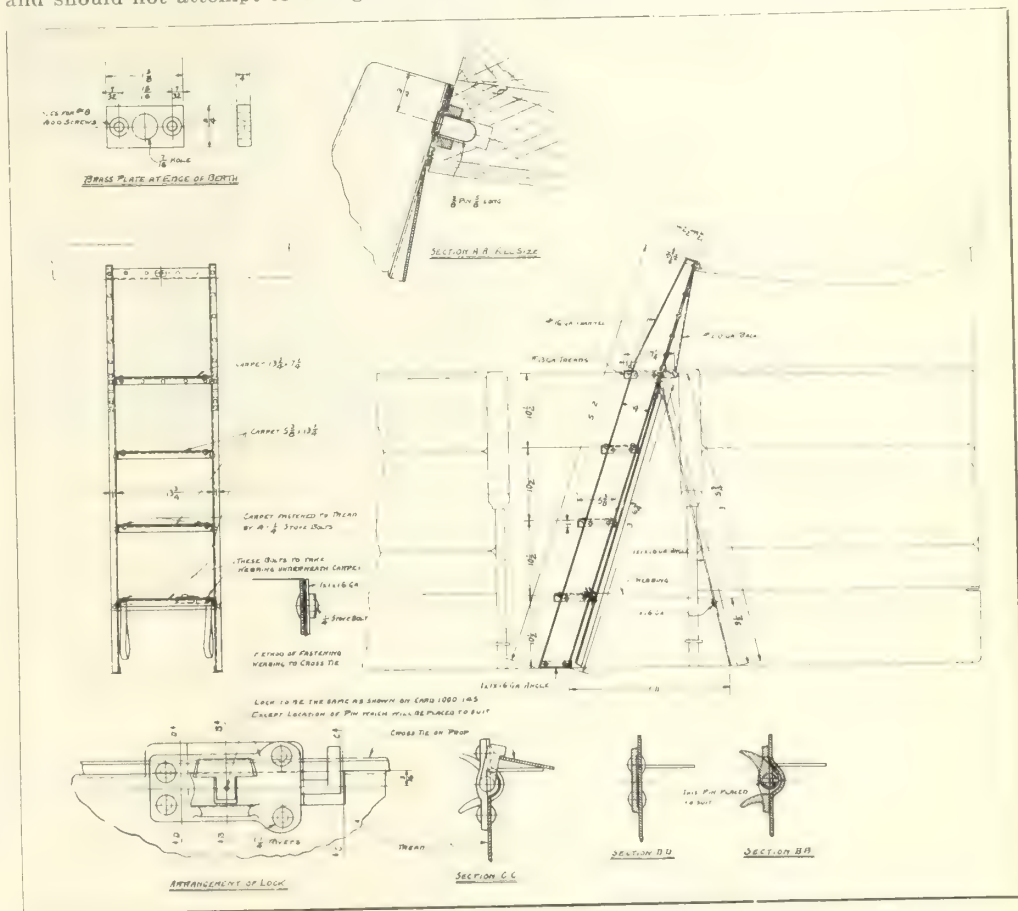

In Aug., 1913, the railway companies proposed to cancel all cartage tariffs, as they desired to discontinue contracts which they had made with the cartage companies. The railway companies urged that they had, in the past, been absorbing part of the charge; and that the service was not a railway service, but one which had been given in ease

of the general situation and for the convenience of the public. Strong protests were made against the proposal. It was reconsidered by the railways; and, at the request of the shippers, the practice was continued under a somewhat higher tariff. The shippers alleged that it would cost much more if the shippers had to have the service performed by independent carters, and that much confusion and inevitable delays would result, if the previous system was abandoned. At that time, as now, the consignees objected to be charged with the cartage rate. The position taken by the Board at that time was that it had not the power and should not attempt to change or modify

has but to deduct the sum collected for cartage, if improperly collected from him, from his invoice. The case is just the same as if the consignor, in a case where the contract called for free delivery at destination, had forwarded the shipment with freight charges collect. In each instance, the question as to whether the freight charges or the cartage charges should be paid by the consignor or the consignee depends on the terms of the contract, to which the railway company is not a party and has no means of ascertaining the facts.

Steel Step Ladder for Canadian Northern Railway Sleeping Cars.

The Canadian Northern Ry. mechanical department has developed an all steel berth step ladder for use on its sleeping cars that

Steel Step Ladder for Canadian Northern Ry. Sleeping Cars.

in any way the rights and obligations of the contracting parties; that the question as to whether the consignees should or should not pay cartage was a matter entirely of contract between the consignors and the consignees, that the Board had nothing to do with the question; and that the work of cartage was not a railway service or facility within the meaning of the act, although covered by the definition of "toll."

In case where the purchase is f.o.b. cars at shipping point, instead of at the warehouse, there is no doubt that the consignees should not have to pay the cost which should be borne by the consignor; but this question is not, however, in any sense, a question for the Board. Generally speaking, the railway company is bound by the consignor's instructions. If these instructions include the collection of the cartage charges, in addition to the collection of the freight charges, there is no reason why the railway company under the act cannot hold delivery of freight until payment is made.

The consignee's remedy is simple, as he

has many advantages from the point of view of construction and convenience over the usual wooden ladder which is placed in the centre of the aisle. The side member consists of 1 1/2 lb. galvanized iron channel, 13 3/4 ins. back to back, with 13 lb. galvanized iron treads, 10 1/2 ins. rise. At the back there is a hinged support of 1 x 1 in. 16 galvanized iron angles, with 1 in. webbing to keep the legs from spreading too far. The top of the ladder has tips which fit into sockets in the upper berth face. Above the top step of the ladder, the back is closed in by 20 lb. galvanized iron sheeting, which will be appreciated especially by women in mounting to an upper berth. When not in use the ladder will fold up neatly in the porter's cupboard at the end of the car.

The Great North Western Telegraph Co. has opened an office at La Tuque, Que., and has closed its offices at Capucins and Little Metis lighthouse, Que., and Badger, Berton, Lorette, Neelin and Vista, Man.

Steel Suburban Cars, Grand Trunk Railway.

The G. T. R. has in service 15 steel frame suburban cars, which are the first steel passenger cars used by the company, and embody some interesting features of design. The steel body framing of the cars, an interior view and a detail view of the underframing are shown in the accompanying three illustrations.

The underframing is of the fish belly girder type, with a carrying side girder plate. The fish belly centre sill consists of two 5-16 in. web plates, 18 ins. apart, 26 ins. deep through the central 28½ ft., tapering to a depth of 16 ins. at the body bolster casting. The top edges of these web plates are reinforced with 5 x 3 x ¾ in. angles on each side of each web, and the bottom, with 3 x 3 x ¾ in. angles on each side of each web, the whole covered with a 30 x ¾ in. cover plate, extending the full length of the car. The body bolster is a heavy steel casting, while the 3 cross bearers, located at the centre and 14¼ ft. each side of the centre, are of flanged ¾ in. plates. The side sills of the cars consist of 5 in. 11.6 lb. Z bar sections, extending the length of the car, between the inner flange of which and the cover plate, there is 1-16 in. floor plating. From the web of the Z bar there is a ¼ in. side sheet plate, extending up to the window sills, reinforced along the inner edge at the top by a 1½ x 4 x 7-16 in. dropper bar. The underframing is further reinforced by flanged sheet stiffeners.

The centre sills are carried through to the bumpers. From the bumper sill back as far as the body bolster casting, there is on each side of the centre sill a 7 in. channel member. The upper rail of the side frame is a 3½ x 3½ x ¾ in. angle, carried on vertical angles between the windows. The bulkhead framing consists of six vertical 4 in. 8.2 lbs. Z bars, with a 4 x 3 x 5-16 in. angle across the top for top rail. The vestibule framing consists of pressed section corner posts, with 2 intermediate 8 in. I beams, with 3½ x 3½ x ¾ in. angle across

with standard 13-16 in. siding. The roof is carried on one piece carlines, forming decking of the standard section.

The cars have an overall length of 82 ft. 10½ ins., 70 ft. long over the body. The interior finish is in mahogany, and the seats

Interior of Steel Suburban Cars, G.T.R.

are of rattan. They are electrically lighted, and have the vapor system of steam heat. We are indebted to J. Coleman, Superintendent Car Department, G. T. R., for the data on which this article is based.

A detail view of the underframing of these cars appears on the next page.

Was a Pioneer Tunnel Advisable at Rogers Pass?

One way of doing a thing well is to do it twice. Ordinarily this is an uneconomical procedure, but the builders of the Rogers Pass tunnel claim that it is economical in their case. They had a long tunnel to dig, and so they started by excavating a second tunnel, a useless tunnel, first, and from it they proceeded to attack the main tunnel itself. To describe the striking, iconoclastic method of the "pioneer heading" in the above terms is likely to seem belittling and unfair. The work was carried on in highly successful and expeditious style. Record breaking rates of advance were made, greater at least than any prior performance on the western continent. No untoward incidents interfered with smooth progress. So the work merits congratulations and praise. That fact, however, does not bar the question whether the second tunnel scheme was an essential factor, or whether the same or even better results would have been attained without it.

Comparison with the Simplon tunnel is invited, because there the parallel heading method was also used—in fact it was originated by the Simplon engineers. Two reasons in co-operation made a sound basis for the method there: First, the prospects were that great heat and large waterflows would be encountered, which would call for drainage and ventilation capacity almost impossible to secure in a single heading; and second, if for purposes of ventilation and drainage a second heading were driven along with the main heading, it could be used later for the second tunnel which would shortly be needed to provide double track, and so the parallel expense would involve hardly any dead expense. There has been much difference of opinion in Switzerland among tunneling experts as to whether the Simplon experience justifies the existence of the parallel tunnel method of construction. In the later Loetschberg tunnel, which is shorter than the Simplon but still much

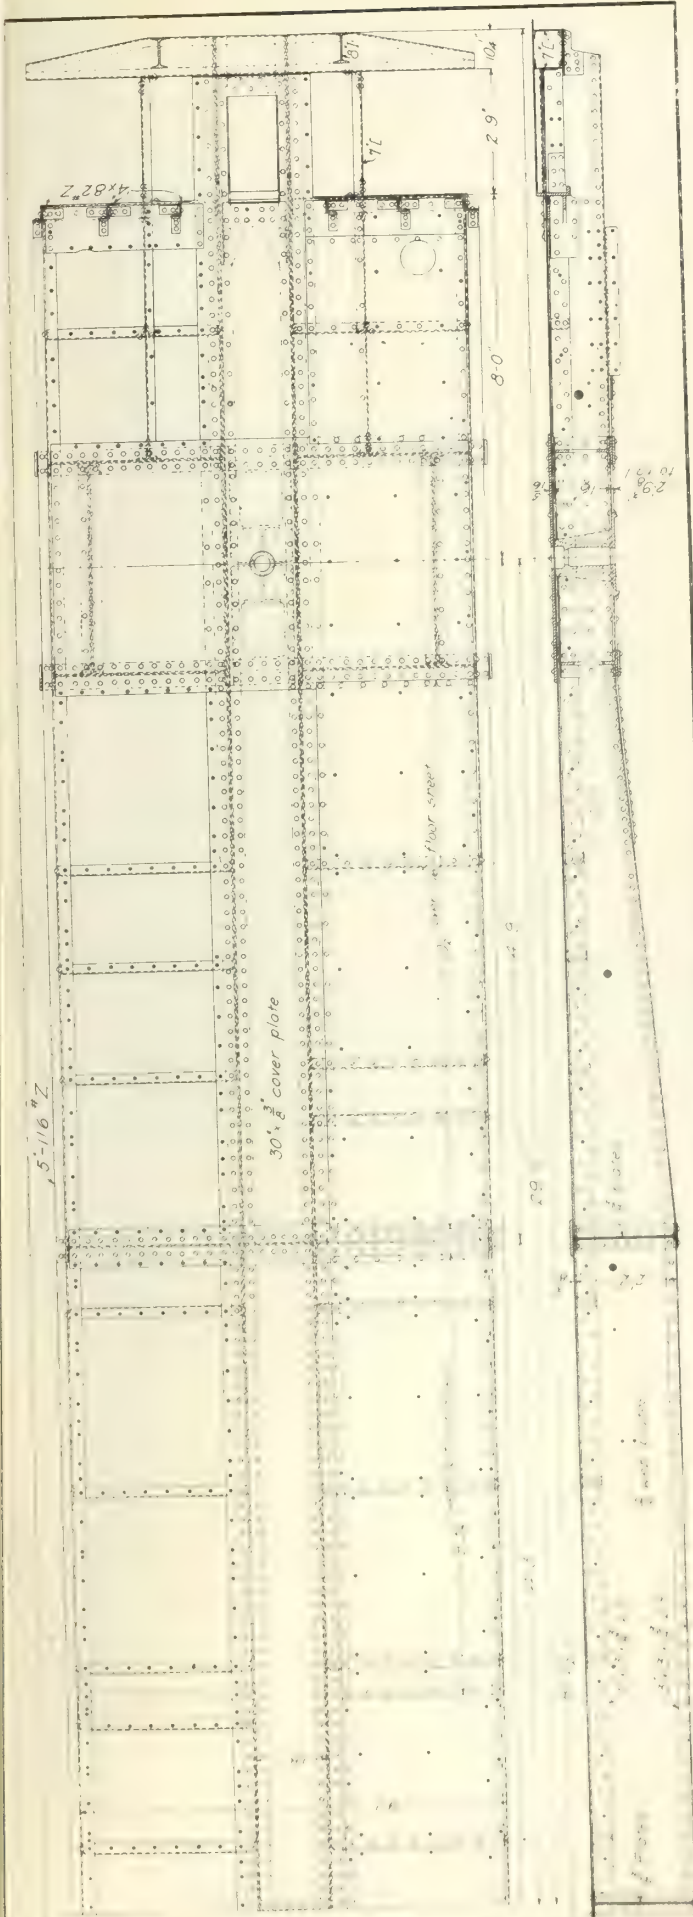

Steel Suburban Car, Grand Trunk Railway, During Construction, Showing Arrangement of Steel Members.

the top, and two 7 in. channels for bumper sill across the bottom.

The flooring consists of two ¾ in. layers of non-conducting material, one above and the other below the 1-16 in. plate flooring, above which there are two layers of ¾ in. flooring, the under one laid diagonally. The siding consists of a ¾ in. layer of non-conductor, with 1½ in. horizontal boarding, sheathed

Port Mann Town Site.—The Pacific Properties, Limited, started proceedings in a British Columbia court, Jan. 7, to recover damages, estimated at \$1,500,000, from the Canadian Northern Ry. The plaintiffs claim that this money was expended on the Port Mann town site on the understanding that it was to be the C.N.P.R. Pacific coast terminus.

longer than the Rogers Pass, the method was not used; and although this is a double track tunnel there is no ground for assuming that the greater width had anything to do with the selection of the driving method. The conclusion is probably conservative that for the Simplon itself the parallel tunnel method was a vitally important device, making possible the suc-

Underframing of Steel Suburban Cars, Grand Trunk Railway.

pears, for if it were the pioneer headings would have been driven on an up slope, to drain. Ventilation, however, may have had important bearing, and a clear statement of how much account was taken of ventilation in adopting the tunneling method will be a most desirable thing.—Engineering News.

Order re Joint Freight Rates and Concurrence Notices.

Sir Henry L. Drayton, Chief Commissioner, Board of Railway Commissioners, gave the following decision Dec. 14:—
The Chief Commissioner reports that the Canadian Pacific and the Grand Trunk Pacific Railway Companies have filed with the Board a revocation of the concurrences of the respective railway companies which were filed with the Board, and the effect of which was to concur in joint tariffs issued by the Canadian Northern Railway lines (West Fort, Ont., and east thereof), lines (Port Arthur, Ont., and west thereof). The Canadian Northern has retaliated by revoking its concurrence in joint tariffs issued either by the Canadian Pacific or the Grand Trunk Pacific. The notifications differ in form. That of the Grand Trunk Pacific in terms revokes the concurrence filed, and states that future concurrences in favor of

the Canadian Northern will be covered by specific concurrence notices. The Canadian Pacific simply cancels its concurrence and says nothing as to what stand it takes in so far as future concurrences are concerned.

Under the act, joint rates are obligatory; and while all the railways concerned seem at least to agree in an effort to get rid of them, as they are all filing revocation of concurrences, joint rates were not called for by the act in ease of railway companies, but in ease of the general freight movement and cost to the public. The companies cannot be permitted to destroy the system of joint rates, simply because they so desire. Under the act, as I at any rate read it, no joint tariff can be disregarded by the companies until it has been superseded or disallowed by the Board. While it well may be that the Board is not now immediately concerned as to the proposal of the Grand Trunk Pacific that concurrences in joint rates will be expressed in the future by concurrence of the individual tariff instead of by the general form which the companies file, the Board is concerned in seeing that concurrences are not revoked, in so far as joint rates effective by reason of such concurrences given in the past are concerned.

So as to give full effect to the revocation of concurrences already alluded to, the Canadian Pacific has in addition filed Supplements nos. 9 to C.R.C. no. E, 284; 29 to C.R.C. no. E, 284; 2 to C.R.C. no. E, 284; 2 to C.R.C. no. E, 284;

3 to C.R.C. no. E, 289; 1 to C.R.C. no. E, 289; 1 to C.R.C. no. E, 307; and other tariffs under these supplements specified. The above tariffs directly cancel joint tariffs as therein set out. The revocation notices given by the different companies, and the supplements issued to tariffs by the Canadian Pacific as above set out, are all cancelled and disallowed. If the companies desire relief in connection with any particular provision of the act, and, so far as joint rate now in effect, the only possible way they can get that relief is by following the provisions of the act, making out a case justifying the extension of such relief.

The following order, 24588, was issued Dec. 22:—Upon its appearing that the Canadian Pacific, the Grand Trunk Pacific, the Esquimalt & Nanaimo, and the Canadian Northern Railway Companies have filed with the Board certain notices of revocation of general notices of concurrence in joint freight rates between points on the railways of the respective companies and previously filed with the Board, the said notices of revocation being as follows:

Canadian Pacific.—G. C. no. W-60 in favor of Canadian Northern (East); G. C. no. W-61 in favor of Canadian Northern (West).
Grand Trunk Pacific.—G. C. no. A-4 in favor of Canadian Northern.
Esquimalt and Nanaimo.—G. C. no. 7 in favor of Canadian Northern; G. C. no. 55 in favor of Canadian Northern (East).
Canadian Northern Railway (West).

G. C. no. 1 in favor of Canadian Pacific (West); G. C. no. 4 in favor of Grand Trunk Pacific.

Canadian Northern Railway (East).—G. C. no. E-153 in favor of Canadian Pacific (East); G. C. no. E-154 in favor of Canadian Pacific (West).

It is ordered that, under the authority of sections 323 and 338 of the Railway Act, and of the general powers possessed by the Board in that behalf, the said notices of revocation, in so far as they affect joint rates previously published and filed, be disallowed, leave being reserved to the said companies to proceed in accordance with clause 6 of General Order 146, dated July 7, 1915. And

it is also ordered that the following schedules filed with the Board, purporting to withdraw and cancel the joint tariffs to which they refer, be disallowed, viz.:—supplements no. 9 to C.P.R. Tariff, C.R.C. no. E-2841; no. 29 to C.P.R. Tariff, C.R.C. no. E-2843; no. 2 to C.P.R. Tariff, C.R.C. no. E-2894; no. 3 to C.P.R. Tariff, C.R.C. no. E-2895; no. 1 to C.P.R. Tariff, C.R.C. no. E-2896; no. 1 to C.P.R. Tariff, C.R.C. no. E-3079.

No. 9 to Canadian Northern Tariff, C.R.C. no. W-791; no. 2 to C.N.R. Tariff, C.R.C. no. E-563; no. 3 to C.N.R. Tariff, C.R.C. no. E-568 no. 1 to C.N.R. Tariff, C.R.C. no. E-569; no. 1 to C.N.R. Tariff, C.R.C., no. E-709.

Making a Fill on the Canadian Northern Railway From a Pontoon Bridge.

About half way between Winnipeg and Port Arthur it was found desirable to locate the C. N. R. main line across an arm of Rainy Lake. It was decided to make a rockfill for the crossing, which was 3 miles long, and in order to avoid the necessity of driving piles to support the work trains a special pontoon arrangement was devised. Surveys for determining the nature of the permanent construction were started in 1908, and it was found that the depth to

used in starting fills out from their shores. In Oct., 1910, two model C 95 ton Bucyrus steam shovels were put to work loading broken rock into 12 yd. standard gauge dump cars, and two more were added a few months later. All four shovels were in commission until the autumn of 1912, and during this time each sometimes handled as much as 50,000 cu. yds. of rock a month.

One of the difficulties encountered at the outset was the necessity for some method of

small islands or to a 5 ton anchor block of stone. A forward line was carried from a winch on the barge and used for warping the barge in moving forward.

Two heavy saw logs were attached to the shore end of the barge, with the small ends toward the shore, so that they formed a support for the track until the head of the bank was brought entirely up to grade, usually a distance of not more than 2 ft.

Dumping could generally proceed until the top was within 2 ft. of grade before it was necessary to move ahead. When the dumper was first built it was anticipated that about an hour would be required to move the device, but in actual practice only 3 or 4 minutes were needed, and dumping could proceed as soon as the track was laid over the space left vacant on the head of the bank. Usually the whole operation from start to finish consumed about 15 minutes.

When the fill had been brought up sufficiently near the surface, the floating bridge was moved ahead and the widening and finishing up of the grade was left to be done by side dumping. About one third of the grade was usually added in this way after the floating bridge had moved on.

In closing up the work the gap finally became too short to permit the use of the barges supporting the dumping track. The embankment was then gradually advanced

Making Rainy Lake Rockfill from Pontoon Bridge.

View of Device, Showing Means of Adjustment.

rock bottom was so great that the piers for a series of steel bridges would be very costly. The mud overlying the rock was too soft to hold clusters of piling, but was also pronounced too stiff to allow rock-filled cribs to sink to foundation.

Study of the lake bottom was carried on through the ice for two winters, and was then finished on open water by what is said to have been a more satisfactory method. The summer soundings were made from a 22 by 34-ft. barge with a driving machine over a central well opening. A 70 lb. hammer was used to sink extra heavy 1½ in. strain pipe to refusal. This pipe was joined together in 10 ft. sections by threaded couplings, and steel specials for point and cap were provided. As many as 28 soundings in a day were taken with this equipment.

With this detailed information about the lake bottom at hand, it was decided to make a solid rockfill for the entire crossing. When the most economical projection of the line across the water had been determined, it was found that the fill would have to be more than 60 ft. deep in some places and that a total of about 1,000,000 cu. yds. of rock would be required. Quarries were located on company property near the lake shores, so that an average haul of only 1 mile was necessary. The line was located so as to take advantage of five rocky islands along the route, and of course rock from these was

dumping the rock so that it would give no trouble in settling into the desired position. A very satisfactory solution of this problem was devised in the shape of a dumper consisting of two 6 ft. plate girders 30 ft. apart, with floorbeams 30 ft. apart on the end at which dumping was done, and shorter distances apart for the remainder of the truss. The track was supported on stringers at the centre, leaving distances of 11 ft. between girders and the ends of the ties through which the material was dumped. Originally the girders were 120 ft. long, but they were afterwards lengthened to 140 ft. so as to carry six 12 yd. cars at one time.

The support for the truss, 75 ft. from the embankment end, was a 32 x 112 ft. barge capable of carrying 200,000 lb. for each foot of displacement. When not resting on the head of the bank, the shore end was supported by two pontoons placed about 40 ft. apart. A girder with a portal entrance and bracing carried the weight from the shore end of the dumper to these pontoons. The truss was supported on the main barge by cribbing so that it could be raised or lowered according to the height of the finished embankment above water. For most of the work this was about 15 ft. above the lake surface.

At each end of the barge were capstans from which lines ran out nearly perpendicular for nearly 1,000 ft. to the shores of

from the east until the gap was short enough so that the 140 ft. steel girders could be floated in on the main barge and bearings secured for them on opposite faces of the two approaching fills. The girder ends were then blocked up on the rock and the barge towed out. After the rock voids near the girder supports had been well filled and allowed to settle, the dumping was proceeded with as before from the track on the girders. When the girders were no longer necessary, they were dismantled and removed.

As to the operation of the dumper, the contractors report that there was no delay from the time it was first installed, except once when the rock embankment settled quickly and for a short time there was danger of a locomotive and cars going into the lake. The dumper was carried when empty by the main barge and pontoons so that there was never any danger of it sinking. The entire cost of the dumper did not exceed 1½ c. per cubic yard for the amount of work done by it, and the equipment is in practically as good shape as when constructed.

The fill was made by Johnson & Carey, subcontractors, under Foley, Welch & Stewart, general contractors for the C. N. R. E. S. Johnson designed the dumper specially for the Rainy Lake work.—Engineering Record.

Railway Mechanical Methods and Devices.

Adjustable Driving Device for Driving Wheel Lathe in Grand Trunk Shops.

The fitting of the usual driving dog on the face plate of driving wheel lathes, so that the driving arm may bear against a spoke of the driving wheel, is usually more or less laborious, as after each pair of wheels is turned, the dog must be removed from the face plate, the wheels removed, a new pair inserted, and then the dog applied to the face plate. From the closeness of the space between the driving wheel and the face plate, it is necessary to swing the dog into place by means of a crane.

In the G.T.R. shops at Stratford, Ont., there is in use a new type of adjustable driving dog, that does not require to be removed between each pair of wheels. It consists of a cast iron base, bolted to the face plate, with the upper face cut with grooves

the method outlined herein the cost has been nearly cut in half over the practice usually followed of using hoops for heating. The heating pit shown in the foreground is located just inside the car shop door, and is served by a small overhead travelling crane, equipped with an air plunger type of hoist. The crane and air hoist are operated from the wall adjoining.

The pit is about 4 ft. deep, lined with fire-brick, slightly smaller in diameter than the gauge of the track between which it is located. The top of the pit wall has an iron cover ring, into which a thin cast iron cover fits, which can be lifted off by the overhead crane when the pit is required, and placed to one side. When not in use the pit is protected completely. Equidistantly spaced around the outside of the pit, and about 12 ins. below the floor level, are 8 torch nozzles, accessible through the 8 board cover openings in the concrete floor, as shown. In each of these nozzle pits there is a control valve, so that each nozzle may be individu-

For putting on tires, the supporting cylinder in the pit is removed, and from 6 to 8 tires piled in the pit, being raised slightly from the bottom on blocks. In the centre of the bottom there is a special mushroom burner, with a number of small holes around the outside, drilled at an outward angle of about 6 degrees from the centre line. A nozzle, similar to that used in the sides, is used in conjunction with this mushroom burner, the oil and gas being thoroughly mixed by the former before coming into the mushroom. This nozzle is controlled by a three valve arrangement on the wall, one controlling both air and oil, and the other two the air and oil individually. A cover is placed over the top of the pile of tires, after the mushroom burner is ignited, and the tires heat in a few minutes to a sufficient temperature to allow of their fitting over the wheel centres.

In the background of fig. 2 there is shown a double air hoist, on which the wheel centres are elevated. From the pit the tires

Adjustable Driving Device for Driving Wheel Lathe.

to carry a small carriage. In the first dog of this type made, the base, being of cast iron, broke under a heavy cut, but it is the intention in future to make the dogs with a forged base. The small carriage is bored to carry a hollow driving pin, which is held in place by a set screw. The position of the carriage may be shifted on its base by a square threaded screw in the base. With the removable pin, it is only necessary to have it removed when placing a pair of wheels in the lathe, the pin being then replaced, and adjusted to position by the adjusting screw in the base.

Removing and Mounting Passenger Car Wheel Tires in Michigan Central Shops.

The accompanying two illustrations show the practice in the Michigan Central Rd. car shops at St. Thomas, Ont., for removing and replacing passenger car wheel tires. By

Fig. 1. Tire Heating Pit Removing Tires.

ally regulated. For operation, the oil and air are regulated from valves on the wall, which control the whole 8 valves.

For removing tires a cast iron cylinder, of such depth that a wheel placed thereon will have the tire level with the 8 nozzles, is lowered in the pit by the crane. The pair of wheels are picked up by the tackle shown in fig. 1, which consists of a clevis with two chains, the end of each chain carrying an eye bolt, which passes through a hole in the web of the wheel, and is bolted on the opposite side. The pair of wheels are lifted up by the crane, and lowered on the supporting sleeve in the pit. The air and oil are then turned on in the 8 nozzles through the central control valve, a single valve regulating the combined air and oil on the wall, with individual valves also on the wall to regulate either the air or oil. The torches will heat the tire sufficiently to come off in from 2 to 5 minutes. The tire is prevented from coming off by two U's, whereby the wheels can be removed, and the tire forced off.

Fig. 2. Tire Heating Pit Heating Tires to Put On.

are lifted one by one, with the special clamp arrangement shown to the left in fig. 2, the tire slipped on the centre, and the retaining rings slipped in place, the whole being fastened together by three pin bolts through three of the retaining bolt holes until such time as the bolts may be permanently placed in the latter.

Formerly, when using coal oil or gasoline with the hoop heaters, the cost of mounting a pair of tires was 21c., with the new method, using fuel oil, it has been reduced to 12c. a pair, or almost half.

The arrangement in the shop for handling wheels is handy. The wheels to be re-tired come along outside the shop to the rear of the point from which the views were secured, and pass through the tire removing and tire mounting processes. From there they pass on to the wheel lathe shown in the right background, passing out at the far side of the shop, and along the transfer table there to the tracks where the car trucks are located for replacing in the latter.

Piston Rod V Blocks on Planer in Grand Trunk Shops.

The G.T.R. shops at Stratford, Ont., follow the practice of planing out the crosshead slippers on the assembled crosshead and piston rod, in the planer, with a formed tool that takes the full width of cut of the guide. The tool is fed down from the top, finishing off both sides as it descends, finally removing the full width of babbitt metal

Piston Rod V Blocks on Planer.

at the bottom of the cut. The crosshead and piston rod are mounted in the planer, in the manner shown in the accompanying illustration, on clamp V blocks of simple but accessible form.

These V blocks, as the illustration shows, are slotted castings, with an eye bolt in the slot on either side of the V, and are swung down out of the way when inserting or removing a piston rod. The rod is clamped in place by a strap across the top between the two bolts of each V block.

Bucket Guard for Moving Gears.

The inexpensive, home made guard illustrated herewith was found in use on a drill press in a garage. The device would be equally applicable, however, to a machine shop. It consists simply of an inverted galvanized iron pail, in the bottom of which

Bucket Guard for Moving Gears.

a circular hole was cut so that it might be slipped over the projecting end of the shaft. Two cuts were also made with a hacksaw on one side of the pail, as shown, and the strip of metal thus freed was bent outward and attached to the frame of the drill press by two cap-screws to hold the pail in position. Although the device is crude, it guards the gears effectively. An ingenious person can often make use of homely materials near at hand in this way to fashion them into satisfactory safeguards, at least for temporary use.

Hydraulic Pressure Control for Tube Testing at Grand Trunk Shops.

Among the feature of the process involved in safe-ending locomotive boiler tubes at the G.T.R. shops at Stratford, Ont., described in Canadian Railway and Marine World for Nov., 1912, was that of the hydraulic pressure test on the tubes to determine their safety after end renewal. The operating end of the machine is shown in the accompany-

spring. When the first superheater flues came through for testing, an increased pressure was given the tubes, the same pressure being applied to the smaller tubes as well. It was found that with this, the smaller tubes would frequently be out in the middle, and as this pressure was greater than the test required, it was reduced. The control nut on the regulating valve gives the pressure for the flues when screwed in full way, while the tubes require a lower pressure. This is now obtained by means of inserting

Hydraulic Pressure Central Arrangement for Testing Tubes and Flues.

ing illustration. The bed of the machine consists of 2 channels, about 25 ft. long, with a stationary head on the end opposite to that shown, with the latter movable to accommodate the different lengths of tubes met with. This bed frame is on the slope, with the grade towards the stationary end.

The tube is first placed in a cup recess in the stationary end, from which it is nearly filled with water, and when the latter appears from the end shown in the illustration, the piston in the cylinder shown is operated, closing the tube, the latter being practically full of water before this from the slope of

a small steel block under the regulating nut, screwing the latter down on the block, which is fastened to the valve by a light chain, and so is always at hand for use, the change from tubes to flues being only a very simple matter.

Air Jack and Truck for Canadian Northern Railway.

A standard air jack, mounted on a shop truck which has been developed by the Canadian Northern Ry. mechanical department

Arrangement of Air Jack and Truck.

the tube on the frame. The water valve is then shut off, and pressure applied through the valve shown in the tray on the frame. This pressure is regulated from the valve shown on the near end of the drum suspended below the frame, and it is this feature that is unique. The pressure regulating valve is an ordinary air reducing valve, which gives the varying pressures required by screwing in or out the nut on the near end, compressing or releasing the contained

for shop use, is illustrated herewith. The truck consists of a pair of 3 x 3 x 3/8 in. angles for side frames, mounted on a pair of 2 in. square axles, the front one of which has a swivel action. The air cylinder is carried between the angle side members by a dry steel plate member, 3/8 in. thick, which forms a central table. The air cylinder is a length of 6 in. pipe, with cast iron caps, containing a two piece leather bushed cast iron piston, with 2 in. pipe for plunger.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—In an interview at Edmonton, Alta., Jan. 5, J. D. McArthur, President, is reported to have said that track had been laid on this line to mileage 182, or 17 miles on the Edmonton side of Christmas River, and that it was expected to have it laid into Fort McMurray by April 1. Ballasting has been completed for some miles beyond Lac la Biche, and is being gone on with as fast as possible. (Jan., pg. 10.)

Burrard Inlet Tunnel and Bridge Co.—At a recent meeting of directors in North Vancouver, B.C., the acting chairman reported that the company was unable to proceed with the construction of the projected bridge across the Second Narrows of Vancouver Inlet, and the other works covered by the charter, and that all arrangements had been made for an application to the Dominion Parliament for the renewal of the charter which expires in April. (Dec., 1915, pg. 469.)

Canadian Pacific Ry.—A deputation from Moose Jaw, Sask., waited upon Grant Hall, Vice President and General Manager, Western Lines, recently, to ask that the company build the necessary mileage to complete a through line between Moose Jaw and Assiniboia. The line at present extends from Moose Jaw through Expanse to Vantage, from which point an extension of eight miles would connect up with a line at present in existence from Assiniboia. (Jan., pg. 10.)

Canadian Terminal Ry.—Application has been made to the New Brunswick Government for a recommendation to the Legislature for a guarantee of bonds for \$20,000 a mile for building a railway from Pennfold on the C.P.R. to connect with Beaver Harbor, Blacks Harbor and L'Etang, and to also have a connection with Eastport, Me. A similar application was made in 1915, but was not granted. (May, 1915, pg. 170.)

Central Canada Ry.—In an interview at Edmonton, Alta., Jan. 5, J. D. McArthur, President, is reported to have said that a train service is being given over the line from McLennan, on the Edmonton, Dunvegan and British Columbia Ry., to the Heart River. It was expected to complete the substructure for the bridge across this river Jan. 30, and the superstructure by Mar. 30. Tracklaying will then be resumed and completed to Peace River. (Jan., pg. 10.)

Central Western Canada Ry.—Application is being made to the Dominion Parliament for an extension of time for the building of this projected railway from Winnipeg northwesterly via Yorkton, Saskatoon and Battleford to Edmonton, Alberta. Pringle and Guthrie, Ottawa, solicitors for applicants. (May, 1914, pg. 121.)

Churchill Southern Ry.—The Manitoba Legislature is being asked to extend the time for the building of this projected railway from Fort Churchill southerly to Kettle Rapids, on the Hudson Bay Ry., with branch lines to any point in Manitoba. (Mar., 1914, pg. 121.)

Edmonton, Dunvegan and British Columbia Ry.—In an interview at Edmonton, Alta., Jan. 5, J. D. McArthur, President, is reported to have said that track had been laid beyond Smoky River as far as Burnt River, and was expected to reach Spirit River by Jan. 31, and would be continued immediately thereafter on the branch line to the Grande Prairie settlement, the grading upon which is fully completed. Construction material

for a grain elevator is being delivered at Spirit River. The line is reported fully ballasted to within four miles of McLennan, and the first left of ballast for 15 miles beyond. (Jan., pg. 10.)

Essex Terminal Ry.—The Ontario Legislature is being asked to confirm a bylaw of the City of Windsor granting a right of way and other rights in the city to the company. (May, 1915, pg. 170.)

Grand Trunk Pacific Ry.—A press report states that grading has been completed on the branch line from Harte to Brandon, Man., 26 miles. No track has been laid.

A press report states that grading on the branch line from Young has been completed into Prince Albert, Sask., about 25 miles beyond the present end of track at St. Louis, on the Saskatchewan River.

The Board of Railway Commissioners has authorized the laying of a spur line in the n.e. $\frac{1}{4}$ of sec. 5, s.e. $\frac{1}{4}$ of sec. 7, tsp. 53, range 23, North Alberta, for the Great West Coal Co. This is a spur from the coal area branches starting out from Bickerdike. (Jan., pg. 10.)

Grand Trunk Ry.—The Lachine, Jacques Cartier and Maisonneuve Ry. Co. on Jan. 4 asked the Board of Railway Commissioners for approval of the location plans of the line, which crosses a number of streets in Montreal. The City of Montreal asked that the company be directed to construct subways at several of the street crossings, and that the city be protected from all claims for land damages. The Canadian Northern Ry. is also interested in the matter, and its counsel expressed a willingness to accept any arrangement made with the G.T.R., which is the senior company. The plans were referred to the Commissioners' Chief Engineer for report.

A press report states that the company is arranging for the construction of a new freight shed and additional trackage at Detroit, Mich., to cost about \$300,000. (Jan., pg. 10.)

Great Northern Ry. Lines in Canada.—A press report states that engineers are making surveys for a railway from Port Arthur, Ont., to Duluth, Minn., in the interests of the Great Northern Minnesota and Duluth Rd. The title would imply a connection with the Great Northern Ry., U.S.A., and that it is a Minnesota State charter. We are unaware of any charter being in existence covering the Ontario end of such a line. During the last year or more G.N.R. engineers have been reported to be working between Port Arthur and the International Boundary line, and to have acquired land suitable for railway terminals in the vicinity of Port Arthur and Fort William.

The Board of Railway Commissioners has approved the company's plans for a station building on the False Creek flats, Vancouver. This was reported to the city council Dec. 10, but on Jan. 3 the council decided to call attention to the fact that the Board had directed that actual construction be started on the station by Dec. 1, 1915, which had not been done. (Jan., pg. 10.)

Joliette and Lake Manuan Colonization Ry.—The Dominion Parliament is being asked to extend the time for the building of this projected railway from Joliette to the National Transcontinental Ry., and from Joliette to Montreal. J. Ritchie, Ottawa, solicitor for company. (May, 1914, pg. 214.)

Kettle Valley Lines.—The Dominion Parliament is being asked to confirm an agree-

ment made July 10, 1914, with the Vancouver, Victoria and Eastern Ry. and Navigation Co., with respect to the operation of a joint section from Princeton to Otter Summit, B.C.

Owing to bad weather and other causes there has been a delay in the completion of the bridge over the Ladner Creek on the Coquihalla Valley section. Tracklaying and other work has been suspended until the spring, and it is not expected that the line will be opened for traffic until the summer. (Jan., pg. 10.)

Manitoba-Ontario Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Fort William by the most feasible route to Falcon Island on Lake of the Woods, and across the lake, and by the most feasible route to Winnipeg; a line from Fort William southwesterly to the International boundary between Rainy Lake and Pigeon Bay, and a branch from the first mentioned line from near Manitou Lake northwesterly to Dryden on the C.P.R., and thence northerly to a junction with the National Transcontinental Ry. Dowler and Dowler, Fort William, Ont., solicitors for applicants.

Winnipeg papers, commenting on the notice of application, state that a project of this kind has been talked of at different times during the past 30 years, but its construction may now be looked upon as being within the region of practicability, seeing that the Greater Winnipeg Water District has built a railway from St. Boniface to Shoal Lake, an arm of the Lake of the Woods, 90 miles. The present project is said to be directed by Mackenzie, Mann & Co. interests, and reports state that engineers representing that firm have been making surveys during the past 18 months in the district to be traversed. The purchase of the Greater Winnipeg Water District's railway is talked of as being part of the plans. The Mayor of Winnipeg is reported to have said that the matter of the sale of the Water District's line had been talked of casually in connection with a projected building of an all-Canadian section of the Canadian Northern Ry. between Fort William and Winnipeg. Such a line would be of great benefit, but at present he had no official knowledge of the matter. (See Greater Winnipeg Water District, Jan., pg. 10.)

Pacific Great Eastern Ry.—It is reported that the reconstruction of the bridge over the Capilano River on the North Vancouver-Dundarave section of the line, which was damaged by a log drive recently, is practically completed, and that traffic will be resumed shortly. Pending reconstruction of the bridge, the company has used automobiles for carrying of passengers between the termini.

The new Premier of British Columbia, in a recent speech is reported to have stated that four-fifths of the work on the line between North Vancouver and Fort George had been completed, but in order to secure its completion it will be necessary for the Legislature to make some further financial arrangements. The extension of the line from Fort George to Peace River is also necessary if the province is to reap the full advantage of its investment in the line. A committee of the Cabinet has been appointed to investigate the whole matter, and to report as to what further aid is necessary. (Jan., pg. 11.)

Pere Marquette Rd.—We are officially advised that the company does not intend to

lay a second track between Blenheim and Wilkie, Ont., about four miles on its Canadian Division, as a recent press report stated.

Quebec Bridge.—H. P. Borden, Assistant to the Chief Engineer, is credited with the statement that the construction of the Quebec Bridge will be completed about the end of this year. The central suspended span will, it is expected, be floated into position about October.

Quebec Central Ry.—We are officially advised that it is not likely any further extension of the Chaudiere Valley line beyond English Lake will be built at present. (Jan., pg. 16.)

St. Francis Valley Ry.—The Quebec Legislature is being asked to extend the time for the building of this projected railway from between Richmond or Melbourne, and St.

Francois du Lac, Que. Beique and Beique, Montreal, solicitors for applicants. (Aug., 1914, pg. 371.)

Toronto, Hamilton and Buffalo Ry.—We are officially advised that it is expected to begin construction on the extension of the Erie and Ontario Ry., which now extends from Smithville to Dunnville, on to Port Maitland, early in the spring. The extension to Port Maitland will be 4.5 miles, making the total length of the line about 20 miles. No contract has been let for grading, and we are advised that all other work will be undertaken by the company's own staff. R. L. Latham, Hamilton, Ont., is Chief Engineer. (Oct., 1915, pg. 393.)

Wabash Ry.—A press report states that plans have been prepared for the enlargement of the company's locomotive house, and trackage facilities at St. Thomas, Ont.

Birthdays of Transportation Men in February.

Many happy returns of the day to:—

B. H. Bennett, General Agent, Chicago and North Western Ry., Toronto, born at Cobourg, Ont., Feb. 6, 1858.

F. L. C. Bond, Division Engineer, Eastern Lines, G.T.R., Montreal, born there Feb. 21, 1877.

T. Britt, General Fuel Agent, C.P.R., Montreal, born there Feb. 3, 1871.

G. E. Bunting, General Western Freight Agent, Allan Line Steamships, and Manager, Allan and Co., Chicago, Ill., born at Toronto, Feb. 8, 1873.

J. S. Byrom, Superintendent, Great Lakes Steamships, Canadian Pacific Ry., Port McNicoll, Ont., born at Jersey City, N.Y., Feb. 10, 1872.

J. J. Callahan, Manager of Operation, London and Port Stanley Ry., London, Ont., born at New Glasgow, Que., Feb. 25, 1875.

H. R. Charlton, General Advertising Agent, G.T.R. and G.T.P.R., Montreal, born at St. Johns, Que., Feb. 9, 1866.

R. Colclough, Superintendent, Intercolonial Ry., Levis, Que., born at Bic, Que., Feb. 24, 1871.

F. W. Cooper, A.M.Can.Soc.C.E., Superintendent, District 1, Eastern Division, C.P.R., Farnham, Que., born at London, Ont., Feb. 16, 1880.

R. Crawford, Northwest Agent, Northern Navigation Co., Winnipeg, Man., born at Kingston, Ont., Feb. 21, 1870.

A. J. Donegan, Superintendent, Algoma Eastern Ry., Sudbury, Ont., born at Perth, Ont., Feb. 17, 1872.

R. W. Drew, Division Freight Agent, Saskatchewan Division, C.P.R., Regina, born at Kingston, Ont., Feb. 17, 1874.

E. A. Evans, M.Can.Soc.C.E., ex-General Manager and Chief Engineer, Quebec Ry., Light and Power Co., Quebec, born at Kensington, London, England, Feb. 26, 1855.

Goodwin Ford, General Superintendent, Western Lines, Dominion Express Co., Winnipeg, born at Bordentown, N.J., Feb. 23, 1859.

L. O. Genest, General Storekeeper, Western Lines, C.P.R., Winnipeg, born at St. Henri, Levis County, Que., Feb. 16, 1856.

J. H. Guess, ex-General Purchasing Agent, Grand Trunk Ry., Montreal, born at Raleigh, N.C., Feb. 5, 1878.

J. C. Holden, A.M.Can.Soc.C.E., Division Engineer, C.P.R., Winnipeg, born at St. John, N.B., Feb., 1876.

T. C. Hudson, Division Master Mechanic, Quebec Grand Division, Canadian Northern Ry., Joliette, Que., born at Brockville, Ont., Feb. 20, 1873.

H. Hulatt, Manager of Telegraphs, G.T.R. and Grand Trunk Pacific Ry., Montreal, born in London, Eng., Feb. 15, 1883.

C. Gardner Johnson, Lloyds' Agent for

British Columbia, Vancouver, B.C., born at Dunblane, Scotland, Feb. 8, 1857.

F. C. Johnson, Night Locomotive Foreman, C.P.R., North Transcona, Man., born at Montreal, Feb. 26, 1885.

John McCraw, General Agent, Central Vermont Ry., New London, Conn., born at Craigvale, Ont., Feb. 6, 1868.

G. L. McCrea, Local Freight Agent, C.P.R., Vancouver, B.C., born at Springtown, Ont., Feb. 9, 1876.

D. McDonald, District Passenger Agent, Canadian Government Railways, Montreal, born at Ste. Hyacinthe, Que., Feb. 28, 1862.

T. McNabb, ex-Master Mechanic, Alberta Ry. and Irrigation Co., now of Picture Butte, Alta., born in Scotland, Feb. 16, 1849.

J. K. McNellie, General Superintendent, Canadian Government Railways, Moncton, N.B., born at Toronto, Feb. 23, 1874.

D. C. Macdonald, Assistant General Claims Agent, C.P.R., Winnipeg, born at Elmsdale, N.S., Feb. 9, 1874.

C. S. Maharg, Superintendent, District 3, Manitoba Division, C.P.R., Brandon, born in Dufferin County, Ont., Feb. 4, 1867.

V. J. Melsted, Engineer of Water Service, Western Lines, C.P.R., Winnipeg, born at Gardar, N.D., Feb. 20, 1887.

G. A. Montgomery, General Superintendent, Algoma Central and Hudson Bay Ry., and Algoma Eastern Ry., Sault Ste. Marie, Ont., born at Bradford, Ont., Feb. 11, 1871.

A. Z. Mullins, Commercial Agent, G.T.R., Grand Rapids, Mich., born at Appin, Ont., Feb. 14, 1862.

M. G. Murphy, District Passenger Agent, C.P.R., Toronto, born at Halifax, N.S., Feb. 26, 1878.

J. E. Proctor, District Passenger Agent, C.P.R., Regina, Sask., born at Sarnia, Ont., Feb. 17, 1878.

C. T. Ridalls, Car Foreman, C.P.R., London, Ont., born at St. Heliers, Jersey, Channel Islands, Feb. 8, 1864.

J. E. Robitaille, Treasurer, Roberval-Saguenay Ry., Chicoutimi, Que., born at Quebec, Feb. 17, 1870.

A. E. Rosevear, General Freight Agent, G.T. Pacific Ry. and G.T. Pacific Coast Steamship Co., Winnipeg, born at Montreal, Feb. 20, 1863.

J. G. Scott, ex-General Manager, Quebec and Lake St. John Ry., Quebec, born there Feb. 13, 1847.

J. J. Scully, General Superintendent, Lake Superior Division, C.P.R., North Bay, Ont., born at Montreal, Feb. 3, 1872.

G. Spencer, Assistant Chief Operating Officer, Board of Railway Commissioners, Winnipeg, born in London, Eng., Feb. 21, 1865.

R. H. Sperling, Assistant to Chairman of the Board, British Columbia Electric Ry., London, Eng., born there, Feb. 9, 1876.

H. E. Suckling, Treasurer, C.P.R., Montreal, born at Gibraltar, Feb. 27, 1851.

Hugh Sutherland, Executive Agent, Canadian Northern Ry., Winnipeg, Man., born at New London, P.E.I., Feb. 22, 1845.

F. L. Wanklyn, M.Can.Soc.C.E., General Executive Assistant, C.P.R., Montreal, born at Buenos Ayres, Feb. 25, 1860.

J. R. Watson, Assistant Superintendent, Sleeping, Dining and Parlor Cars and News Service, Eastern Lines, C.P.R., Montreal, born at Morpeth, Eng., Feb. 8, 1873.

John L. Weller, M.Can.Soc.C.E., Engineer in Charge, Welland Ship Canal, St. Catharines, Ont., born at Cobourg, Ont., Feb. 13, 1862.

A. Williams, Superintendent, District 2, Atlantic Division, C.P.R., Woodstock, N.B., born at Mono Road, Ont., Feb. 22, 1872.

Freight Rate Increases in Western U.S. Classification Territory.

The Interstate Commerce Commission gave a decision at Washington, D.C., Dec. 18, 1915, which was summarized as follows:—

Proposed increased carload rates on agricultural implements justified except to points in Louisiana, and to those points not justified.

Proposed increased carload rates on canned goods and flue lining in western trunk line territory justified.

Proposed increased carload rates on eggs from points in Kansas and other points to southwestern points not justified.

Proposed increased carload rates on cider and vinegar from interstate points to Kansas and Missouri not justified.

Proposed increased carload rates on bauxite ore to certain points justified, and to certain other points not justified.

Proposed increased carload rates on boots and shoes, leather, and boot and shoe findings between Missouri manufacturing points and interstate points justified; proposed less-than-carload rates between same points and increases in carload minima not justified.

Proposed increased rates on dried and evaporated fruits in portions of western trunk line territory justified.

Proposed readjustment of rates to Louisiana not justified.

Proposed increased carload rates on furniture from Kansas City and other points to Oklahoma groups 6, 7, and 8 justified; proposed increase to Oklahoma group 9 not justified.

Proposed increased less than carload rates to and from manufacturing points in Missouri on various commodities found unlawful when made to vary with quantity shipped; other proposed increases justified.

Proposed charges for switching "run-by and setback" grain justified.

Proposed transit charges on fruits and vegetables in western trunk line and trans-Missouri territory justified.

Proposed increases upon miscellaneous items justified; others not justified.

The Roberval-Saguenay Ry. has been admitted to the Eastern Canadian Passenger Agents Association's membership, its representative being J. E. Robitaille, G.F. & P.A.

NOTICE.

C. F. Buchanan, of the United States of America, the owner of the exclusive rights to Canadian patent no. 153287, issued to J. B. Cox, and covering improvements in Smoke Jacks, wishes to advise that all possible users of Smoke Jacks covered by this patent can obtain them within reasonable time for use on any railway in the Dominion of Canada.

All enquiries regarding the above should be addressed to C. F. Buchanan, c-o Coleman Fare Box Co., Ltd., 70 Bond Street, Toronto, Ontario, Canada.

February, 1916.]

Railway Rolling Stock Notes.

The French Government has ordered 2,000 freight cars from Canadian Car and Foundry Co., as reported in our last issue.

The Canadian Northern Ry. has received 4 tank cars, nos. 7161-7164, built in the United States.

The Grand Trunk Pacific Ry. is applying Schmidt type A superheaters to 14 class D2 consolidation, and 5 class E1 mogul locomotives.

The Central Vermont Ry., a subsidiary of the G.T.R., has ordered 1 ten wheel, and 6 consolidation locomotives from American Locomotive Co.

Canadian Government Railways has received a 100 ton wrecking crane from F. H. Hopkins and Co., and 2 consolidation locomotives from Canadian Algis-Chalmers, Ltd.

Canadian Government Railways, operating the National Transcontinental Ry., is renting some locomotives from the Grand Trunk Pacific Ry., and now has 31 of these in use over the line.

The Canada Cement Co. has ordered 12 narrow gauge charging cars, and 30 narrow gauge ingot cars, from Canadian Car and Foundry Co., for February delivery. They will be built at Turcot Works, Montreal.

The C.P.R. has ordered 12 steel mail cars, 1 steel mail and baggage car, 4 steel baggage cars and 1 steel dining car, at its Angus Shops. The order was foreshadowed in Canadian Railway and Marine World for January.

The Timiskaming & Northern Ontario Ry. was stated recently to be in the market for 2 mountain (4-8-2) type and 4 consolidation (2-8-0) type locomotives. We were officially advised, Jan. 3, that the report was quite unwarranted, that no tenders had been invited and no offers received.

The Michigan Central Rd. has ordered 150 steel underframes for flat cars of 100,000 lbs. capacity, from Canadian Car and Foundry Co. The frames will be built at the Dominion Works, Montreal, and the cars will be completed at the M.C.R. shops at St. Thomas, Ont.

Sir John C. Eaton, Toronto, has cancelled the order which he gave to the Preston Car & Coach Co. for a private car and which was announced in Canadian Railway and Marine World for April, 1915. He is said to be negotiating with United States car builders.

Canadian Government Railways has ordered 15 consolidation locomotives and 10 Pacific passenger locomotives from Canadian Locomotive Co., as mentioned in our last issue, and has also ordered 200 wood underframe stock cars, 60,000 lbs. capacity, from Canadian Car and Foundry Co. The cars will be built at Amherst, N.S.

Canadian Government Railways is applying superheaters to 43 Pacific and 117 consolidation locomotives. Of this number, 5 Pacific and 1 consolidation have been converted, and the work is being continued monthly until the whole are equipped. The superheater used is Schmidt type A, manufactured and supplied by the Locomotive Superheater Co.

The French Government has ordered 4,000 freight cars from the National Steel Car Co., Hamilton, Ont. They will be of the customary European type with 4 wheels 41 ins. diar. of rolled steel, or steel tired, axles $5\frac{1}{2}$ by 10 ins., bodies about 24 ft. long by $8\frac{1}{2}$ ft. wide and about 18 tons capacity. They will be equipped with hand brakes, and the usual draft gear, bumpers, etc., standard on European railways.

Following are details of the 10 Pacific

type locomotives which Canadian Government Railways has ordered from Canadian Locomotive Co., as mentioned in our last issue,—

Weight on drivers	150,000 lbs.
Weight in working order, total	230,000 lbs.
Wheel base of engine, rigid	13 ft.
Wheel base engine, total	33 ft. 6 ins.
Wheel base engine and tender	65 ft. 1 in.
Driving wheels diar.	73 ins.
Driving wheels, material and centres	Cast steel
Driving journals	10 by 13 ins.
Cylinders, diar. and stroke	23 $\frac{1}{2}$ x 28 ins.
Boiler type	Radial stay
Boiler pressure	200 lbs.
Tubes, no. and diar.	200, 2 ins.; 28, 5 $\frac{1}{2}$ ins.
Tubes, length	20 ft. 6 ins.
Injectors	Locomotive type
Brakes	Westinghouse American
Packing	Metallic
Superheater	Schmidt type A
Cab	Vestibule type
Weight of tender loaded	150,000 lbs.
Tank capacity	6,500 imp. galls.
Coal capacity	10 tons
Truck, type	4 wheel equalized
Wheel, diar. and type	36 ins. steel tired
Journals	5 $\frac{1}{2}$ x 10 ins. M.C.R.
Brake beam	Simplex high speed

Following are chief details of the 15 consolidation locomotives which Canadian Government Railways has ordered from Canadian Locomotive Co., as mentioned in our last issue,—

Weight on drivers	208,000 lbs.
Weight in working order, total	236,000 lbs.
Wheel base, rigid	16 ft. 6 ins.
Wheel base, total	25 ft. 5 ins.
Wheel base, engine and tender	69 ft. 11 ins.
Heating surface, firebox	207 sq. ft.
Heating surface, tubes	1,885 sq. ft.
Heating surface, total	2,092 sq. ft.
Driving wheels, diar.	63 ins.
Driving wheels, material	Cast steel
Driving journals	10 by 14 ins.
Cylinders, diar. and stroke	24 x 32 ins.
Boiler, type	Straight top, radial stay
Boiler pressure	180 lbs.
Tubes, no. and diar.	227, 2 ins.; 30, 5 $\frac{1}{2}$ ins.
Tubes, length	15 ft. 2 $\frac{1}{2}$ ins.
Injectors and safety valve	Locomotive type
Brakes	Westinghouse American
Packing	Metallic
Superheater	Schmidt, type A
Valve gear	Walschaert
Weight of tender, loaded	140,000 lbs.
Tank capacity	6,500 imp. galls.
Coal capacity	10 tons
Tender truck	Outside equalized
Tender wheels	34 ins. diar.
Wheels, type	W.I. centre, steel tired
Truck journals	5 $\frac{1}{2}$ by 10 ins.
Brake beams	Steel I section

Alberta Public Utilities Commission Rules of Practice.

The recently appointed Board of Public Utilities Commission for Alberta has issued its rules of practice for the guidance of those who will have business before it. The Commission proposes to sit on Tuesdays at 11 a.m. to hear and dispose of applications, complaints, etc., except during July and August, when special sittings will be arranged on application to the Secretary. Sittings may be arranged on other days than Tuesdays, and at other places than Edmonton, where the fixed regular sittings will be held. Six days must elapse between service of notice of application or complaint, and the hearing. The applicant is to file notice of application with copies of any documents, maps or plans necessary to his case, with the Secretary, to which the respondent is to file a written reply. In contested cases the hearing on presentation of the application shall be of a preliminary nature, and reasonable delay shall be allowed before the hearing upon disputed facts. If it appears to the Board that a question of law is involved which it would be convenient to have settled before further proceeding with the case, it may be raised by special stated case or otherwise as the Board deems expedient. The Board may ap-

point any person to make an enquiry and report on any matter pending before it, or over which it has jurisdiction, and may order by whom the expense is to be borne. The Board may order the attendance of any witnesses necessary, and it may issue commissions to take evidence outside Alberta. Evidence by affidavit may be accepted. The conduct of all its proceedings shall be governed by rules adopted by it, but it is not to be bound by the technical rules of legal evidence. Written briefs may be required, and in any case not otherwise provided for the Board may define its procedure. In the case of want of prosecution the Board may, on application, or upon its own initiative, proceed to deal with and dispose of the matter as shall appear proper. Wilful disobedience of an interlocutory order may in the discretion of the Board, in the case of an applicant, result in a stay of proceedings or dismissal of the application, and in the case of a respondent as a withdrawal from the proceedings.

Detroit Reconsigning Case.—In the case of Detroit Coal Co. vs. Michigan Central Rd., the Interstate Commerce Commission decided at Washington, D.C., on Dec. 18, 1915, as follows:—"The tariffs of respondents authorized, under certain circumstances, a charge of \$2 per car for reconsigning coal at Detroit, Mich., to points within the switching limits of that city, but the provisions of the tariff did not, as contended by the complainant, make the imposition of the charge conditional upon the terminal carriers having first given the consignee at Detroit notice that the car had arrived at Toledo, Ohio. Charges collected upon the shipments involved in the complaint not shown to have been unreasonable. Reparation denied and complaint dismissed."

G.T.R. President's New Year's Greeting.—E. J. Chamberlin, President, Grand Trunk and G.T. Pacific Rys., sent the following message, Dec. 31:—"At the closing of the old year and the beginning of the new, I desire to extend to all the officers and employees of the company, my best wishes for the health and happiness of themselves and families during the new year, and to thank them on behalf of myself and the board of directors for the loyal and efficient service rendered the company during the past year by all classes of employees and to solicit the cooperation of every employee in making the Grand Trunk Ry and its service to the public for 1916, the best of any railway on the continent."

Car Operation over Arlington Bridge, Winnipeg.—The Manitoba Public Utilities Commissioner some time since made an order respecting the operation of cars across the Arlington bridge, Winnipeg, by the Winnipeg Electric Ry. The night men made a protest, which was subsequently endorsed by the day men, and a deputation waited on the Commissioner's engineer asking that the company be directed to provide adequate safety appliances on the cars. There is a considerable gradient at the bridge, and a street car crossing at the foot of the gradient. Up to Jan. 10 there has been no regular car service across the bridge.

Short Billing of Freight Alleged.—The Canadian Pacific Ry., according to a press report, has begun an action in an Alberta court, against the Taylor Miller Co., Lethbridge, asking for an accounting and for damages for breach of warranty and breach of contract. The C.P.R. has carried large quantities of grain for the milling company, and alleges in the statement of claim that the waybills showed smaller quantities of grain than were actually carried, in consequence of which the plaintiffs lost certain sums chargeable on the grain so carried.

Freight and Passenger Traffic Notes.

The Lake Erie and Northern Ry.'s standard freight mileage tariff C.R.C.1, and its standard passenger tariff C.R.C.1, have been approved by the Board of Railway Commissioners.

C.P.R. train 16 started, Jan. 3, leaving Montreal daily, except Saturday, for Halifax, and train 15 started leaving Halifax, N.S., and St. John, N.B., daily, except Sunday.

The Great Northern Ry. announced, Jan. 4, that from that date all cars loaded with forest products in British Columbia destined for points on its line in the east would be carried through without being transferred.

Canadian Government Railways Maritime Express between Halifax, N.S., and Montreal, which until January ran daily except Saturday, now runs daily, and the Ocean Limited between the same points, which was running daily, now runs daily except Saturdays.

The Pacific Great Eastern Ry. has extended its train service from Lillooet to Clinton, B.C., 47 miles. It has 166 miles of track in operation from Squamish to Clinton, in addition to the short mileage from North Vancouver to Dunadave, in the direction of Squamish.

The C.P.R. sleeping car heretofore run on trains 17 and 18 between Montreal and Cochrane, Ont., now runs daily between Montreal and Timmins, Ont., passing through Timagami, Cobalt, Haileybury, Liskeard, Englehart, Dane, Matheson, Porcupine and Schumacher.

The C.P.R. steamships Empress of Russia and Empress of Japan, on their passages from Vancouver westbound, call at Manila, but not at Shanghai, passengers for the latter port being transferred at Nagasaki. On the trip east to Vancouver these vessels call at Shanghai, but not at Manila.

The C.P.R. announces that an agreement has been made with the Spokane and Inland Empire Ry. under which there will be an interchange of passenger traffic at Spokane, Wash., with the Spokane International Ry., which makes a connection with the C.P.R. near Yahk, B.C., by a subsidiary line, the Eastern British Columbia Ry.

The Intercolonial Ry.'s newly completed Dartmouth to Deans, N.S., branch was opened for traffic, Jan. 3. A train leaves Upper Musquodoboit on Tuesdays, Thursdays and Saturdays, at 5.30 a.m., returning from Dartmouth at 3 p.m. The present end of track is at Deans, a short distance beyond Upper Musquodoboit.

Under present conditions in Mexico, several Canadian railways have announced that through tickets must not be sold or baggage checked to that country, but that intending passengers should be ticketed to Laredo, Eagle Pass, El Paso, Texas, or Nogales, Ariz. The Mexican authorities announce that the Constitutionalist railway trains arrive and depart from the International and Great Northern Ry. station at Laredo, and are running regularly.

The North Pacific Coast Passenger Association met at Seattle, Wash., Jan. 12, to discuss the question of the reduction of fares now in force, between Puget Sound and Alaska, and the through rates to the east in connection therewith, with a view to adjust them to meet the lower rates quoted by the Grand Trunk Pacific Ry., via Prince Rupert. The rate prevailing from Ketchikan is \$16 higher, and that from Juneau, Alaska, is \$10 higher, to points in the east via Seattle, than the rates quoted

by the G.T. Pacific Ry. via Prince Rupert. The C.P.R. rate from the same points via Vancouver has already been adjusted to meet the G.T.P. rate.

The Intercolonial Ry. put in force on Jan. 16 an order changing the numbering of its trains, in order to get a more uniform system than in the past. All the passenger trains, except the Ocean Limited, have been given the low numbers between 1 and 50. The local mixed and suburban trains have been given numbers in a series that will correspond with the numbers of each district superintendent's district. For instance, the suburbans on District 1 will be in a series up to 100, in District 2 from 100 to 200, and so on up to District 5, which will be in the 500 series. The fast freights are in the 800 series. Way freights are in the 600 series. A separate timetable is being prepared for each superintendent's district.

It was announced in the West, Dec. 30, that the Canadian Northern Ry. had placed an embargo on all grain shipments to Port Arthur, beginning on Jan. 1. It was stated that the embargo would not apply to shipments to Duluth, Minneapolis and other U.S. grain centres. The cause of the embargo was stated to be the congestion at

Section of Drawbridge Showing Post Spindle.

the Government elevators at Westfort and Port Arthur. G. H. Shaw, General Traffic Manager, Toronto, made the following statement:—"The embargo on grain shipments to Port Arthur for storage is a precautionary measure taken by the Canadian Northern in the public interest. It is a temporary expedient and means the movement of grain for the moment to other storage points served by its line."

Railway Finance, Meetings, Etc.

Canadian Pacific Ry.—The Dominion Parliament is being asked to extend the company's powers in respect of the issuance of consolidated debenture stock, now or hereafter to be issued, by the conversion thereof into denominations of Canadian currency.

Central Ry. of Canada.—The case of the Central Ry. Co. of Canada against the British Corporation of Mexico, Ltd., for damages for failure to take up 150,000 debenture bonds at 90%, was before the Chancery Division in London, England, recently, and was remitted to the official referee on the question of damages.

Great Northern Ry. and Mining Co.—The quarries, plaster areas and railway line owned by the company were sold at Port Hood, N.B., by the sheriff recently, to satisfy the claim of P. M. O'Neill, who holds

a judgment for \$3,000 against the company. The buyer was N. Levoie, General Manager, Banque Nationale, who, it is said, was acting on behalf of the bondholders, the purchase price being \$115,000. Other claims amounting to \$15,000 will be discharged by the purchasers. A Halifax press dispatch states that the ultimate purchaser is P. M. O'Neill, the judgment creditor, of St. John, N.B., who proposes to operate the plant.

White Pass and Yukon Route.—Gross earnings from Jan. 1 to Nov. 30, \$1,460,524, against \$1,493,459 for the same period 1914.

Detecting the Cause of Post Spindle Breaking.

A drawbridge that has been in service for nearly 30 years had latterly a peculiar tendency to break a post spindle from time to time. The bridge was at a considerable distance from the main office, and the supervision was entrusted to a local agent, and all he knew was that when the spindle broke to order a new one from the local machine shop, and forward the bill for payment. The bills came too often and the management decided on sending an experienced engineer to try and discover the cause of the repeated breakages, and it was soon found upon tracing the various points

that the gearing was changed from a comparatively light gear to a heavier gear. By referring to the bearing B1 on the drawing it will be seen that the bearing is proportionately heavy enough, when re-bored to take the heavier shafting. The bearing box, B2, was re-bored too much in the cup, in order not to make the bottom part too light. By reason of the bearing separating plate being much higher at that end than at the other, the effect was that the spindle was a quarter of an inch out of line.

It was also learned that the spur gears had been changed from time to time without paying due regard as to whether they were the exact mesh or not, consequently shims had to be placed below the bearing box so that the spur teeth would not lock each other, and with this added cause, the spindle was thrown half an inch out of line.

It will therefore be readily understood that the attachment XI, through which the spindle passes, under these conditions of the spindle bearings, between rigid angle-bar guides, managed to carry the spindle as far as X2 by considerably bending or sagging the spindle, but after repeated operations and consequent bendings the spindle finally broke at that point. Hence the lesson in regard to the inevitable results of cheap, unskilled supervision which is a common weakness on some quarters.—J. G. Koppell, Electrical Superintendent of Bridges, C.P.R., Sault Ste Marie, in Railway and Locomotive Engineering.

Handling of Railway Service Telegrams and Mailgrams on the Canadian Pacific Railway.

By G. W. Carter, Chief Clerk to District Baggage Agent, Canadian Pacific Railway, Calgary, Alberta.

The telegraph service should be used in cases where immediate action is necessary, and when there is not sufficient time to write and receive answers by mail. While business should never be lost for the sake of not sending a telegram, every care should be taken to keep the wires free from unnecessary encumbrance. When preparing a telegram, full and precise particulars should be briefly given so that further use of the wires will not be required. In many cases officials authorized to send service telegrams include words which could without altering the sense of the telegram be eliminated, for example, words like "please" and "kindly." The clerks in charge of our offices should make periodical examinations of the handling of service telegrams under their supervision and inaugurate a system that will tend to relieve the unnecessary loading of the wires.

I would suggest that the classification of service telegrams be discussed. In my opinion the service telegram should be divided into three classes, telegrams pertaining to accidents and other important subjects should take precedence over all others and be prefixed in a manner to indicate their importance. Other telegrams which require immediate transmittal over the wires should have a secondary prefix. The third class of telegrams are those which can be forwarded by train enclosed in the pink envelopes, known as mailgrams. The officials of the telegraph department who are authorized to classify telegrams should take exception to any, which in their opinion could have been carried by passenger train and delivered in time to receive attention at destination, and report each case to the head of the offending department, attaching copy of the telegram to their report. They should also be instructed to be on guard against the slipping through of telegrams of a personal character under the guise of service telegrams.

One step toward the relief of the telegraph service, is the system of handling telegrams by passenger trains, which is known as mailgrams, and which should be more strictly adhered to. Without doubt the use and value of the mailgram envelope as a means of promoting prompt delivery has been lost sight of for some years and little, if any, attention has been given to this method of handling service telegrams. Urgent telegrams relating to company's business, may often be taken to their destination by train and delivered in reasonable time to receive attention providing there be no delay in the local delivery of them. The special color and marking of the mailgram envelope should indicate to agents and others that the prompt delivery of the mailgram after it has left the train is imperative.

The question of handling railway service telegrams by passenger trains over western lines was discussed with the Vice President and it is his wish that every effort be made to use the train service to the best advantage and in consequence a schedule was drawn up by the General Superintendent of the Telegraph Department, at Winnipeg, showing the time and places for which telegrams must be forwarded by mail. The schedule drawn up covers the whole western lines and the question for discussion is, whether it can be relied upon with the guarantee that telegrams sent by train will receive special attention en route.

Another point for discussion is the recording of the mailgram in order to place the

responsibility of delays. In my opinion the envelope itself if revised would serve the purpose, squares on the right hand margin of the envelopes could be provided in order that initials of employees handling the mailgrams could be shown, the time, date and train could also be recorded on the envelope and if delay occurred the envelope could be held and filed. The handling of mailgrams at points where mail rooms are in operation is another point for general discussion. In my opinion arrangements could be made to suit the local conditions. If instructions were issued to the mail clerks to deliver all mailgrams to the various departments immediately after the arrival of each train it would assist in the quick dispatch. All agents at small points where mail rooms are not in operation should be instructed to see that the mailgrams are delivered to the addressee immediately after the departure of the train on which they arrive. The mail clerks at terminal points should record the mailgrams in a book provided for that purpose, and in the event of a delay should be in a position to give the receiving record to the mailgram, also the time delivered to the telegraph department. The importance of legibly addressing the mailgrams and completing the envelope according to its heading, should not be overlooked, as when this is not done it tends to delay the mailgram, thus impairing its efficiency.

The foregoing paper was read at a meeting of Chief Clerks of the Alberta Division, Canadian Pacific Ry., at Calgary, and a discussion on it was led by J. Stevenson, Chief Clerk to Claims Agent, Calgary. The following recommendations were adopted:—That attention be drawn to the instructions regarding the elimination of unnecessary words in telegrams. The chief clerks should use very sparingly the word "Rush" on telegrams. Pink envelopes should not be used except where it is desired that enclosures receive as prompt attention as wired messages. Where a reply by wire is required, the mailgram should so state. That attention be drawn to the schedule for handling messages by mail issued by the General Superintendent of Telegraphs in Jan. 1914.

Eastern Canadian Passenger Agents Association's Officers, Etc.

At the Association's meeting in Montreal, Jan. 11, the following were elected for this year:

Chairman.—G. H. Clark.

Executive Committee.—W. H. Snell (chairman), R. L. Fairbairn, W. S. Cookson, J. F. Pierce.

Rules Committee.—W. Maughan (chairman), C. W. Johnston, R. L. Fairbairn, J. W. Hanley, G. C. Martin, N. Mooney, L. W. Landman, H. H. Melanson, F. T. Grant.

General Baggage Agents' Committee.—J. O. Apps (chairman), G. C. Allen, R. L. Fairbairn, J. F. Pierce, J. E. Quick, H. P. Dearing, W. M. Skinner, G. H. Clark, A. E. Plumer.

Secretary.—G. H. Webster.

C.P.R. Employees' War Contributions.—By a contribution of \$1,000 to the Toronto and York County Patriotic Fund Association, for December, the C.P.R. Ontario Division employees' contributions to it have reached \$3,500 in three months.

Traffic Orders by the Board of Railway Commissioners.

Freight Charges on Ties to Pas.

24541. Dec. 9. Re application of D. D. Campbell, claims agent, Winnipeg, on behalf of H. H. Blackburn, for adjustment of freight charges on 18 cars of ties from Bannock, Sask., to Pas, Man: Upon hearing the application at Winnipeg, Dec. 1, 1915, in presence of counsel for the Canadian Northern Ry., the applicant appearing in person, it is ordered that the application be refused.

Minimum Weights on Lumber.

24550. Dec. 13. Re application of R. H. H. Alexander, of Vancouver, for an order postponing the effective date of the item on pg. 4 of C.P.R. Supplement 59 to Tariff C.R.C. W-1806, providing for a minimum of 35,000 lbs. on fir, spruce, hemlock, and common cedar lumber, and articles taking lumber rates, in cars under 36 ft. long, and continuing the minimum provided for in Supplement 58 to said tariff: It is ordered that the effective date of the said item, namely, Dec. 15, be postponed until further order.

Lake Erie & Northern Standard Freight Tariff.

24600, Dec. 28, 1915. The application for Lake Erie & Northern Ry., under sec. 327 of the Railway Act, for approval of its Standard Freight Tariff, C.R.C. 1: It is ordered that the said tariff be approved.

Montreal and Southern Counties Standard Freight Mileage Tariff.

24626, Jan. 5. The application of Montreal and Southern Counties Ry., under sec. 327 of the Railway Act, for approval of its proposed Standard Freight Mileage Tariff C.R.C. 5, cancelling C.R.C. 1, approved by order 21566, April 1, 1914, it is ordered that the said tariff be approved, to become effective Jan. 15, and that order 21566 be rescinded.

Express Rates on Fish.

24628. Jan. 10. Re application of Canadian Fisheries Association, of Montreal, and the W. J. Guest Fish Co., of Winnipeg, for an order suspending certain schedules of express companies by which it is proposed to make the rates on fish, in carloads, exclusive of cartage: It is ordered that the following tariffs, viz.: Dominion Express Co., Supplement 11 to Tariff C.R.C. 4418; Supplement 8 to Tariff C.R.C. 4437; Canadian Express Co., Tariffs C.R.C. 1683, 1684, 1685, 1686, Supplement 2 to Tariff C.R.C. 1622; Canadian Northern Express Co., Supplement 1 to Tariff C.R.C. 835, Supplement 1 to Tariff C.R.C. 1527, all effective Jan. 15, 1916, be suspended pending a hearing by the Board.

Free Transportation for Live Stock Shippers.

24673. Jan. 22. Re complaint of Executive Boards of Western Live Stock Shippers' Association and Winnipeg Live Stock Exchange against cancellation by Canadian Pacific, Canadian Northern, and the Grand Trunk Pacific Railways, of all free return transportation for live stock shippers west of Port Arthur, to take effect Feb. 1: It is ordered that the following tariffs, effective Feb. 1, 1916, be suspended, pending further order, viz.: Canadian Northern, C.R.C. no. W-899, Grand Trunk Pacific, C.R.C. no. 134, freight; Canadian Pacific, C.R.C. no. W-1902, Grand Trunk Pacific, C.R.C. no. 509, Canadian Northern, C.R.C. no. W-1300, passenger

The G.T.R. Patriotic Association of Toronto has subscribed an additional \$2,000 to the Toronto and York Patriotic Fund, making a total of over \$7,000 subscribed since its organization.

Canadian Northern Railway Construction, Betterments, Etc.

Canadian Northern Ry.—The Board of Railway Commissioners is being asked to approve harbor plans for a spur line through sections 30 and 19, tp. 25, range 17, west of the 3rd meridian, Sask., the plans, etc., for which are deposited in the Land Titles Office at Moose Jaw, Sask.

R. H. Douglas, engineer of the Alberta Department of Railways, is reported to have stated that his recent inspection of work down on the Calgary-Macleod line during 1915, showed that on June 5, when grading was resumed, three miles of grading had been completed between Calgary and High River, and 14.4 miles between High River and Macleod. Since then 29 miles of grading had been completed, involving the shifting of 560,000 cubic yards of material. A further two miles of grading remained to be completed between Calgary and High River.

Canadian Northern Pacific Ry.—M. H. MacLeod, General Manager and Chief Engineer C.N.R., was present at a meeting of the New Westminster City Council, Dec. 24, when the company's plans for its line in the city were under discussion. The plans entail the erection of a station building, at least equal in size to that of the C.P.R., which will be reached by a line from the bridge over the Fraser River to Lytton Square, thence to Front St., down West St. to the old Royal City Hotel and through Chinatown to the site of the old market, where the station will be built. The proposed route will affect the present C.P.R. tracks, and the British Columbia Electric Ry. tracks. Tenants of the houses acquired by the company on the right of way have been notified to vacate the premises immediately. The work of bricklaying and station building will, it is expected, be gone on with during this year.

Vancouver Terminals.—M. H. MacLeod, General Manager and Chief Engineer, C.N.R., is reported to have said, in an interview at Vancouver recently, that while the company had prepared plans for its own station and terminals on the False Creek property, it had also prepared plans for a combined station building and terminal facilities with the Great Northern Ry. Negotiations were in progress between the two companies and a satisfactory solution was anticipated. Up to the present time the Vancouver City Council has not favored a joint plan, but has been calling upon the two companies to provide the facilities set out in their separate agreements for the reclamation and development of the False Creek property.

Ferry Connection with Vancouver Island.—M. H. MacLeod, General Manager and Chief Engineer, C.N.R., and A. Angstrom, Naval Architect, C.N.R., spent some time recently at the Pacific Coast in connection with the car ferry section of the line. Mr. MacLeod is reported to have said it was hoped to have the first car ferry on the route some time during next summer. It would be operated from New Westminster pending the completion of the line to the proposed ferry terminal on Lulu Island. The completion of this line involves the building of a bridge across the north arm of the Fraser River, and the laying of track to mileage 5.42 from New Westminster bridge, whence track is at present laid to Steveston. The ferry slip will be located at Woodward on Lulu Island. It is about 45 miles from this point to Patricia Bay, where the slip on Vancouver Island will be located. It is expected that construction will be started on

these two ferry slips at an early date.

Vancouver Island Lines.—Track laying is reported to have been started at Victoria on the lines to Patricia Bay, but it is said to have been delayed owing to the non-delivery on time of the diamond for the crossing of the British Columbia Electric Ry. The diamond is now said to have been delivered Jan. 10.

In connection with the Selkirk Water reclamation project, in which the Victoria City Council is interested, a settlement was effected Jan. 4, with the C.N.P. Ry., as to its bridge. In April, 1914, the city decided to oppose the company's application for approval of a temporary trestle, and to ask the Dominion authorities to order the building of a permanent bridge of steel or concrete with spans of not less than 50 ft. The city maintained their attitude to Oct., 1915, when, after some negotiations a compromise was arranged. The terms of the compromise were reported to the council by the Selkirk Water Reclamation Committee, Jan. 4. Under its terms a trestle bridge will be built; to be filled in within certain specified limits, the work to begin within seven years, and to be completed within one year after commencement. On other sections steel spans on concrete piers are to be erected, and a navigation span of 70 ft. is to be provided. An agreement embodying the terms of settlement was signed Jan. 6. (Jan., pg. 12.)

St. John and Quebec Railway Operation.

The St. John and Quebec Ry. is completed from Gagetown to Centreville, N.B., and is being operated as a part of the Intercolonial Ry., under the management of Canadian Government Railways officials. The argument as to operation provided for the payment of 40% of the gross earnings to the New Brunswick Government, in consideration of it having financed the construction of the line. This arrangement, we are officially advised, worked out so badly from the standpoint of the Dominion Minister of Railways, that notice was given that it would cease at the end of 1915. In order that there may not be any interruption of the service on the line a temporary arrangement has been made under which the Government Railways will retain the entire receipts. This arrangement will continue until the return of the Minister of Railways, from England, when a new contract will be discussed with the New Brunswick Government and directors of the company. The terms of the new agreement will be made retroactive to Jan. 1.

Rates via Rail and Lake Routes.—The Interstate Commerce Commission decided at Washington, D.C., Dec. 30, 1915, that the proposed increased class and commodity rates via rail and lake, lake and rail, and rail, lake and rail routes between points in the New England and the middle Atlantic states, and the west, were not justified, and that the tariffs must be cancelled.

Western Canada Railway Club.—At the monthly meeting in Winnipeg, Jan. 11, E. T. Spidy, Assistant to the General Locomotive Foreman, Canadian Pacific Ry., there, read a paper on the evolution of the locomotive.

The American Wood Preservers' Association held its 12th annual convention at Chicago, Ill., Jan. 18 to 20, when a number of committee reports and individual papers were read and discussed.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, for Western Lines, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,206,100	\$921,000	\$285,100	x\$145,400
Aug.	1,192,800	954,000	238,800	x5,900
Sept.	2,014,600	1,358,000	661,600	1,900
	\$4,413,600	\$3,227,000	\$1,186,600	x\$79,300
Decr.	\$ 658,300	\$ 579,000	\$79,300

x Decrease.
Mileage in operation at Sept. 30, 1915, 4,965, against 4,670 at Sept. 30, 1914.

Commencing with October, the figures show the earnings of the entire system, both eastern and western lines.

	Gross Earnings	Expenses	Net Earnings	Increase
Oct.	\$3,678,500	\$2,421,500	\$1,257,000	\$ 537,800
Nov.	3,535,200	2,323,800	1,211,400	618,400
	\$7,213,700	\$4,745,300	\$2,468,400	\$1,156,200
Incr.	\$2,407,400	\$1,251,200	\$1,156,200

The mileage operated during December 1915, was 7,775 against 6,886 in December 1914.

Approximate earnings for December, 1915, \$3,435,600 against \$1,809,000, and for three weeks ended Jan. 21, \$1,514,400 against \$987,600 for same period 1915.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$7,895,375.47	\$5,094,972.25	\$2,800,403.12	x\$978,042.71
Aug.	8,801,451.52	5,359,176.80	3,442,314.72	79,157.62
Sept.	1,279,165.45	5,527,864.81	4,475,300.64	378,252.25
Oct.	13,433,206.88	6,863,750.29	6,579,434.75	3,258,105.79
Nov.	13,351,253.51	6,996,870.48	6,354,413.63	3,710,340.86

	\$53,764,490.30	\$29,842,644.73	\$23,921,865.66	\$6,447,813.21
Incr.	\$ 5,270,327.24		\$ 6,447,813.21
Decr.		\$1,177,485.97	

Approximate earnings for Dec. 1915, \$12,580,000 against \$7,321,000 for Dec. 1914, and for three weeks ended Jan. 21, \$5,647,000 against \$4,028,000 for same period 1915.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings of the G.T.R. (including the Canada Atlantic Ry.), the G.T.W.R. and the D.G.H. & M.R., for 1915 compared with those for 1914:—

	1915	1914	Incr	Decr.
G.T.R.	\$39,829,694	\$41,737,370	\$1,916,676
G.T.W.R.	7,876,304	7,215,822	\$670,482
D.G.H. & M.R.	2,877,912	2,567,503	310,409

Totals	\$50,574,910	\$51,510,695	\$ 935,785
--------	--------------	--------------	-------	------------

Approximate earnings for two weeks ended Jan. 14, \$1,847,003 against \$1,523,267 for same period 1915.

Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section, 916 miles, for Dec. 1915, were \$744,584 against \$262,683 for Dec. 1914, and the aggregate for six months ended Dec. 31, 1915, \$3,451,310 against \$2,331,683 for same period 1914.

Buckwheat and Corn Flour Westbound Transcontinental Rates.—The Interstate Commerce Commission, at Washington, D.C., Dec. 20, 1915, after a rehearing, found that for the future no higher rates should be maintained by respondent, Atchison, Topeka and Santa Fe Ry. and Southern Pacific Co., on buckwheat flour or corn flour in carloads from producing points in transcontinental groups A to J, inclusive, to California terminals and intermediate points than are contemporaneously maintained on wheat flour in carloads from and to the same points.

The Winnipeg Transportation Social Club decided at its regular meeting, Jan. 17, to change its name to the Winnipeg Traffic Club, and to extend its sphere of operations so as to induce the traffic men in wholesale and retail business as members. Following are officers for the current year: President, A. Syme; Vice President, K. Watson; Secretary, J. P. Galvrey; Treasurer, J. O. Norrie.

The King's New Years Honors for Transportation Men.

Canadian Railway and Marine World for January had gone to press when the King's New Year's honors were announced. It is gratifying that a larger proportion than usual of those who have been selected for distinction by His Majesty are prominent in transportation work, or are closely allied to it. Lord Mersey, well known in connection with Admiralty investigations, has been raised from a baron to a viscount; Sir Thos. G. Shaughnessy, President, Canadian Pacific Ry., and D. A. Thomas, who has several railway projects in Canada, have been created barons; Sir Alex. Henderson, Bart., Chairman of the Great Central Ry. Co. of England, has been created a baron; Arthur A. Booth, Chairman, Cunard Steamship Co., and A. F. Yarrow, the British shipbuilder, who is also interested in Yarrows Ltd., Vancouver, have been created baronets; Collingwood Schreiber, the veteran civil engineer, has been created Knight Commander of the Order of St. Michael and St. George; W. D. Reid, President, Reid Newfoundland Co., John Kennedy, the distinguished harbor engineer, and Brigadier General Alex. Bertram, who performed splendid service as Chairman of the Shell Committee, have each been created a knight bachelor.

The Right Hon. Viscount Mersey.

Lord Mersey, who has been raised from Baron to Viscount, is well known in Canada as having conducted the enquiry into the Empress of Ireland disaster in the St. Lawrence in 1914. He also presided over the Lawrence in 1914. He also presided over Titanic, and has been well known in Admiralty cases, as counsel and judge, respectively, for several years.

The Right Hon. Lord Shaughnessy, K.C.V.O.

Sir Thomas G. Shaughnessy, K.C.V.O., was born at Milwaukee, Wisconsin, Oct. 6, 1853, and entered railway service, July 1869, since when he has been, to Jan. 1879, in Purchasing Department, Chicago, Milwaukee and St. Paul Rd.; Jan. 1879 to Oct. 1882, General Storekeeper, same road; Oct. 1882 to Jan. 1884, General Purchasing Agent, Canadian Pacific Ry., Montreal; Jan. 1884 to Sept. 1885, Assistant to General Manager, same road; Sept. 1885 to Sept. 1889, Assistant General Manager, same road; Sept. 1889 to June 24, 1891, Assistant President, same road; June 24, 1891 to June 12, 1889, Director and Vice President, same road; June 12, 1899 to date, President, same road, and from May 9, 1910, also Chairman of the company. Amongst a number of public positions held by him are places on the directorates of the Bank of Montreal, Royal Trust Co., and a number of subsidiary and allied companies of the C.P.R. He was a delegate to the International Railway Congress in 1905. He was knighted by the late King Edward in 1901 and created a Knight Commander of the Royal Victorian Order in 1907. He is a Knight of Grace of the Order of St. John of Jerusalem, and holds the decoration of the Order of the Sacred Treasury of Japan of the second class. It is announced that he has selected the title of Baron Shaughnessy of Montreal, Canada, and Ashford, Ireland.

The Right Hon. Lord Faringdon.

Sir Alexander Henderson, who has been raised to the peerage with the title of Baron, is Chairman of the Great Central Ry. of England, and has rendered considerable transportation service during the war.

The Right Hon. Lord Rhondra.

D. A. Thomas, who has been created a Baron of the United Kingdom, has been rather intimately associated with Canada

lately in the organization of the Imperial Munitions Board in the Dominion, under the control of the Imperial Minister of Munitions. He has some extensive Can-

adian interests, covering the Athabasca and Fort Vermillion Ry., Pacific Peace River and Athabasca Ry., and the Peace River Tramway and Navigation Co. projects. With his daughter, Lady Mackworth, he was sav-

ed from the s.s. Lusitania, when she was torpedoed by German submarines.

Sir Arthur A. Booth, Bart.

Arthur A. Booth, who has been created a baronet, is Chairman of the Cunard Steamship Line, and has rendered special services during the war in connection with the transportation of munitions, men and war supplies in various parts of the world.

Sir A. F. Yarrow, Bart.

A. F. Yarrow, who has been created a baronet, is head of the well known firm of Yarrow & Co., Ltd., Glasgow, Scotland, and of Yarrows Limited, Vancouver, B.C., and has taken a prominent part in the war in regard to the production of submarines, torpedo boat destroyers, etc., and recently established an experimental tank at the National Physical Laboratory in England, for the elucidation of propeller problems, for the use of any shipbuilder.

Sir Collingwood Schreiber, K.C.M.G.

Collingwood Schreiber, C.M.G., Hon. M. Can. Soc. C.E., who has been created a Knight Commander of the Order of St. Michael and St. George, was born in Essex, Eng., Dec. 14, 1831, and came to Canada in 1852. In that year he was engaged on the Toronto and Hamilton Ry.'s engineering staff and continued in that service until the completion of the road in 1856. From 1856 to 1860 he was in private engineering practice as a partner in the firm of Fleming, Ridout and Schreiber, at Toronto; 1860 to 1863, Superintending Engineer, Northern Ry.; 1863, Division Engineer for the Nova Scotia Government's Pictou Ry., and remained in charge of the work until its completion in 1867. He was subsequently connected with the Intercolonial Ry., first in charge of the surveys for the route by way of Lake Temiscouata, and then in charge of the Eastern Extension Ry., as Superintending Engineer in 1869, and afterwards as Superintending Engineer and Commissioners' Agent for the entire road: 1873 to 1880, Chief Engineer and General Manager of railways operated by the Dominion Government, succeeding the late Sir Sandford Fleming as Chief Engineer, Canadian Pacific Ry., in 1880; 1892 to 1905, Chief Engineer and Deputy Minister, Department of Railways and Canals. Since July 1, 1905, he has been Consulting Engineer to the Dominion Government, and Chief Engineer, Western Division, National Transcontinental Ry. He was appointed a member of the Royal Commission on Railways in 1886, and was created a Companion of the Order of St. Michael and St. George in 1893. He is a member and one of the founders of the Canadian Society of Civil Engineers, of which he was a councillor in 1887 and 1888, and was made an honorary member in 1909.

Sir William Duff Reid.

William Duff Reid, who has been created a knight bachelor, is the eldest son of the late Sir Robert G. Reid, the founder of the Reid Newfoundland Co. He was born in Australia, March 20, 1867, and came to Canada with his parents in 1871. He was associated with his father in the construction of a section of the Canadian Pacific Ry. north of Lake Superior, and also in the construction of the C.P.R. bridge over the St. Lawrence River at Lachine, Que. As a contractor on his own account, he built a portion of the C.P.R. Atlantic Branch and the Intercolonial Ry. bridge from the stationery to Grand Narrows, N.S. He was subsequently, in conjunction with his father, engaged in the construction and operation of the

steam and electric railways in Newfoundland, and steamships connecting with the main land, owned by the Reid Newfoundland Co., of which he became Vice President and General Manager, and on his father's death in 1908, President.

Sir John Kennedy.

John Kennedy, Hon. M.Can.Soc.C.E., who has been created a knight bachelor, is the eldest son of the late Wm. Kennedy, founder of the manufacturing firm of Wm. Kennedy and Sons Co., Owen Sound, Ont. He was born at Spencerville, Ont., in 1838, and was educated privately, at Bytown High School and McGill University. He commenced his engineering career in 1853, under the late T. C. Keefer, and assisted in the construction of water works at Montreal and Hamilton, and also in railway and other engineering works. He was appointed Assistant City Surveyor of Montreal in 1863, and subsequently Deputy City Surveyor, resigning in 1867 on his appointment as Manager of the Hull Iron Mining and Manufacturing Co.'s smelting works at Ironside, Que. In 1871 he was appointed

was also a member of the Royal Commission appointed the same year to enquire into the causes of floods in Montreal and to suggest remedies therefor. He was also a member of the Royal Commission appointed in 1888 to report upon the advisability of completing the Trent Valley Canal system, and has often been called upon to act as arbitrator or consulting engineer on important questions relating to railways, waterways, etc. He was one of the founders of the Canadian Society of Civil Engineers in 1887, and was a councillor during several years, Vice President in 1887, 1890 and 1891; President in 1892, and was elected an honorary member in 1907. He is also a member and councillor of the Institute of Civil Engineers, England, and a member, since 1875, of the American Society of Civil Engineers. Sir John and Lady Kennedy celebrated the 50th anniversary of their wedding in August, 1915.

Brigadier General Sir Alexander Bertram.

Brigadier General Alexander Bertram, who has been created a knight bachelor, is the second son of the late John Bertram, one of

Munitions Board, under Imperial control, he was appointed Deputy Chairman. He is included among the transportation men, in this article, on account of having been so intimately connected with them in supplying machinery for railway, locomotive, car and ship building shops.

Railway Profiles to be Based on Mean Sea Level.

The Board of Railway Commissioners passed the following general order 156 Jan. 18:— Re proposal that the profiles of railway companies where lines commence, terminate, or intersect with any of the lines listed in the work entitled *Altitudes in Canada*, hereinafter referred to as "*Altitudes*," edited by James White, Assistant to Chairman and Deputy Head of the Commission of Conservation, including the lines of the said companies which touch tidewater, be based upon mean sea level as provided in *Altitudes*: Upon reading what is filed on behalf of the Canadian Pacific, Canadian Northern, Grand

Sir John Kennedy, Hon.M.Can.Soc.C.E.

Division Engineer on construction, Wellington, Grey and Bruce Ry., and subsequently became Chief Engineer, Great Western Ry., as such building the Canadian Air Line and some minor branches, all of which now form part of the G.T.R. He also laid the first double track line in the Dominion, between Glencoe and Windsor, resigning in 1875 on his appointment as Chief Engineer, Montréal Harbor Commissioners, which position he held until Feb. 1907, when he became Consulting Engineer. During his occupancy of the position of Chief Engineer, he deepened the ship channel between Quebec and Montreal from 20 to 27½ ft., and designed and carried out all the improvements in the Montreal harbor undertaken in that period. On his retirement the Montréal Harbor Commissioners placed on record their deep sense of his lengthened and devoted service and of his faithful and zealous performance of the same. He was a member of the Royal Commission appointed in 1886 to enquire into the leasing of water power on the Lachine Canal, and

Sir William Duff Reid,
President, Reid Newfoundland Co.

the founders of the Canada Tool Works, now known as the John Bertram and Sons Co., Ltd., at Dundas, Ont. He was born at Dundas, Feb. 18, 1853, and was educated there. He joined his father in the business, and was admitted a partner in 1886. He has been, for several years, connected with military matters, and was at one time in command of the 77th Wentworth Regiment. He was transferred to the Reserve of Officers in Jan. 1905, and in December of that year was appointed to a command in the 3rd Infantry Brigade; was appointed Colonel in 1910, after having commanded the Canadian Bisley team in the previous year, and has received the Colonial Auxiliary Forces officers' decoration. On the outbreak of the present war he was appointed Chairman of the Dominion Government Shell Committee, which had the handling of the organization of the manufacture of shells and ammunition, and on the recent reorganization of that board, in the course of which it became the Imperial

Sir Alexander Bertram.

Trunk Pacific, and Grand Trunk Railway Companies, the said companies consenting to the proposal, and the report and recommendation of the Board's Chief Engineer, it is ordered that, on or before February 1, 1916, all railways of companies which commence, terminate, or intersect any of the lines listed in *Altitudes*, as well as those which touch tidewater, be based upon mean sea level as provided in *Altitudes*.

Grand Trunk Ticket Clerk Convicted.—W. A. Mason, a ticket clerk at the G. T. R. city ticket office, Toronto, who was found guilty recently of the theft of \$1,500 from the company, obtained by issuing tickets for distant points and marking the stubs for points close in, was sentenced, Jan. 5, to 2 years in Kingston penitentiary.

Toronto Union Station Damaged.—A fire starting in the C.P.R. filing room, on the top floor of the office section of this station, on Jan. 10, did about \$15,000 worth of damage.

Mainly About Railway People Throughout Canada.

P. G. Bromley, at one time agent C.P.R., Boissevain, Man., and afterwards travelling auditor, died at Forest, Ont., Jan. 9.

Nelson Main, an inspector on the Intercolonial Ry., was run over by a travelling crane, Jan. 4, and had both legs amputated, lying shortly after.

Paul J. Myler, Vice President, Canadian Westinghouse Co., Ltd., Hamilton, Ont., has been elected a director of the Bank of Toronto.

Sir William D. Reid, President, Reid Newfoundland Co., accompanied by his family, and F. Rioux, his assistant, left St. John's, Nfld., Jan. 9, for Montreal.

W. H. Stewart, Assistant Superintendent, District 1, Eastern Division, C.P.R., Farnham, Que., has been loaned to the Imperial Munitions Board, Ottawa.

Wm. Jarman, who died in Toronto, Dec. 28, aged 80, was employed in the Grand Trunk Union Station ticket office, Toronto, for over 30 years, retiring about 15 years ago.

Geo. D. Perry, General Manager, Great North Western Telegraph Co., left Toronto Jan. 17, for Bermuda, intending to return about the middle of February.

J. J. Hill, of the Great Northern Ry., St. Paul, Minn., has contributed \$5,000 to the fund for a women's residence at Regina College, Sask.

Bion J. Arnold, consulting engineer, Chicago, has been asked by the grade crossing commission of Syracuse, N.Y., to examine and advise upon plans adopted for the elimination of grade crossings there.

Miss Dorothy Gutelius, daughter of **F. P. Gutelius**, General Manager, Canadian Government Railways, was married at Moncton, N.B., Jan. 5, to Dr. Duncan A. Campbell, of North Bay, Ont.

Hugh Sutherland, General Executive Agent, and **M. H. MacLeod**, General Manager and Chief Engineer, Canadian Northern Ry., Winnipeg, visited the company's headquarters in Toronto in January.

E. H. Wood, formerly Division Car Foreman, Ontario Division, C.P.R., Toronto, who resigned in Sept., 1915, is now General Car Foreman, Michigan Central Rd., Chicago, Ill.

T. H. White, M.Can.Soc.C.E., Chief Engineer, Canadian Northern Pacific Ry., Vancouver, B.C., spent some time in Toronto in January, conferring with the President, Vice President and other C.N.R. officials.

J. G. Sullivan, Chief Engineer, Canadian Pacific Ry., read a paper on the Rogers Pass tunnel construction before the Canadian Society of Civil Engineers in Montreal, Jan. 13.

H. H. Vaughan, formerly Assistant to Vice President, Canadian Pacific Ry., and since April 1915 Consulting Engineer, C.P.R., and President, Montreal Ammunition Co., has been elected a director and a Vice President of the Dominion Bridge Co., Ltd.

T. A. Hiam, private secretary to Sir Donald Mann, Vice President, Canadian Northern Ry., is taking a training course with the Canadian Engineers in Toronto, prior to entering the Canadian Expeditionary Forces for overseas service.

Colonel Lyons Biggar, who has been appointed Director General of Transports and Supply, is a brother of **W. H. Biggar, K.C.**, General Counsel, G.T.R., and Vice President and General Counsel, Grand Trunk Pacific Ry., Montreal.

The tower and chime of bells, given to

Grace Church, Brantford, Ont., by Lieut.-Col. **R. W. Leonard**, ex-Commissioner, National Transcontinental Ry., in memory of his parents, were dedicated there, Jan. 9. Their total cost was about \$45,000.

Westropp Armstrong, latterly Bridge Engineer, Toronto-Hamilton Highway Commission, formerly of Mackenzie, Mann & Co.'s engineering staff, and now a captain in the 86th Machine Gun Battalion, was married at Hamilton, Ont., recently to Miss Colquhoun.

Irving R. Todd, Fredericton, N.B., resigned as President of the St. John and Quebec Ry. Co., Dec. 31. The reason given was that the condition of his health, and the pressure of private business rendered it necessary.

A. B. Ingram, Vice Chairman, Ontario Railway and Municipal Board, has been elected Second Vice President, Ontario Safety League. **D. B. Hanna**, Third Vice President, Canadian Northern Ry., has been elected Third Vice President of the League.

E. W. Beatty, K.C., Vice President and General Counsel, Canadian Pacific Railway.

J. W. Crane, formerly Chief Dispatcher, Canadian Northern Ry., Saskatoon, Sask., was presented recently with an arm chair and humidor, by his associates there, on leaving for Kamloops, B.C., where he has been appointed Chief Dispatcher, Pacific Division, C.N.R.

Lt.-Col. J. J. Creelman, of the 2nd Brigade, Canadian Field Artillery, 1st Division, Canadian Expeditionary Forces, and son of A. R. Creelman, K.C., one of the C.P.R. directors, returned to Montreal at the end of December from France, on six weeks leave of absence.

Dr. J. A. Hutchison, Chief Medical Officer, G.T.R., Montreal, is mentioned as Chairman, with the temporary rank of Lieutenant-Colonel in the Army Medical Corps, of the newly appointed medical board for the 4th Division, for the examination of army pensioners.

W. B. Lanigan, Assistant Freight Traffic

Manager, Western Lines, C.P.R., was the principal speaker at a recruiting meeting at the Royal Alexandra Hotel, Winnipeg, recently. The audience consisted entirely of members of the various C.P.R. office staffs in the city.

Capt. R. Falshaw Morkill, Signal Engineer, Grand Trunk Ry., now of the 34th (Norfolk) Divisional Royal Engineers, wrote from Sutton Veny Camp, Wiltshire, Eng., Dec. 25, to E. W. Oliver, of Mackenzie, Mann & Co.'s engineering staff, Toronto, that he expected to leave for Egypt two days later.

N. P. Dalziel, formerly of Mackenzie, Mann & Co.'s engineering staff, Toronto, who is a provisional lieutenant (supernumerary) in the Canadian Engineers, has been gazetted recently as having been seconded on Sept. 14, 1915, while employed as an assistant inspector of steel.

Thos. Gibson, a Toronto solicitor, formerly President, Lake Superior Corporation, among the subsidiaries of which are the Algoma Central & Hudson Bay Ry., the Algoma Eastern Ry., and the Algoma Central Steamship Co., has given up his practice to become Major in the 168th Oxford Battalion, Canadian Overseas Expeditionary Forces.

W. L. Donaldson, who was appointed Assistant General Freight Agent, Lehigh Valley Rd., Buffalo, N.Y., recently, began railway service in 1898, and served in various capacities in the freight department, G.T.R., Wabash Rd. and Chicago and North Western Ry., entering Lehigh Valley Rd. service in 1906.

A. P. Giles, who has retired from the position of Roadmaster, Intercolonial Ry., Newcastle, N.B., under the provisions of the pension rules, was presented with an address and a purse of money, Jan. 4. He had been in the Government railway service for 35 years, the last five of which were spent at Newcastle, N.B.

E. A. Lancaster, M.P., who died at St. Catharines, Ont., Jan. 4, after a lengthened illness, aged 55, was for several years Chairman of the Railway Committee of the House of Commons. During his membership of the House he was chiefly responsible for legislation dealing with cattle guards and level crossings.

L. C. Fritch, Assistant to the President, and General Manager, Eastern Lines, Canadian Northern Ry., Toronto, and **W. McNab**, Valuation Engineer, G.T.R., Montreal, have been appointed members of the committee of arrangements to prepare for the American Railway Engineering Association's annual convention, March 22 to 25, at Chicago, Ill.

Bruce Hosmer Acton Burrows, B.A.Sc., younger son of Acton Burrows, Managing Director, Canadian Railway and Marine World, has been gazetted recently as having been appointed a provisional lieutenant (supernumerary) in the Canadian Engineers on Sept. 15, 1915. He is at the Canadian Engineers Training Depot, Ottawa, preparatory to going overseas.

E. McDonald, who has been appointed General Baggage Agent, Grand Trunk Pacific Ry., and Grand Trunk Pacific Coast Steamship Co., Winnipeg, was from June, 1904, to May, 1910, clerk, General Baggage Agent's office, G.T.R., Toronto, and from May, 1910, to Dec. 31, 1915, District Baggage Agent, G.T.P.R. and G.T.P. Coast Steamship Co., Winnipeg.

M. K. Cowan, K.C., of Toronto, formerly of the Grand Trunk Legal Department, Montreal, collapsed suddenly in the Board

of Railway Commissioner's offices at Ottawa, Jan. 25, owing, it is said, to acute indigestion. He was taken to St. Luke's Hospital there, where he recovered consciousness, and it was stated later in the day that he was not seriously ill.

Andrew Ledingham, who has been appointed City Freight Agent, C.P.R., Winnipeg, was born at Blackford, Scotland, Sept. 29, 1884, and entered C.P.R. service, Jan. 1, 1911, since when he has been, to Jan. 1, 1913, chief clerk to Assistant Freight Traffic Manager, Winnipeg; Jan. 1, 1913, to Jan. 1, 1916, Contracting Freight Agent, Winnipeg.

Barton Wheelwright, who has been appointed acting Signal Engineer, G.T.R., Montreal, was born at Minneapolis, Minn., Mar. 12, 1888, and entered G.T.R. service, July 1, 1911, since when he has been, to Mar. 1, 1912, draughtsman on grade separation, Toronto; Mar. 1, 1912, to Dec. 1, 1914, Block Signal Inspector, Montreal; Dec. 1, 1914, to Jan. 14, 1916, Assistant Signal Engineer, Montreal.

Lieutenant H. F. H. Hertzberg, Jr., M.Can. Soc.C.E., of the Royal Canadian Engineers, who is on active service in Europe, and who has been promoted to the rank of Captain, is a son of A. L. Hertzberg, M.Can. Soc.C.E., Division Engineer, C.P.R., Toronto, and was formerly with the Trussed Concrete Steel Co. of Canada, Walkerville, Ont. This item appeared in the January issue, but owing to typographical errors in the names, is repeated.

Thos. Malcolm, railway contractor, whose latest work was building the International Ry. of New Brunswick, of which company he was President until he sold the line to the Dominion Government, is ill at his home, Campbellton, N.B. He left there Nov. 28 for New York, where he was operated upon on Dec. 6 for obstruction of the pylorus, and progressed satisfactorily until Dec. 21, when complications occurred and he was taken home in the middle of January, accompanied by Mrs. Malcolm, a doctor and a nurse.

Arthur Tilley McKean, who has been appointed Division Freight Agent, C.P.R., Winnipeg, was born at St. John, N.B., Dec. 18, 1886, and entered C.P.R. service, Apr. 1, 1903, since when he has been, to Mar., 1906, clerk and stenographer, General Freight Department, St. John, N.B.; Mar., 1906, to Jan., 1908, clerk, assistant chief clerk and chief clerk to Assistant Freight Traffic Manager, Winnipeg; Jan., 1908, to June, 1911, Soliciting Freight Agent, Winnipeg; June, 1911, to Jan., 1916, City Freight Agent, Winnipeg.

William James Rennie, who has been appointed Soliciting Freight Agent, C.P.R., Winnipeg, was born at Montreal, Aug. 21, 1886, and entered C.P.R. service, Dec. 5, 1899, since when he has been, to May 31, 1911, office boy, junior clerk and claims clerk, Freight Claims Auditor's office, Montreal; June 15 to Oct. 31, 1911, claims clerk, Division Freight Agent's office, Winnipeg; Nov. 1, 1911, to Jan. 31, 1912, assistant chief clerk, same office; Feb. 1, 1912, to June 30, 1914, assistant chief clerk, Assistant Freight Traffic Manager's office, Winnipeg; July 1, 1914, to Dec. 31, 1915, chief clerk, same office.

Charles Henry Towle, who has been appointed Assistant Superintendent, District 1, Atlantic Division, C.P.R., Brownville Jct., Me., was born at Enfield, Me., Apr. 13, 1878, and entered railway service in Oct., 1893, since when he has been, to Feb., 1894, station baggage master, Maine Central Rd., Enfield, Me.; Feb., 1894, to Aug., 1896, freight brakeman, same road, Bangor, Me.; Aug., 1896, to Dec., 1898, freight brakeman, C.P.R., Brownville Jct., Me.; Dec., 1898, to Sept., 1914, freight conductor, C.P.R., Brownville

Jct., Me.; Sept., 1914, to Nov., 1915, General Yardmaster, C.P.R., McAdam Jct., N.B.

George Arthur Walton, who has been appointed General Passenger Agent, Western Lines, C.P.R., Winnipeg, was born at Montreal on July 17, 1881, and entered C.P.R. service, Sept. 1, 1901, since when he has been, to May 31, 1903, chief rate clerk, Winnipeg; June 1, 1903, to Mar. 31, 1906, chief clerk, Winnipeg; Apr. 1 to Aug. 31, 1906, station ticket agent, Winnipeg; July 15, 1907, to Apr. 14, 1910, District Passenger Agent, Brandon, Man.; Apr. 15, 1910, to Aug. 31, 1911, General Agent, Passenger Department, Spokane, Wash.; Sept. 1, 1911, to Dec. 31, 1915, General Agent, Passenger Department, Chicago, Ill.

Albert G. Albertsen, who has been appointed City Ticket Agent, C.P.R., San Francisco, Cal., was born at Copenhagen, Denmark, Dec. 31, 1887, and entered transportation service in April, 1908, since when he has been, to Nov. 1909, passenger clerk, Thos. Cook and Sons; Nov. 1909 to July 1910, Travelling Agent, International Mercantile Marine Co.; July 1910 to Mar. 1911, passenger and ticket clerk, Pacific Mail Steamship Co.;

G. A. McNicholl,
Assistant General Freight and Passenger Agent,
Grand Trunk Pacific Railway.

Mar. 1911 to May 1912, City Passenger Agent, C.P.R.; May 1911 to Jan. 1916, Travelling Passenger Agent, C.P.R., all at San Francisco, Cal.

T. J. Wall, who has been appointed General Agent, Passenger Department, C.P.R., Chicago, Ill., was born at St. Louis, Mo., Sept. 10, 1882, and was, to July 1, 1908, Station Passenger Agent, Pennsylvania Lines, St. Louis, Mo.; July 1, 1908, to Feb. 1, 1911, Travelling Passenger Agent, C.P.R., St. Louis, Mo.; Feb. 1 to Oct. 1, 1911, City Passenger and Ticket Agent, C.P.R., Chicago, Ill.; Oct. 1, 1911, to June 1, 1914, General Agent, Passenger Department, C.P.R., Spokane, Wash.; June 1, 1914, to Jan. 1, 1916, General Agent, Passenger Department, C.P.R., Minneapolis, Minn.

Fred L. Nason, who has been appointed General Agent, Passenger Department, C.P.R., San Francisco, Cal., was born at Newton,

N.H., Apr. 16, 1880, and entered railway service in June 1898, since when he has been, to Oct. 1902, telegraph operator and ticket agent, New York, New Haven and Hartford Ry., Hyde Park, and Boston, Mass.; Nov. 1902 to May 1903, telegraph operator, Atchafson, Topeka and Santa De Ry., in Arizona; May 1903 to Aug. 1908, telegraph operator and agent, Southern Pacific Co., at various points in California; Aug. 1908 to Jan. 1, 1916, City Ticket Agent, C.P.R., San Francisco, Cal.

Lewis Raymond Hart, who has been appointed General Agent, Passenger Department, C.P.R., Buffalo, N.Y., was born at Fairport, N.Y., June 3, 1877, and entered railway service June 22, 1899, since when he has been, to Jan., 1900, telegraph operator and ticket clerk, New York, New Haven and Hartford Rd., West Quincy, Mass.; Jan. to Sept., 1900, assistant ticket agent, same road, Quincy, Mass.; Sept., 1900, to Dec. 11, 1905, assistant ticket agent, same road, Fall River, Mass.; Dec. 11, 1905, to July 28, 1913, chief clerk, Passenger Department, C.P.R., Boston, Mass.; July 28, 1913, to Jan. 1, 1916, chief clerk, Passenger Department, C.P.R., New York, N.Y.

Frederick William Robertson, who has been appointed District Passenger Agent, Intercolonial Ry., Halifax, N.S., was born at Moncton, N.B., Oct. 10, 1871, and entered I.R.C. service, May 20, 1886, since when he has been, to Aug., 1889, clerk on car mileage; Aug. to Nov., 1889, clerk to Chief Superintendent; Nov., 1889, to Feb., 1891, clerk to General Passenger Agent; Feb. to Apr., 1891, clerk to Chief Superintendent; Apr., 1891, to Nov. 1901, clerk to General Passenger Agent; Nov., 1901, to Sept., 1902, secretary to General Manager; Sept., 1902, to Feb. 4, 1913, secretary to General Passenger Agent; Feb. 4, 1913, to Dec. 1, 1915, chief clerk, all at Moncton, N.B.

George W. Caye, whose appointment as General Purchasing Agent, G.T.R., Montreal, was announced in our last issue, was born at Malone, N.Y., Dec. 1, 1865, and entered railway service, Aug., 1883, since when he has been, to 1897, successively, junior clerk, stenographer and ticket clerk, Passenger Department, Central Vermont Ry., St. Albans, Vt.; 1897 to 1900, chief clerk to General Superintendent, same road, St. Albans, Vt.; 1900 to 1902, Travelling Car Agent, Canada Atlantic Ry., Ottawa, Ont.; 1902 to 1905, secretary to General Manager, same road; 1905 to 1907, chief clerk to Vice President and General Manager, Grand Trunk Pacific Ry., Montreal; 1907 to Dec. 31, 1915, Assistant to Vice President and General Manager, same road, Winnipeg.

George Henry Nowell, whose appointment as District Master Mechanic, District 3, British Columbia Division, C.P.R., Nelson, was announced in our last issue, was born at Montreal, Nov. 13, 1885, and entered railway service, July 2, 1899, since when he has been, to July 2, 1904, machinist apprentice, C.P.R., Montreal; July 2 to Nov. 5, 1904, machinist, C.P.R., Montreal; Nov. 5, 1904 to Feb. 15, 1905, machinist, C.P.R., North Bay, Ont.; Apr. 15 to Sept. 1, 1905, machinist, G.T.R., Montreal; Sept. 1, 1905 to Sept. 30, 1908, machinist, C.P.R., Montreal; Sept. 30, 1908 to Jan. 15, 1910, leading hand, C.P.R., Montreal; Jan. 15, 1910 to Jan. 15, 1913, charge hand, C.P.R., Montreal; Jan. 15, 1913 to Sept. 5, 1915, Erecting Shop Foreman, C.P.R., Ogden, Alta.; Sept. 5 to Dec. 1, 1915, Locomotive Foreman, C.P.R., Cranbrook, B.C.

George N. Goad, who has been appointed Inspector of Transportation, Eastern Lines, Canadian Northern Ry., Toronto, was born there, Nov. 26, 1884, and entered railway service in Sept., 1901, since when he has

February, 1916.]

een, to July, 1902, junior clerk, Division Freight Agent's office, G.T.R., Toronto; July, 1902, to Sept., 1904, stenographer, same office; Sept., 1904, to Dec., 1905, chief clerk, Canadian Freight Agent's office, Lehigh Valley Rd., Toronto; Dec., 1905, to Mar., 1907, stenographer, Third Vice President's office, Canadian Northern Ry., Toronto; Mar., 1907, to Aug. 31, 1915, chief clerk to Superintendent and General Superintendent, C.N.R., Toronto; Sept. 1., to Dec. 31, 1915, chief clerk to General Manager, Eastern Lines, C.N.R., Toronto.

B. T. Chappell, who has been appointed Superintendent, Pacific Division, Canadian Northern Ry., Vancouver, B.C., was born at Charlottetown, P.E.I., May 1, 1878, and entered railway service, Sept., 1895, since when he has been, to 1897, clerk in Freight Department, Northern Pacific Ry., Winnipeg; 1897 to 1901, in train service, same road; 1901, on the taking over of the Northern Pacific lines in Manitoba by the Canadian Northern Ry., to 1903, in train service, C.N.R.; 1903 to 1905, Yardmaster, same road, Port Arthur, Ont.; 1905 to 1907, Trainmaster, District 1, Western Division, same road; 1907 to Jan. 1, 1913, Trainmaster, District 4, Western Division, same road; Jan. 1, 1913, to Nov. 22, 1915, Superintendent, District 2, Western Division, same road, Saskatoon, Sask.

Arthur A. Tisdale, who has been appointed Assistant to Vice President and General Manager, Grand Trunk Pacific Ry., Winnipeg, was born at Mount Vernon, Ont., Mar. 8, 1874, and entered railway service Sept. 18 1889, since when he has been, to July, 1892, in local freight office, G.T.R., Hamilton, Ont.; July, 1892, to May, 1899, secretary to Chief Engineer, Hamilton and Montreal; May, 1899, to Oct., 1907, successively, secretary, chief clerk, and Assistant to Fourth Vice President in charge of Transportation and Maintenance of Way, G.T.R., Montreal; Oct., 1907, to Oct., 1909, Assistant to Vice President and General Manager, Grand Trunk Pacific Ry. Montreal; Oct., 1909, to June, 1915, Superintendent, Lake Superior Division, same road, Fort William, Ont.; June, 1915, to Jan. 1, 1916, Superintendent, Regina Division, same road, Regina, Sask.

E. W. Beatty, K.C., Vice President and General Counsel, C.P.R., who has been elected a director of the company, was born at Thorold, Ont., Oct. 16, 1877. He was educated at the Model School and Harbord Collegiate Institute, Toronto, and the University of Toronto, graduating in 1898. He served his articles with the late D'Alton McCarthy, of McCarthy, Osler, Hoskin and Creelman, Toronto, and was admitted to the bar in 1901. On the appointment of A. R. Creelman, as Chief Solicitor, C.P.R., he accompanied him to Montreal, and was appointed Assistant Solicitor, Jan. 1, 1905; General Solicitor, Mar. 1, 1910; General Counsel, June, 1913, and Vice President and General Counsel, Dec., 1914. He is a son of the late Henry Beatty, at one time Manager of the Upper Lakes Steamships, C.P.R., Toronto, and brother of Dr. H. A. Beatty, Chief Surgeon, Ontario Division, C.P.R., Toronto.

Albert E. Lock, who has been appointed Superintendent of Car Service, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., was born at Albany, N.Y., July 14, 1879, and entered railway service Dec. 1, 1896, since when he has been, to Sept. 1, 1897, telegraph operator and relief agent at various points, Lehigh Valley Rd.; Sept. 1, 1897, to July 1, 1902, tower man, telegraph operator, relief agent, ticket clerk, assistant agent, etc., Mohawk and Adirondack Divisions, New York Central and Hudson River Rd.; July 1, 1902, to Aug. 15, 1903, City Ticket Agent,

same road, Lake Placid, N.Y.; Aug. 15, 1903, to Sept. 15, 1904, Travelling Passenger Agent, New York Central Lines, Saranac Lake, N.Y.; Sept. 15, 1904, to Nov. 1, 1913, Travelling Passenger Agent, New York Central Lines, Montreal; Nov. 1, 1913, to Apr. 1, 1914, Commercial Agent, Toronto, Hamilton and Buffalo Ry., Toronto; Apr. 1, 1914, to Dec. 29, 1915, Car Accountant, same road, Hamilton, Ont.

Frank W. Cooper, A.M.Can.Soc.C.E., who has been appointed Superintendent, District 3, Lake Superior Division, Schreiber, Ont., was born at London, Ont., Feb. 16, 1880, and entered railway service in 1901, since when he has been, to 1903, draughtsman, maintenance of way; and leveller on preliminary location and construction, Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont.; June, 1903, to Nov., 1905, transit man and Assistant Engineer, C.P.R., London and Toronto; Nov., 1905, to Nov., 1911, Resident Engineer, C.P.R., London and Toronto; Nov., 1911, to Apr., 1912, Resident Engineer, C.P.R., Montreal; Apr. to Nov.,

The Late Alexander Shields.

1912, Assistant Engineer in Chief Engineer's office, C.P.R., Montreal; Nov., 1912, to Feb., 1915, Division Engineer, Eastern Division, C.P.R., Montreal; Feb. to May, 1915, acting Superintendent, District 1, Eastern Division, C.P.R., Farnham, Que.; May, 1915, to Jan. 8, 1916, Superintendent, District 1, Eastern Division, C.P.R., Farnham, Que.

Harry Parry, who has been appointed Assistant General Passenger Agent, New York Central Rd., and West Shore Rd., Buffalo, N.Y., was born in Hamilton, Ont., and entered railway service in 1883 as a messenger in the Traffic Manager's office, Great Western Ry. there. In 1884 he was stenographer in the rate department, and subsequently served in the freight claims department until the absorption of the G.W.R. by the G.T.R., when he was, from Jan. to Apr., 1885, stenographer, freight claims department, G.T.R., Montreal; Apr. to Sept., 1885, stenographer in General Freight and Passenger Agent's office, Northern and Northwestern Ry., Toronto; Sept. to Dec., 1885, clerk to General Agent, and Assistant City Passenger and Ticket Agent, West Shore Rd., Buffalo, N.Y.; Dec., 1885, to May 27, 1889, Assistant City Passenger and Ticket Agent, New York Central and Hudson River Rd., Buffalo, N.Y.; May 27, 1889, to Mar. 1,

1897, City Passenger and Ticket Agent, New York Central Lines and West Shore Rd., Buffalo, N.Y.; Mar. 1, 1897, to Jan., 1916, General Agent, Passenger Department, same lines, Buffalo, N.Y.

Alexander Shields, Locomotive Inspector, Canadian Northern Ry., Winnipeg, died Jan. 18, at Rochester, Minn., where he had been to consult the Mayo Bros., Surgeons, who decided that it was useless to operate. The body was taken to Winnipeg and thence to Toronto, the funeral taking place from the home of his brother in law, E. W. Hendrick, Jan. 24. He was born at Toronto, June 14, 1867, and entered railway service there in 1880, as apprentice on the Credit Valley Ry., now part of the C.P.R., and from 1886 to 1901, was in the mechanical department, G.T.R., at Port Huron, Mich.; 1901 to 1903, Locomotive Foreman, C.P.R.; 1903 to Jan. 1912, Locomotive Foreman, and Master Mechanic, Canadian Northern Ry., Winnipeg; Jan. to March 1912, General Master Mechanic, C.N.R., Winnipeg. He resigned from the service in March, 1912, on his election as President Railroaders' Investment Co., and a director of the Consolidated Land Co. He returned to Canadian Northern Ry. service during 1915, as Locomotive Inspector. He is survived by a widow and three daughters.

M. G. Murphy, who has been appointed District Passenger Agent, C.P.R., and Canadian Pacific Ocean Services, Ltd., St. John, N.B., was born at Halifax, N.S., Feb. 26, 1878, and entered C.P.R. service Mar. 31, 1899, since when he has been, to Jan., 1901, agent and operator, Atlantic Division; Jan., 1901, to 1903, chief clerk to Freight Agent, C.P.R., and agent, Dominion Express Co., Halifax, N.S.; 1903 to 1905, Travelling Passenger Agent, Atlantic Division; 1905 to June, 1907, Assistant to District Passenger Agent, St. John, N.B.; June, 1907, to Nov. 1, 1910, General Travelling Passenger Agent, Western Lines, Winnipeg; Nov. 1, 1910, to Oct. 1, 1911, General Travelling Passenger Agent, All Lines, Montreal; Oct. 1, 1911, to Jan. 31, 1916, District Passenger Agent, Toronto, covering rail and lake lines as well as ocean services until the organization of Canadian Pacific Ocean Services, Ltd., Jan. 1, when I. E. Suckling was appointed General Agent, Passenger Department, C.P.O.S., Ltd. He is President of the Toronto Transportation Club. On leaving Toronto he was presented with a gold watch by a number of local transportation men, and with a gold watch chain by his office staff.

George Alexander McNicholl, who was appointed Assistant General Freight and Passenger Agent, Grand Trunk Pacific Ry., Prince Rupert, B.C., recently, was born at Montreal, July 31, 1876, and entered railway service Apr. 1, 1889, since when he has been, to Aug. 14, 1891, apprentice, General Auditor's office, G.T.R., Montreal; Aug. 14, 1891 to July 10, 1895, apprentice, Assistant General Manager's office, G.T.R., Montreal; July 10 to Nov. 7, 1895, clerk, General Passenger Agent's office, G.T.R., Montreal; Nov. 7, 1895 to Feb. 22, 1896, clerk, General Manager's office, G.T.R., Montreal; Feb. 22, 1896 to Dec. 15, 1900, clerk, General Traffic Manager's office, G.T.R., Montreal; Dec. 15, 1900 to June 12, 1902, secretary to Second Vice President and General Manager, G.T.R., Montreal; June 12, 1902 to Jan. 1, 1905, chief clerk, Third Vice President, G.T.R., Montreal; Jan. 1, 1905 to Apr. 1, 1907, secretary to Vice President and General Manager, Grand Trunk Pacific Ry., Montreal; Apr. 1, 1907 to July 1, 1910, Purchasing Agent, G.T.P.R., Vancouver, B.C.; July 1, 1910 to Oct. 1, 1913, Superintendent, G.T.P.R., Prince Rupert, B.C.; Oct. 1, 1913 to Nov. 15, 1915, Commissioner of Colonization and Industries, G.T.P.R., Prince Rupert, B.C.

Steam Railway Track Laid in 1915.

The returns received from steam railway companies throughout Canada, in answer to Canadian Railway and Marine World's inquiries, and which were published in our January issue, showed only 547.47 miles of new first track as having been laid in 1915, but as explained in the article, the returns were incomplete, some companies not having reported, and others having sent in figures based on estimates, which needed revision. The full and revised returns are given in the table below, which shows that 714.26 miles of new first track were laid by 15 separate companies, a mileage which, while considerably below that laid in any one year for the past 12 years or so, is in excess of that which it was estimated would be laid. Track laying was somewhat held up owing to the difficulty of placing orders for steel, the mills finding it more profitable to run on steel for shell making and similar purposes. The details for the several companies are as follows:

	Miles.	Miles.
Alberta and Great Waterways.		
Mileage 78 to 174.5, Alberta	96.50	
Canadian Northern System.		
Canadian Northern Quebec—		
Arundel to Rouge River, Que.	2.00	
Canadian Northern—		
Grand Marais to Victoria		
Beach, Man.	14.07	
Canora to Sturgis, Sask.	21.44	
Bienfait to Estevan, Sask.	8.91	
Elrose to Eston, Sask.	34.81

D'Arcy to Clinton, B.C.	81.20	
Quebec Central.		
From mileage 5 east of St. Ca-		
mille to English Lake	14.00	
St. John and Quebec.		
From Fredericton, N.B., south.	1.29	
Total	714.26	

The mileage laid in the several provinces in comparison with that laid in 1914 was:—

	1915.	1914.
Alberta	299.60	513.12
British Columbia	212.20	679.26
Saskatchewan	107.12	215.97
Manitoba	57.91	300.15
Nova Scotia	18.29	47.80
Quebec	16.00	52.51
New Brunswick	2.14	29.99
Ontario	1.00	200.01
Prince Edward Island		2.50
Miles	714.26	2,041.31

Several United States publications have published tables in which considerable differences occur. The Railway Review gives

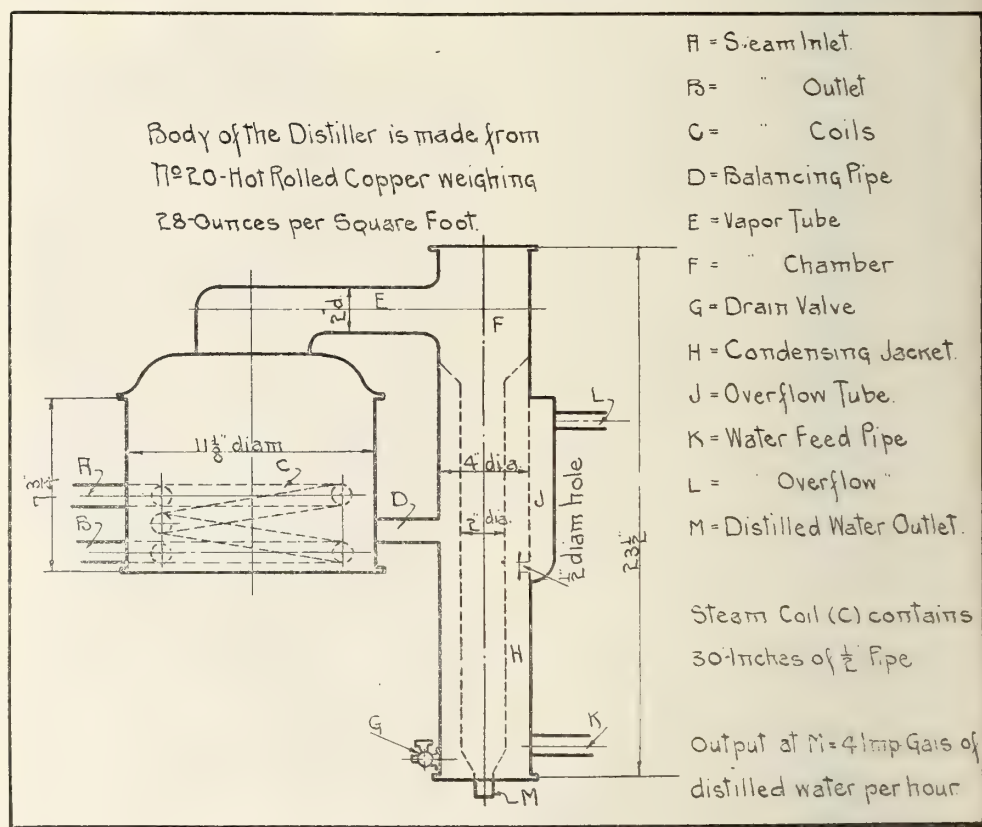

585.10 miles and the Railway Age Gazette 718.37 miles, the latter mentioning 15 railways. An examination and comparison of these figures with our returns for 1915 and 1914, shows that the Railway Age Gazette includes 14.81 miles on the Dominion Atlantic, which was included in our 1914 table; and omits to include the Halifax and South western, the St. John and Quebec, and the Intercolonial's Dartmouth Branch. Among other figures in the Railway Age Gazette's table which do not agree with the returns we have received, are the following:—It gives track as having been laid on the Canadian Northern south easterly from Camrose, Alta., for 60 miles, while we are advised that only 43 miles had actually been laid at the time of our report. It gives the Canadian Northern Pacific as having laid 22 miles, while our figures were held over as the reports we had received did not fit in with previous reports; the figures given in our

official statement only reached us Jan. 19. The other differences between the two reports are fractional.

A Simple Water Distiller.

The accompanying plan represents one of the simplest and yet most effective styles of water distilling outfits yet devised. Being a small apparatus and of simple construction with a capacity of four imperial gallons of distilled water per hour, it meets the ordinary requirements of most storage battery plants, especially those pertaining to railway car lighting service.

Water is supplied through the $\frac{1}{2}$ inch pipe K and fills tube H, which forms a condensing jacket around vapor chamber F. The water in the condensing jacket H rises to the level of balancing pipe D, at which point it enters the main drum in which is located the steam coil C. Approximately 30 ins. of $\frac{1}{2}$ -in. radiating pipe is provided and connected to inlet A and outlet B. By ab-

A Simple Water Distiller.

table are the actual mileages laid in 1915, the figures given in 1914 having been made up in the company's office from progress reports and estimates of what it was expected to do. It gives the entire length of the Central Canada to Peace River Landing, 50 miles, while track had been laid for 47.50 miles, and will not be laid further until the completion of the bridge over Heart River. The track laid on the Edmonton, Dunvegan and British Columbia is placed by the Railway Age Gazette at the round figure of 100 miles, while our revised report shows only 90.20 miles to have been laid. The other important difference is on the Pacific Great Eastern, in regard to which in 1914 we estimated track to have been laid to mileage 120, near Lillooet, that being the objective point for the year, but track end did not reach beyond D'Arcy, in 1914, and reached Lillooet in the spring, the 46 miles estimated in our January issue as having been laid in 1915, being laid in the autumn. The company's

sorbing sufficient heat from the coils, the water forms into vapor and passes through the vapor tube E into chamber F, where it is condensed by the cooling action of water jacket H and passes out of connection M. In case water is forced under pressure through feed pipe K at too great a rate, it is fed back through the $\frac{1}{2}$ -in. hole in condensing jacket to overflow tube and from thence out through the $\frac{3}{8}$ -in. overflow pipe, the latter being located so that not more than an inch of water may stand over the top surface of the steam coils C.

The body and tubes of the distiller are made from no. 20 hot rolled copper weighing 28 oz. per sq. ft. There are quite a number of these distillers in service, the Canadian Northern Ry. having adopted it for train lighting storage battery plants. The original design was developed by E. Lindelius, Superintendent, Preston Car & Coach Co., Preston, Ont., to whom we are indebted for the above data.

More Evidence of the Return of Canada's Business Prosperity.

Canadian railway earnings continue to show most gratifying results. The remarkable increase of \$6,447,813.21 in Canadian Pacific net earnings for the four months July 1 to Nov. 30, 1915, was referred to in our last issue. The net earnings for December are not available as this is written (Jan. 24) but the gross traffic earnings for December were very satisfactory, viz: \$12,580,000 for 1915, against \$7,321,000 in 1914, an increase for the month of \$5,259,000. Judging by the way the working expenses were decreased in Nov., 1915, a very satisfactory net was no doubt made in December. From Jan. 1 to 14, 1916, the gross traffic earnings were \$3,737,000 against \$2,637,000 for the same period of 1915, an increase of \$1,100,000. Of course the great increases made during the autumn movement of the grain crop could not be kept up, but the figures for the first half of January are very satisfactory and encouraging.

The Canadian Northern's full figures to Nov. 30 are available since our last issue. From Oct. 1, when it commenced to issue figures for the entire system, to Nov. 30, the gross earnings increased \$2,407,400, while the expenses only increased \$1,251,200, an increase in net earnings of \$1,156,200. The gross earnings for Dec. 1915, were \$3,435,600, against \$1,809,600 for Dec. 1914, an increase of \$1,626,000. For the first two weeks of Jan. 1916, the gross receipts were \$1,010,400, against \$665,000 for the same period in 1915, an increase of \$345,000, and from Oct. 1, 1915, to Jan. 14, 1916, the gross receipts were \$11,659,700, against \$7,259,400 in the same period of 1914-1915, an increase of \$4,400,300.

The Grand Trunk System traffic earnings for Dec. 1915 were \$4,819,124, against \$4,807,967 in Dec., 1914, an increase of \$731,157. For the first two weeks of Jan. 1916, the traffic earnings were \$1,847,003, against \$1,523,267 for the same period in 1915, an increase of \$323,736.

The Grand Trunk Pacific earnings, which are given out in sterling figures, increased from July 1, to Dec. 31, 1915, £229,903 over the corresponding period of 1914.

Canada's exports for 12 months ended Oct. 3, 1915, aggregated \$1,147,446,551, against \$1,086,568,316 for same period 1913-1914, \$1,127,282,699 for 1912-1913, and \$991,786,674 for 1911-1912.

Canada's revenues for the 9 months ended Dec. 31, 1915, were \$122,000,000, against \$99,600,000 for the corresponding period of 1914, an increase of \$22,400,000.

The building permits granted in 25 cities in the Provinces of Quebec, Ontario, Manitoba and British Columbia in Dec., 1915, were for \$3,388,714, against \$1,936,529 in Dec., 1914, an increase of 74.9%.

Toronto Telegram, Jan. 21:—Four hundred freight trains were handled on the G.T. R.'s Ontario Division in the past 24 hours, and the C.P.R. handled about 275. This is the largest movement of freight in 10 years.

At the Canadian Bank of Commerce annual meeting in Toronto recently, the President, Sir Edmund Walker, gave the following figures to show the astonishing change in Canada's international position in the last three years:—

	Imports.	Exports.
1913	\$86,515,536	\$377,068,355
1914	635,383,222	455,117,224
1915	497,376,961	461,442,509
6 months	228,335,678	273,377,082
	Excess	Excess
	Imports.	Exports.
1913	\$309,117,181	
1914	179,945,908	
1915	35,934,452	
6 months		\$45,941,404

Canada's production from the farms, forests and mines increased enormously in 1915 over 1914. The following figures were compiled by The Monetary Times:—

	1915.	1914.
Field crops	\$ 788,919,535	\$638,580,300
Forests	175,000,000	176,672,000
Mines	128,000,000	128,863,075
Fisheries	31,250,000	31,264,631
	\$1,123,169,535	\$975,380,006

Customs receipts throughout Canada for 1915 show in the aggregate a large increase over 1914. Following are the figures for the principal ports, also those for the whole country.

	1915.	1914.
Montreal	\$21,740,872	\$19,644,444
Toronto	18,630,695	16,508,763
Winnipeg	5,874,707	6,536,617
Vancouver	4,691,111	5,363,862
Hamilton	4,152,640	2,284,007
Windsor	3,843,810	2,094,535
St. John	2,542,059	1,547,318
Halifax	2,488,106	2,063,319
Quebec	2,076,146	1,854,847
Ottawa	1,587,556	1,532,759
Victoria	953,811	1,375,235
Calgary	873,224	1,346,281
Edmonton	718,096	1,159,915
Dominion of Canada total.	\$91,907,716	\$81,771,648

Canada's Remarkable Track Laying Record.

Though in view of the war conditions it could not be expected that the great activity which has been displayed in laying new steam railway track in Canada would be kept up during 1915, what was actually accomplished is a splendid showing, in view of the world wide conditions, no less than 714.26 miles of new first track having been laid.

Reports as to the amount of new first track laid in the United States during 1915 vary, the two leading authorities there giving considerably different figures. The Railway Review, Chicago, shows 1,157.79 miles, while the Railway Age Gazette, New York, shows only 933.24 miles. The significance of these figures will be realized when the respective populations of the two countries are considered. Canada's population by the last census taken in 1911 was 7,206,643, while that of the United States by the census of 1910 was 99,451,000.

The Transportation Interests Pre-eminent Position.

It is estimated that the January dividend and interest disbursements in Canada, exclusive of bonds and debentures, were approximately as follows:—

Transportation	\$6,538,656
Public utilities	2,628,317
Industrial	1,624,590
Mines	1,200,405
Banks	537,500
Mortgages and loans	548,606

The above figures show the immensity of transportation compared with other interests.

Progress of Rogers Pass Tunnel Construction, Canadian Pacific Railway.

The following table, for which we are indebted to J. G. Sullivan, M. Can. Soc. C.E., Chief Engineer, C.P.R., Winnipeg, shows the progress made from Dec. 2 to Dec. 30, also the total progress to Dec. 30, 1915:

	Progress.	Total.
EAST END.		
Main heading	1,174 ft.	1,174 ft.
Main tunnel	684 ft.	8,742 ft.
WEST END.		
Main heading	1,174 ft.	1,174 ft.
Main tunnel	742 ft.	7,692 ft.
Broke headings Dec. 19.		

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Alberta & Great Waterways Ry. See Edmonton, Dunvegan and British Columbia Ry.

Canadian Government Railways.—A. R. MACGOWAN, heretofore Division Engineer, Districts 3 and 4, Intercolonial Ry., and Prince Edward Island Ry., Moncton, N.B., has been appointed Principal Assistant Engineer, Canadian Government Railways. Office, Moncton, N.B.

C. B. TRITES, heretofore chief clerk, has been appointed Assistant Secretary, Canadian Government Railways Employees Relief and Insurance Association, W. C. PAVER, Secretary, having been granted leave of absence on account of ill health. Office, Moncton, N.B.

C. J. BOURGEOIS has been appointed acting chief clerk, Canadian Government Railways Employees Relief and Insurance Association, vice C. B. Trites, promoted. Office, Moncton, N.B.

See also Intercolonial Ry. and National Transcontinental Ry.

Canadian Northern Ry.—G. N. GOAD, heretofore chief clerk, General Manager's Office, Eastern Lines, has been appointed Inspector of Transportation, Eastern Lines, with such duties as are assigned to him from time to time. Office, Toronto.

F. E. McCORMICK, heretofore chief clerk, local freight department, Brandon, Man., has been appointed City Freight Agent, Winnipeg, vice R. M. Milliken, whose appointment as District Freight Agent, Brandon, was announced in our last issue.

W. WALKER has been appointed Shop Foreman, Winnipeg locomotive house, vice J. N. Duncanson, Assistant Locomotive Foreman, promoted.

W. SHEPHERD has been appointed Locomotive Foreman, Portage la Prairie, Man., vice S. Hicks, whose appointment as Locomotive Foreman, Boston Bar, B.C., was announced in our last issue.

J. N. DUNCANSON, heretofore Assistant Locomotive Foreman, Winnipeg, has been appointed Locomotive Foreman, Dauphin, Man., vice J. W. Skinner, who has been granted extended leave of absence while on active service.

E. BOWER, heretofore chief clerk to District Passenger Agent, Calgary, Alta., has been appointed Travelling Passenger Agent, Saskatoon, Sask.

W. EAGLESON has been appointed Roadmaster, Lucerne, B.C.

H. A. MacKENZIE has been appointed Roadmaster, Blue River, B.C.

C. F. O'CONNOR has been appointed Bridge and Building Master, Pacific Division. Office, Kamloops, B.C.

A. ANDERSON has been appointed Roadmaster, Kamloops, B.C.

T. WEBSTER has been appointed Roadmaster, Boston Bar, B.C.

B. T. CHAPPELL, Superintendent, Pacific Division, has had his office removed from Kamloops Jct., B.C., to Vancouver, B.C.

R. B. McINTOSH, heretofore District Freight Agent, Brandon, Man., has been appointed chief clerk in the district freight and passenger office at Vancouver, B.C.

Canadian Pacific Ocean Service, Ltd. The following general agents, Passenger Department, have been transferred from the C.P.R. Steamship Department to Canadian Pacific Ocean Services, Ltd.: W. WEBBER, Montreal; I. E. SUCKLING, Toronto; W. C. CASEY, Winnipeg; J. J. FORSTER, Van-

couver, B.C.; and H. M. MacCALLUM, Chicago, Ill.

G. M. JACKSON, heretofore General Agent, Passenger Department, C.P.R., San

Francisco, Cal., has been appointed General Agent, Passenger Department, C.P.O.S. Ltd., for Japan and Korea. Office, Yokohama, Japan.

C. E. TAYLOR, heretofore ticket agent, Southern Pacific Co., San Francisco, Cal., has been appointed Passenger Agent, C.P.O.S. Ltd., Yokohama, Japan.

A. J. BLAISDELL, heretofore General Agent, Passenger Department, C.P.R., St. Louis, Mo., has been appointed General Agent, Passenger Department, C.P.O.S. Ltd., for Northern China, including Tientsin and Peking. Office, Shanghai, China.

P. D. SUTHERLAND, heretofore Passenger Agent, C.P.R., Hong Kong, China, has been appointed General Agent, Passenger Department, C.P.O.S. Ltd., for Southern China, Philippines, Malay Federated States, Java, and India. Office, Hong Kong, China.

T. J. BURNS, heretofore Travelling Passenger Agent, Allan Line, Chicago, Ill., has been appointed Passenger Agent, C.P.O.S. Ltd., Hong Kong, China.

J. R. SHAW, heretofore Passenger Agent, C.P.R., Yokohama, Japan, has been appointed Passenger Agent, C.P.O.S. Ltd., Manila, Philippine Islands.

Canadian Pacific Ry.—E. W. BEATTY, K.C., Vice President and General Counsel, has been elected a director, succeeding D. McNicoll, resigned.

M. G. MURPHY, heretofore District Passenger Agent, Toronto, has been appointed District Passenger Agent, C.P.R., and Canadian Pacific Ocean Services, Ltd., St. John, N.B., vice W. B. Howard, transferred.

C. C. KIRBY has been appointed Division Engineer, Atlantic Division, vice J. E. Beatty transferred. Office, St. John, N.B.

R. McKILLOP has been appointed Superintendent, District 2, Atlantic Division, vice A. Williams, transferred. Office, Woodstock, N.B.

A. WILLIAMS, heretofore Superintendent, District 2, Atlantic Division, Woodstock, N.B., has been appointed Superintendent, District 1, Atlantic Division, vice V. A. Harshaw, transferred. Office, Brownville Jct., Me.

V. A. HARSHAW, heretofore Superintendent, District 1, Atlantic Division, Brownville Jct., Me., has been appointed Assistant Superintendent, District 3, Eastern Division, vice E. J. Melrose, transferred. Office, Montreal.

A. R. KETTERSON, heretofore in Engineering Department, Western Lines, Winnipeg, has been appointed Assistant Engineer to Assistant Chief Engineer, Eastern Lines, Montreal.

J. W. WANSBROUGH, heretofore chief dispatcher, Toronto, has been appointed Inspector of Transportation, Montreal, vice G. T. Rooke, transferred.

J. BARCLAY is acting Assistant General Storekeeper, Eastern Lines, during the absence of G. E. Hall, on active service in Europe. Office, Montreal.

E. J. MELROSE has been appointed acting Assistant Superintendent, District 1, Eastern Division, vice W. H. Stewart, Assistant Superintendent, loaned to the Imperial Munitions Board, Ottawa.

W. B. HOWARD, heretofore District Passenger Agent, St. John, N.B., has been appointed District Passenger Agent, Toronto, vice M. G. Murphy, transferred.

G. T. COLEMAN, heretofore Car Service and Fuel Agent, Moose Jaw, Sask., has been appointed Car Service Agent, Ontario Division, vice G. T. Rooke, transferred. Office, Toronto.

F. W. COOPER, A.M. Can. Soc. C.E., heretofore Superintendent, District 1, Eastern Division, Farnham, Que., has been appointed Superintendent, District 3, Lake Superior

February, 1916.]

Division, vice J. H. Boyle, transferred. Office, Schreiber, Ont.

G. A. WALTON, heretofore General Agent, Passenger Department, Chicago, Ill., has been appointed General Passenger Agent, Western Lines, with territory, Field, Kootenay Landing and easterly, vice A. C. Shaw, transferred to other duties at Montreal. Office, Winnipeg.

G. H. SMITH, heretofore Division Freight Agent, Manitoba Division, Winnipeg, has been appointed Assistant General Freight Agent, Western Lines. Office, Winnipeg.

H. H. TRIPP, formerly of Edmonton, Alta., has been appointed Resident Engineer, Winnipeg Terminals, vice S. C. Wilcox, who has been appointed a Lieutenant in the 100th Battalion, Winnipeg Grenadiers, for active service.

A. BROWN, heretofore Locomotive Foreman, Fort William, Ont., has been appointed District Master Mechanic, Winnipeg Terminals, vice A. Peers, transferred.

A. T. McKEAN, heretofore City Freight Agent, Winnipeg, has been appointed Division Freight Agent, Manitoba Division, vice J. H. Smith, promoted. Office, Winnipeg.

A. LEDINGHAM, heretofore Soliciting Freight Agent, Winnipeg, has been appointed City Freight Agent there, vice A. T. McKean, promoted.

W. J. RENNIE, heretofore chief clerk to Assistant Freight Traffic Manager, Western Lines, Winnipeg, has been appointed Soliciting Freight Agent there, vice A. Ledingham, promoted.

A. WALKER has been appointed chief clerk to Assistant Freight Traffic Manager, Western Lines, Winnipeg, vice W. J. Rennie, promoted.

T. FAWCETT, heretofore General Fuel Agent, Western Lines, Winnipeg, has been appointed Assistant General Storekeeper, Western Lines, Winnipeg.

J. M. FRYERS, heretofore Trainmaster, District 3, Saskatchewan Division, Saskatoon, has been appointed Trainmaster, District 3, Manitoba Division, vice J. A. Audrain, transferred. Office, Minnedosa.

J. A. AUDRAIN, heretofore Trainmaster, District 3, Manitoba Division, Minnedosa, has been appointed Trainmaster, District 3, Saskatchewan Division, vice J. M. Fryers, transferred. Office, Saskatoon, Sask.

A. PIERS has been appointed District Master Mechanic, District 2, Saskatchewan Division, vice J. Neill. Office, Moose Jaw.

J. M. MacARTHUR, heretofore Terminal Trainmaster, Calgary, Alta., has been appointed acting Superintendent, District 2, Alberta Division, vice F. Walker, who has been granted indefinite leave of absence owing to illness. Office, Calgary.

J. A. PANTER has been appointed acting Terminal Trainmaster, Calgary, Alta., vice J. M. MacArthur, promoted.

W. J. RENIX, heretofore District Master Mechanic, Calgary, Alta., has been appointed District Master Mechanic, District 1, British Columbia Division, vice L. Fisher, assigned to other duties. Office, Revelstoke.

M. K. WHYTE has been appointed Yardmaster, Revelstoke, B.C., vice T. Hope, enlisted for active service.

The position of Superintending Engineer, British Columbia Lake and River Service, Nelson, B.C., heretofore occupied by D. STEPHENS, has been abolished temporarily. He has been granted leave of absence for a short time, and will probably resume his former position as chief engineer (marine), Okanagan Lake service.

H. A. SPIERS, heretofore Fuel Agent, Vancouver, B.C., has been appointed Assistant Storekeeper there.

T. M. McKEOWN, heretofore Commissary Agent, Winnipeg, has been appointed Com-

missary Agent, Victoria, B.C., vice W. Bell, enlisted for overseas service.

L. R. HART, heretofore chief clerk, Passenger Department, New York, N.Y., has been appointed General Agent, Passenger Department, Buffalo, N.Y., covering New York State west of and including the Dela-

ware, Lackawanna and Western Ry. line from Binghamton to Oswego.

T. J. WALL, heretofore General Agent, Passenger Department, Minneapolis, Minn., has been appointed General Agent, Passen-

ger Department, Chicago, Ill., vice G. A. Walton, promoted.

R. S. ELWORTHY has been appointed General Agent, Passenger Department, Minneapolis, Minn., vice T. J. Wall, whose appointment as General Agent, Passenger Department, Chicago, Ill., was announced in our last issue.

F. L. NASON, heretofore City Ticket Agent, San Francisco, Cal., has been appointed General Agent, Passenger Department, there, vice G. M. Jackson, transferred to service of Canadian Pacific Ocean Services, Ltd.

A. G. ALBERTSEN, heretofore Travelling Passenger, San Francisco, Cal., has been appointed City Ticket Agent there, vice F. L. Nason, promoted.

F. J. VILLAIN has been appointed Travelling Passenger Agent, San Francisco, Cal., vice A. G. Albertsen, promoted.

Central Canada Ry. See Edmonton, Dunvegan & British Columbia Ry.

Duluth, South Shore and Atlantic Ry., Mineral Range Rd.—E. R. LEWIS, M.Am. Soc. C.E., Assistant to the General Manager, Duluth, Minn., has been given charge of all matters pertaining to engineering, maintenance of way and structures and federal valuation of these companies.

Eastern British Columbia Ry.—J. M. BOYES, heretofore Locomotive Foreman, C.P.R., Cranbrook, B.C., has been appointed Locomotive Foreman, E.B.C.R., Corbin, B.C., as reported in our last issue.

Edmonton, Dunvegan & British Columbia Ry.—N. F. JUDAH, heretofore in Comptroller's office, C.P.R., Montreal, has been appointed Auditor, E.D. & B.C.R., Alberta & Great Waterways Ry. and Central Canada Ry.

Grand Trunk Ry.—J. B. McLAREN, heretofore Auditor of Freight Accounts, has been appointed Auditor of Revenues in charge of Freight and Passenger Accounts, and his former position, together with that of Auditor of Passenger Accounts, hitherto held by G. B. Filgiano, have been abolished. Office, Montreal.

The position of Superintendent of Time Service, heretofore held by Professor C. H. McLeod, M.Can.Soc.C.E., has been abolished, and all matters pertaining to the time service are now under the jurisdiction of the Manager of Telegraphs, H. HULATT, Montreal, to whom all correspondence, reports, etc., are addressed.

W. McNAB, heretofore Principal Assistant Engineer, has been appointed Valuation Engineer. Office, Montreal.

A. CRUMPTON, heretofore Assistant Engineer, Montreal, has been appointed Assistant Valuation Engineer. Office, Montreal.

BARTON WHEELWRIGHT has been appointed acting Signal Engineer, vice R. F. Morkill, Signal Engineer, on active military service. Office, Montreal.

Grand Trunk Pacific Ry.—A. A. TISDALE, heretofore Superintendent, Regina Division, Regina, Sask., has been appointed Assistant to Vice President and General Manager, vice G. W. Caye, resigned to enter G.T.R. service. Office, Winnipeg.

E. McDONALD, heretofore District Baggage Agent, G.T.P.R. and Grand Trunk Pacific Coast Steamship Co., Winnipeg, has been appointed General Baggage Agent, vice J. E. Quick, who retains the position of General Baggage Agent, G.T.R., Toronto. The position of District Baggage Agent has been abolished. Office, Union Station, Winnipeg.

H. McCALL, Superintendent, Winnipeg, Man., to Watrous, Sask., and the Melville-Canora Branch, has had his jurisdiction extended to cover the Regina Division, hitherto

under the jurisdiction of A. A. Tisdale, promoted. Office, Melville, Sask.

J. BREWER, heretofore Chief Dispatcher, Regina, Sask., has been appointed Assistant Superintendent, there.

Intercolonial & Prince Edward Island Rys. F. O. CONDON, heretofore Resident Engineer, Intercolonial Ry., Campbellton, N.B., has been appointed Division Engineer, Districts 3 and 4, Intercolonial Ry., and Prince Edward Island Ry., vice A. R. Macgowan, promoted. Office, Moncton, N.B.

The jurisdiction of J. T. HALLISEY, Superintendent, Truro, N.S., has been extended over the Dartmouth-Deans Branch, which has been incorporated with District 3, as the Dartmouth Subdivision.

W. R. CONWAY has been appointed acting wharfinger at St. John, N.B., vice J. McMulklin, resigned.

R. A. BLACK, heretofore Resident Engineer, District 5, National Transcontinental Ry., Edmundston, N.B., has been appointed Resident Engineer, District 2, I.R.C., vice F. O. Condon. Office, Campbellton, N.B.

W. F. SMALLWOOD, heretofore locomotive driver, has been appointed Locomotive Foreman, temporarily, at Newcastle, N.B., a new position.

A. ASTLE, heretofore Roadmaster, Fredericton Subdivision, Fredericton, N.B., has been appointed Roadmaster, Newcastle, N.B. vice A. P. Giles, retired.

S. ALLANACH has been appointed acting Roadmaster, Fredericton Subdivision, Fredericton, N.B., vice A. Astle, transferred.

National Transcontinental Ry.—J. F. FLYNN has been appointed Roadmaster from mileage 63.4, Grant Subdivision, to mileage 132.4, Armstrong Subdivision, vice J. R. Logan. Office, Armstrong, Ont.

H. S. CLARKE has been appointed Resident Engineer, District 5, vice R. A. Black, transferred to I.R.C. service. Office, Edmundston, N.B.

J. REEVES has been transferred from the Transcona repair yard to Redditt, Ont., vice W. Jones.

W. MILLS has been appointed Car Foreman in charge of all work at Transcona yards, Transcona, Man.

W. JONES, heretofore at Redditt, Ont., has been appointed Assistant Foreman in charge of freight car repair yard, Transcona, Man.

New York Central Rd., West Shore Rd.—

W. R. B. BARNET, Assistant General Passenger Agent, lines east of Buffalo, N.Y., having resigned to engage in other business, the following have been appointed:—C. C. HOWARD, Assistant General Passenger Agent, Grand Central Terminal, New York; W. V. LIFSEY, Assistant General Passenger Agent, 1216 Broadway, New York; H. PARRY, Assistant General Passenger Agent, Buffalo, N.Y.

Pere Marquette Rd.—R. C. VANDERCOOK has been appointed Manager of Public Relations Department, Detroit, Mich.

JOHN DUNPHY has been appointed Assistant General Passenger Agent, Detroit, Mich.

Prince Edward Island Ry.—See Intercolonial Ry.

St. John and Quebec Ry.—F. W. SUMNER, Moncton, N.B., is reported to have been elected President, vice I. R. Todd, resigned.

Toronto, Hamilton & Buffalo Ry.—A. E. LOCK, heretofore Car Accountant, has been appointed Superintendent of Car Service. Office, Hamilton, Ont.

Wabash Ry.—J. D. McNAMARA, heretofore General Passenger Agent, has been appointed Passenger Traffic Manager. Office, Railway Exchange Bldg., St. Louis, Mo.

British Columbia Freight Rates and Interswitching Charges.

With the advent of the Canadian Northern Ry. as a transcontinental line, through the recent opening of the Canadian Northern Pacific Ry., a new freight traffic situation has been created in Vancouver. As the new line reaches the Pacific Coast via Edmonton, a considerable stretch of territory is brought much nearer Vancouver by the C.N.R. lines, than it is by the Canadian Pacific, and some portions of the territory in Alberta and Saskatchewan, which heretofore have been regarded as being within the area of trade for eastern wholesalers, are brought within that of the Pacific Coast. The freight rates on the Canadian Northern Pacific, are under the control of the British Columbia Government, that being part of the contract under which that Government guaranteed the bonds for the construction of the line. Part of the area covered by the Canadian Northern lines, in Alberta and Saskatchewan, affected by the present so called "rate war," is served by

while the C.P.R. states that it is not called upon to do any of these services for the Canadian Northern, that it can fix its own charges as against a railway whose rates are fixed by the Provincial Government, and that the Provincial Government cannot exercise any control over its rates. When the Canadian Northern appealed to the Dominion Government in 1914 for aid, the question of the Dominion control of freight rates was raised, but owing to protests made by the three Provinces interested a section of the act provides that the Canadian Northern Pacific Ry., the Canadian Northern Western Ry., and the Canadian Northern Saskatchewan Ry., may be brought under the control of the Board of Railway Commissioners, so far as freight rates are concerned, by proclamation of the Governor General, after the completion of the lines. It is said in Vancouver trade circles that steps are being taken to have the Dominion control extended over the lines in question.

Canadian Northern officers in Winnipeg are reported to have stated, on Jan. 5, that most of the freight shipped in and out of Vancouver over their line is not competitive, and the extra charges for interswitching charged by the C.P.R. really hit the manufacturer and the wholesaler. On competitive traffic the Canadian Northern has absorbed the cost of teaming freight between warehouses of shippers and consignees and its freight terminals for its own protection.

White Pass and Yukon Railway Company's Annual Meeting.

At the annual meeting in London, Eng., Dec. 6. C. C. Macrae, Chairman of the company, in moving the adoption of the report for the year, stated that all their anticipations as to the beneficial results which they were led to believe would follow the purchase of the Northern Navigation and Northern Commercial companies were entirely upset by the war, with the result that they had to go to the debenture holders and ask their forbearance and their consent to the funding of their coupons for the past year. He pointed out that there was an item on the credit side of the profit and loss account, for interest on securities of local companies, mentioned as paid and accrued, but they had recently become acquainted with the fact that none of this amount had been paid, and this had brought about a situation of the utmost possible difficulty, and they were compelled to go to the debenture holders again, but up to the time of his speaking they had not been able to arrive at what might be called a formulated proposal to submit. He disclaimed responsibility for the state of things as shown by the statement, and offered to resign from the chairmanship if thought desirable. The report was adopted without discussion.

Canadian Wheat at Duluth.—A Duluth, Minn., press dispatch, Jan. 13.—"Canadian wheat is arriving in Duluth at the rate of about 50 cars daily. With the elevators at the Canadian head of the lakes congested, Duluth is the only outlet. The elevators here were completely emptied at the close of navigation and are in good shape to care for the Canadian wheat, despite heavy United States receipts. Some all rail shipments from Duluth to the east are being made, but the influx of Canadian wheat has had the effect of making vessel rates for spring very firm. Offers of 4¼c from Duluth to Buffalo for spring tonnage have been refused here. There is said to be some tonnage on the market here at 5c."

453
C. H. Towle,
Assistant Superintendent, District 1, Atlantic
Division, Canadian Pacific Railway.

the Canadian Northern Western Ry., and the Canadian Northern Saskatchewan Ry., the freight rates on which lines are under the control of the Alberta and Saskatchewan Governments respectively, under the terms of the bond guarantee agreements. The freight rates from the territory served by these lines, owing to the shorter mileage to Vancouver, are lower than those of the C.P.R., but inasmuch as the Canadian Northern is at present without terminal facilities, industrial spurs, etc., in Vancouver, it is dependent upon the C.P.R. for the distribution of its freight there, and the switching of cars from factories, etc., for which services the C.P.R. makes its charge. The C.P.R. routes for freight, interswitching, etc., are subject to the control of the Board of Railway Commissioners, and the tariffs at present in effect have been so approved. The Canadian Northern alleges that the C.P.R. is charging it much higher rates for switching than the tariff calls for.

Orders by the Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which they were drawn.

24552. Dec. 9.—Approving agreement between Bell Telephone Co. and La Cie. de Telephone de Contrecoeur, Nov. 30.

24553. Dec. 9.—Amending order 24455, Nov. 18, re street extension across C.P.R. at Keddlestone, Sask.

24554. Dec. 11.—Authorizing Montreal & Southern Counties Ry. to open for traffic between St. Cesaire and Abbotsford, Que., 6.83 miles.

24555. Dec. 15.—Amending order 24511, Dec. 1, re Canadian Northern Ry. highway crossing at St. Joseph Street, La Tuque, Que.

24556. Dec. 16.—Authorizing London Railway Commission to build one track of London & Port Stanley Ry. across Nelson St., and five tracks across Phillip St., London, Ont.

24557. Dec. 16.—Rescinding order 3506, July 19, 1907, re C.P.R. branch from Southwestern and Pembina Mountain Branch, Winnipeg.

24558. Dec. 16.—Authorizing Canadian Northern Ry. to build highway crossing over its track between Secs. 22 and 27-46-22, w.2.m., Sask.

24559. Dec. 17.—Authorizing G.T.R. to build two spurs in Berlin, Ont.

24560. Dec. 17.—Approving location and details of Algoma Eastern Ry. station building at Creighton, Ont.

24561. Dec. 11.—Authorizing C.P.R. to build siding for City of Outremont, Que.

24562. Dec. 15.—Authorizing Saskatchewan Highway Commission to build highway over Canadian Northern Ry. at Main St., Buchanan.

24563. Dec. 14.—Extending for 30 days from date time within which C.P.R. shall install gates at Talbot Ave., Winnipeg.

24564. Dec. 13.—Authorizing C.P.R. to build siding for Corrugated Paper Co., North Toronto, and rescinding order 24308, Oct. 9.

24565. Dec. 13.—Authorizing Canadian Northern Ontario Ry. to build spur for Godson Contracting Co., Pickering Tp., Ont.

24566. Dec. 13.—Ordering G.T.R. to install gates at highway immediately west of Lorne Park station, Ont., by June 1, 1916.

24567. Dec. 14.—Ordering that the speed of Elgin & Havelock Ry. trains operated over three bridges north of Petitcodiac, N.B., be limited to 8 miles an hour, pending laying of 8 x 8 ins. x 12 ft. ties, when guard rails shall be installed; ties and guard rails to be laid by May 1, 1916; crossing signs to be erected at all highways on line by Dec. 31.

24568. Dec. 11.—Authorizing Montreal & Southern Counties Ry. and C.P.R. to operate over crossings on Lot 34, St. Hyacinthe to Farnham, Que., without first stopping.

24569. Dec. 18.—Dismissing complaint of City Transfer Co., Edmonton, Alta., re breaches of contract with Canadian Northern Ry., Feb. 1, 1911.

24570. Dec. 14.—Approving revised location of Grand Trunk Pacific Branch Lines Co.'s Battleford Branch in Secs. 10, 15, and 22-38-16, w.3.m., Sask.

24571. Dec. 11.—Authorizing Montreal & Southern Counties Ry. to use certain bridges.

24572. Dec. 15.—Authorizing C.P.R. to build siding for Fraser, Ltd., Victoria, N.B.

24573, 24574. Dec. 10.—Approving Bell Telephone Co.'s agreement with Camden Independent Telephone Co., Nov. 30, and Urban & Rural Telephone Co., Dec. 1.

24575. Dec. 20.—Extending to June 30, 1916, time within which Canadian Northern Ry. shall equip its cabooses with air brakes, subject to condition that cabooses already so equipped be kept in service as much as possible.

24576. Dec. 20.—Authorizing C.P.R. to build extension to siding for Pembroke Shook Mills Ltd., at mileage 106.5, Chalk River Subdivision.

24577. Dec. 18.—Authorizing Niagara, St. Catharines & Toronto Ry. to operate spur 1,062 ft., from its Queenston St. line down Phelps St., St. Catharines.

24578. Dec. 20.—Authorizing Canadian Northern Ry. to cross road between Secs. 9 and 8-18-22, w.1.m., Man.

24579. Dec. 20.—Authorizing St. Lawrence & Adirondack Ry. to build spur for Castings Co. of Canada, Ltd., Valleyfield, Que.

24580. Dec. 18.—Ordering C.P.R. to fence right of way on its Sirdar Subdivision, B.C., from mileage 75.45 to 77, to be completed by May 15, 1916.

24581. Dec. 17.—Authorizing C.P.R. to divert road across its Outlook Subdivision, mileage 48.4, Sask.

24582. Dec. 18.—Extending to May 15, 1916, time within which Grand Trunk Pacific Ry. shall fence its ballast pit, on its Regina-Boundary Branch.

24583. Dec. 21.—Authorizing Canadian Northern Ontario Ry. to build bridge in E. ½ Lot 11, Con. 14, Orillia Tp., to carry Trent Canal across its track.

24584. Dec. 20.—Authorizing Canadian Northern Ry. to build spur for Winnipeg Supply & Fuel Co., Ltd., Winnipeg.

24585. Dec. 22.—Authorizing Dominion Atlantic Ry. to open for traffic its revised location from east side of Sissiboo River, near Weymouth, N.S., to west side of river, 2,241 ft.

24586. Dec. 18.—Authorizing Canadian Northern Alberta Ry. to build Brule Lake spur through Secs. 3, 10, 14 and 15-50-27, w.5.m., Alta., crossing two unopened road allowances.

24587. Dec. 22.—Authorizing G.T.R. to build siding for Cleveland Sarnia Saw Mills Co., Sarnia, Ont.

24588. Dec. 22.—Disallowing certain notices of revocation of general notices of concurrence in joint freight rates, and certain schedules purporting to withdraw and cancel the joint rates to which they refer. This order is given fully on another page.

24589. Dec. 22.—Authorizing Dominion Atlantic Ry. to open for traffic portion of revised location from near Chestnut St., Avon, N.S., to the Avon River, 3,250 ft.

24590. Dec. 22.—Authorizing Canadian Bank of Commerce, Red Deer Branch, to pay to Calgary & Edmonton Ry., \$1,277 of the \$1,400 deposited to Board's credit, and pay the remainder, with accrued interest, if any, to Saskatchewan Land & Homestead Co.

24591. Dec. 22.—Authorizing G.T.R. to rebuild bridge carrying Main St., Watford, Ont. across its tracks.

24592. Dec. 20.—Ordering Canadian Northern Ry. to do certain work at highway between Secs. 28 and 29-30-18, w. 4 m., Mecheche, Alta.

24593. Dec. 23.—Approving details of Vancouver, Victoria & Eastern Ry. and Navigation Co.'s station and facilities in Vancouver, B.C.

24594. Dec. 22.—Approving agreement between Bell Telephone Co. and Consolidated Telephone Co., Dec. 10.

24595. Dec. 22.—Recommending to Governor in Council for sanction, traffic agreement between the Essex Terminal Ry. and C.P.R.

24596. Dec. 23.—Approving Lake Erie & Northern Ry. bylaw authorizing Martin N. Todd, General Manager, and C. J. Whitney, Freight and Passenger Agent, to prepare and issue tariffs of tolls.

24597. Dec. 23.—Ordering G.T.R. by June 1, 1916, to install improved type of automatic bell at crossing of Chatham Road, Thamesville, Ont.

24598. Dec. 22.—Authorizing St. Joseph de Deschambault Parish, Que., to build highway crossing over C.P.R. near mileage 119.1, Quebec Subdivision, and to close existing crossing.

24599. Dec. 23.—Authorizing Canadian Northern Ry., C.P.R., and Great Northern Ry., to operate over C.N.R. and C.P.R. near Emerson Station, Man., at speed not exceeding 15 miles an hour.

24600, 24601. Dec. 28, 27.—Approving Lake Erie & Northern Ry. Standard Freight Tariff C.R.C. 1; and Standard Passenger Tariff, C.R.C. 1, the latter applying rate of 2½¢ a mile.

24602. Dec. 27.—Ordering Canadian Northern Ontario Ry. and C.P.R. to arrange operation of switches and signals at Belleville, Ont.

24603. Dec. 24.—Approving clearances between C.P.R. siding and buildings of Salmon Arm Farmers' Exchange at Salmon Arm, B.C.

24604. Dec. 24.—Authorizing G.T.R. to connect two siding tracks with spur owned by St. Davids Sand Co., near St. Davids, Ont.; and approving layout of automatic signals there.

24605. Dec. 27.—Amending order 23857, June 14, re crossing of Canadian Northern Quebec Ry., St. Joseph de Deschambault Parish.

24606. Dec. 28.—Authorizing Canadian Northern Ry. to build spur on W. ½ Sec. 12-30-15, Rosetown, Sask.

24607. Dec. 27.—Ordering C.P.R. to build siding for J. H. Theoret, St. Eustache Parish, Que.

24608. Dec. 27.—Relieving G.T.R. from providing further protection at first crossing south of St. Isidore Jct., Que.

24609. Dec. 28.—Authorizing Essex Terminal Ry. to build second main track across Dougall Road, Sandwich West Tp., Ont.

24610. Dec. 27.—Ordering Grand Trunk Pacific Branch Lines Co. to appoint station agent at Coleville, Sask.

24611. Dec. 28.—Authorizing C.P.R. to build spur at mileage 4.34, Quebec Subdivision, connecting with Laurin & Leich's siding.

24612. Dec. 28.—Extending for 3 months from Dec. 31, time within which C.P.R. may carry traffic over its Stirling East Branch, mileage 49.2 to 74.5, Alta.

24613. Dec. 29.—Authorizing St. Placide, and St. Benoit parishes, Que., to build shelter and platform on Canadian Northern Ry. at Coutte Double, Que., according to C.N.R. standard station plan 3.

24614. Dec. 28.—Ordering Toronto, Hamilton & Buffalo Ry. to build new bridge carrying King St., Hamilton, over its tracks; bridge to be same width as McKettrick Bridge, and designed to accommodate double line of street cars, and loads of same capacity as McKettrick Bridge; 30% of cost to be paid by City, and balance by T.H. & B.R.

24615. Dec. 29.—Ordering C.P.R., pending further order, to maintain present train service between Kingston and Renfrew, Ont.

24616. Dec. 31.—Approving location and detail plans, Oct. 1, and station building sheets 1 and 2, of 7, showing Canadian Northern Ontario Ry. station building at Napanee.

24617. Dec. 30.—Ordering G.T.R. to build highway between Cons. 8 and 9, Cumberland Tp., Ont., and remove bushes to give view of approaching trains 100 ft. from crossing, and half mile along railway on both sides of crossing; work to be completed by May 31, 1916.

24618. Dec. 28.—Authorizing G.T.R. to build spur for Canadian Fairbanks Morse Co., Toronto.

24619. Jan. 3, 1916.—Amending orders 18946 and 24590, Mar. 20, 1913, and Dec. 22, 1915, re Calgary & Edmonton Ry. spurs for Saskatchewan Land and Homestead Co.

24620. Jan. 3.—Authorizing C.P.R. to build siding and grain loading platform on S.W. ¼ Sec. 22, at Navarre, Alta.

24621. Jan. 3.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to build across 9 highways.

24622 to 24625. Jan. 3, 4.—Approving Bell Telephone Co. agreement with four telephone companies in Ontario.

24626. Jan. 5.—Approving Montreal & Southern Counties Ry. standard freight mileage tariff, C.R.C. 5, cancelling C.R.C. 1, effective Jan. 15, and rescinding order 21566, Apr. 1, 1914.

24627. Jan. 7.—Authorizing City of Winnipeg to complete work at Bell Ave., according to plans approved by Board in connection with grade separation at north approach to Norwood Bridge, and place in good condition for traffic outlet from Bell Ave. north of Main St., as well as south to bridge; cost of additional work apportioned as follows: 20% out of railway grade crossing fund; 30% of remainder each by Canadian Northern Ry., City of Winnipeg and City of St. Boniface, and 100% by Winnipeg Electric Ry.

24628. Jan. 10.—Suspending, pending hearing by Board, Dominion Ex. Co. Supplement 11 to C.R.C. 4418, and Supplement 8 to C.R.C. 4437; Canadian Ex. Co. tariffs C.R.C. 1683, 1684, 1685 and 1686, and Supplement 2 to C.R.C. 1622; and Canadian Northern Ex. Co. Supplement 1 to C.R.C. 835 and Supplement 1 to C.R.C. 1527, effective Jan. 15.

24629. Jan. 7.—Authorizing London Railway Commission to cross at grade London St. Ry. with London & Port Stanley Ry. at corner of Richmond and Bathurst Sts., London, Ont.

24630. Jan. 7.—Approving plans dated Aug. 24, 1915, showing revised location of Lake Erie and Northern Ry. yards and station, mileage 36.75, at Watford, Ont., and rescinding order 24024, July 23, 1915.

24631. Jan. 10.—Extending for 1 year from Dec. 31, 1915, order 12723, Dec. 6, 1910, re Canadian Northern Ontario Ry. crossing of Hurdman's Road, Nepean Tp.

24632. Jan. 10.—Extending to Apr. 1st, time within which C.P.R. shall install gates at Symington Ave., Toronto, crossing to be protected by day and night watchmen, wages paid half each by C.P.R. and the City, and reserving question of C.P.R. indemnifying city against damages during extension.

24633. Jan. 10.—Ordering G.T.R. within 90 days to install automatic bell at second crossing east of Baden station, Ont., 20% of cost of installing to be paid out of railway grade crossing fund.

24634. Jan. 10.—Authorizing G.T.R. to build extensions to two spurs for H. Corby Distillery Co., Corbyville, Ont.

24635. Jan. 10.—Authorizing C.P.R. to build spur for Nicholson & Bain, Calgary, Alta.

The Interstate Commerce Commission, in its annual report issued recently, says that the variety and volume of the work already laid upon it make necessary an early enlargement of its membership and legal authority to take final action through subdivisions of its membership, of course under the general authority of the commission as a whole. Bills to effect this have already been introduced in Congress.

Passenger Rate Meetings at Buffalo.

The Niagara Frontier Summer Rate Committee and the Great Lakes & St. Lawrence River Rate Committee met at Buffalo in January. The rate representatives met on Jan. 4 and 5 for compilation of fares, etc., and the annual meetings of the two committees were held on Jan. 6, the proceedings consisting of the usual routine. C. C. Howard, A.G.A., New York Central Rd., New York, was elected Chairman of the Niagara Frontier Summer Rate Committee for this year, and L. G. Lewis, G.P. & T.A., Detroit & Cleveland Navigation Co., Detroit, Mich., was elected Chairman of the Great Lakes & St. Lawrence River Rate Committee. Jas. Morrison, A.G.P.A., Eastern Lines, Canadian Northern Ry., Montreal, is permanent Secretary of both committees.

R. L. Fairbairn, G.P.A., Eastern Lines, Canadian Northern Ry., Toronto, retiring Chairman of the Niagara Frontier Summer Rate Committee, was presented with a gavel, the head of which is a piece of one of the break-up timbers used in constructing the Mount Royal tunnel, Montreal. Embedded in the head of the gavel at both ends are pieces of the drill which first punched a hole through the tunnel, connecting the two sections which had been worked from opposite sides of the mountain. The handle is a piece of mahogany from the C.N.R.'s sleeping car Brockville, which made its first trip on the train inaugurating the C.N.R.'s through Toronto-Winnipeg service on Nov. 1 and on which car Mr. Fairbairn travelled.

The International Water Lines Passenger Association held its meeting Jan. 5, the chair being taken by the Vice President, F. B. Hibbard, G.P.A., Hudson River Day Line, New York, in the absence of the President, W. P. Hinton, T.M., Grand Trunk Pacific Ry. A gavel for the retiring President was presented, made from cabin fittings of the C.P.R. steamship Princess Margaret, which was built in Scotland in 1914 for service on the British Columbia coast and Puget Sound but was taken over by the British Government on completion.

The question of the redemption of passage tickets, or unused portions of them, on which berth reservations were made, was discussed and it was decided that it was largely a matter for the interested lines to agree upon among themselves. After the meeting a number of interested lines agreed that the following rule be placed in effect and tried during this year, viz.:—"That a charge (amount left to each line) be made on all reservations not released at least 48 hours in advance of sailing and which were not resold."

The question of a terminal charge of 10c. to be made in checking baggage, to be in no way connected with the charge for transportation, the additional expense incurred by the passenger to be covered by the acceptance of unlimited liability by the carrier, and also the proposal that the practice

of placing prepaid orders by telegram or telephone be discontinued, were removed from the docket, as it appeared that they had not been placed in effect by other territorial associations or individual railway lines.

It was decided to prohibit the use of imitation passage tickets, or the use of anything having semblance thereto, for advertising, theatrical, school or similar purposes foreign to legitimate use of regular tickets.

It was reported that advice had been received from the Commissioner of Internal Revenue, Washington, D.C., that the War Revenue Tax Law enacted Dec. 17, 1915, is continued in full force and effect up to Dec. 31, 1916.

It was decided that reservations for out of town people, not ticket agents, should be accompanied by deposit.

The following officers were elected for this year:—President, F. B. Hibbard, G.P.A., Hudson River Day Line, New York; Vice President, E. W. Holton, G.P.A., Northern Navigation Co., Sarnia, Ont.; Executive Committee, W. F. Wasley, Muskoka Lakes Navigation and Hotel Co., Gravenhurst, Ont.; J. Berolzheimer, Chicago, Duluth and Georgian Bay Transit Co., Chicago, Ill.; P. Robbins, Goodrich Transit Co., Chicago, Ill. The permanent Secretary is M. R. Nelson, Northern Steamship Co., New York, who was elected in 1910.

It was decided to hold the next meetings of the three associations at Quebec, Que., in Jan., 1917.

Official Freight Classification Ratings in United States.

The Interstate Commerce Commission gave a decision at Washington, D.C., Dec. 14, 1915, which is summarized as follows:

Upon consideration of objections to proposed changes in classification ratings on certain commodities named in supplement 9 to official classification 42, and certain other tariffs, and of the facts, circumstances, and conditions shown of record in relation thereto; held:

Proposed higher ratings on beer, beer tonic, ale, and porter in carloads and less than carloads; on nonalcoholic beverages in carloads and less than carloads; on tobacco cuttings or scraps and tobacco siftings or sweepings in less than carloads; on plug or twist tobacco in carloads and less than carloads; on grain and grain products in less than carloads; on animal, poultry, and pigeon feed, not medicated, in less than carloads; and on rags, waste paper, and other paper makers' fibres in less than carloads, not justified.

Proposed higher ratings on beer barrels and certain other cooperage, both new and old, in carloads and less than carloads; and on old bottles in carloads and less than carloads, and old bottle carriers in carloads, justified.

Proposed establishment of carload and less-than-carload ratings on leaf tobacco in

lieu of any-quantity rating not justified.

Proposed increased estimated weights of flour in barrels and half barrels justified.

Michigan Central Railroad and London and Port Stanley Railway Traffic Arrangements.

The agreement made between the Michigan Central Rd. and the London and Port Stanley Ry. respecting the former's entrance into London, Ont., is dated Dec. 23, 1915. Under its terms the M.C.R. tracks on its terminal property in London, purchased lately from the London and South Eastern Ry. Co., but formerly leased, are to be electrified, and certain connecting tracks at St. Thomas are to be built and electrified for the purpose of facilitating the exchange of traffic at these points. The commissioners operating the L. and P.S.R. will haul between St. Thomas and London all carload freight coming from or going to the M.C.R. at London by its electric locomotives at the following rates: In trainloads of not less than 12 cars, \$3 per loaded car and \$2 per empty car; in trainloads of less than 12 cars, \$4 for each car, and \$5 if the movement is of a single car, provided that if the M.C.R. has ready and placed for movement at one time more than 12 cars the rate shall be \$3 per loaded car and \$2 per empty car. The minimum payment in any calendar year for the hauling of freight cars shall be \$25,000. All passenger traffic between London and St. Thomas is to be handled by the commission and through tickets are to be sold. The agreement is to run for 21 years, which term is to be extended to 30 years if the necessary legislation is obtained. The rates for the services performed by the commission are subject to revision at the end of each five years.

We are officially advised that the commission's staff has started work on the electrification of the M.C.R. yards at St. Thomas and London, and on the connections with the L. and P.S.R.

A St. Thomas press report, Jan. 11, states that the city council there is withholding its sanction to the laying of electrified sidings between the L. and P.S. Ry., and the M. C. Rd., on the ground of the increased danger to traffic. Sir Adam Beck, Chairman, London Railway Commission, who attended the council meeting to support the application, stated that the Board of Railway Commissioners would be asked to authorize the making of the crossings.

Canadian Pacific Ry. President's Greetings.—Sir Thos. G. Shaughnessy telegraphed from Montreal, Dec. 31, to all officers and employees: "You have my very best wishes for the new year." Among the replies received was the following:—"Greetings to yourself and family from the snow shovellers at the Chateau Lake Louise, the highest residential point in Canada. May your happiness be as great as we are high."

Grain of the 1915 Crop Moved from the Prairie Provinces by the Railways.

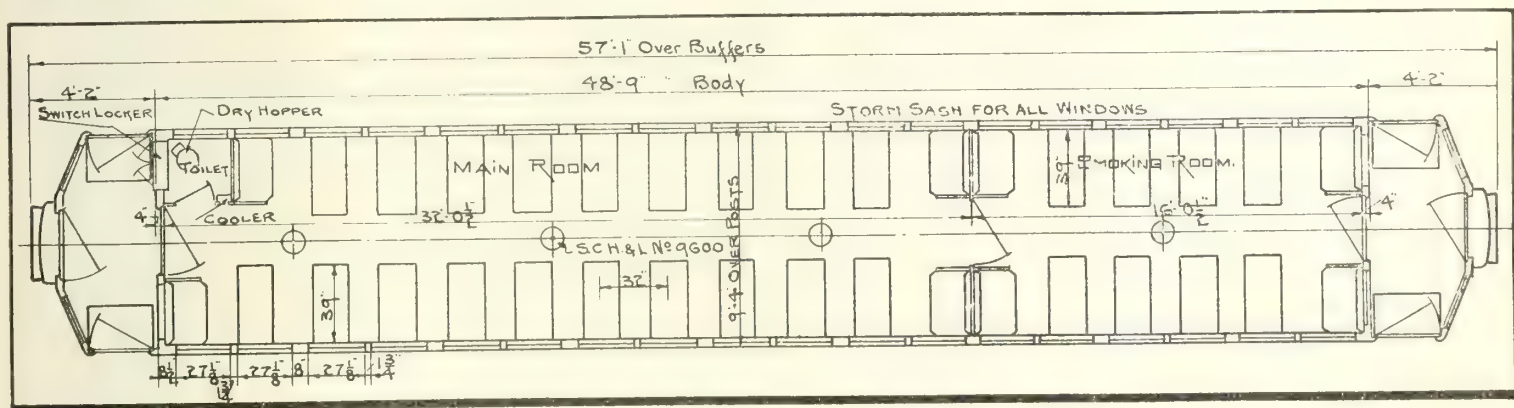

For the following statement showing the number of cars and quantities in bushels of each kind of grain carried by the different railways from Sept. 1, 1915, to Jan. 7, 1916, we are indebted to the Trade and Commerce Department.

RAILWAY	WHEAT		OATS		BARLEY		FLAX		RYE		SCREENINGS		TOTALS

Width between window posts ...	2 ft.	3¾ ins.
Width of aisle	2 ft.	1 ins.

trailer cars to motor car service by simply installing the necessary wiring and equipment. The upper glass portion of vestibule side doors is movable, and the doors themselves are set out nearly flush with the side of the car. All vestibule sash are stationary and glazed with $\frac{1}{4}$ in. thick polished plate glass. Trap doors are located as shown on floor plan and actuated by coil spring balances connected to a system of levers. The vestibule side doors are arranged to open behind the trap door, the latter being provided with a suitable gray iron attached to its lower surface and forming a means of support for passengers entering the car. The vestibule steps are provided with steel sides, wooden treads and composition tread plates. Vestibule floor is formed from two layers of 13-16 in. x $3\frac{1}{2}$ in. face, tongued and grooved Georgia pine, with a layer of felt paper placed between. A motorman's mirror is installed at diagonal corners on vestibule corner post, and suitable marker lamp brackets, are let in flush with face of post at all four corners of car.

Floor Plan, Lake Erie and Northern Railway Cars.

The interior finish is carried out as follows:—Vestibule, plain mahogany; main room, plain mahogany, with inlay stripes; smoking room, plain quartered oak; ceiling, three-ply poplar veneer. A modified type of beam ceiling finish is developed for the main

room top deck in conjunction with the usual style of lower deck.

Window curtains are of pantasote, pattern silk 4-2, color 77, mounted on 1 in. diameter all-metal rollers and fitted at the bottom with spring-pinch fixtures. Sash locks are of polished bronze. All of the cars, both passenger and trailer, are provided with 27 low back walkover seats and eight stationary seats at bulkhead and end finish, all are upholstered in pantasote and each of the walkover seats is fitted with the usual corner hand grab.

The cars are wired for lights, trolley heaters, headlights and air brake equipment, same being executed in steel conduit, with the usual outlets and junction boxes. The lighting fixtures are as follows:—3 Safety Car Heating & Lighting Co.'s no. 9600, 3 lamps per fixture, main room; 1 Safety Car Heating & Lighting Co.'s no. 9600, 3 lamps per fixture, smoking room. Supplementing the above, a number of Crouse-Hinds type J.R.R.H. hoods, with Crouse-Hinds pendants no. 8294, and shade mounted type J.R.R. condulet body are located along the deck sill. Each vestibule is provided with one Crouse-Hinds 3 light vestibule lamp equipment, consisting of type K.R.Y.A. reflector holder, S.H. 25 reflector and norbitt receptacle C-227. Furthermore, there are four bracket lamps on each side of main room, two each side of smoking room and one in the lavatory. Lighting control in vestibules is carried out by the use of a two-way switch so that the fixtures can be thrown on and off alternately. The line voltage is nominally 1,500 volts d.c., and as shown above there are 12 body centre lamps, 4 fixtures 3 lamps each, in conjunction with 3 vestibule lamps, or a total of 15 lamps per circuit, which allows 100 volts per lamp on a series basis. Consolidated Car Heating Co.'s electric heaters are used as follows:—26 no. 392 T for body, and 2 no. B. 4722 F. control switch no. 313 (three position).

Each vestibule is furnished with a polished bronze conductor's signal bell, having operating cord attached. Each seat is fitted with an annunciator push button, wiring for same being provided with a cut-out switch. Eight basket racks are installed in main room, and two in smoking room. Emergency tools, consisting of axe, saw and sledge are placed in body, accessible for immediate use. Coat and hat hooks are located at each wide pier in body of car. Motorman's steps are secured to body corner post on diagonal corners of car, also grab handles at each door opening as required.

The painting throughout was provided for in the following manner:—Steel work, one coat of red lead; bottom framing and underside of flooring, one coat of red oxide; top of flooring, two coats of paint and oil; exterior of body, builders' standard formula Fullman new body color; lettering and numbering, gold leaf; interior, finished natural (no shellac used), rubbed down to a dull finish; ceilings, gloss finish.

The cars have been built by the Preston Car & Coach Co., Ltd., Preston, Ont.

The Canadian Westinghouse Co. has supplied six 1,500-volt quadruple car equipments, equipment for two trailer cars, and new universal air brakes for both motor and trailer cars. Each of the six 1,500-volt motor car equipments will consist of four 85 h.p. ventilated type motors and AB unit switch type of control. Ordinary wheel trolleys will be used at first at least, but the cars are so arranged that pantagraph trolleys can be installed in place of the wheel trolleys, or as auxiliaries. The trailers will be equipped with control apparatus, so that a train may be operated from any platform without switching the cars.

The trucks weigh 12,800 lbs. each, or a total of 25,600 lbs. per car. The air brake equipment weighs 2,800 lbs., including the compressor. The electrical equipment in-

cluding control and wiring, weighs 17,000 lbs., and the bodies complete weigh 34,725 lbs., which gives a total car weight without passengers of 80,125 lbs.

St. Clair Tunnel Electrification Operating Data.

The Grand Trunk Ry. tunnel under the St. Clair River between Sarnia, Ont., and Port Huron, Mich., was electrified in 1908. The electrification was fully described in Canadian Railway and Marine World, Dec., 1908.

The system is single phase, 3,300 volts, six 66 ton Westinghouse locomotives being used. Two coupled together haul 1,000 ton trains up the 2% grades encountered in the tunnel at 10 m.p.h. Electric operation has made it possible to handle fully one third more trains than was possible with steam operation, and has eliminated danger from gas.

Through Walter D. Hall, Superintendent of the tunnel, information regarding the results of six years of electrical operation of the tunnel has been made available. He states that the steam locomotive men who, after a few weeks of training, were put in charge of the locomotives are still operating them and, with two exceptions the same firemen, now called assistants, are with them. Not a passenger or member of the yard crew has been injured by electric shock and but two casualties have occurred to workmen in the electric bay of the shops.

The average cost per year for maintenance of the six electric locomotives has been \$11,131 as compared with \$21,173 for the four steam locomotives which they replaced. The average cost per car handled through the tunnel, a distance of about 5 miles, was 17.22c. compared with 26.64c. with steam locomotives, although the capacity of cars handled today is much greater than that of the cars of 1907 and 1908. The electric locomotives are available for service about 90% of the time. The total yearly locomotive mileage for the six units averaged 208,810, or 34,800 per unit.

The commutators make from 60,000 to 99,480 miles between turnings and the brush mileage is from 40,000 to 60,000. The pinion mileage is from 64,000 to 118,000, and none of the gears have worn out in 254,000 miles of service.

Formerly the greatest mechanical expense was due to flange wear, the average mileage between tire turnings being 25,000. Since the installation of electro-pneumatic flange oilers, the invention of Mr. Hall, some tires have already made 184,000 miles since last turning, and are still in service. Tires which formerly made 12,000 miles now reach 83,000 between turnings.

The few train delays which have occurred were due mostly to insulator failures or flashovers caused by the steam locomotive exhaust. At first some short circuits were caused by birds which alighted on the arcing tips of lightning arresters, but this cause of trouble was removed by installing porcelain perches over the arcing tips. Such strain and special insulator failures as occurred were apparently due to expansion under the effect of temperature changes. Strain insulator trouble has been overcome by the use of fibre "shrouds" which protect from rain and steam locomotive gases. The tunnel insulator design was also improved by increasing the amount of insulation between wire and ground and making broken insulators more readily replaceable. A steel contact wire was also placed below the copper wire to reduce the rate of wear.

The wood section breakers gave some trouble due to warping. These have been removed and an overlapping arrangement of the contact wires has been substituted.

The wire hangers of ¼ in. pipe proved satisfactory except where subjected to steam locomotive gases in the yard. In such places ½ in. x 1 in. galvanized or sherardized steel band has been used when hangers needed replacing. A special hanger or universal trolley wire clamp was devised by Mr. Hall for use in supporting the iron contact wire. This consists of two grooved plates, held together by one carriage bolt with provision for attaching a band iron hanger by means of which the clamp with attached wires can be supported from messenger wire or insulator.

The average cost of maintenance per mile per year of the 12 miles of overhead construction and rail bonding was \$127 for labor and \$72 for materials and tools. The saving in the cost of track maintenance in the tunnel is estimated at \$1,500 a year.

The cost of fuel for the steam locomotives was \$42,729 a year, while that for the electric locomotives was \$17,186, with the electric locomotives handling a greater tonnage. While slack coal is used in the power plant in place of the hard coal formerly used on the locomotives, fewer tons of the former are consumed. The energy cost given also includes energy supplied for operating pumps, for tunnel, terminal, yard and engine house lighting and for crane and other motors. The average watt-hours per ton mile at the generator busbars were 37.6.

An interesting indicating device has been installed in the boiler room to supplement the automatic device used to adjust the rate of fuel consumption to the load. The latter consists of a diaphragm valve in the fan engine line, which controls both the fan speed and the engine speed through variation in boiler pressure. There are times when trains follow each other in such quick succession that it is not advisable to wait for the steam pressure to drop in order to bring in the auxiliaries. A coil was therefore placed around the cable feeding the contact wire and the induced current was utilized for ringing a bell and lighting lamps when a train requiring 800 kw. or more moves out of the yard toward the tunnel. This indicates to the fireman that he should prepare to handle a heavy train up the 2% grade in 3 or 4 minutes. He can then cause the fan and stokers to speed up and be ready in ample time to care for a heavy load.—Electric Railway Journal.

Sandwich, Windsor and Amherstburg Ry.'s Franchise.—The Ontario Legislature is being asked by the Windsor City Council to limit the duration of the franchise of the company as to supplying electric energy for lighting, heating and motive purposes within the city under the bylaw of 1892, and the further bylaw of 1896, by providing that the franchise and all the powers granted thereunder shall cease after Dec. 31, 1922, that being the date of the expiration of the company's franchise for the operation of its electric railway in the city.

The Shawinigan Water and Power Co. is asking the Quebec Legislature to authorize it to acquire and deal with the shares and securities of other companies, to carry on all kinds of manufacturing business, to guarantee the performance of contracts, etc. The company owns, among other things, the Three Rivers Traction Co., and the Shawinigan Terminal Ry.

British Columbia Electric Railway Company's Annual Report.

Following are extracts from the report for the year ended June 30, 1915, presented at the annual meeting in London, Eng., Dec. 30:

Owing to adverse circumstances the result of the year's operations is exceedingly unsatisfactory. The period in question has been one of continuous difficulty and anxiety to the directors and the management in British Columbia. The following charges have been made against the revenue account for the year,—

Provision for renewals maintenance	£167,888	3	7
Addition to capital amortization fund	2,553	10	7
Provision for income tax	10,000	0	0
	£180,441	14	2
The net revenue for the year, after making the above deductions, amounts to	£180,661	10	4
Add—			
Balance brought forward from last year	6,884	7	7
Amount transferred from reserve fund	60,000	0	0
	£247,545	17	11
Deduct—			
Interest on debentures and debenture stock to June 30, 1915	£132,879	4	6
—Dividends already paid—			
On 5% cumulative perpetual preference stock for year to June 30, 1915	72,000	0	0
On preferred ordinary stock for year to June 30, 1915, at 2½% per annum	36,000	0	0
	£240,879	4	6
Leaving a balance to carry forward to next account of	£6,666	13	5

In order to make the above dividend payments it has been necessary to transfer £60,000 from the reserve fund.

Owing to the war and especially to the resultant paralysis of the shipping trade commercial depression of the most acute severity has prevailed throughout British Columbia, which has brought about an almost complete cessation of expenditure by the Government, municipalities, railways and other large undertakings. This depression has been responsible for a decrease in population, estimated at about 30%, in the districts served by the company. The spending power of the remaining population has been reduced, and a general tendency to economize has resulted. As one result of the depression a very serious difficulty arose at the beginning of 1915, when the company had to meet an extraordinary form of competition from privately owned motor cars which started plying for hire at ordinary tram fares in opposition to the company's cars. The directors have already issued circulars to the stockholders drawing their attention to the fact that these motor cars, which are called jitneys, are allowed by the authorities to compete with the company on a very unfair basis. Strict regulations and limitations as to frequency of service, accommodation and construction of cars are imposed upon the street car service in order to secure the safety, comfort and convenience of the public, whereas these motor cars are allowed to run practically unregulated in these respects, paying no percentage of their receipts to the cities and without contributing to road maintenance. To meet this jitney competition, the company, some months ago, reduced some of its fares as an experiment. The results of this experiment have been disappointing, and other measures are being adopted to cope with the situation. It has been proved that cities of the size of those served by the company cannot support a thoroughly efficient and convenient electric railway service and also an unrestricted service of jitneys. At the present time the tramway service is run to a regular schedule. It serves all districts, including outlying ones, at all hours, regardless of whether such service is profitable or not. The inhabitants will therefore have to

choose whether they will retain the present tramway service, or whether they prefer the unregulated service of jitneys, coupled with a very much curtailed service by the tramways, which would necessarily be restricted to the actual requirements of present business and would also be restricted to routes and districts which were profitable to operate.

The depression and jitney competition combined have rendered it impossible for the company, notwithstanding the most

rigid economy, to operate the street railway system at a profit. In order to meet the new conditions, the most determined efforts have been made by the board and management to curtail expenditure in every direction. The General Manager has been compelled to reduce and carefully reorganize the staff in British Columbia, but the directors are satisfied that the present managing staff is carrying on the business of the company in a thoroughly efficient manner. During the financial year operating and all other expenses of the company have been drastically reduced, but the full effect of these economies is not apparent from the accounts now submitted to the stockholders. On June 30, 1915, the wages agreement between the company and its employees terminated, and the board of arbitration made an award, reducing the rates of wages paid to the employees by about 8½%, which will represent a saving of about £22,000 per annum. The General Manager estimates that the various economies put into force during the current year, together with the reduction in wages, will amount to a reduction in expenditure, as compared with the year ended June 30, 1914, of very nearly £200,000, and he states that this will be accomplished without in any way affecting the efficiency or general upkeep of the plant or the public safety. Unfortunately against this economy there is a decrease in gross earnings during the first four months of the current year of £124,147. For the purpose of comparison, it must be borne in mind that during the corresponding four months of last year the jitneys had not commenced to compete and the full effect of the war had not been felt.

In reviewing the work which has been accomplished during the year, the General Manager reports that the company's plant has never been in a higher state of efficiency, and the company is in an excellent position to profit by an improvement in business conditions when the war is over. £167,888 3s. 7d. has been set aside out of earnings for renewals maintenance. This charge is calculated upon a fixed basis settled some years ago, and the board have determined to adhere to this basis. The charge is a heavy one to provide in times like the present, but provisions of this char-

acter make for a sound financial status. The expenditure on capital account during the past year by the company and its subsidiaries has been \$875,558, against \$4,110,327 for the previous year. Practically the whole of this expenditure relates to works authorised and entered into some time prior to June 30, 1914.

In considering capital expenditure, it is necessary to remember that the population of newly developed countries fluctuates to a considerable extent and that such countries are susceptible to the extremes of prosperity and depression. It is, therefore, impossible for a public utility company always to provide the plant and equipment that is precisely adequate to the requirements of the moment. For many years the company was altogether unable to keep pace with the needs of the communities which it served. The records of the company show that serious risks were then being taken as the company had absolutely no reserve of generating plant, rolling stock and equipment. This gave rise to continual complaints from the authorities and the population, on the ground of overcrowding and breakdowns of service. Moreover, dissatisfaction was expressed because the company was not extending its services to new districts, and that it was failing to carry out the obligations which devolved upon it in view of the special privileges which the company enjoyed in these districts. Careful estimates as to future developments were made by the board, based on the reports of highly qualified experts, and power plants were laid down to meet the needs of the rapidly growing communities; the tramway and lighting systems were laid out on a similar policy. The provision made was very much below the demands of the municipal authorities and others, and due allowance was made for a probable temporary set back, such as occurred in the financial year ended June 30, 1914, and which had actually been anticipated by the board. The directors, however, did not contemplate a European war, and they are confident that, if it had not been for that catastrophe, the provision for the future development of the districts served would not have been more than sufficient for the actual needs. As it is the company will probably have for some time a general equipment considerably in excess of immediate needs, and it may have to face a delay of some years in the development which would, but for the war, have taken place in the Province. At the same time, the company is now undoubtedly in a very strong position to take advantage of the revival in business when it extends from the eastern part of Canada to the western coast.

Without in any way minimising the difficulties which will have to be met in the next few years, the directors feel that they can congratulate themselves and the stockholders upon the strong financial position in which the company stands. It had on June 30 the following liquid assets:—marketable securities (at cost), £105,000; short loans and cash in hand, £418,876; total, £523,876. Since that date the liquid resources have increased. Although there is no immediate prospect of sufficient profit being earned to pay the dividend on the 5% cumulative perpetual preference stock, the directors are of opinion that the company's financial position justifies the payment of the dividend for the current year out of the reserve fund, and a resolution will be submitted to the stockholders to approve of this course being adopted. The directors are unable to hold out any hope that they

will be able to recommend the payment of any dividend on the preferred ordinary or deferred ordinary stocks for the current year.

Shortly after the outbreak of the war the company made substantial contributions to a local patriotic fund, and also gave the military authorities transportation concessions during mobilisation. A canvass was made of the employes and nearly all the office staff and many of the outdoor staff agreed to contribute 1% of their salaries each month to the patriotic fund so long as the war lasted. These contributions amounted up to Oct. 30 to \$12,763. When the last war loan was issued the directors, in view of the large liquid resources, subscribed for £100,000 thereof, which has been paid up in full, and is now held by the company as part of its liquid assets. Although it is somewhat unusual to make a reference to any matter which does not strictly relate to the company's business, the directors desire to make fitting reference to the magnificent response of Canada to the call of the Empire, and to the glorious deeds of the Canadians at the front. The company's staff, both in British Columbia and London, has contributed its quota to the Canadian and British forces, and the directors desire to extend their sympathy to the relatives and friends of those who have given their lives for the country.

In considering the situation the directors realise the severe disappointment of the stockholders at the present results and the hardship imposed on many of them, but they wish to warn them against undue pessimism. The directors remind the stockholders that a young country in the geographical situation of British Columbia feels the effect of the war far more acutely than an old country like England, and, on the other hand, British Columbia, with its magnificent and scarcely developed natural resources, should recover far more rapidly than older countries. In his last report, the General Manager states:—"I wish to record my faith, which is shared by every member of the management, in the future, both of the territory we serve and of the undertakings we are operating. All we ask is reasonable time in which to readjust the business to changed conditions, requiring patience on the part of the proprietors."

The directors again have pleasure in expressing their appreciation of the loyal and satisfactory service rendered by the management and staff in British Columbia under difficult and disheartening conditions.

A comparative statement, appended to the report, shows the number of passengers carried for the years ended June 30 as follows:—1912, 385,846; 1913, 401,836; 1914, 410,229; 1915, 201,768.

The following expenditures on appropriations of capital account were made for the year ended June 30, 1915:—

Rolling stock.....	\$128,201.10
Permanent and double tracking and sundry improvements.....	139,129.79
Track extensions.....	27,595.40
Lighting and power extensions.....	8,470.03
Steam plant.....	19,161.21
Land and buildings.....	260,377.74
Electrical machinery.....	89,938.17
Extending light and power system.....	39,095.80
North Vancouver — Rolling stock, meters, transformers, and initial installations.....	252.62
Sundries.....	19,113.58
Transmission lines and railway feeders.....	8,108.57
	\$701,121.59

The Athabasca Power Co., Ltd., has been incorporated under the Dominion Companies Act, with \$100,000 capital and office at Winnipeg, to carry on business as a light, heat and power company, and to own and operate steam and sailing vessels of every description.

The Jitney Situation in Canada.

The Three Rivers City Council is applying to the Quebec Legislature for power, among other things, to regulate or prohibit autobus traffic within the city limits.

The contract with the Canadian Autobus Co. has been again before the Montreal City Council. At a meeting of the Board of Control the City Attorney was asked to advise the Board definitely as to its power to enforce the carrying out of the franchise agreement.

It was reported recently that there were only 11 jitneys operating on Yonge St., Toronto, against over 700 some six months ago. The residents of North Toronto, on Jan. 14, entered a protest against the regulations, which they contend are driving the jitneys out of business, and they claim that the jitney is a necessity to them.

The Edmonton, Alta., City Council, on Jan. 4, gave a second reading to a new bylaw for the regulation of street traffic, and referred it to a committee. The bylaw has not been published, and its probable effect on the jitney traffic is not known.

About 150 jitney licenses for 1916 had been issued by the Vancouver City Council to Jan. 8, but it is reported that there are some jitneys being operated for which new licenses have not been taken out. In 1915 459 licenses were issued.

The Victoria, B.C., City Council, on Jan. 4, appointed examiners of jitney drivers for the current year. It is proposed to amend the jitney bylaw by providing that a driver once having received the proficiency certificate shall not be required to secure another, so long as he remains continuously a licensed driver.

Concrete Poles for Electric Railways.

The American Electric Railway Association's Committee on Power Distribution presented a report at the convention in San Francisco recently in which it summarized its tests and experience of several years as follows:—

Failure of a pole is always due to stretching of the reinforcing rods on the tension side.

A failure is always preceded by the appearance of hair-line cracks in the concrete on the tension side, at rather frequent and regular intervals from the ground line up.

It is advantageous to use a high grade of reinforcing steel to secure the maximum tensile strength.

Plain round reinforcing rods are essentially as satisfactory as twisted or other rough rods, because in general the rods will elongate before they slip in the concrete.

A large number of small rods is preferable to a smaller number of large rods, as a better distributed reinforcement may be secured for a given amount of steel and a greater bonding contract surface is presented to the concrete.

The reinforcement need not be uniform throughout the length of the pole, but may be stepped off as the top of the pole is approached.

A pole with uniform reinforcement will break at the ground line, while one with tapered reinforcement will break at some point above the ground, depending on the taper of the reinforcement.

A concrete pole has an element of safety in it, as a failure of the pole will not in general allow it to fall to the ground. It is difficult at times to pull over a pole after failure, even though it is inclined at a large angle from the vertical.

The committee presented complete specifications for manufacture of reinforced con-

crete poles, from which the following is condensed:—

Weights—Variations in weights of poles shall not exceed 5% over or under the weights specified in the order.

Reinforcement—The area of reinforcing rods shall constitute practically 3% of the cross-sectional area of the pole at the ground line, and shall be made up of 16 reinforcing bars placed as shown. The modulus of elasticity of the reinforcing steel shall be at least 30,000,000.

Pole Attachments—Holes shall be provided in the pole for steps, cross arms, span wire attachments, bracket arms and other fixtures.

Test—One per cent. of the number of poles (minimum of one pole) may be tested to destruction, and 10% of the total number of poles may be tested for deflection with the specified loading, all at the expense of the contractor. Any additional testing that may be required by the company shall be at its expense. The poles to be tested may be selected by the company.

Rejection.—The failure of 40% of the poles tested to meet the requirements as herein specified shall be sufficient cause for rejection of the entire order.

Regina Municipal Railway Held Liable for Damages.

A Saskatchewan court has, under the Workmen's Compensation Act, awarded \$2,000 damages to the widow of T. F. Cook, an employe of the Regina Municipal Ry. who died as the result of injuries received Oct. 14, 1914, while engaged in the uncoupling of "hauling" cars. A common law action was originally brought, and on May 13, 1915, a jury found for the plaintiff on a number of points, fixing the damages at \$5,000. As the jury found there was contributory negligence on Cook's part it was held there was no liability for damages, and in June, 1915, action was brought under the Workmen's Compensation Act. Judge Newlands gave judgment, Dec. 29, against the city's contention that the action had not been brought immediately, holding that under all the circumstances it had been brought as soon as possible; that the plaintiff's rights were fixed by the act, and there was, therefore, no actual necessity for the setting out of the matter on the statement of claims.

The chief point raised was that the act does not apply to injuries received on a municipal street railway. The judge said: "The last objection is based on subsec. 1 of sec. 3 of the act, which says: 'Railway means a road used by a private person or public company on which,' etc. Mr. Blair claims that a municipality is neither a person nor a public company. He apparently interprets the word 'used' as meaning 'owned or operated.' 'Used' does not mean either of those things, and if I give it its ordinary meaning, which I think I must, the Regina Municipal Railway is certainly used by private persons. As deceased received more than \$2,000 in the three years preceding the injury, I fix the compensation at that amount. Costs in the successful proceedings are awarded the plaintiff, except in so far as they are increased by any part of the proceedings that fail, and the plaintiff ought to bear all costs occasioned by such failure."

Heavy snow caused a suspension of street railway traffic in Brandon, Man., Jan. 10, and it was anticipated that several days would elapse before the streets were sufficiently cleared to permit cars to be again operated.

Electric Locomotives for Lake Erie and Northern Railway.

The L.E. & N.R. has received one of its 60-ton electric locomotives and the second is expected to be shipped by March 31. The principal dimensions are as follows:

Gauge, 4 ft. 8½ ins.
Distance between truck centres, 17 ft. 8 ins.
Wheelbase, each truck, 6 ft. 8 ins.
Wheelbase, total, 24 ft. 4 ins.
Driving wheels, diameter, 36 ins.
Journals, 5½ x 10 ins.
Width over all, 10 ft.
Height to top of cab, 12 ft. 0½ in.
Height over all, 12 ft. 10 ins.
Length, centre to centre of coupler knuckles, 37 ft. 6¼ ins.
Weight, 120,000 lbs.

voltage across each is 750 volts. Their nominal rating is 75 kw. (100 h.p.).

The frame is of soft steel, cast in a single piece. The projections of the frame, to which the axle caps are bolted, extend over the axle, to a large extent relieving the axle cap bolts of the weight of the motors. At each end there is a large bored opening through which the armature, pole pieces and field coils may be removed. These openings are enclosed by housings, which will carry the bearings and oiling arrangements and are securely bolted to the frame. Tapped holes are provided in each housing

preventing vibration and chafing, and are protected from abrasion by metal coil shields.

The commutating poles are of steel and are bolted to finished seats. The coils are wound, insulated and prevented from vibrating in substantially the same manner as the main field coils.

The brushholder is readily accessible for adjustment, cleaning and removal of carbons. Each holder is supported by two insulated pins, over which are placed porcelain bushings, which give a large creepage distance between the holder and the motor frame. The holders are arranged for radial adjustment to allow for wear of the commutator. The proper brush tension is provided by an adjustable spiral spring. A flexible shunt protects the springs for excessive current.

Both armature and axle bearings are arranged for oil and waste lubrication. Large waste pockets are provided having an opening into the low pressure side of the bearings. Separate oil reservoirs permit the fresh oil to be fed and filtered up through the waste to the bearing. The depth of oil in the reservoir may be easily gauged, so that the most economical height may be maintained. Oil guards and wiper rings prevent the oil from reaching the inside of the motor.

Two separate field windings are used on the main poles. By connecting the two field windings in series during acceleration, a relatively high tractive effort at low speed is secured with a small current. After all the resistance has been cut out, one of the field windings is cut out reducing the total active field turns. This gives a higher speed at any given current. While the full field connection is intended primarily for acceleration, it may be used to some extent for slow-speed running.

The motors have a unique system of ventilation. While air for cooling is normally provided by a motor driven blower, each motor has a fan at one end of the armature which will provide sufficient ventilation to operate the locomotive at three-quarter capacity in case of accident to the blower.

The control equipment used on the locomotives is HB electro pneumatic and is practically the same as the high voltage

These locomotives are of the 8-wheeled, double-truck type, so equipped that they can be used in passenger, freight or switching service. They will operate on 85-lb. rails, traversing curves of 40 ft. radius without a trailing load and of 130 ft. radius with a trailing load. In service they will handle standard freight cars and Canadian Pacific passenger cars, the maximum train load being about 800 tons.

The trucks are of the equalized pedestal type, with rigid bolsters and half elliptic springs. This design of truck, it is claimed, combines simplicity of construction with ample strength, and with riding qualities which are satisfactory for locomotive service. The wheels are steel tired, with cast steel centres. The longitudinal frame sills consist of four 13-in. steel channels, which are strongly braced transversely above the truck centre pins. The bumpers are of cast iron, with push pole pockets, and are made in one piece with heavy lugs which are riveted to the frame sills. This provides a most substantial frame structure. Iron pilots and short shank M.C.B. couplers are applied at each end.

The locomotives are arranged for double end operation and they have central cabs with sloping hoods at either end. The cab is of steel, and is lined with wood for the comfort of the enginemen. Steps and handholds are arranged to conform to the Board of Railway Commissioners' requirements.

The motors are of a new type, styled 562-D-5, which has been developed by the Westinghouse Electric & Mfg. Co. for high potential direct current. Two motors are permanently connected in series so that the

for use in removing it. Access to the commutator and brushes is afforded by a large opening over the commutators. The cover is held by a tee bolt at one end and a locking device at the other. Tapped drain holes are provided through the bottom of the frame.

The four main poles are built up of

lamination of soft steel, riveted between end plates. The main poles are secured by studs extending through the frame and fitted with easily accessible nuts. The field coils are wound with flat copper strap, insulated between turns with asbestos ribbon. The outside is protected by a covering and the entire coil is impregnated with a heat conducting and water proofing insulating compound. The coils are held rigidly against the pole tips by stiff flat springs,

control outfits used on the motor cars.

The various main circuit connections are made by individual or unit switches, arranged compactly in a group, these switches being operated by compressed air. The magnet valves governing the flow of air to the switch cylinders are actuated by low voltage current from a storage battery. The switch group consists of a number of unit switches in a common frame. Each switch is provided with a powerful magnetic blow

out coil, which effectually extinguishes the arc whenever the switch is opened. The switches are normally held open by strong coiled springs, contained in the cylinders and are closed against the action of the springs by compressed air. Since the air under normal pressure exerts a force approximately double that of the spring, the action of the switch in either opening or closing is always quick and positive.

The master controllers are located at either end of the locomotive cab. Two levers are provided on the master controllers, one for notching up and one for reversing. The reverse lever is mechanically interlocked with the operating handle, so that it cannot be thrown unless the main drum is in the off position. There are four running positions on the drum, together with seven resistance notches in series and five in parallel. The running positions are short and full field in series and short and full field in parallel.

With forced ventilation, the motors and auxiliary apparatus has sufficient capacity to enable the locomotives to exert continuously a tractive effort of 9,200 lbs. with an average of 600 volts at each motor. With 750 volts at the motors the locomotive is able to exert a tractive effort of 13,800 lbs. for one hour at approximately 14 m.p.h. With 25% adhesion the locomotives are able to exert a maximum effort of 30,000 lbs. Their maximum speed is 40 m.p.h.

The equipment includes Westinghouse air brakes, which can also be operated by hand; air signal; one foot gong; two air whistles and a locomotive bell with air ringer.

The locomotives were ordered from the Canadian Westinghouse Co. and were built in the Westinghouse works in the United States.

Additional Cars for Toronto Civic Railway.

The City of Toronto Works Department has received tenders for the supply of 13 semi-steel, double end, double truck, city cars, to be delivered in knock down shape at the Danforth Ave. car barn, where they will be assembled. Contracts will be awarded under six separate heads, viz., car bodies, trucks, motor equipment, air brake equipment, wire and cable, and fare boxes. The general dimensions of the car bodies are to be as follows,—

Length over corner posts	31ft. 8 ins.
Length of each platform from outside of end sill to outside of dash, on the centre line	7 ft. 8 ins.
Length over bumpers	47 ft.
Maximum width at drip rail	8 ft. 6 ins.
Width over posts at belt rail	8 ft 4½ ins.
Height from top of rail to top of trolley board	11 ft. 8½ ins.
Truck centres	19 ft. 8 ins.
Driving wheels, cast iron	33 ins.
Pony wheels, cast iron	21 ins.
Truck wheel base	4 ft 10 ins.
Seating capacity	48
Motors per car	2
Speed, including stops, miles per hour	11
Minimum centre radius of horizontal curves	35ft.
Approximate weight	20,000 lbs.
Height of steps, top of rail to top of first step	14 ins.
First step to platform floor	12¼ ins.
Platform to body floor	10¼ ins.
Ramp in floor from end sill to bolster	3 ins.
Body floor to top of rail	3 ft. 3½ ins.

It is specified that the body bolster shall be designed to carry a safe load of 11,000 lbs. at each end when supported in the centre, allowing a safe unit stress in tension at the outer fibre of 12,500 lbs. per sq. in. The side bearings, to be of approved design, are to be mounted 26 ins. on each side from the centre of king pin, which is to be supplied by the builder, the centre plate of approved design to be furnished by the truck builder. Cars will

be supplied with cast steel pull couplers bolted to centre platform knees. The inside finish will eliminate all corners where dust and dirt are likely to accumulate. The interior finish will be no. 1 red cherry. The side sheathing will be a 9-64 in. plate with top, bottom and intermediate stiffening. Side posts will be of ash, notched out to give air circulation between panels, and be bolted to side girder. The interior finish below bolt rail will be cherry veneer with a layer of tar paper inside. The roof framing will be of the plain arch roof type, covered with tongued and grooved poplar sheathing and 8 oz. cotton duck.

The door operating mechanism will be arranged so that the step will drop into place as the door opens, and will fold as the door shuts, and the doors will be arranged to lock in position when either open or closed. Four automatic ventilators will be provided on each side of car, with openings 5¼ by 7¼ ins. The general equipment is to include four straps over each longitudinal seat, with celluloid hand hold, Consolidated Car Heating Co.'s push button buzzer system of the trolley operated type, signal bells, forced draught heaters, foot gong, motorman's seats, Crouse-Hinds type Z headlight at each end, Coleman no. 4 stationary fare box at each end, H. B. life guard at each end, trolley catcher at each end, fire extinguisher, sanding apparatus, etc. The seats, of which there will be 16 of the walkover type arranged crosswise, and 4 longitudinally, will be of cherry, with sandboxes, lockers, etc., under the longitudinal seats. The air brake equipment is to be of General Electric type with C.P. 27B compressor, and the motor equipment of Canadian Westinghouse type with no. 533 fully ventilated interpole box frame street railway motors and K. 51 A controllers arranged for field control, etc.

In addition to tenders for the supply of the necessary materials to enable the Works Department to assemble the cars at the car barns, separate prices for the assembling of the parts and the installation of the equipment are also under consideration.

London and Port Stanley Railway Earnings.

Following is a statement for six months ended Dec. 31, 1915, as supplied by the Auditor and Treasurer, J. E. Richards. The figures include the actual receipts and expenditures for the first five months, December being estimated the same as for November:—

REVENUES.			
Passenger	\$63,758.34		
Freight	78,456.23		
Miscellaneous	3,523.27		\$145,737.84
OPERATING EXPENSES.			
Miscellaneous	\$1,111.60		
Power	17,949.60	\$99,061.20	
FIXED CHARGES.			
Interest	18,778.18		
Sinking fund	4,139.52		
Rental	10,000.02		
Taxes	3,481.32	\$36,339.00	\$135,460.20
Net earnings			\$10,277.64

Brantford Municipal Railway Commission.—Brantford, Ont., ratepayers, at the municipal election, Jan. 3, elected C. H. Hartman, W. R. Turnbull and F. J. Calbeck as the commission for 1916. Messrs. Hartman and Turnbull were commissioners last year, and Mr. Hartman headed the poll this year, although he strongly opposed the sale of the Paris-Galt section of the Grand Valley Ry. to the Lake Erie & Northern Ry., which the ratepayers authorized by a majority of some 300. A. K. Bunnell, City Treasurer, who was a commissioner last year, was defeated.

The Edmonton Power Company's Railway Project.

For some time past there has been considerable speculation in Edmonton, Alta., as to the plans of the Edmonton Power Co., which is seeking to obtain a franchise for the supply of electric power in Edmonton at a price which would compete with the plant owned by the city. After considerable agitation a bylaw was submitted to the ratepayers in Nov., 1915, authorizing the granting of a franchise, and was approved. The city council, on Nov. 24, refused to give the bylaw a third reading pending certain modifications in its terms, and on Dec. 7 an interim injunction was obtained to restrain the council from passing it. A local court, on Dec. 10, dissolved the injunction, holding that the bylaw was merely an agreement to grant a franchise, which must have the sanction of the Alberta Legislature before it could become operative. The bylaw again came up for consideration by the city council on Dec. 24, when it was approved by a vote of 7 to 4. Three aldermen protested against its passing, and the Mayor said that he would not sign the agreement; that he had put the motion before the council, as he was compelled by law to do, but that he would not go any further.

At the same meeting an intimation was given that application was given for the incorporation of a radial railway company in connection with the company's power development project, under the title of the Edmonton and South Western Ry. Co. The notice of application to the Dominion Parliament respecting this company states that power is desired to build a railway from Edmonton southwesterly to the Saskatchewan River, near Blue Rapids, 70 miles, together with telegraph and telephone lines, and with power to use part of its right of way for a power transmission line. It is asked that the railway be declared to be an undertaking for the general advantage of Canada, and that the company have power to enter into agreements under the terms of sec. 361 of the Railway Act with the Grand Trunk Pacific Ry., the Canadian Northern Ry., and the Canadian Pacific Ry., or any of them. Pringle, Thompson, Burgess and Cote, Ottawa, are solicitors for applicants.

A local newspaper article respecting the company's power development plans states that the project has been under investigation for about three years by Sir John Jackson, Limited, a British firm of engineers and contractors, that the site of the proposed dam is on the Saskatchewan River, about 65 miles southwesterly from Edmonton, but considerably further by the river, that the dam will be 1,500 ft. long, and 105 ft. high, and will make an artificial lake of 60 square miles, that the power plant development is estimated to cost \$6,000,000, that for the purposes of the company a 65 mile railway will be built to the power plant site, by an independent but apparently associated company. The route through which the railway is projected is reported to be fairly well settled, and should offer considerable opportunities for further settlement. G. W. Farrell and Co., Montreal, who are interested in the project, state that they are unable to give any information as to the company's plans until after legislative sanction has been obtained.

The Regina, Sask., City Council has appointed Aldermen Wilson, Baker, Black and McInnes as its street railway committee for the current year.

Electric Railway Projects, Construction, Betterments, Etc.

Buffalo, Fort Erie Ferry and Rd. Co.—The Ontario Legislature is being asked to incorporate a company with this title to, among other things, acquire by lease or otherwise the right of way, rolling stock and all such other assets as may seem desirable, formerly owned by the B., F. E. Ferry and Ry. Co., and to operate the railway now terminating at Fort Erie, Ont. Authority is also being asked to extend the line from Fort Erie to any part of Point Abino, in Bertie Tp., to Port Colborne; through the eastern part of Bertie and Willoughby Tps., with a branch line from Crystal Beach to Ridgeway. F. V. R. Bardoe, 400 D. S. Morgan Building, Buffalo, represents the company, and Fasken, Cowan, Chadwick and Rose, Toronto, are its Canadian solicitors. The company, it is said, has been reorganized recently. (June, 1913, pg. 286.)

The Chestermere and Calgary Suburban Ry. Co. was incorporated by the Alberta Legislature in 1910, to build a railway to be propelled by electricity or any other motive power from Calgary to Chestermere Lake, 12 miles. The lake is an artificial one, having been created by the C.P.R. irrigation canal flowing into it, and the project was understood to be connected with a number of real estate development plans, as the route proposed was a somewhat circuitous one, through various subdivisions which were then being put on the market. The provisional directors were:—G. E. Tudor, J. A. MacCullough, A. J. Samis, E. F. Ryan, Calgary; G. B. Tudor, Cleveland, Ohio. We are informed that between three and four years ago some light grading was done at the Calgary end of the proposed line, and later on poles were erected for a considerable distance to carry on the overhead wires, while several car loads of ties were delivered, but were never placed in position. These ties lay on the ground for nearly two years, decreasing in number and deteriorating in quality. The City of Calgary subsequently purchased the remaining ties for its municipal electric railway, and some poles which were subsequently used for street lighting purposes. The city has not entered into any agreement with the company regarding the operation of the line, and is in no way interested in the concern. As far as we can ascertain it was entirely a private proposition, and it may be considered dead, at all events for the present. (May, 1913, pg. 235.)

Edmonton and South Western Ry.—See under "The Edmonton Power Co.'s Electric Railway Project," on another page of this issue.

Edmonton Interurban Ry.—Workmen are reported to be stringing wires on the line from the Edmonton Radial Ry., on 124th St., along Alberta Ave. and 127th St. to the Grand Trunk Pacific Ry. near West Edmonton. Track is reported to have been laid as far as the G.T.P.R. shops, but pending the obtaining of an order from the Board of Railway Commissioners for the crossing, there will be no physical connection of the two sections. It was expected to have the line ready for operation to the G.T.P.R. tracks by Jan. 31. The line will be operated by the Edmonton Radial Ry. (owned by the City of Edmonton) under an arrangement made in Sept., 1915. (See Edmonton Radial Ry., Jan., pg. 30, and Oct., 1915, pg. 404.)

Lake Erie and Northern Ry.—M. N. Todd, General Manager, is reported to have said in an interview, Jan. 11, that it was ex-

pected to begin operating the Galt-Brantford section of the line about Feb. 1, and that as soon as arrangements with the Brantford and Hamilton Ry. were completed, an hourly service would be given. He also said that an announcement would be made shortly respecting the opening for traffic of the Brantford-Port Dover section. (Jan., pg. 28.)

London and Port Stanley Ry.—The property owners of London, Ont., have approved a bylaw to raise \$110,000 to provide a new station, additional sidings, etc. It is proposed to provide for the interest and sinking fund for these debentures out of the earnings of the line. (Jan., pg. 30.)

Moncton Tramways, Electricity and Gas Co.—The Sunny Brae, N.B., Town Council has under consideration the company's proposal to extend its line from Moncton into that town. A special committee reported a recent interview with E. B. Reeser, Vice President of the company, when the question of the crossing of the Intercolonial Ry.'s Union St. bridge and the widening of Town St. were discussed. The General Manager of the Canadian Government Railways had promised the use of the bridge, provided it did not necessitate any expenditure on the part of the railway. The council appears to be opposed to the widening of the street, but the matter will be again taken up with the company. (Jan., pg. 30.)

Montreal and South Western Ry.—The Quebec Legislature is being asked to reenact the Act constituting "the said company incorporation, sanctioned Mar. 24, 1911, statute 1, Geo. V., 2nd session, chap. 82, under reserve, and moreover to give more rights permitting said company to acquire, possess, develop and operate hydro electric power within 125 miles from Montreal, and for other things in connection therewith." (Jan., pg. 30.)

Montreal Tramways Co.—A press report states that construction will be started soon on an extension of the Park Ave. line from Van Horne to Atlantic Ave. (Dec., 1915, pg. 482.)

Morrisburg and Ottawa Electric Ry.—The Ontario Legislature is being asked to extend the time for the building of this projected railway from Morrisburg to Ottawa. G. D. Kelley, Ottawa, solicitor for company. (June, 1915, pg. 227.)

Niagara Falls Park and River Ry.—Alternative plans are reported to have been submitted to the Ontario Railway and Municipal Board for alternative changes on the line near Queenston Heights, Ont., where the serious accident occurred July 7, 1915. Some time ago the Board, it is said, submitted a plan proposing a new down grade single track line which would take one continuous curve, leaving the existing line for up grade traffic. The company's alternative proposal is said to involve a partial reconstruction of the existing double track line, by lengthening the curves and cutting down the gradients. The new plans are under the Board's consideration. (Aug., 1915, pg. 317.)

Oshawa Ry.—We are officially advised that during 1915 the company reconstructed and paved half a mile of main line track in Oshawa, Ont.; and laid 1,024 ft of new sidings. (Nov., 1915, pg. 441.)

St. John Ry.—We are officially advised that the company started operating its cars between East and West St. John, N.B., on Jan. 1. over the new arch bridge, which replaces the old suspension bridge across the St. John River at the reversing falls. (Sept., 1915, pg. 359.)

Schomberg and Aurora Ry.—We are officially advised that this railway, extending from a junction with the Toronto and York Radial Ry.'s Metropolitan Division at Bond Lake to Schomberg, Ont., 14.42 miles, which has hitherto been operated by steam, has been electrified. The electrification plans were described in Canadian Railway and Marine World for July, 1915. It is expected to start the electrical operation about Feb. 1. (Jan., pg. 30.)

Three Rivers Traction Co.—The track built and in operation is 3.9 miles long, consisting of a belt line, 2.9 miles, and an extension to the Wayagamac Pulp and Paper Co.'s plant. The belt line starts at the corner of St. Maurice and St. Cecile Sts., runs southeasterly to Notre Dame St., along that street to St. Antoine St., south on St. Antoine track along Du Fleuve St., north on Du Plator St. (this forms a small loop), thence along Desforges St., westerly on Champlain St., north on St. George St., to the corner of St. Marie St., and thence easterly along St. Marie, Champfleu and St. Maurice Sts. to the starting point. The Wayagamac extension runs from the corner of St. Maurice and St. Cecile Sts. to the St. Maurice River, which is crossed, to St. Christopher Island, and thence southerly to the pulp and paper plant, with a spur line on the mainland to the Shawinigan Power Co.'s plant. The extension to Cap de la Madeleine will start at the point where the Wayagamac extension turns southerly on St. Christopher Island, and will be about two miles long. The Quebec Legislature is being asked to grant the company power to run its cars within the village and parish of Cap de la Madeleine, notwithstanding the opposition of the Council and its refusal to submit a bylaw to the ratepayers, and for such other powers which the putting into operation of the tramway has rendered necessary. (Jan., pg. 28.)

Vercheres, Chambly and La Prairie Tramways Co.—The Quebec Legislature is being asked to incorporate a company with this title, to build an electric railway from Montreal to places south of the St. Lawrence River. The points to be connected, it is reported, are St. Roch and Chateaugay, and La Prairie and Chambly with loop lines and connections branching to various places in the counties of Chateaugay, La Prairie, Chambly, Vercheres and Richelieu. The company is reported to have a provisional organization, and to have plans prepared to secure an entrance into Montreal, the character of which will be made known when the project comes before the Legislature.

Vancouver Car Schedules.—The British Columbia Electric Ry. announced, Jan. 10, a new car schedule for its Vancouver city lines, to come into effect Jan. 15. In announcing the change the management stated that the latest figures available showed that in Nov., 1915, the car mileage was 542,390 miles, against 521,538 for Nov., 1914, while 342,438 fewer passengers were carried than in Nov., 1914. The new schedule will, the circular adds, entail a very heavy additional operating expense to the company, but is in line with the policy which the company intends to adopt and which it trusts will meet with the support of the travelling public. The traffic will be very carefully watched as in the past, and special cars will be run, if necessary, to supplement the ordinary services detailed above.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry., and allied companies.

Nova Scotia Tramways and Power Co.—

The Nova Scotia Public Utilities Board has refused the company's application for permission to increase its capital stock from \$6,000,000 to \$10,000,000, as no organization has been effected and therefore no vote of the shareholders authorizing an increase, as required by the charter, can be taken. The increase was desired for the absorption of the Halifax Electric Tramway Co.

Toronto Ry., Toronto and York Radial Ry., and allied companies:

During January, \$750,000 of two year 6% gold notes, dated Jan. 15, and due Jan. 15, 1918, were offered for sale in New York at 100 and interest. These are a direct obligation of the company, specifically secured by deposit with the Central Trust Co., New York as trustee, \$970,000 of 4½% perpetual consolidated debenture stock secured by a mortgage on all the company's property, subject to \$5,000,000 of underlying bonds.

Winnipeg press dispatch, Jan. 19:—The Winnipeg Electric Ry. has notified the City Treasurer that its gross earnings for 1915 were \$1,856,867.70, on which 5% or \$92,843.88 will be paid the city.

The company has declared a dividend of 2% for the last quarter of 1915, making a total of 9½% for the year, against a total of 12% in 1914, 1913 and 1912. The dividends in 1911 totalled 11½%, 10% in each of several previous years.

Windsor, Essex & Lake Shore Rapid Ry.—

Reference has been made from time to time to the Dominion Traction & Lighting Co. It was incorporated under the Dominion Companies Act in Jan. 1913, with head office at Toronto, which appears to have been moved to Windsor, Ont., where W. C. Ken-

nedly is President. The company is a holding one and among other securities has \$750,000 first mortgage bonds, W.E. & L.S.

R.R. and also the Windsor Gas Co.'s stock and bonds. The D.T. & L. Co. has issued \$1,825,000 first mortgage 5% bonds.

Mainly About Electric Railway People.

P. Pocock was re-elected Chairman of the London, Ont., City Council's Public Utilities Committee, Jan. 12.

W. B. Baptiste has been appointed Manager, Three Rivers Traction Co., Three Rivers, Que. **J. H. McNeil** is Superintendent.

Geo. Rapsey and **A. E. Wideman** were re-elected Utilities Commissioners by Port Arthur, Ont., ratepayers, Jan. 3.

B. I. Dasent has been appointed Publicity Agent, British Columbia Electric Ry., Vancouver, vice F. Harris, resigned.

Edmund E. Walker has been appointed Sales Manager, Light & Power Department British Columbia Electric Ry., Vancouver.

A. G. Workman has been appointed Chief Dispatcher, British Columbia Electric Ry., New Westminster, succeeding T. G. Connon.

C. Rummel, heretofore Manager, Light & Power Department, British Columbia Electric Ry., Vancouver, has been transferred to the same position at New Westminster.

Aldermen Picard, Bush and Wilson were appointed as a committee on public utilities by Edmonton, Alta., City Council, Jan. 4, Alderman Picard being chairman.

A. C. Eddy has been appointed Engineer, Maintenance of Way, British Columbia Electric Ry., Vancouver, succeeding H. J. Tippet.

Geoffrey Porter, heretofore Assistant Chief Engineer, British Columbia Electric Ry., Vancouver, has been appointed Chief Electrical Engineer.

J. E. Richards, formerly General Freight & Passenger Agent, Chatham, Wallaceburg & Lake Erie Ry., Chatham, Ont., has been appointed Auditor and Treasurer, London & Port Stanley Ry., London, Ont.

H. A. Robson, K.C., ex-Public Utilities Commissioner for Manitoba, gave an address to the Alberta Law Society, at Calgary, Alta., recently on the work of a public utilities commission.

W. D. McGregor, heretofore in the London & Lake Erie Ry. & Transportation Co.'s service, London, Ont., has been appointed Freight and Passenger Agent, London and Port Stanley Ry., St. Thomas, Ont.

G. Gordon Gale, General Manager, Hull Electric Co., Hull, Que., has been elected a member of the managing committee of the Canadian Society of Civil Engineers' Ottawa Branch.

Lieutenant Gordon Duke, attached to the Royal Navy Aviation Corps, who was killed in an aviation accident at Eastbourne, England, Jan. 10, was formerly employed on Toronto Civic Ry.'s staff.

Arthur Reid, who was Commissioner of Public Utilities for Lethbridge, Alta., during 1914, handed over the office to his successor, Mr. Freeman, Jan. 1. It is said that Mr. Reid will remove from Lethbridge, where he has resided since 1905.

Geo. W. Caye, heretofore Assistant to Vice President and General Manager, and Purchasing Agent, Grand Trunk Pacific Ry., has been appointed Purchasing Agent, Montreal and Southern Counties Ry., as well as of the Grand Trunk Ry. vice J. H. Guess, resigned.

Lieut. Lorenzo Evans, who was reported recently as having been seriously wounded in Flanders, is not a son of E. A. Evans, M.Can.Soc.C.E., ex-General Manager, Quebec Railway, Light, Heat & Power Co., as stated

in a number of daily papers, his father being Lorenzo Evans, of Dobell, Beckett & Co., Quebec.

T. F. Ahearn, only son of Thos. Ahearn, President, Ottawa Electric Ry., and who is himself a director of that company and of the Ottawa Car Manufacturing Co., entered the Army Service Corps in Oct., 1914, as a lieutenant, went to England in March, 1915, and went on to France in Sept., 1915. He has been promoted to a captaincy, and has been recalled to militia headquarters, Ottawa, to assist in munitions work.

P. A. Macdonald, barrister-at-law, Winnipeg, has been appointed Public Utilities Commissioner for Manitoba, in succession to H. A. Robson, who resigned recently to become Chief Counsel for the Union Bank. Mr. Macdonald was born at Gananoque, Ont., Jan. 6, 1857, educated at Kingston Grammar School and Queen's University, from which he graduated 1876, and proceeded to the study of law at Toronto, being called to the bar at Osgoode Hall, Jan., 1880. He entered into practice at Winnipeg in partnership with the late J. M. Macdonell in 1882, as Macdonell and Macdonald; subsequently practising in the firm of Macdonald and Brophy, and later as Macdonald and Cameron. In 1888 he was appointed Master in Chancery, referee and accountant, and he has had considerable experience in local arbitrations, among the matters in which he acted being one in connection with the threatened strike of C.P.R. employees in 1910, when he was chairman of the conciliation board. He resigned his public position in 1911, and returned to private practice. In Sept., 1915, he was appointed police magistrate to hear the charges against Sir Rodmond Roblin and other ex-members of the Manitoba Government.

Attempt to Secure Free Transportation of Soldiers on Toronto Railway.

The Toronto Board of Control, at a meeting, Jan. 21, decided, on the Mayor's motion, to apply to the Legislature for legislation providing that in cities having a population of 200,000 or more, electric railway companies shall carry soldiers and nurses, including soldiers in training, free of charge, notwithstanding any law, statute, custom or usage to the contrary, and providing a penalty of \$100 for failure to give a service and for each breach of the Act. The Mayor stated that soldiers are carried free on the cars operated by the municipality, and are carried free in Great Britain, Australia, and other countries.

Toronto is the only city in Ontario which would come under this proposal, and in newspaper interviews, R. J. Fleming, General Manager, Toronto Ry., is reported to have characterized the suggestion as a gross impertinence, and added that the company had done much for the soldiers, a good deal of which was not made public. The company had supplied free cars on several occasions. He continued that until the city saw fit to provide the soldiers with almost everything they needed free of cost, the company should not be asked to provide free transportation, and the proposed legislation to force the company to give free transportation to soldiers will be fought strenuously.

February, 1916.]

Electric Railway Notes.

The Quebec Public Utilities Commission is investigating two recent accidents on the Montreal Tramways Co.'s lines.

On account of the extension of the St. John Ry. service across the river bridge at St. John, N.B., the issue of transfers by way of the ferry steamboat has been discontinued.

The Board of Railway Commissioners has approved Montreal and Southern Counties Ry. freight mileage tariff C.R.C. 5 cancelling C.R.C. 1, effective Jan. 1, 1916, and rescinding order 21566, April 1, 1914.

The North Shore Power Co. is applying to the Quebec Legislature for authority to extend its operations beyond the limits of the district of Three Rivers, and more especially in the counties of Portneuf and Lotbiniere.

The Twin City Rapid Transit Co. is conducting a campaign for a new street railway franchise in Minneapolis, Minn. The company secured its charter in 1875 for 50 years. Its franchise for St. Paul is perpetual, and has been so decided by the court and accepted by the city.

The British Columbia Electric Ry. has maintained since 1913 a technical school in Vancouver for the benefit of its employees. At the annual gathering of the pupils, Dec. 30, addresses were delivered by G. Kidd, General Manager; R. M. Freer, President of the School, and J. G. Lister, technical instructor.

A Board of Railway Commissioners' traffic inspector visited New Westminster, Jan. 10, investigating the service given by the British Columbia Electric Ry., as a result of complaints made by residents along the Burnaby Lake line. The inspector heard statements from all parties concerned and will report to the Board.

The Lethbridge Municipal Ry. has on hand \$8,500 of tickets in books of 30, and under the resolution of Dec. 20, 1910, it sells 8 tickets for 25c. In order to use up the old tickets, the Commissioners passed a resolution, Dec. 30, 1915, to sell these tickets at 30 for \$1. The new rate is 3 1-3 cents, against the old one of 3 1/2 cents a ride, an increase of 5-24 of a cent.

The Brantford, Ont., Tp. Council passed a resolution, Jan. 11, to the effect that while the council is willing to encourage the municipal ownership of public utilities its solicitor be instructed to oppose the application of the Brantford City Council as to the Grand Valley Ry., unless the charter imposes upon the railway the same obligation to pay taxes as if it were privately owned.

In connection with a recent threatened strike of electrical workers in Vancouver, B.C., the British Columbia Electric Ry., it is alleged, declared a lockout. The electrical workers instituted criminal proceedings against the company for causing an illegal lockout, but owing to some technicality Judge McInnes dismissed the case, Jan. 7.

Following the reception, by the Ontario Railway and Municipal Board, of a deputation of citizens respecting additional car service, R. J. Fleming, General Manager, Toronto Ry., stated to the Board, on Jan. 5, that the company would be prepared, provided the city would build the necessary loop line, at Keele and Dundas Sts., to operate its cars over it at a price per car mile to be fixed by the Board, and to operate over the Toronto Civic Ry. line west of Dundas St., on Bloor St., at 20c. per car mile.

Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, stated that

the passing of the hydro radial railway by-law in Toronto, has opened the way for the purchase of the Toronto and York Radial Ry.'s Metropolitan Division, and that negotiations will be commenced forthwith. The City of Toronto has made a request that the Commission undertake the negotiations on its behalf.

Cost of Concrete Header Along Rails.

By H. R. Ferris, Victoria, B.C.

The accompanying sketch shows concrete header laid along the rails of a car line in asphalt pavement in a fairly light traffic residential street. The track is all on curve as it follows the inside of a circular "place" where four streets come together. The headers have been down nearly two years and are still in good condition, although several lateral cracks have occurred between expansion joints. This is possibly due to the jarring of cars passing around the Circle, as, where similar headers have been laid on straight tracks, no difficulty has arisen. It has been suggested by the engineers of the street railway company that this defect could be avoided by the use of reinforcement laid longitudinally with the rails. The

Cross Section of Concrete Header Along Street Car Tracks.

concrete was machine mixed; it would probably have been cheaper to lay by hand. The cost of constructing 2,200 lin. ft. of header was as follows:

	Cost per 100 lin. ft.
Labor:	
Foreman, 33 hrs. at 55 cts.	\$0.825
Mixer eng., 9 hrs. at 45 cts.	0.184
Mixer helper, 14 hrs. at 35 cts.	0.222
Cement man, 4 hrs. at 30 cts.	0.055
Common labor, 170 hrs. at 30 cts.	2.318
Form setter, 11 hrs. at 50 cts.	0.250
Form setter and helper, 30 hrs. at 40 cts.	0.545
Form setter and helper, 10 hrs. at 35 cts.	0.159
Finisher, 40 hrs. at 60 cts.	1.091
Finisher helper, 30 hrs. at 40 cts.	0.545
Finisher helper, 2 hrs. at 30 cts.	0.027
Labor mixing surface, 40 hrs. at 30 cts.	0.545
Total labor	\$3.766
Cartage on tools, etc. (\$2)	0.091
Materials delivered:	
Cement, 51.25 bbls. at \$2.60	\$6.057
Sand, 13.6 cu. yds. at \$1.70	1.050
Gravel, 28 cu. yds. at \$1.60	2.036
Lumber for forms	0.273
Total materials	\$9.416
Grand total	\$13.273

The Toronto Ry. and the Outside Running Board on Summer Cars.—The Ontario Railway and Municipal Board has ordered the Toronto Ry. to have 25 cars in service by March 1, with longitudinal seats and the windows so arranged that sufficient ventilation shall be obtained during the summer months. A considerable time has been taken up in experimenting with various types of car with the view of eliminating the outside running board. Cars have been equipped with a longitudinal seat on the one side and cross seats on the other, and also with the cross seats half on one side and half on the other, but neither design has been acceptable. The present order merely permits of the ordinary cars being used, with open windows.

Electric Railway Track Laid in 1915.

Revised figures of new track laid by electric railways in Canada during 1915, show that 86.35 miles were laid by 14 lines. Of these, the London and Port Stanley Ry. was converted from a steam railway, the line being entirely reconstructed.

The Lake Erie and Northern Ry. track laid in 1914 was included in the table for steam railways for that year, as it had not been definitely announced that it would be operated by electricity. The total length of this line from Brantford to Port Dover, Ont., is 503 miles. Track was laid in 1914, from Brantford to Galt, 21.1 miles, and from Waterford to Simcoe, 6.8 miles, a total of 27.9 miles. The final reports sent in by the company for 1914, and published in our revised table in Feb., 1915, show 30 miles of track as having been laid, viz.: Brantford to Galt, 22.00 miles; Waterford towards Simcoe, 8.00 miles, or 2.1 miles more than the actual mileage between the four points named.

The Sudbury and Copper Cliff Suburban Electric Ry. began track-laying in 1914, laying 0.43 of a mile within the limits of the town of Sudbury, Ont.; it completed the line to Copper Cliff in 1915, making a line having a total present length of 6.09 miles.

Saskatoon Municipal Ry. Results, Etc.—E. S. Martin, Commissioner, in estimating the financial requirements of the City of Saskatoon, Sask., for 1916, in his report, dated Dec. 30, said: "During December the street railway, for the first time since its inception, will, it is anticipated, show a profit of approximately \$800." The estimated deficit for 1915 was \$32,500, while that for 1916 is \$20,000. He also referred to the necessity for additional capital expenditure for an extension of the power house, and the installation of additional plant.

The Hydro Electric Power Commission of Ontario's Proposed Electric Railway From Toronto to London.

Canadian Railway and Marine World for January gave details of the electric railway which the Hydro Electric Power Commission of Ontario proposes to build to form a trunk line from which to radiate other lines serving country districts at present without transportation facilities. The various municipalities through which the line is to pass are to be responsible for the financial success of the undertaking, and are to be assessed pro rata for the whole cost and any deficiency that may occur, while the Commission will do the actual construction and financing, and conduct the operation of the line when completed and equipped. The details are put into the form of an agreement with the Commission, which is to be executed by the municipalities, and on Jan. 1, the majority of the municipalities submitted a bylaw to the vote of qualified rate-payers, empowering the local councils to enter into the agreement with the Commission.

Of the 31 municipalities concerned, 24 voted on Jan. 1, and of these, 20 returned majorities authorizing the councils to enter into the agreement, a copy of which was incorporated in the bylaw, and four municipalities rejected it. The total votes registered in favor of the bylaw in the municipalities which voted were 31,509, and the total voting against were 11,097. The municipalities which did not vote on Jan. 1, but which have decided to take a vote during February, are, the townships of Toronto, Eramosa and Nelson, while the townships of South Easthope, Puslinch and Ellice decided by votes of their councils against putting the bylaw to the vote, and in the township of Etobicoke, an injunction was obtained against a vote being taken, on a technicality. In the four places where the bylaw was defeated, arrangements are being made for its resubmission, and in these places, as well as in others where a vote has not yet been taken, meetings are being held, at which the details are being more fully explained.

In the townships affected by this vote, and which are also likely to be served in part by the Toronto Suburban Ry. extension from Lambton to Guelph, the attitude of the Commission towards this road is of some interest. It is reported that the Commission has made an offer to the company, to take over the entire extension as constructed, at cost plus 10%, but no confirmation of this is forthcoming. The route of the proposed new line as laid out by the Commission, parallels the Toronto and York Radial Ry.'s line from Sunnyside, Toronto, to Port Credit, and it is surmised that it is the Commission's intention to acquire this line on behalf of the municipalities.

Following are the figures of the voting in 23 municipalities on Jan. 1, showing those for and against, with the majority in either case. Where the majority was against the by-law an asterisk is shown:—

	For	Against	Majority
City of Toronto	21,247	5,711	15,536
London	2,763	2,087	676
Stratford	1,693	420	1,273
Berlin	1,078	413	665

New Hamburg	158	35	123
Port Credit	123	15	108
New Toronto	117	16	101

Sir Adam Beck, Chairman of the Hydro Electric Power Commission of Ontario, is reported to have said in recent interviews:

"The only places that have voted adversely are those not contiguous to the line, and under a clause in the act their consent is not necessary for the construction of the radials. They are not touched by the radials, and, of course, our work will not be delayed. However, we can go back there and institute another campaign, and have another vote taken, and this is probably what we will do. The first thing we shall do will be to finally decide upon the routing of the line, especially through the larger cities. We shall also complete our plans and specifications. Our first expenditure will be for the right of way. The acquisition will be gradual. Property is cheaper now than it will ever be again, and it behooves us to secure the necessary land while it is cheap. Copper, steel, and aluminum are dear at present, but by the time we need them they will be cheaper. The close of the war will send these commodities down. We hope to secure sufficient funds to begin preliminary work at an early date, and as the money markets improve we will proceed more rapidly, aiming toward completion at the earliest possible time, as the need for suburban radial railways steadily grows greater. Our progress in this connection will, however, be guided absolutely by considerations of our paramount and dominant duty in the great struggle for righteousness, freedom and justice being waged in Europe. We shall be prepared to give work to many men just at a time when work will be needed. At the close of the war there will likely be many men out of work, and we will be able to provide for large numbers of these. We shall proceed cautiously, as finances will permit."

In view of the increased demand for power which the radial railways will create, the Commission, which is now using about 120,000 horse power, proposes to construct a power plant at Niagara Falls to develop 600,000 h.p.

Postmen's Transportation in Peterborough.

—Following the example of the Sherbrooke Ry. and Power Co., which refused to enter into another agreement to carry postmen for \$25 a man per year, the Peterborough Radial Ry. also refused, but offered to do so for \$35, which the Post Office Department declined to pay. The Peterborough Co. had its conductors keep a record of the postmen's rides and found that for the week of Nov. 23 to 29, 1915, the 17 postmen made 829 trips, an average of 8 trips per man per day, so that the company was getting a fraction less than 1c. for each ride. The Department has authorized the postmaster to buy car tickets for the postmen and in view of the result of its count of the number of rides taken it is doubtful if the Peterborough Company would now accept \$35 a man per year.

The Port Arthur, Ont., Utilities Commissioners decided, Dec. 29, to again start operating the south belt line for the convenience of residents of Mariday Park and vicinity.

Brantford Sells Part of Grand Valley Ry.

Brantford, Ont., property owners approved, on Jan. 3, by a majority of 396, a bylaw to sell the Paris-Galt section of the Grand Valley Ry. to the Lake Erie and Northern Ry. for \$30,000. The right of way of the Blue Lake siding is granted to the L.E. and N. Ry., but the ties, rails, poles, wire and other material are reserved to the Brantford Municipal Railway Commission. The L.E. and N.R. agrees to operate its entire line from Galt to Port Dover by electricity only; and agrees not to operate within the Flats district of Paris except for freight only, and upon such further conditions as shall be approved by the Brantford City Council. The agreement is to be ratified by the shareholders of the L.E. and N.R., and approved by the Board of Railway Commissioners and the Dominion Parliament.

A Brantford press dispatch of Jan. 24 says that the third reading of the bylaw was laid over by the city council for two weeks, some aldermen taking the ground that it should have been submitted to all voters and not to the property owners alone, and that the proposed sale price of \$30,000 is insufficient.

Tango Tickets Discontinued.—The British Columbia Electric Ry. gave notice, Dec. 27, that the 8 for 25c., no transfer tickets, known as "tango tickets," which were put on sale in May last, were to be discontinued Jan. 1. The notice stated that although there had been a larger number of passengers carried since the tango tickets were put on sale, yet the increase was not sufficient to meet the cost of operation; the no transfer feature of the tickets was also unpopular. The old rate of 6 for 25c., with transfer, was put in force Jan. 1. These tickets are available in Vancouver and Victoria day and night.

Jitney Accidents in Portland.—The Spectator, of Portland, Ore., says that during 9 months, 82 persons were injured in jitney accidents in that city. Since Feb. 13, 1915, the jitneys were responsible for 441 accidents to property; there were 51 collisions in which city property was injured; 14 collisions between jitneys; 38 collisions with private automobiles and 338 collisions with street cars. The statement is made that "nearly every one of these accidents was preventable and almost all were due to violation of ordinances that all our vehicles, apparently with the exception of the jitney, must observe."

Victoria Harbor Works.—During 1915, the channel leading to the inner harbor at Victoria, B.C., was widened, and the greater portion of the upper basin was dredged to 20 ft. In the lower basin there is a depth of 20 ft. at low water. Various rocks at the entrance have either been removed or cut back, straightening out a difficult turn in addition to widening. The northern end of the channel is being straightened gradually and rocks are being removed. The construction of a turning basin having about 21,000 superficial feet area was also completed during the year. This has a depth of 30 ft. at low water. About two-thirds of the total length of the breakwater is above high water, and nine of the large caissons for the two piers have been placed in position. The total outlay to the end of the year, on the breakwater, was \$1,400,000, and on the piers, \$740,000.

Load Line on Steamships.—A press report states that the Dominion Government has under consideration the establishment of a load line regulation for ocean going vessels, similar to that in effect in Great Britain and other maritime countries.

Marine Department

Shipping Letters From the Head of the Great Lakes.

The New York State Barge Canal's Progress and Prospects.

F. & W. Jones, shipping brokers, Fort William, Ont., wrote, Dec. 31, as follows:

The coal movement at the Canadian head of the lakes during the season of 1915 has only been of moderate volume. It had been expected that a much more substantial movement would have developed, but those expectations did not eventuate, partly on account of the financial depression which ruled at the commencement of the season and partly on account of a revival of activity in the Canadian western coal fields. The total amount of the season's coal arrivals by lake aggregated approximately 1,565,000 tons, distributed at the various docks as follows: Canadian Northern 650,000 tons; Canadian Pacific, 675,000 tons; Grand Trunk Pacific, 175,000 tons; Murphy's, 65,000 tons. The greatest volume on record of coal at these ports was in the season of 1913 when a total of 3,828,500 tons was brought in. In 1914 arrivals dropped to a little more than 1,000,000 tons. The past season has, therefore, made a fair advance in volume, but it is not considered that the amount of receipts is at all adequate to the prospective demand. This tonnage was carried in 224 vessels of which 115 were U. S. register carrying 849,000 tons, and 109 Canadian carrying 715,200 tons.

It is somewhat difficult to secure actual figures representing the stocks of coal now on pile, owing to the only available records being in the hands of private companies. We have, however, made a careful estimate from what data has been available and have arrived at the following stocks, which we believe will be found to be as near accurate as possible: Canadian Northern, 590,000 tons, 16% commercial; Canadian Pacific, 550,000 tons, 60% commercial; Grand Trunk Pacific, 230,000 tons, 15% commercial; Murphy's, 30,000 tons, 100% commercial. Westbound rail movement was very active during the late autumn and every indication is that very heavy demand will be made on stocks right through the winter months, and it is anticipated that by the opening of navigation the coal piles will be very nearly depleted, as a matter of fact, one railway has already been drawing on its service coal stocks east of Port Arthur.

Grain.—The close of navigation at the Canadian head of the lakes was unprecedented in the volume of grain moved. From Dec. 1 to the close, 34,886,308 bush. were shipped east, in 139 vessels, of which 51 were Canadian register and 88 U. S. There are 18 vessels tied up for winter storage, 13 Canadian and 5 U. S. At time of writing 16 of these are loaded with a total tonnage of approximately 2,500,000 bush. Two U. S. bottoms are still unchartered, with a capacity of about 750,000 bush.; these will probably be loaded before final ice conditions set in. Although the official closing was slated for Dec. 12, four of the above vessels cleared after that date, the last one leaving for Duluth Dec. 18.

From Sept. 1, the date at which new crop records begin, there was received at the terminal elevators 179,055,251 bush. of all grains. At that date there was also in store of old crop about 1,566,927 bush., making a total of grain stored of 180,622,184 bush. During the same period there has been shipped out 1,099,844 bush. At the close of navigation stocks on hand were reduced to about 10,000,000 bush., since then to time of writing, grain has been arriving at

the rate of approximately 1,000,000 bush. per working day. Stocks in store have consequently climbed up considerably, and now stand, after allowing for all rail shipments, at 22,500,000 bush. It is estimated that several thousand cars are on track west of Fort William and Port Arthur probably 4,000 on the Grand Trunk Pacific, and a similar number on the Canadian Northern and Canadian Pacific, for which storage must be found. It will thus be seen that but a short time can elapse before elevators will be filled to capacity.

The total quantity of grain moved by lake during the whole navigation season of 1915 was 201,639,325 bush., carried in 1,139 vessels, of which 687 were of Canadian register and 452 U. S. Of this 106,543,046 bush. were carried in U. S. vessels or 52% of the whole movement.

Shipment of grain eastbound, all rail, commenced somewhat ahead of time and at the close of navigation shippers had placed orders for upwards of 5,000 cars, and additional orders have been steadily piling up. All rails have moved at an average rate of some 250 cars a day and, to date of writing, this would account for about 4,000,000 bush. This can easily be seen is quite an insignificant amount, in face of the large accumulating of stocks in store. While everything possible is being done to facilitate eastbound movement, it is very questionable whether more than 300 cars a day can be loaded and shipped, in fact it is doubtful whether anything in excess of that figure could be handled at the various eastern points considering the congestion which already exists there.

Taking the previous total crop figures of 742,163,155 bush. of all grains as final, which is now universally conceded; and after allowing the lake shipments of 170,996,844 bush., it will be seen there is still a volume of 571,166,311 bush. to be accounted for. Of this it is estimated there will be retained in the west for domestic purposes 190,000,000 bush., thus leaving some 380,000,000 bush. to be handled after the close of navigation for eastern movement. At present prospects, all rail shipments will not take care of more than 30,000,000 bush., which means that at the opening of 1916 navigation, not only will terminal and line elevators be loaded to capacity, but all available cars will be en route with grain, and then leave a substantial balance in the farmers' hands to come forward.

Estimates of preparation for next season's crop are already being compiled, and while every indication is of great activity, still it is very evident that a repetition of this season's bumper crop can scarcely be expected. There is no doubt that a very great factor in final crop results rests in the amount of acreage of fall ploughing. The coming season will fall short of that of the past one to the extent of probably 25%; against, this, however, must be mentioned that new ground broken up for cultivation will be in the neighborhood of 25% increase, whilst the amount of summer fallow will remain about the same. All things considered, therefore, the coming season will open up with good prospects, as regards activity and preparedness.

The Keystone Transportation Co. of Canada, Ltd., Montreal, has increased its authorized capital from \$500,000 to \$750,000.

The eastern half of the Erie Canal and the Champlain Canal have each a single unfinished and unawarded contract which has been the chief obstacle to the entire completion of its respective section. By letting these contracts together with one or two bridge contracts, and by pushing work on them and on the few other contracts which are under award but not quite completed, it is expected that one season's time will be all that is needed to finish the Champlain Canal and also a channel from the Hudson to Lake Ontario by way of the Erie and Oswego branches. The Erie Canal west of the Oswego junction contains several uncompleted portions. Here legal complications are largely responsible for the unfinished condition. There are numerous railway crossings which have proved to be very troublesome from the standpoint of the state, both because of delays in coming to agreements with the railway companies and on account of the slowness in performing the work in such manner as not to interrupt traffic. Because of the amount of work still to be done and the number of crossings still to be made, it is anticipated that two seasons will be required to complete the western half of the Erie Canal. The State Engineer intends to do his utmost to have all uncompleted work under contract at the earliest possible moment, so that the state may no longer than necessary be denied the benefits of the completed waterway, and meantime may utilize its finished parts. Thus he will justify his prediction that the Champlain Canal can be completed in one year, as can also the canal between Waterford and Oswego and the branch into Cayuga and Seneca lakes, and that the balance of the canal through to Buffalo can be finished in two years. To do this, however, it will be necessary for the legislature at the beginning of its session and as one of its first acts to make provision for the immediate issuing of the \$27,000,000 of bonds authorized by the vote of the people at the last election.

Proposed Provincial Aid for British Columbia Shipbuilding.

At a recent joint session of the Vancouver and Vancouver Island Boards of Trade, the question of shipbuilding in the province was discussed, and a resolution was passed recommending to the B. C. Government that it should aid construction and ownership by contributing a cash bonus, the amount of which might remain to be agreed upon, and which should form a first charge against the vessels and be non-collectible for 20 years, unless the vessels were removed from British Columbia service. It was also recommended that the Government subsidize all freight originating in the province and handled out of B. C. ports, and half of such subsidy amount on other Canadian shipments, applicable to all vessels owned and built under the arrangement outlined, and all such vessels to be considered under the Government control as regards freight rates and routes. Other suggestions were made with a view to assisting in the development of the shipbuilding trade in the province, and a letter was read from the Premier suggesting that a deputation be appointed to meet the sub-committee or shipping appointed by the Government recently, to discuss the matter.

The Batiscan-Bengore Head Case and the Dominion Wreck Commissioner.

At a meeting of the executive council of the Mercantile Marine Service Association at Liverpool, Eng., recently, amongst other things discussed was that relating to the request for the intervention of the Imperial Government regarding the sentence passed by the Dominion Wreck Commissioner, on Capt. Green of the s.s. Batiscan, for responsibility for the collision with the s.s. Bengore Head in the St. Lawrence on Aug. 1, 1915, by which his certificate was suspended for two years, and provision made for the granting of a first mate's certificate for the second year. The Journal of Commerce, Liverpool, in dealing with the meeting, says "The meeting was much concerned to learn that the Board of Trade has intimated their inability to interfere in the case of the collision between the Bengore Head and the Batiscan, whereby the master's certificate of the latter steamer had been suspended for no less than two years, a savage sentence, which has aroused no little indignation throughout the profession. The council were naturally dissatisfied at the Board of Trade's reply and determined to continue their efforts to secure redress to a finding which was not concurred in, even by one of the assessors. The well known severity of the Canadian courts has on several occasions in the past been the cause of considerable agitation, and it is felt that no efforts should be spared to bring their judgments more in accord with those of similar courts in the United Kingdom."

The review of the evidence tendered in the case mentioned, with the court's judgment, were given in full in Canadian Railway and Marine World, for Oct. 1915, and were delivered by Capt. L. A. Demers, Dominion Wreck Commissioner. The judgment was assented to by Capt. F. Nash, one of the nautical assessors, the other, Capt. J. A. Murray, dissenting. He concurred on the main points, but dissented on the sentences passed, and so far as Capt. Green's sentence is concerned, suggested that he be granted a mate's certificate for the full period of the suspension of his master's certificate. By this it will be seen that the Commissioner and the two assessors are agreed on the main findings, and in Capt. Green's case, which is the only one which the paper in question comments upon they differ regarding the granting of a mate's certificate for the first half of the suspension period. The Imperial Board of Trade has carefully reviewed the case, and expresses its inability to interfere, and in addition to this, the Dominion Admiralty Court has held that the Batiscan was solely to blame for the collision. It would therefore appear that the court's decision was correct, and that the sentence passed is, in view of the evidence adduced at the formal investigation, justifiable.

This is not the first time that the Journal of Commerce has developed hysteria about decisions of the Wreck Commissioner's court, and one cannot help but come to the conclusion that it is biased against marine decisions in Canada, as it has previously shown itself to be, without proper reason, against the St. Lawrence route. In the course of its remarks, previously quoted, it refers to "a finding which was not concurred in, even by one of the assessors." If this quoted portion means what it says, it is incorrect, as one of the assessors did concur in the Commissioner's decision. Probably what it intends to convey is that one of the assessors dissented, but in the excitement of the moment, a comma was placed wrongly.

Navigation Aids Throughout Winter.

Recent press reports stated that the Marine Department had arranged for the future continuous maintenance of navigation lights on the Great Lakes, throughout the winter. This is somewhat misleading, and has to some extent been misunderstood. The facts are that the Marine Department has hitherto, towards the close of navigation, removed the light keepers from Michipicoten Island, Michipicoten Island east end, Michipicoten harbor, Otter Island Gargantua, Corbeil Point and Ile Parisienne, and thereafter the lights have been discontinued. In addition to the difficulty experienced in removing the keepers from these stations after severe winter weather sets in, it has become apparent that those engaged in navigation up to the last moment on Lake Superior are considerably inconvenienced by the discontinuance of the lights and fog alarms at these points. While the Department has recognized that it is somewhat unpleasant for the keepers to remain at their posts throughout the winter, the conclusion has been reached that the shipping interests have become so important as to require a change of policy. Arrangements are therefore being made with the various keepers by which it is pro-

posed that they shall remain at their stations throughout the winter hereafter, so that the lights and fog alarms can be kept in operation as long as there is any necessity for doing so.

Toronto Harbor Improvements.

The work to be undertaken during 1916 will consist chiefly of reclamation of land, and the construction of seawall foundations. Most of this work will be undertaken in the western section, and will cover land reclamation along the Lake Shore Road toward Exhibition Park, where grading for the proposed boulevard is to be commenced. During 1915 about 3,800 ft. of foundation for the outside seawall was laid, and during this year it is proposed to lay the concrete superstructure thereon. A further 4,800 ft. of foundation will also be laid, extending easterly from the point where work stopped for the winter. On the eastern section, practically the only work to be carried out will be the construction of a lift bridge over the Don River. Apart from this the only work to be undertaken on the east side will be the overhauling of certain work done by subcontractors, and of which complaints had been dealt with by the Dominion Government.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during 1915.

The Canadian canal was opened April 13 and closed Dec. 16, 1915; season, 248 days.
The U.S. canal was opened April 17 and closed Dec. 20, 1915; season, 248 days.

February, 1916.]

Longshoremen's Dispute at St. John, N.B.

The dispute between the vessel owners and the longshoremen at St. John, N.B., has been referred to a conciliation board under the Industrial Disputes Act. The vessel owners will be represented on the board by J. Herbert Lauer, General Manager, Marconi Wireless Telegraph Co. of Canada, Montreal, and the longshoremen by J. E. Tighe, of St. John. W. E. Foster, President and General Manager, St. Martin's Ry., St. John, has been appointed chairman by mutual consent. He was also chairman of the conciliation board which sat at St. John in 1913, under the award of which the longshoremen's work has since been carried on and against the terms of which the men are applying, although the scale of pay then granted is higher than at either Halifax or Montreal. Mr. Lauer was, in 1907, a member of the Quebec board of conciliation to represent the employees of the province in labor disputes. In 1910 he was a member of a board of conciliation under the Lemieux Act representing the the Shipping Federation of Canada in a dispute between ship owners and carpenters, and although his report was a minority one it was accepted and acted upon by the employers and employees. In 1910 he was also appointed representative of the Shipping Federation for five years on the permanent board of arbitration to consider grievances which might arise between the vessel owners and the shipping companies.

A St. John press dispatch of Jan. 24 gives particulars of the board's unanimous decision. It says that no change is made in the working schedule of 10 hours day or night in the winter, and 9 in the summer. The demand for 40c. an hour in the winter was refused, the present scale of 35c. an hour in the winter for week days being retained. Extra money is allowed for bulk grain handling on week days, Sundays or holidays. The request for the raising of a number in a gang from 15 to 16 was declined. The board recommends that the shipping companies enter into an agreement with the St. John Longshoremen's Association, to appoint a permanent local arbitration board to deal with disputes, introduce various protective devices to safeguard workmen loading or unloading ships, and better the accommodation of the longshoremen. It is proposed that the agreement should run to Dec., 1919.

The Great Northern Pacific Steamship Co. has been permitted to continue its business, after an investigation into its railway connections, on the ground that the service is in the interest of the public and of advantage to the convenience and commerce of the people, and that a continuance of it will neither exclude, prevent nor reduce competition on the water route. All rates are to be filed with the Interstate Commerce Commission. The company is owned by the Spokane, Portland and Seattle Ry., which is owned by the Great Northern Ry. and the Northern Pacific Ry.

The Farrar Transportation Co., Ltd., held its annual meeting in Toronto, Jan. 25. It paid off about \$16,500 of its bonded indebtedness, this payment being equivalent to about 7% on capital stock, and also paid 25% dividend to its shareholders, and carried a considerable balance to profit and loss account. The officers this year are:—T. I. Thomson, Owen Sound, President; W. E. Allen, Toronto, Vice President; and G. E. Fair, Toronto, Managing Director.

Marine Associations' Annual Meetings.—The Dominion Marine Association's annual meeting will be held in Toronto on Feb. 3 in the morning, and the Canadian Lake Protective Association's annual meeting in the afternoon of the same day.

Steel Tank Vessels for Imperial Oil Co.

The Imperial Oil Co., Ltd., Toronto and Sarnia, Ont., ordered a steel oil tank vessel, from the Collingwood Shipbuilding Co., Collingwood, Ont., in June, 1915, for delivery on the opening of navigation this year, mention of which was made in Canadian Railway and Marine World for July, 1915. The company has ordered two additional vessels of similar type from the same place. They will be each 258 ft. long, 43 ft. beam and 18 ft. deep to main deck, with an expansion trunk 7½ ft. above the deck running fore and aft. They will be classed at Lloyd's for the highest classification for ocean going steamers, as they are intended, not only for the lake trade, but for transportation to Montreal, Quebec and Halifax.

A great many closely spaced bulkheads will be fitted athwartships, and a continuous longitudinal bulkhead will divide the hold spaces into 10 tanks for crude or refined oil, and four tanks for lubricating oil. A cross bunker for carrying oil fuel will be fitted forward of the boiler room. The pump room will be located at the fore end of the foremost tank, in which will be placed the large pumps for handling oil cargoes. They will be engined for a speed of 8 knots an hour when loaded.

The Coastwise Steamship and Barge Co., which operates the s.s. Amur between Vancouver and Granby Bay, is reported to have purchased the s.s. Turret Crown, for transporting coal, coke and ore on that route. The Turret Crown was built at Sunderland, England, in 1895, and is of steel with double bottom for watertight ballast. Her dimensions are, length 253 ft., breadth 44 ft. 4 ins., depth 19 ft. 4 ins.; tonnage, 1,827 gross, 1,142 register. She is equipped with triple expansion engines with cylinders 22, 36 and 59 ins. diam., by 39 ins. stroke, 1,100 i.h.p. at 70 r.p.m., and supplied with steam by 2 Scotch boilers 14 by 11 ft. at 180 lbs. She was formerly owned by Turret Crown, Ltd., Toronto, controlled by Mackenzie, Mann and Co. interests, and during 1915 was under charter to the Nova Scotia Steel and Coal Co., New Glasgow, N.S. She is stated to be refitting at Perth Amboy, N.J., after which she will operate between New York and the West Indies until the Panama Canal is reopened, when she will proceed to Vancouver.

The Imperial Merchant Service Guild held its annual meeting at Collingwood, Ont., Jan. 21, when considerable criticism was levelled at the Canada Shipping Act, which was characterized as in a large measure detrimental to the successful carrying on of navigation. It was claimed that 5% of the vessels on the Great Lakes are under equipped, as under the law it is not necessary to have a chart on board. The method of appointing lighthouse keepers, harbor masters and inspectors was also criticized, it being claimed that men often entirely unacquainted with the needs of seamen are appointed. The officers for the current year are:—Capt. W. C. Jordan, Collingwood, Chairman; Capt. W. Inkster, Collingwood, Secretary-Treasurer.

Sailing Vessels for Newfoundland.—It is reported that a number of wooden sailing vessels are under construction for the Newfoundland trade, which has been interfered with to a considerable extent, owing to the shortage of steam vessels and of men capable of handling them, due to war requirements. For some years past the export of fish has been carried on by steam vessels, which have latterly either been requisitioned by the Admiralty, or purchased by the Russian Government for service in ice, for which they are specially adapted.

Grand Trunk Pacific Coast Steamship Company's Steamship Records.

The following figures show the records of the steamships Prince Rupert and Prince George for the past season:

s.s. Prince Rupert, June 8 to Oct. 30—		Miles.
20 trips, Seattle to Prince Rupert and return	25,080	
11 trips, Seattle to Anyox and return....	15,818	
	40,898	
s.s. Prince George, June 10 to Nov. 2—		
20 trips, Seattle to Prince Rupert and return	25,080	
10 trips, Seattle to Anyox and return	11,380	
1 trip, no call at Victoria	1,235	
1 trip, Seattle, Victoria and Vancouver....	145	
	40,840	

The total time taken on these trips, including time spent in manoeuvring in harbors, and running slow during fogs, etc., was 103 days, 7 hrs., 34 mins., and the average distance per day was 395.86 miles. The average speed per hour was 16.49 knots; longest non-stop run, north and south, 482 miles, on which the vessels arrived on the average, 6 mins. and 10 mins. ahead of schedule time, on the north and south runs respectively.

Erie Canal Route for Canadian Grain.—Speaking before the Canadian Club in New York recently, Secretary of State Hugo, who is a member of the New York State Canal Board, is reported to have said:—"One of Canada's greatest economic problems and a threatening menace to her future prosperity—freight rates—will be solved to a large extent by the New York barge canal. Over half of the Canadian wheat exported in 1913 reached the Atlantic Ocean through Buffalo and New York, and with the greatly enlarged transportation capacities of the new canal, a big increase in the wheat export trade by way of New York City may be expected."

The Shipmasters' Association of the Great Lakes held its annual meeting at Toronto, Jan. 25 to 30, the first time its meeting has been held in Canada.

Atlantic and Pacific Ocean Marine.

The Cunard Co. is reported to be asking for tenders for building eight steamships for Atlantic service.

The Quebec Steamship Co., a subsidiary of Canada Steamship Lines, Ltd., has leased Pier 46, East River, New York, for six months.

The s.s. Shabonee put in at St. John's, Nfld., towards the end of December, having lost a propeller. The replacing was done by the Reid Newfoundland Co., without the vessel being docked.

The France and Canada Steamship Co., Ltd., incorporated in Montreal recently, has increased the number of its directors to nine. The President is E. G. Bennett, and W. J. Shaughnessy is Secretary.

It is reported that the s.s. Belgenland, now being completed at Belfast, Ireland, for the Red Star Line, will be transferred to the White Star Line for operation between Liverpool and New York. It is also stated that she will be renamed Homeric.

In connection with the taking over of the Johnston Line by Furness, Withy and Co., mentioned in a previous issue, it has now been announced that the latter company has acquired all the shares held by the Johnston family, and assumed entire control on Jan. 1.

The Great Northern Steamship Co.'s s.s. Minnesota, which sailed from San Francisco, Cal., recently for Great Britain, where

it was announced she was to be sold, had to put back with boiler trouble. It is now announced that extensive repairs, including the installation of new boilers, will be carried out before she again sails.

A report from New York states that the Canadian Pacific Ry. will have two new steamships completed in British shipbuilding yards for its trans-Pacific service, within three months. It is stated that Capt. Hopcraft, of the s.s. *Empress of Japan*, is to take charge of one of the vessels. They will, it is said, be 540 ft. long, and somewhat similar in size to the Canadian-Australian Line's s.s. *Niagara*.

The C.P.R. s.s. *Empress of Russia*, which has been refitted, after service from the commencement of the war as an auxiliary cruiser, is intended to sail from Hong Kong, China, Mar. 23, and from Vancouver on her first trip westward, Apr. 20, calling at Yokohama, Kobe, Nagasaki, and Manila. Thereafter the steamships *Empress of Russia* and the *Empress of Asia*, which is also being refitted at Hong Kong, after similar service, will sail every four weeks.

The Montreal Transportation Co.'s s.s. *Northmount* was reported recently to have been abandoned at sea, about Dec. 18, when bound from Newport News, Va., to Trinidad. The crew were picked up by the s.s. *Yaqui*, and landed at Turks Island. The *Northmount* was built at Dumbarton, Scotland, in 1908, and was of steel, with steel tank top, four watertight and two non watertight bulkheads, steel boiler house, steam pump wells, etc. Her dimensions were: length, 249 ft.; breadth, 43 ft.; depth, 19 ft. 5 ins.; tonnage, 1,908 gross, 1,172 register. She was equipped with triple expansion engines, with cylinders 18 x 30 x 48 ins. and 33 ins. stroke, 950 i.h.p. at 90 r.p.m., supplied with steam by two Scotch boilers 12½ by 11 ft., at 185 lbs. She had been engaged in grain traffic from the head of the lakes for some time, and during the war has been under charter for the West Indies service.

Maritime Provinces and Newfoundland.

The figures of export traffic from West St. John, N.B., for December, show that 38 steamships cleared with 181,370 tons of cargo and 1,166 horses, against 20 steamships with 60,346 tons of cargo and 1,262 horses in Dec., 1914.

The Victoria Steamship Co.'s annual meeting was held at St. John, N.B., Dec. 29 when the report showed that the year had been a successful one. An offer was received for the purchase of the controlling stock, on behalf of some St. John and Fredericton parties.

The St. John, N.B., harbor revenue for 1915 was \$122,362.80, against \$97,998.01 for the previous year. During December 38 vessels cleared with 1,166 horses and 181,370 tons of cargo, against 20 vessels with 1,262 horses and 60,346 tons of cargo in Dec., 1914. The custom receipts for 1915 were \$2,554,212.11, against \$1,540,788.85 for 1914, and pilotage receipts were \$36,143.28 and \$33,012.93 for the two years respectively.

The Black Diamond Steamship Co.'s s.s. *Coban* ran ashore at Placentia, Nfld., at the end of December, and it was stated that she might become a total loss. She was, however, released and taken to St. John's, where repairs were undertaken. It was found after she was docked that only certain minor repairs could be carried out, until a new stern frame and rudder could be obtained, so the vessel was floated out of the dock Jan. 11, and towed to Sydney, N.S., where the balance of her cargo was removed.

Province of Quebec Marine.

The overhauling of the Canada Steamships Lines' s.s. *Rapids King*, which was recently damaged by fire, has been completed at Sorel, Que. The damage was comparatively slight, and the overhauling did not include any change in the previous layout or decoration, the chief damage being in the saloon which was only slightly burned.

Ontario and the Great Lakes.

The Canadian Stewart Co.'s steam tug A. M. Stewart, which was completed at Glasgow, Scotland, recently for work on the Toronto Harbor improvements, has been requisitioned by the Admiralty.

The Interlake Steamship Co., Cleveland, Ohio, has purchased the Cleveland Steamship Co.'s business at a valuation of about \$3,000,000. The Cleveland Steamship Co. operated 13 vessels in the Great Lakes trade.

The United States Lake Survey reports the levels of the Great Lakes, for December, in feet above tidewater, as follows,—Superior, 602.72; Michigan and Huron, 579.51; Erie, 571.37; Ontario, 244.78. As compared with the average December levels for the past ten years, Superior was 0.47 ft. above; Michigan and Huron 0.63 ft. below; Erie 0.36 ft. below and Ontario 0.72 ft. below.

The s.s. *Turret Cape*, which was stranded at Cove Island, Georgian Bay, Nov. 7, 1911, and abandoned to the underwriters as a total loss, and subsequently repaired and purchased by the former owners, was formerly registered in England. The register there was closed Jan. 9, 1912, and since then she has been operated as an unregistered vessel. She has now been registered in Canada by the Canadian Ocean and Inland Navigation Co., Toronto.

A New York report states that a large shipping company is in process of formation in connection with Great Lakes shipping, which will take over all vessels hitherto owned or controlled by railway companies, which have now, under the Interstate Commerce Commission's ruling, to divorce their railway and steamship interests. It is stated that an expenditure of from \$7,000,000 to \$10,000,000 is contemplated. W. J. Conners, Buffalo, N.Y., is said to be interested in the matter.

G. R. Crowe Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital, and office at Toronto, with power to own and operate steam and other vessels and to conduct a general navigation business, etc. The company has acquired the s.s. G. R. Crowe, formerly owned by the St. Lawrence and Chicago Steam Navigation Co., Toronto, the sale of which, to A. B. Mackay, Hamilton, Ont., and other details, were given in our last issue.

The Great Lakes Transportation Co.'s s.s. *Calgary* is being converted into an oil tanker at Baltimore, Md., and will be utilized in this trade on the ocean. Reports to the effect that she has recently changed owners, emanating from New York, are not correct. She was originally registered as being owned by James Richardson and Sons, Ltd., Kingston, Ont., but this was merely pending the organization of the Great Lakes Transportation Co., of which Jas. Playfair is President and General Manager, and H. W. Richardson, Kingston, is Vice President.

Russian Freight Rates.—It is announced that rates on grain traffic, except oats, between Russia and China, for export, have been considerably reduced.

British Columbia and Pacific Coast.

The construction of the Dominion Government grain elevator at Vancouver was expected to be completed by the end of January.

During December, 144,425 passengers were carried on the ferries between Vancouver and North Vancouver, a slight increase as compared with the previous month.

The north arm of Burrard Inlet was frozen over Jan. 3, and one of the Dominion Government steam tugs was dispatched from Vancouver to act as an icebreaker. This is the second time in 20 years that ice has caused any difficulty at this point.

Mainly About Marine People.

Miss Annabelle Murray, who died in Montreal recently, aged over 90, was the only daughter of the late William Murray, of that place, who founded the Beaver Steamships Line.

F. H. Clendenning, Division Freight Agent, British Columbia Coast Service, and Ocean Steamship Lines, C.P.R., Vancouver, has received word of the death of his brother, from wounds, while serving with the 24th Battalion of Montreal.

Sir Arthur A. Booth, who has been created a baronet, is Chairman of the Cunard Steamship Line, and has rendered special services during the war in connection with the transportation of munitions, men and war supplies in various parts of the world.

Lt.-Col. G. P. Murphy, Vice President, Ottawa Transportation Co., Ltd., who is in the Canadian Army Service Corps, and has been engaged on staff work since the war began, will, it is said, be added to the staff of Major General Carson, who specially represents the Canadian Minister of Militia in England.

F. F. Pickard, formerly Inspector of Hulls for Victoria, B.C., is reported to have been a passenger on the s.s. *Persia*, which was sunk by the enemy in the Mediterranean Sea recently. As a member of the Indian Marine Reserve he was ordered to report in London, Eng., about three months ago, and it is stated that he was ordered to take charge of some machine shops in Mesopotamia, whence he was bound at the time of the disaster. As no list of survivors has been published, it is not known if he is amongst those saved.

The Status of a Shipping Contract During War Time.

The case of James Carruthers and Co., Ltd., Montreal and elsewhere, and Danon Freres, Antwerp, Belgium, came before the King's Bench Division in London, England, recently, when a number of points arose as to the position of shippers in regard to contracts which were interfered with by the war. The first named firm were sellers of wheat under a c.i.f. contract, and had up to Sept. 15, 1914, to make deliveries. The latter firm, as buyers, sued for damages for failure to deliver, and the question arose as to whether there was a breach of contract, having regard to the conditions that existed during August and September of that year. The court was asked to say that non delivery was excused by the exception clauses in the contract, and whether there was prevention within that clause owing to the impossibility, as claimed, or difficulty of getting vessels at the material dates to carry freight from American ports for delivery at Antwerp. It was also asked to say if circumstances did not arise which discharged the parties from their obliga-

February, 1916.]

tions under the contract. The contract was made in Antwerp and had the usual prohibition and arbitration clauses. In the resulting arbitration the first award was against the sellers, but there were appeal proceedings before the Trade Committee, and the court was asked to review the findings. It was decided to remit the matter to the Appeal Committee for them to ascertain, if possible, and append to the case, the forms of bill of lading referred to in the sale contract and the charter party.

St. Lawrence and Chicago Steam Navigation Company's Annual Report.

The following report was submitted at the annual meeting in Toronto, Jan. 21, over the signatures of W. D. Matthews, President, and A. A. Wright, Managing Director: The season of 1915 has been one of the best in the company's history. Owing to the exceptional crop in the west, and the demand for iron ore, the highest rates since the year 1905, prevailed during the fall months, and prospects for the beginning of the season 1916 are decidedly encouraging. The steamship G. R. Crowe, not being entirely suitable for our trade, has been sold, and your directors are considering the policy of replacing her with a larger and more modern steamship as soon as practicable. The company's steamships have gone through the season virtually free of accidents and are all in first class condition. Our policy regarding insuring only part of our risk continues satisfactory, and the balance at credit of our insurance fund is \$135,689.67. The directors from the earnings of the season have declared a dividend of 10% and a bonus of 2% on the capital stock amounting to \$115,968, and, after payment of same, carried forward the balance, \$162,622.33, to the credit of profit and loss, making the balance at credit of that account \$393,791.88.

ASSETS AND LIABILITIES.

Four steamships, J. H. G. Hagarty, E. B. Osler, W. D. Matthews, Iroquois	\$1,120,000.00

The following are the directors for the current year:—W. D. Matthews, President; J. H. G. Hagarty, Vice President; Sir Edmund B. Osler, C. S. Gzowski, G. R. Crowe, Jas. Carruthers, S. Crangle and A. A. Wright, Managing Director.

British Columbia Merchant Marine, Limited.

As a result of numerous discussions in Vancouver, recently, it is announced that steps are being taken for the incorporation of a company with the name of The British

Columbia Merchant Marine, Ltd., with an authorized capital of \$2,500,000, divided into 250,000 shares of \$10 each, with a minimum subscription of \$250,000 before proceeding to allotment. No promotion expenses will be paid, nor will commission for the sale of stock be paid by stock, nor will any expense be incurred until it is assured that the minimum amount stated will be subscribed. It is proposed to build vessels, as well as charter or purchase them, for which cash will be raised by bonds, which it is anticipated will be guaranteed as to principal and interest by the B. C. Government. Agencies will be established, and for the present, the office of the Agent General in London, England, will be used, and when the business warrants, a separate office will be established. The directors are to be 15 in number, and the qualification 50 shares. A preliminary subscription list has been thrown open to the public, and a number of shares have been applied for. C. Gardner, Lloyd's representative in British Columbia, is interested in the project.

Oil Burning Tug in New York Harbor.

The first commercial oil burning tug in New York Harbor is the Mexpet, which went into service last summer. It is owned by the Mexican Petroleum Co. and is used for handling oil tankers and ocean vessels docking at the company's pier to fill its bunkers with fuel oil. The tug is 112 ft. overall and has a beam of 24½ ft. The hold is 14 ft. deep. The rudder is unusually large for ease in short turning. The boat has one Scotch boiler 14½ ft. in diameter by 12 ft. long, with three corrugated suspension furnaces 48 in. in diameter. The pressure carried is 165 lb. per sq. in. The mechanical fuel oil firing system is employed, there being two oil pumps and two heaters. The main engine is an inverted compound with 18 and 38-in. cylinders and a 26-in. stroke. In service the Mexpet has evaporated 16.4 lb. of water per pound of oil from and at 212 degrees F. Oil is sprayed at from 240 degrees to 280 degrees F. under 40 to 80-lb. pressure. The engine horsepower ranges from 650 to 750, and a speed of 10 knots has been developed. Ninety tons of fuel oil is carried, sufficient for 10 days run. A crew of 10 men is required.

Marconi Wireless Telegraph Company of Canada.

Following are extracts from the annual report for the year ended Jan. 31, 1915, issued recently: During the six months which elapsed before the outbreak of the war, the business continued to make normal and satisfactory progress. The range of the Cape Race station has been greatly increased by its equipment with steel masts 250 ft. high, in replacement of the 160 ft. wooden spars, and on the return to normal conditions there should be a marked improvement in the earnings of the station. The establishment of a well equipped factory in Montreal, with excellent shipping facilities, has been amply justified, and despite increasing difficulties in obtaining raw materials, the company has been able to meet all demands. During the year permanent stores and offices have been opened at Toronto and Vancouver. Message traffic to and from ships, which forms an important source of the company's revenue, and which prior to the war was showing a gratifying increase, has naturally been adversely affected by the severe censorship imposed, the general dislocation of passen-

ger traffic and the placing of important stations at the disposal of the Government. It is impossible at this time to fully relate the very important services your company has rendered to the naval authorities. Calls for assistance have been received almost daily, operators required at short notice for special duty, apparatus for urgent requirements installed practically on demand, and especially powerful installations for new stations supplied in record time. It is a tribute to the company's organization to record that in no single instance has it failed to fully meet the demands made upon it. In addition, the company has had to provide for the loss of trained operators and engineers who have enlisted for active service. Your directors have accordingly submitted appropriate claims to the naval authorities for compensation in respect of the reduced revenue of the various coast stations as compared with the corresponding period anterior to the war. This matter is still in abeyance, but your directors have reason to believe that an equitable settlement will be duly arranged. Practically the whole of the mercantile marine of Canadian and Newfoundland registry has now been equipped with Marconi wireless telegraph apparatus. Towards the close of the year the Newfoundland Government enacted legislation providing for the compulsory wireless equipment of all vessels engaged in the seal fishery. The company's transatlantic service has shown important gains in traffic despite the adverse conditions imposed by the war. The publicity campaign inaugurated by the board two years ago has made Marconi a household word among the cabling public and throughout Canada. The balance sheet showed net profit for the year \$50,020.11, less interest on advances \$28,956.49 an d balance of deposit account at Jan. 31, 1914, transferred, \$15,335.75, leaving a net balance of \$5,727.87.

The directors, who were re-elected, are: Andrew A. Allan, President; G. Marconi, Vice President; J. N. Greenshields, K.C.; Robert Bickerdike, M.P.; G. C. Isaacs, G. M. Bosworth, W. D. Birchall, E. J. Nally, J. H. Lauer, General Manager.

Telegraph, Telephone and Cable Matters.

The cable companies announced a temporary suspension of their deferred trans-Atlantic cable service recently.

The Association of Railway Telegraph Superintendents will hold its 35th annual meeting at St. Paul, Minn., June 20 to 22.

The Great North Western Telegraph Co. has completed the work at its new office at Ottawa, and is now operating Morkrum printing installations between Ottawa and Montreal and Ottawa and Toronto.

The Pacific Cable Board's report for the year 1914-15 shows traffic receipts \$1,106,400; other receipts \$18,825; total \$1,125,225; expenditures \$731,795; surplus \$393,430. The interest and sinking fund requirements were \$433,005, the deficit being provided by the British and Dominion Governments. The deficit was \$39,575 against a deficit for the previous year of \$60,175, and the net traffic receipts were \$126,125 more. The traffic at ordinary tariffs showed a decrease, but there was an increase in deferred traffic of 599,879 words, and in the week end traffic there was an increase of 747,332 words, practically 200%.

Among the Express Companies.

W. J. Alles has been appointed agent, Canadian Ex. Co., Berlin, Ont., vice E. Gelattly.

M. S. Anderson has been appointed agent,

Canadian Ex. Co., Regina, Sask., vice W. R. Perry.

A. Scholey has been appointed agent, Canadian Ex. Co., Prince George, B.C., vice G. Bennett.

D. F. Martin has been appointed route agent, Dominion Ex. Co., North Bay, Ont., vice W. Aitchison, promoted.

The Canadian Ex. Co. has opened offices at Abbotsford, Parent and St. Basile, Que., and Reaboro, Ont.

W. Aitchison, heretofore route agent, Dominion Ex. Co., North Bay, Ont., has been appointed agent at Windsor, Ont., vice C. F. Price, resigned.

The liquidator of the United States Ex. Co., D. I. Roberts, has made a second distribution of 25%. The first payment was distributed No. 15, 1915. The stock as at Dec. 1 was estimated at a total liquidation value of \$96.60 a share, including the 25% payment already mentioned.

The Canadian Ex. Co.'s revenues, expenses, etc., for Aug., 1915 and 1914, were as follows,—

	1915	1914.
Mileage of lines covered.....	10,238.13	9,676.50
Charges for transportation....	\$325,941	\$291,320
Express privileges, Dr.....	170,060	167,663
Operation other than transportation	5,370	5,494
Total operating revenue	161,250	149,131
Operating expenses	133,942	140,064
Net operating revenue	27,307	9,066
Express taxes	4,200	4,000
Operating income	23,094	5,066

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

John Millen & Son, Limited, Montreal, have sold their railway supply department to F. D. Lyman, who has been its manager since its inception some nine years ago, and it will in future be carried on by Lyman & Lyman, Limited.

M. Beatty & Sons, Limited, Welland, Ont., have received an order from the Confederation Construction Co., contractors, section 3, Welland Ship Canal, for 6 electric hoists, 2 of 50-h.p. with single drums, two 50-h.p. with double drums. They are to be used on the concrete handling plant, which the contractors are building this winter for use on the twin flight locks next spring.

Calendars for 1916 have been received from the W. W. Butler Co., Ltd., railway, marine and mining supplies, Montreal; Hart-Otis Car Co., Ltd., Montreal; Diamond Saw and Stamping Works, Buffalo, N.Y.; The Hiram L. Piper Co., Ltd., railway and steamship supplies, Montreal; John Bertram & Sons Co., Ltd., machinery manufacturers, Dundas, Ont.; Pratt and Whitney Co., of Canada, Ltd., Dundas, Ont.

Transportation Conventions in 1916.

Western Canada Railway Club—Louis Kon, Box 1707, Winnipeg. Meetings at Winnipeg, 2nd Monday each month, except June, July and August.

KETTLE VALLEY RAILWAY COMPANY.

NOTICE.—The Kettle Valley Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which the company may construct the following lines of railway—

(a) From a point at or near the Otter Summit by the most feasible route to the Aspen Grove mineral district in the Province of British Columbia, not exceeding thirty miles.

(b) From a point fifty miles to the north fork of the Kettle River, thence northerly by the most feasible route to Fire Valley, thence northwesterly following the general course of Fire Valley to Vernon, thence westerly to a junction with the line of the Nicols, Kamloops and Similkameen Coal and Railway Company at or near Quilchena.

(c) From a point on the line mentioned in paragraph (b) at or near the junction of the east fork and west fork of the north fork of Kettle River in a generally north-easterly direction to Franklin Camp, thence to Killarney.

(d) From a point at or near Hedley on the line to be constructed from Midway to Hedley northerly along Twenty Mile creek for a distance of about twenty miles.

Dated at Montreal, this 9th day of December, 1915.

H. C. OSWALD,

Secretary.

Pringle, Thompson, Burgess & Cote,
Ottawa agents.

CANADIAN PACIFIC RAILWAY CO.

Notice.—The Canadian Pacific Railway Company will apply to the Parliament of Canada, at its next session, for an Act amending and extending the powers of the company in respect of the issuance of consolidated debenture stock now or hereafter issued by the conversion thereof into denominations of Canadian currency.

Dated at Montreal, this 3rd day of January, 1916.

W. R. BAKER,

Secretary.

Pringle, Thompson, Burgess & Cote,
Ottawa agents.

KETTLE VALLEY RAILWAY COMPANY.

Notice.—The Kettle Valley Railway Company will apply to the Parliament of Canada, at its next session, for an Act ratifying and confirming an agreement dated the tenth day of July, one thousand nine hundred and fourteen, entered into between the Vancouver, Victoria and Eastern Railway and Navigation Company and The Kettle Valley Railway Company respecting a joint section from Princeton to Otter Summit.

Dated at Montreal, this 5th day of January, A.D. 1916.

H. C. OSWALD,

Secretary.

CANADIAN PACIFIC RAILWAY COMPANY.

NOTICE.—The Canadian Pacific Railway Company will apply to the Parliament of Canada, at its next session, for an Act:—

1. Extending the time within which the company may construct the following lines of railway—

(a) From a point on its Pheasant Hills Branch in Township 36 or 40, Range 19 or 20, west of the 3rd Meridian in a northerly and westerly direction towards the Battle River, thence westerly through Township 43, 44, or 45 to a point in Range 5 or 6, west of the 4th Meridian, thence southerly and westerly, crossing the said Pheasant Hills Branch to a junction with the Lacombe extension of the Calgary & Edmonton Railway in Township 36, 37 or 38, Range 11, 12 or 12, west of the 4th Meridian, a distance of about 180 miles;

(b) From a point in Township 6, 7, 8 or 9, Range 30, west of the 2nd Meridian in a westerly direction to a connection with the Crow's Nest Pass Branch, between Range 16, west of the 4th Meridian and Lethbridge, a distance of about 350 miles, or at a point on the Alberta Railway and Irrigation Company's railway in or near the Town of Sterling;

(c) From a point at or near Sedgewick on its Hardisty subdivision in a southerly direction to a point in Township 39 or 40, Range 11, 12 or 13, west of the 4th Meridian, in the Province of Alberta;

(d) From a point at or near Irricana in an easterly and southeasterly direction to a point in Township 20 or 21, Range 11 or 12, west of the 4th Meridian, in the Province of Alberta;

(e) From a point at or near Killam or some point in Township 44, Range 12, 13 or 14, west of the 4th Meridian in a northwesterly direction to a point at or near Strathcona, in the Province of Alberta.

2. Amending and extending the powers of the company in respect of the issuance of preferred shares now or hereafter issued by the conversion thereof into denominations of Canadian currency.

And for other purposes.

Dated at Montreal, this 9th day of December, 1915.

W. R. BAKER,

Secretary.

Pringle, Thompson, Burgess & Cote,
Ottawa agents.

A Clear Track To Promotion

How to get off the side-track—how to break the couplings that hold them near the bottom of the pay roll—is the one big problem that troubles most railroaders.

There's a clear track to promotion—without grade or curve—open to the man that has the backbone and grit to take it. Before you can travel this track to promotion and bigger pay you must "coal up" with knowledge—you must be specially trained.

The Railway Instruction Department of the International Correspondence Schools is able and ready to give you the training you must have. You can get it right at home without losing an hour's time from your present job.

It will not cost anything to find out how the I.C.S. can train you for a better job. Put an "X" near the class of work you would like to follow, in the attached coupon, and mail it to the I.C.S. This won't obligate you in the least. It will simply bring full information by return mail.

Mark the Coupon NOW

FAIRMONT WINS GOLD MEDAL

The excellence of FAIRMONT Railway Motor Cars is attested by their receiving the highest competitive award, a gold medal, at the Panama-Pacific International Exposition, San Francisco.

Years of good service on Canadian railroads has proven the justice of this award. When you need a motor car, specify "FAIRMONT". Instalment terms to private buyers.

Flange Lubrication Should be Automatic

Flange lubrication to be efficient should be automatic, absolutely independent of your engineer, and at the same time the device itself should be so simple and yet so accurate that it will be practically trouble proof. The

Detroit Automatic Flange Lubricator (Pendulum Type)

is absolutely automatic and at the same time simple. It is all in the pendulum. Any lateral movement of the locomotive causes the pendulum to swing. This oscillation rotates, rocker-like, the pendulum shaft, which produces alternating strokes of the two plungers in the pumping unit.

The use of the Detroit Automatic Flange Lubricator insures positive lubrication just when it is needed. May we send booklet F-O 81? It contains all the facts as well as drawings. Write to-day.

Lagonda Arch Tube Cleaner.

Lagonda Cleaner Removing Scale from Arch Tubes.

LAGONDA ARCH TUBE CLEANERS

Scale forms in the Water Arch Tubes of Locomotives, and it must be removed, as Government Inspection requires that these tubes be absolutely clean.

The Lagonda Arch Tube Cleaner will remove these scale deposits easily and quickly. They are built for all sizes of tubes and can be driven by either water, air or steam. Send for Catalogue W-1 describing the construction and operation of these Cleaners.

Other Lagonda Boiler Room Specialties are described in our General Catalogue L-8. Send for Copy.

National Motor Trucks

To have designed and built a Truck that has absolutely proven its worth under the most severe tests that any Truck has ever been put through and to demonstrate by results that the Truck is a sound commercial proposition both from the Purchaser's as well as the Maker's standpoint is an achievement worthy of note.

That is the record of the National Motor Truck to-day. It is acknowledged by competent authorities to be not only a marvel of Engineering skill, but a completely satisfactory Truck from a Service and Price basis of comparison.

Backed by a system of Service Stations that guarantees the Purchaser the attention he should get after he has made the purchase, the National Motor Truck will need less attention and repairs and yet give a full service efficiency.

Catalogue mailed upon request.

Adjustable Taps for Shell Work

Accuracy is one of the principal requirements demanded in the production of shells.

To maintain it in solid taps is too expensive for modern practice.

The simple adjusting device illustrated on this page gives greatly increased life to your taps and **ACCURACY** at a very reasonable first cost.

We will be glad to tell you about our other lines of adjustable taps which embody

**ACCURACY and
ECONOMY**

Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE—INTERCOLONIAL RAILWAY

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

YOURS FOR GOOD RELIABLE SERVICE

I am the Model 2A Signal

Although my face is the same as other signals, yet my teeth are uncommonly large and have great clearances.

No one can raise my arm for me. It is only I who can do this. Remember that my design is so general that I am able to fill any of your exacting requirements.

Very little effort is required to retain my arm in the vertical position and no complications are required such as are usually employed.

When lowering my arm I am able to bring it back with much ease and to indicate at a considerable distance that I have done so; this is accomplished thru my will power and not thru complications such as are common among my associates.

I am wonderfully rugged and strong; I have stood the extreme heat of the Tropics, the frigidity of the far North, the parching sands of the Desert and the extremely variable climate of the East. I have given unequalled service on 85 railways, although in the prime of life.

Remember that I who have served others satisfactorily can also so serve you. Good Reliable Service is the secret of my success.

Hidden Facts About Hides

The next time a man tells you that he is selling you genuine leather, ask him to explain how many hides has a cow—furthermore, ask him why on the cow—one hide—off the cow—three hides. Ask him the difference between a No.1 leather and split leather; ask him why the split hide is coated and embossed to give it appearance and texture. Then ask him the difference in price and quality of “split” leather and

Use

For
Vestibule Curtains

For
Car Seat Upholstery

Fabrikoid is **not** artificial leather—but is more durable and less expensive than the best coated “splits.” Fabrikoid is a scientifically made upholstery material of the leather type. Its base is a strongly woven fabric; smooth and even; coated, however, like split leather. Unlike the coated split (whose base is a wet, soft, pulpy mass), Fabrikoid has tensile strength—can be washed and is guaranteed for one year not to peel or crack. Costs less than coated splits and stands up under severe service conditions. Made in many artistic patterns. Samples and detailed information on request.

Du Pont Fabrikoid Company

Canadian Office and Factory, Toronto, Canada

R. R. Department Representatives

63 Broadway, New York, N. Y.

Why employ 20 to 40 men to handle your material? A

BROWNHOIST Locomotive Crane

will do the same amount of work with a decided saving to you. Its cost, including 6 p.c. interest on investment, depreciation, and operating costs, is only \$6.00 to \$10.00 per day. It is one man operated, powerful, quick-acting, and built to withstand hard and continuous service. Records prove this.

Adaptability. The equipment is interchangeable. It only takes a short time to apply the Grab Bucket, Bottom Block, Drag-Line Bucket, Pile Driving Attachment, Lifting Magnet, or Shovel Equipment. This makes practically six machines in one.

Railroads all over the country are realizing more and more the advantage and economy of having a Brownhoist Locomotive Crane on the job, because it is always ready to work in case of emergency. A Brownhoist Crane can be relied upon. One road uses thirty of them.

*INVESTIGATE TO-DAY. Catalogue I shows how
and where some of these cranes are used.*

Garlock High Pressure Piston Rod Packing

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

Offer a Workman His Choice Between

a new file and a half worn one and he'll choose the new one every time.

Why?

Because with a new file he does better work. It means a saving of labor. It means a big saving in time.

And the saving in time and labor pays for the cost of a file, many, many times over.

It pays you to educate your men to discard a file when it is half worn — the time when a file loses its efficiency.

And they should be replaced with the following brands:

KEARNEY & FOOT GREAT WESTERN AMERICAN
ARCADE GLOBE

(Made in Canada)

They are the products of plants with an output of 60,000,000 files yearly.

They are used by 90 p.c. of the file users in Canada. Made by a firm with 50 years' experience in the making of efficient files.

Berry Brothers' Railway Varnishes

Represent Nearly 60 Years of Varnish Making Experience

Berry Brothers' extensive line of Railway Varnishes makes it possible for you to purchase the right varnish for any demand.

Here are a few finishes you should know.

Locomotive Black

A fossil gum varnish of the highest grade--- for the best attainable finish on locomotives, tenders and valuable rolling stock, combines excellence with durability--- efficient because its use is true economy--- a case of the best being the cheapest.

Front End Black

For the front end of locomotives. It covers well, makes a handsome jet black finish, and stands a high degree of heat without injury.

Smoke Stack Black

Made especially for use on smoke stacks, producing a jet black and brilliant lustre, and resisting heat of a high degree without injury.

Let us send you a copy of our Railway Varnish catalog, just issued

465 Railroad Shops in the United States and Canada Use the Thermit Welding Process

Let us send you this pamphlet.

This comprises practically all the shops of importance in North America, and it can be said without exaggeration that the list of railroads using Thermit includes practically every system from the small road having only three or four locomotives to the largest system in the world having many thousand locomotives.

If by any chance your shop is not using Thermit, you should investigate the process and see how effectively and economically it will handle the many repairs on locomotive frames and other sections.

Remember that the greatest railway systems in the world use hundreds of thousands of pounds of Thermit. They do not use it for any reason except that it "delivers the goods" and has proven itself a profitable investment.

Let us mail you our new pamphlet, No. 2144, which contains full information on the use of Thermit in Railroad Shops.

We have a well equipped shop in Toronto, Ont., for the manufacture of Thermit and appliances used with it.

The Perfect Stay

For Locomotive Fire Boxes

Tate Flexible Staybolts

Are now in use on 425 Railroads of the United States as well as the main Railroad Systems of Canada.

Recognized as the Most Economic Flexible Staybolt now in the market, because the Tate Bolt has demonstrated its true functions as a mechanical appliance to service fire box requirements.

Many Railroad Systems have kept accurate service records and show remarkable increase in the earning power of the locomotives that have been equipped with complete installations of the Tate Flexible Staybolt.

FLANNERY BOLT COMPANY, Vanadium Building, Pittsburgh, Pa.

Manufactured and sold in Canada by Canadian Allis-Chalmers, Limited, General Offices, Toronto, Ont.

Scientific Treatment of Boiler Waters Dearborn Service to Railroads

Every time an engine failure takes place it means a large expense in dollars to the railroad company in time lost, impairment of service, and cost to send another engine to the rescue. Every time a locomotive goes to shop for repairs, it represents many thousands of dollars invested capital which is earning no revenue.

By the use of Dearborn Treatment engine failures due to the boiler foaming or leaking can be entirely eliminated. Dearborn Treatment counteracts the foaming tendency in waters of that type, and prevents scale formation, and the corrosive and pitting action that results in leaks. By thus overcoming the bad effects of the waters used, and keeping the boiler tubes and sheets free from

incrustation, the engine may be kept in service longer between boiler washings, and the period between shop-pings for repairs of this character will be much longer. There are also great savings in fuel and lubricating oil, and the engine will always be in condition to haul full tonnage.

Dearborn Chemical Company of Canada, Limited

Office and Works : 1220-1230 Dundas Street, Toronto, Canada

Avoid the Waste of Constant Repairs

No road can earn big dividends with constant repair and replacement eating into its profits.

Pedlar's ^{"PERFECT"} Culverts

make a definite saving in repair expense. Outlive under ordinary usage the most carefully laid roads.

The first cost delivered at your station is practically the last cost. The culvert arrives assembled complete ready to be rolled into the trench. No excessive transportation problems.

Made from anti-corrosive  that cannot crack or rust or corrode.

Easy to Haul — Easy to Instal

Made in sizes and lengths to suit any road requirements.

The complete Culvert Reference Book No. 4 R.M. brings you much important data and valuable drainage tables. Shall we send it to you by next mail?

SUCCESSFUL and PROSPEROUS

The figures contained in the Thirty-fifth Annual Report of the North American Life indicate a year of increased success.

The growing records of business in every department made still greater increases during the past year.

Policies in Force now amount to over \$56,200,000.

The Assets amount to \$15,716,888.

The Net Surplus now exceeds \$2,500,000.

NORTH AMERICAN LIFE ASSURANCE CO.

Outstanding Figures for 1915.

Increase over 1914.

Policies Applied For	\$9,745,944	\$1,391,878
Policies Issued	9,102,128	1,248,078
Assets	15,716,888	800,880
Net Surplus	2,502,093	385,928
Cash Income	2,749,950	85,933
Payments to Policyholders ..	1,386,025	45,936

PROFITS PAID TO POLICYHOLDERS

The Company has paid out in the last ten years over \$1,500,000 to Policyholders as Profits, and has contingently apportioned for 1916, the sum of \$292,821.26.

Such uniform progress is the outward evidence of the splendid position attained by the Company, and of the sure foundation upon which it has been built.

Preponderantly, a Policyholder's Company embodying the essential features of Mutuality, its record touching investments, interest earnings, favorable mortality and all other points incident to a highly skillful and conservative management, makes the North American Life an ideal Company in which to insure.

A Clear Track To Promotion

How to get off the side track—how to break the couplings that hold them near the bottom of the pay roll—is the one big problem that troubles most railroaders.

There's a clear track to promotion—without grade or curve—open to the man that has the backbone and grit to take it. Before you can travel this track to promotion and bigger pay you must "coal up" with knowledge—you must be specially trained.

The Railway Instruction Department of the International Correspondence Schools is able and ready to give you the training you must have. You can get it right at home without losing an hour's time from your present job.

It will not cost anything to find out how the I.C.S. can train you for a better job. Put an "X" near the class of work you would like to follow, in the attached coupon, and mail it to the I.C.S. This won't obligate you in the least. It will simply bring full information by return mail.

Mark the Coupon NOW

International Correspondence Schools Box 8402, Scranton, Pa.

Please explain, with a suggestion to me, how I can qualify for the position I have marked with an X.

Proper Brush Selection Increases Motor Efficiency

There is one grade of brush that is best suited to each condition of motor operation.

Choose this proper grade and the motor will operate most efficiently.

A grade not properly selected will not only cause pitting and wearing of the commutator but may reduce the efficiency of the motor quite appreciably.

In our twenty-six years of experience in the manufacture of brushes we have developed a grade that is best suited for every condition of stationary or railway motor operation.

More than that, we have a staff of expert engineers who are at your service and who will make proper recommendations.

If you have a brush problem put it up to our engineers. They will gladly advise you.

Write for a brush data sheet.

Fire Tube Marine Superheater -- Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler h.p. from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

Brake Beams for all Classes of Cars, Locomotives and Electric Equipment

Money paid for these Brake Shoes was largely money wasted

Why?

Because these unreinforced brake shoes did not give equivalent service for their cost, having broken in service before their life had barely commenced.

And the remedy?

Use only Reinforced Brake Shoes—then you will get your brake shoe money's worth in long and safe service.

Manufactured in Canada.

Thor

Most Convenient Air Tool Made Close Corner Drill

The neat and compact construction, together with the design of the mechanical parts, makes it possible to drill holes in places where it would be absolutely impossible with an ordinary centre spindle drill.

Especially adapted for work in close quarters.

Made in Two Sizes:
No. 8 For Drilling up to 1 1/4 in.
No. 9 For Drilling up to 3 in.

Every experienced mechanic appreciates the value of a Thor Close Corner Drill for steady service and economy. Order one on trial to-day. We take all the risk.

Independent Pneumatic Tool Company

334 St. James St., Montreal, Que.

Lagonda Arch Tube Cleaner.

Lagonda Cleaner Removing Scale from Arch Tubes.

Lagonda Arch Tube Cleaners

Scale forms in the Water Arch Tubes of Locomotives, and it must be removed, as Government Inspection requires that these tubes be absolutely clean.

The Lagonda Arch Tube Cleaner will remove these scale deposits easily and quickly. They are built for all sizes of tubes and can be driven by either water, air or steam. Send for Catalogue W-1 describing the construction and operation of these Cleaners.

Other Lagonda Boiler Room Specialties are described in our General Catalogue L-8. Send for Copy.

It Always Pays to Buy the Best

Just as it pays to plant the best seed, so
it always pays to buy the best goods.

Best Quality
Best Construction
Best Workmanship

In our Rubber Goods, it is QUALITY that counts.
We stand back of the quality, workmanship and construction of our lines. That protects your interests, and you are sure to be satisfied.

Our line-up is complete, our quality is unexcelled, and our prices are right. Let us show you what we can do.

It is Our Desire to Serve You

Canadian Railway and Marine World

March, 1916.

Passenger Cars for Transcontinental Service on Canadian Northern Railway.

For the inauguration of transcontinental train service on the Canadian Northern, it was found advisable to provide 77 new cars of the latest and most substantial construction, the various types being illustrated by the accompanying plans and divided as follows: 15 baggage-express, 4 postal, 5 second class, 12 first class, 7 colonist sleeping, 7 tourist sleeping, 7 dining, 11 standard sleeping, 2 compartment sleeping and 7 compartment-buffet observation sleeping, all of which were built from the railway company's designs and specifications by the following builders: National Steel Car Co., Hamilton, Ont., Crossen Car Co., Cobourg, Ont., Preston Car and Coach Co., Preston, Ont., and Canadian Car and Foundry Co., at its Amherst, N. S. and Turcot, Que. works.

The body framing throughout is of ample proportions to withstand an assumed buffing shock of 500,000 lbs. with a large factor for safety, the side construction is selfsupporting and thoroughly reinforced for window and side door openings. The two body bolsters are of unit builtup form, having suitable cover plates top and bottom, 24 in. wide at the centre, tapering to 15 in. in width at the ends. The centre sills form a box girder with cover plates 23 in. in width, extending from end to end of cars, so far as possible, the principal members being two rolled steel 15 in. by 33 lb. channels placed back to back and provided with a finished camber at the centre of car of $\frac{1}{4}$ in. when car is ready for service. The vestibules are built entirely of steel, so formed as to constitute separate members each side of centre construction, this being an important item in case of damage admitting of making repairs more easily and also should one corner be swept away there is no liability to distort or disarrange the adjacent end panel on other side of car. The platform buffers are of coil spring design with coupler centring device, furnished by the Standard Coupler Company, of New York, which provides a maximum cushioning effect of 84,000 lbs. per car, which added to that of the A-2-P draft gear allows for a maximum buffing resistance of 387,000 lbs. before the centre construction is directly effected. The top diaphragm buffing attachment is designed to accommodate the railway company's standard coil springs of $\frac{1}{4}$ in. square crucible steel. The steel end posts extend down in front of the pressed steel end sills and are reinforced by cover plates and connection angles, all forming a rigid panel strong enough to cause the side and centre construction to work in union under direct impact.

General conditions both from the standpoint of maintenance and operation necessitated the use of a steel car insulated inside and outside with wood. The light weight of the cars has been kept down so far as possible, but inevitably a composite construction does not lend itself to the greatest refinement in this respect, and on account of the long journeys a large storage battery capacity

necessitates two sets of batteries being carried, besides considerable other equipment, such as overhead water storage tanks, in conjunction with the usual air pressure water raising system under car.

The lighting equipment conforms to the railway company's standard practice as followed for equipment built in the past, with the exception that the steel conduit for wiring is entirely removed from the roof, and inspection is obtained from special junction boxes with weather-proof covers extending through the roof, the conduit proper passing between the roofboards and the headlining. The annunciator wiring is also executed in conduit. Current is supplied to the lamps and fans by dynamos for all cars, double batteries of 500 ampere hours capacity being furnished except in the case of the baggage cars and colonist sleepers, which have a single set of batteries of 240 ampere hours capacity. The Safety Car Heating and Lighting Co.'s fixtures are provided and especially designed, metal-cased, slate switchboards are provided for the sleeping and dining cars; these cars are also furnished with electric exhaust fan sets, having a capacity of 400 cub. ft. of air per hour. Fifteen watt, 12 candle power lamps are furnished throughout and 10 in. non-oscillating electric fans with takedown attachment are used. Candle lamps are used for auxiliary lighting purposes. Hot water circulation heating system is used on all cars, except the baggage and postal cars, which are fitted with straight steam equipment in conjunction with stove auxiliary. Composition flooring, laid on sectional galvanized steel, is provided on all cars and so formed as to provide sanitary corners for all outside edges. The baggages and postal cars have sheathed ceilings, the remaining cars being furnished with canvas with gold leaf and dutch metal to the railway company's standard patterns. The end construction throughout is designed to meet primarily the United States standard specifications for mail cars, this being considered a satisfactory basis.

For the baggage cars, the railway company's standard practice was not altered from the equipment of that class purchased previously. Arrangement was made, however, to carry two sets of desks and filing cases, also sleeping accommodation and a vault. Auxiliary lighting equipment for passenger cars is carried in a sealed box located in the centre portion of the car, there being 24 candle lamps and a double set of candles furnished. Emergency wrecking tool cases and auxiliary outfit, also a thaw-out hose 50 ft. long, designed to connect directly to a thawout connection on train line of each car, are maintained in sealed cases on baggage cars. A steam-water mixer is attached to the basin water supply, to heat the water as desired during the winter.

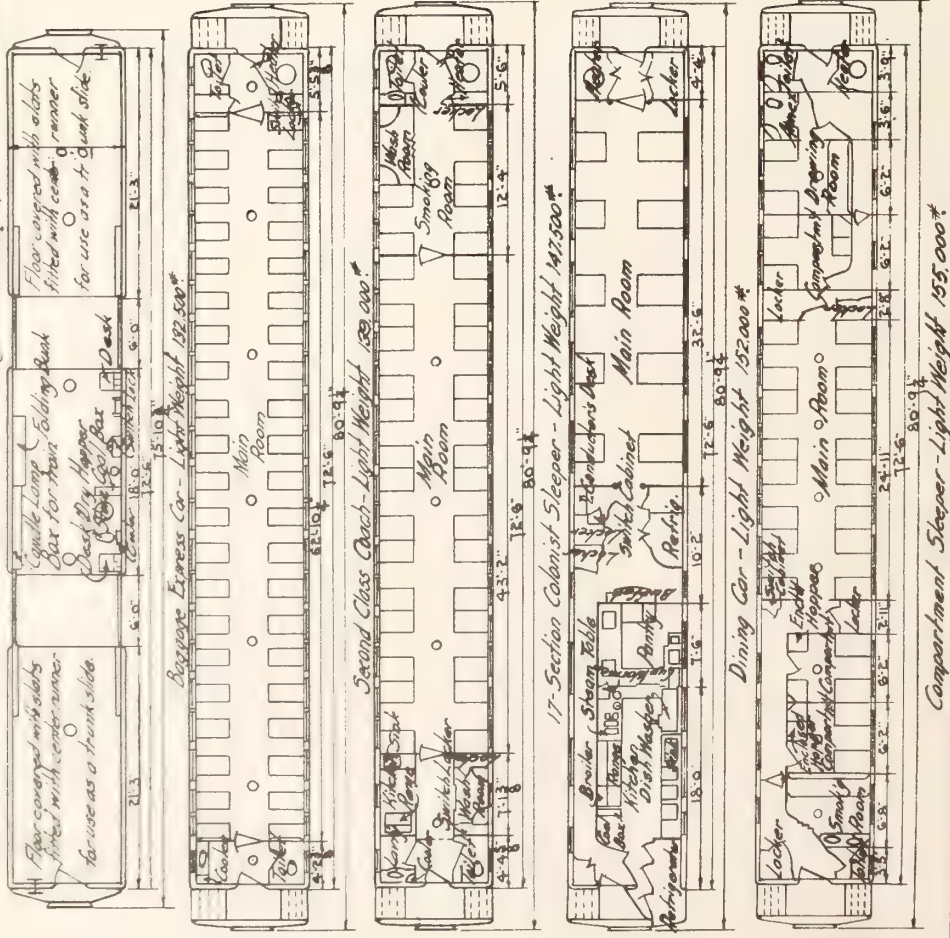

On account of operating for a short distance and being obliged to maintain local mail service through United States territory and for the reason that the

type of car standardized by the U. S. Post Office Department has been satisfactory to all concerned, it was adopted for the cars built recently. Several novel features were embodied in the design, chiefly on account of restrictions from following usual standard practice for this class of equipment. No gas auxiliary lighting was provided, this necessitated the use of a 350 watt electric coffee heater. Double windows, besides storm sashes, for service in winter had to be furnished and therefore a novel scheme of drop sash fixtures had to be devised so as to allow the upper or screened section of top sash to operate as intended. Weather conditions necessitated the use of condensation collectors for skylight over letter cases, and extreme care was exercised in designing the glass fastening frame, which is of sheet copper, to avoid any leakage, which might become serious on account of the possible collection of large quantities of snow and ice. The wiring was carried out entirely in steel conduit and the train line connected so as to draw current as desired from any car in the train. The light distribution is in exact accordance with the latest recommendations for postal cars and 15 watt lamps were installed throughout. Large overhead tanks are provided and furnished with water level gauges, and hot water attachments were included for basins. The sides and ends of car are painted a light grey, while the ceiling is of a lighter shade.

Second class cars are now being generally superseded by colonist sleeping cars for transcontinental train service, but the type of second class car shown in the accompanying plan, is especially well adapted for local business, or through service, where a maximum number of passengers have to be carried. The maintenance cost on a car of this style is considerably less than that of a colonist sleeper, principally because of the absence of bunks and kitchen, the latter being unnecessary for harvester excursions, where men form the great majority of the passengers, as they purchase sardines, crackers and sandwiches from news agents; besides this a second class car weighs about 7 per cent. less than a colonist sleeper. A large water capacity and plenty of ventilation is essential to the proper operation of a car of this class. Square deck and side finish, all in natural birch, was used in conjunction with low back reversible seats upholstered in pantasote.

The railway company's usual design of first class car was used, except that slight modification obtained with respect to the style of smoking room employed. High back reversible seats were installed and upholstered in green plush for main room, while the smoking room sofas were covered with pantasote. Empire deck with oval oak sashes and square outside gothics fitted with clear pressed prism glass, was employed, the finish throughout being of plain mahogany, relieved with three line striping and single white holly striping for curtain boxes.

Steel Framed Passenger Car Equipment for Canadian Northern Railway System Transcontinental Trains.

Experience gained from service of a large number of colonist sleeping cars, caused the railway company to provide ample facilities for washing and cooking which are absolutely essential for this type of equipment. The usual square deck and finish throughout was employed, the interior being of natural birch. Ample ventilation and large water supply is necessary also for a large smoking room. Extreme judgment is required in the design of tourist sleeping cars, in order not to divert first class traffic, and it is also necessary to provide an arrangement of sufficient merit to meet the severest competition. The railway company

considered it inadvisable to furnish berth lamps for this class of car, this being the only exception as compared with standard sleeping car. The upholstery throughout is executed in pantasote and the finish is of plain mahogany. Announcators are provided and the usual smoking room arrangement as employed in standard sleeping cars is furnished. Extremely large locker accommodation for bedding and provisions is necessary in a car of this type, as the great volume of travel in this service is that of family groups, journeying from coast to coast, or nearly so.

The dining cars are similar to the type

used in the past, having a seating capacity of 30. Square beam ceilings, in main room and passageways, in conjunction with circular side plate coving, was employed as in previous cars; the interior gothics were changed from leaded art glass to white pressed prism glass with matted back and lamp fixtures to correspond. All inlay marquetry was abandoned, in common with the practice for all other classes of equipment. White enameled steel refrigerators were employed and provided with automatic lighting switches, for use when open. Kitchen table top covering is of nickel-ine, flashed all around and protected on

line, flashed all around and protected on the edges with hard metal moulding. The railway company's standard design of hard coal range was used, also charcoal boiler with coal storage space below, and steam table provided with 2 meat trays, 2 gravy bowls, a soup pot, coffee urn and cup warmer, opening into the pantry. The dish washing machine is hand operated and fed from the overflow line of hot water boiler. An electric exhaust fan set, 2 large globe ventilators and a vanetype range hood deck ventilator are furnished, and provide extremely good ventilating conditions under all phases of train operation. The kitchen

floor is covered watertight with copper, a longitudinal gutter 3 ins. wide and 1 in. deep being provided in the centre, with holes making it self draining. The use of garbage cans has been avoided by providing a special deflecting device to the garbage chute and fitting it with a covered galvanized iron boxing with hinged lid. The lockers, vegetables bins and provision chests are all unit locked. Thawout tubes for drains are located in ice boxes. The pantry contains the usual storage lockers and sink, and is also furnished with a special water filter. The locker above the conductor's desk contains a special humidifier arrangement for cigar storage, consisting principally of a lamp, which burns continually in conjunction with a metal pan filled with an absorbing compound, holding water, which tends to keep the air moist. A central metal perforated shelf is also employed and the doors are fitted with pressed prism plate glass with matted finish, to diffuse the light. Cork tiling is used in the passageways, pantry and main room, so that carpet may be dispensed with during the summer. Vacuum cleaner connections are also installed in common with the practice for sleeping and parlor cars.

Such good results have been obtained with the railway company's standard 12 section sleeping cars that practically no alterations were made on account of the new service, except in the matter of refinement in detail. Electric exhaust fan sets were employed in smoking room and main body of car, entrance buzzers located at entrance to the drawing room, for use by the car porter, specially designed towel boxes were located over washstand in smoking room, to avoid having them saturated with the odor of smoke; boot locker opening into passage way from drawing room, special selfsupporting berth ladder with safety attachment and encased top tread were used, and all berth lamps were divided up in each section, so that a serious car failure would have to obtain if all lights were out in one section.

It is often difficult to design a car, especially a sleeping car, suitable for long distance and local travel as well, and this was the problem which presented itself in the development of the compartment sleeper shown in the accompanying plan which contains 8 standard sections, drawing room and compartments. The car is especially well balanced, and affords a maximum seating capacity without in any way detracting from the generally complex scheme of the layout. The general design embodies all the details which are applicable from the standard 12 section sleeping car already described, including the use of green frieze plush for upholstering throughout, except the smoking room, which is carried out in Spanish leather. The drawing room arrangement is the same as used in the sleeping cars and the compartments are of special design, including a folding washstand, which forms a table when closed, the cover containing a hand mirror, hair brush and comb, tooth brush, holder, clean and soiled towel racks and towel bars also large mirrors. The bottom portion is provided with a central shelf, and doors opening into the compartment and out into the passageway for use as a boot locker. Above the folding washstand is a corner water cooler, which is iced and filled from the passageway, through a small door. The hopper is enclosed and provided with an automatic disinfecting device, which operates continually and can be regulated as desired. Economy of space was of paramount

importance in the design of the observation cars, in order to include necessary storage room, in conjunction with a depressed platform, a seating capacity of 17 in the observation room, 4 compartments and 1 drawing room, also a buffet. It has been found advisable in this type of a car to locate the heater on the opposite side from the drawing room or compartment and wherever this is possible it should be done, otherwise great discomfort will be experienced by passengers in sections adjacent to the heater, for obvious reasons, and this was accomplished on both the compartment sleepers and observation cars. The buffet contains a compact refrigerator sink, humidifier cigar locker, 3-burner gas stove with water urn, percolator and toasting and frying attachments, metal lined bread locker, pie locker, canisters and water filter. The space being small, it was found advisable to provide a pair of 8 in. diam. globe ventilators in the top and connected to electric exhaust fan set, which also serves the observation room, smoking being allowed, and is indispensable for conditions of this sort when trains are standing still.

Auxiliary overhead water storage tanks are furnished in all of the cars and supply boxes as required. Suitable lockers are fitted up in each car for the reception of spare belts, train connectors, bulbs, belt fasteners and fuses. All dining and sleeping cars carry their own complement of candle lamps and spare candles in a sealed locker, also special soiled linen lockers with movable front gratings and floor slats.

The trucks for all cars are of the 6-wheel type, built up from rolled steel sections and plates and provided with cast steel centre plate supports. The wheels are 36 in. diam., steel tired, of bolted type wire section. Axles have 5 in. diam. journals, 9 in. long. The wheelbase of trucks is 11 ft. The colonist tourist, 12 section compartment and observation sleeping cars and the dining cars have locked centre pins and roller centre plates, and the baggage, postal, second class and first class cars have plain centre pins and flat centre plates.

Appreciation of C.P.R. in the Prairie Provinces. The United Farmers of Alberta, in convention at Calgary recently asked the Alberta Government to follow the C.P.R.'s example of pursuing the destruction of gophers. Statistics read, giving a record of the grain movement over C.P.R. lines from Sept. 1 to Dec. 31, evoked applause, and the company was congratulated on the showing made. At a sitting of the Saskatoon Royal Livestock Commission recently, the C. P. R. also came in for praise in connection with its efforts to promote the interest of livestock shippers.

A Quebec Quarry Railway Dispute. The dispute respecting the quarry railway connecting with the C. P. R. at St. Fravers de Salis, Que., which was decided in a Montreal court recently in favor of L. Labelle, has entered another stage. The defendant in the original suit is now preventing the plaintiff from using the line, giving as a reason that the purchase price has not been paid in full, and that he cannot avail himself of the right to operate.

The Pennsylvania Rd. has completed two years without a single fatality amongst its passengers; the lines east of Pittsburgh have not had a single passenger fatality for three years. During the past year, 361,572,114 passengers were carried.

The Magnitude of the Railway Industry.

Wm. C. Willard, A.M.Am.Soc.C.E., Assistant Professor of Railway Engineering, McGill University, Montreal, in the introduction to his work on Maintenance of Way and Structures, issued recently, says:

"On June 30, 1914, considering all tracks—single, second, third, fourth, etc., yard tracks and sidings—in round numbers a total of 384,000 miles of track were being operated in the United States, 41,000 miles in Canada and about 20,000 miles in the remainder of North America, making a grand total of approximately 445,000 miles in North America. In order to better realize the vast mileage this represents it can be stated in terms of the circumference of the earth. This track mileage would girdle the earth seventeen times. The distance of the moon from the earth is 239,000 miles and this railway mileage is almost twice that distance. In the year from June 30, 1910 to June 30, 1911, 1,815,239 persons were required to maintain and operate the railways of the United States, 141,224 persons were required to maintain and operate the railways of Canada, and about 75,000 those of the rest of North America. Considering Canada and the United States together, 1,956,463 persons were employed directly by the railways. The combined population of the two countries, according to the census taken in 1910, was 99,178,909. This means that one person out of each 51 was directly supported by the railways. The individual figures are one out of each 51 for both the United States and Canada, a surprising agreement of figures. A study of the report of the United States census for 1910 shows that the production of supplies directly consumed by the railways, but not manufactured by them, such as rails, ties, bridge steel, locomotives, cars, etc., required the employment of about 750,000 persons. In Canada the proportion is doubtless about the same, but if the number is assumed at but 50,000 the total number of persons directly and indirectly employed by the railways of the United States and Canada in 1910 was 2,756,000. The same census report gives the average number of persons per family in the United States as 4.5 in 1910. If it is assumed that but one out of each four persons employed directly or indirectly by the railways had the average family, 2,310,000 must be added, giving 5,066,000 as the number of persons supported by the railways. Dividing this into the total population it is seen that one person out of every 20 of our total population is dependent upon the railways for a living. These figures do not include electric roads or street railways, but stand alone for steam roads."

Australian Railway Construction.—It is reported that a conference is to be held between the Australian military advisers and the railway commissioners of the various states of the Commonwealth, to consider the construction of strategic railways in addition to the transcontinental railways under consideration and building.

The British Government Management Committee, now operating the railways in Great Britain, has decided to abolish the system of booking individual seats in cars, and will only book whole compartments and sleeping berths. The amount of work involved and the shortage of employes are given as reasons for this.

Was a Pioneer Tunnel Advisable at Rogers Pass?

J. G. Sullivan, M.Can.Soc.C.E., Chief Engineer, Western Lines, Canadian Pacific Railway, has favored us with a copy of a letter he has written *Engineering News*, New York, in answer to an article on the above mentioned subject, which was published in that paper and reproduced in *Canadian Railway and Marine World* for February. Mr. Sullivan's letter is as follows:

Your criticisms and questions would appear logical and reasonable, if, as you seem to think, they were based on the idea that speed was the only object we had in mind, but the most important factor, and the one that must govern all good engineering, is the factor of economy, and this was the sole factor that was considered in making our decision. Time was a factor in this larger question of economy, but much smaller than some others. We considered time to be worth approximately \$750 a day. In a circular letter sent out to contractors inviting them to bid, dated April 8, 1913, the following statements appeared.

"The necessity for this tunnel is so great and the expenditure so large that it would be worth considerable money to this company to have the tunnel completed as soon as possible. Therefore, everything also being equal, the party who will guarantee completion in the shortest time will be the party who will receive the work."

"I would be glad if you would give us prices on the European method of tunneling, which is to drive a very small heading and take out the bench, working from several headings into this small drift. Tunnels in Europe have been driven by this method at two or three times the speed that any tunnel was ever driven in the U. S. or Canada, and I would like to be able to place before the management figures for doing this work according to this method. I would be glad if you would state in your proposal the amount per day that you would be willing to have inserted in a contract to be paid as a bonus for time saved over the agreed time, the same amount to be exacted as a penalty for the time lost, being the time between the fixed day of completion and the actual date of completion. We are of the opinion that this sum should be about \$750 a day."

The writer, however, was aware at this time that the chances of American contractors tendering a reasonable figure on the European method was very remote, in fact, after having studied some of the prices paid for labor in some of the large Swiss and Italian tunnels, we were forced to the conclusion that theirs was not a practicable method for this country, where labor is so expensive. On March 13, 1913, the writer reported to the management his ideas on this subject. To quote from that report:

"Referring to the progress that we hope to make in the driving of the Rogers Pass tunnel. I advised you in my report of Oct. 22, regarding the relative speeds of driving tunnels on the American continent compared with those that have been driven through the Alps. I have given the matter considerable study since and have come to the conclusion that the European method of driving a small lower heading and stopping out the remainder of the tunnel is too expensive on this side on account of the difference in the cost of labor."

I then described in general the methods which we proposed and which we have

practically followed out. The method desired was one by which we would be able to handle the minimum amount of material by hand and the maximum amount by steam shovel. By driving a heading in the centre of the excavation required for the completed tunnel, making this heading just large enough so that we could handle in the same, steel that would reach from the perimeter of this advance heading to the perimeter of the completed tunnel, and then drilling holes at right angles to the axis of the tunnel, enabling us to shoot at once the entire section required for the enlargement of the tunnel and this shooting was done in the following manner. Six holes at the bottom of the tunnel, having been previously shot out, they would load six holes in the next ring back in the bottom and all the side holes of the first ring up to a point a little over half way up the sides of the tunnel. This would continue until the tunnel began to fill up, and then some of the advance rings in upper portion of the tunnel would be shot and this process continued until the tunnel was choked full of muck. There was usually shot, about six rounds (or 30) of holes before the steam shovel started to clean up. In some of the harder rocks that shot well, they were able to shoot a greater distance. The most shooting done at one time up to date was 84 feet. This method enabled us to handle about 85 per cent. of the total excavation of the tunnel proper with steam shovels. This was the prime object to be obtained, and how that could be done without interfering with the work of the shovel was solved by driving the pioneer heading or tunnel, to be used as a by-pass for removing the muck from pioneer and advance headings; for ventilating ducts; air, water pressure pipes, etc., the result being that work was carried on continuously at all points, irrespective of shooting at other points, work only stopping at the local points at which shooting was being done. As there were no air pipes or water pipes, or any obstruction whatever passing over the muck pile in front of the shovel, the shovel was able to excavate 85 per cent. of the total excavation almost as easily as if it had been an open cut.

Our expectations have been more than realized, as is proved by the speed and the cost of the work. The cost of driving this tunnel through rock, including in this price the cost of driving 19,610 lin. ft. of pioneer tunnel; 12 cross cuts each about 40 ft. long; installation of plant including freight on same; the proportionate cost of building about 5 miles of temporary railway tracks, and other overhead charges plus 10 per cent. on all expenditures, will amount to a little less than \$5 a cubic yard for tunnel excavation in the tunnel proper. I may add further, that in reply to my invitation of April 8, 1913, the contractors who are doing the work, having in mind the method which was later adopted and which was suggested by myself and one of their engineers, bid \$6.10 a cubic yard with a time limit of 42 months from date of signing contract. Other responsible and supposedly expert tunnel contractors bid from \$8 to \$11.25 a cubic yard, with time limits varying from 42 to 48 months. I do not know what method these latter contractors proposed to employ but I always presumed it would be some modification of the European method. We also received an estimate of \$5.50 a cubic

yard for tunnel excavation from a very reputable American expert tunnel contracting firm who would do the work on a percentage basis and would be willing to forfeit a large portion of their percentage if they did not keep the price within the estimate. They however, estimated the time at 58 months. At the speed they promised for driving tunnel in rock, and figuring the time it took our contractors to get into rock at both ends on account of heavy cuts, it would have taken them 8 or 9 months longer than the estimate, or something over 5½ years. The method that they proposed to employ was to remove tunnel right from a face, loading muck by steam shovel.

Now, as far as speed is concerned, on account of large cuts and soft ground at the approaches, the shovel doing the enlargement work did not reach the rock on the east end until Jan. 1, 1915, and on the west end until Feb. 1, 1916. On Dec. 19, 1915, when the heading was completed, the shovels were two miles apart. Had the conditions been such that we could have got into the tunnel proper at earlier dates, I do not think there is any European record that would not have been broken. We are driving the tunnel at the rate of better than three miles a year for the last year. During Jan. 1916, the shovel in the east end made an advance of 946 lin. ft.

In conclusion, I wish to say, that in Europe, where drill runners, as I understand, get 90 cents to \$1.25 a day, and laborers something like 75 cents, the method followed in driving the Loetschberg tunnel may be economic as well as rapid, but all the evidence that we have goes to show that where we have to pay from \$4 to \$5.50 for drill runners and \$2.25 to \$3 for laborers, per day, the method we have adopted is by far the most economical.

New African Railway. A railway which will be of immense importance in time of peace was built with remarkable speed primarily for the purpose of facilitating the invasion of German Southwest Africa by the troops under General Botha. It connects the railway systems of Southwest Africa and the Union of South Africa, extending 300 miles from Kalkfontein in the former to Prieska on the Orange River in the latter. The new line saves many hundred miles of travel between points in South Africa and those in Southwest Africa as compared with the old route by rail to Cape Town and thence by boat to the ports of the late German colony now under British military control. Through trains are now running from South African points to Walfish Bay.

Light Railways for War Purposes.—By the use of light railways, the Germans have been enabled to run lines close up to the trenches. A network of such lines has been built throughout the occupied territory in Belgium and France, thus relieving road traffic and generally assisting in the handling of supplies and men. The lines are narrow gauge, and consist of high grade steel rails of light weight, and the whole is built up in sections, so that track is laid on the level in practically a ready made manner.

The National Union of Railway Men, of Great Britain, announced recently that it had lost 1,020 members by death in the war.

Birthdays of Transportation Men in March.

Many happy returns of the day to:—
W. G. Annable, General Passenger Agent, Canadian Pacific Ocean Services, Ltd., Montreal, born at Ottawa, Mar. 3, 1875.

John Archibald, Locomotive Foreman, C.P.R., Coquitlam, B.C., born at Edinburgh, Scotland, Mar. 13, 1872.

C. F. Black, Attorney, Central Vermont Ry., St. Albans, Vt., born at Burlington, Vt., Mar. 5, 1884.

George Bury, Vice President, C.P.R., Montreal, born there, Mar. 6, 1866.

Allan Cameron, Superintendent, Land Branch, Department of Natural Resources, C.P.R., Calgary, Alta., born near Owen Sound, Ont., Mar. 14, 1864.

F. G. J. Comeau, General Freight Agent, Dominion Atlantic Ry., Halifax, N.S., born at Meteghan River, N.S., Mar. 10, 1859.

W. A. Cooper, Manager, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Montreal, born there, Mar. 22, 1871.

A. E. Cox, General Storekeeper, Canadian Northern Ry., Winnipeg, born at Huddersfield, Eng., Mar. 12, 1863.

Hon. N. Curry, President, Canadian Car & Foundry Co., Montreal, born in King's County, N.S., Mar. 26, 1851.

C. T. Delamere, acting Engineer of Construction, Eastern Lines, C.P.R., Montreal, born at Brainerd, Minn., Mar. 18, 1881.

Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co., Montreal, born there, Mar. 4, 1876.

Frederick Elliott, President, Victoria Navigation Co., Ltd., Thurso, Que., born at Montreal, Mar. 8, 1858.

W. R. Fitzmaurice, Assistant Superintendent, Moncton and Ste. Flavie District, Intercolonial Ry., Newcastle, N.B., born at Bedford, N.S., Mar. 19, 1870.

C. Forrester, Superintendent, Stratford Division, Ontario Lines, G.T.R., Stratford, born at Wanstead, Ont., Mar. 5, 1876.

Jas. D. Fraser, Director and Secretary-Treasurer, Ottawa Electric Ry., Ottawa, Ont., and President, Canadian Electric Railway Association, born at St. Andrews, Que., Mar. 26, 1851.

R. A. Gamble, General Yardmaster, Winnipeg Terminals, C.P.R., born at Dublin, Ireland, Mar. 1, 1876.

E. P. Goodwin, ex-Inspecting Engineer, National Transcontinental Ry., Baie Verte, N.B., born there, Mar. 17, 1865.

J. Halstead, Division Freight Agent, C.P.R., Calgary, Alta., born at Bracebridge, Ont., Mar. 2, 1877.

R. M. Hannaford, M.Can.Soc.C.E., Assistant Chief Engineer, Montreal Tramways Co., Montreal, born there, Mar. 22, 1865.

C. A. Hayes, General Traffic Manager, Canadian Government Railways, Moncton, N.B., born at West Springfield, Mass., Mar. 10, 1865.

H. T. Hazen, M.Can.Soc.C.E., Chief Engineer, Toronto Suburban Ry., Toronto, born at Truro, N.S., Mar. 14, 1870.

Joseph Hobson, M.Can.Soc.C.E., Consulting Engineer, G.T.R., Hamilton, Ont., born at Guelph, Ont., Mar. 1834.

J. I. Hobson, Treasurer, Canada Steamship Lines, Ltd., Montreal, born at Guelph, Ont., Mar. 30, 1872.

N. J. Holden, President, The Holden Co., Ltd., Montreal, born at Nobleton, Ont., Mar. 22, 1866.

A. R. Holtby, Master of Bridges and Buildings, Mountain Division, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at Rawdon, Que., Mar. 23, 1859.

Frank Lee, M.Can.Soc.C.E., Principal

Assistant Engineer, C.P.R., Winnipeg, born at Chicago, Ill., Mar. 7, 1873.

R. W. Long, Division Freight Agent, G.T.R., Hamilton, Ont., born at Appin, Ont., Mar. 20, 1873.

T. W. Lowe, General Boiler Inspector, Western Lines, C.P.R., Winnipeg, born at Montreal, Mar. 30, 1858.

J. M. McKay, Superintendent, District 1, British Columbia Division, C.P.R., Revelstoke, born at Tiverton, Ont., Mar. 13, 1868.

Owen McKay, M.Can.Soc.C.E., Chief Engineer, Essex Terminal Ry., Walkerville, Ont., born in Ross Tp., Renfrew Co., Ont., Mar. 13, 1848.

Col. H. H. McLean, K.C., M.P., President, St. John Ry., St. John, N.B., born at Fredericton, N.B., Mar. 22, 1855.

M. Magiff, Superintendent of Car Service and Telegraphs, Central Vermont Ry., St. Albans, Vt., born at Planks Point, N.Y., Mar. 24, 1852.

Sir Donald D. Mann, Vice President Mackenzie, Mann & Co., Ltd., and Vice President Canadian Northern Ry., Toronto, born at Acton, Ont., Mar. 23, 1853.

H. H. Melanson, General Passenger Agent, Canadian Government Railways, Moncton, N.B., born at Scadouc, N.B., Mar. 9, 1872.

T. Milne, Locomotive Foreman, C.P.R., Windsor, Ont., born at Arbroath, Scotland, Mar. 3, 1856.

J. V. Murphy, General Agent, C.P.R., Portland, Ore., born at Bowmanville, Ont., Mar. 5, 1885.

Peter Paton, Purchasing Agent, Canada Steamship Lines, Ltd., Montreal, born at New Lovell, Ont., Mar. 13, 1869.

F. W. Peters, General Superintendent, British Columbia Division, C.P.R., Vancouver, born at St. John, N.B., Mar. 25, 1860.

J. W. Pugsley, Secretary, Department of Railways and Canals, Ottawa, Ont., born at Amherst, N.S., Mar. 12, 1861.

E. H. Sewell, City Passenger Agent, C.P.R., Sherbrooke, Que., born at Quebec, Mar. 17, 1875.

C. J. Smith, Manager and Secretary, Montreal Warehousing Co., Montreal, born at Hamilton, Ont., Mar. 10, 1862.

W. Y. Soper, Vice President, Ottawa Electric Ry. Co., Ottawa, Ont., born at Oldtown, Me., Mar. 9, 1854.

E. F. L. Sturdee, General Agent, Passenger Department, C.P.R., Boston, Mass., born at St. John, N.B., Mar. 29, 1876.

A. A. Tisdale, Assistant to Vice President and General Manager, and Purchasing Agent, Grand Trunk Pacific Ry., Winnipeg, born at Mount Vernon, Ont., Mar. 8, 1874.

G. W. Vaux, General Agent, Passenger Department, Union Pacific Rd., Chicago, born at Montreal, Mar. 21, 1866.

A. D. Watt, District Locomotive Foreman, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at St. Louis, Que., Mar. 5, 1874.

A. T. Weldon, Assistant General Freight Agent, Canadian Government Railways, Moncton, N.B., born at Dorchester, N.B., Mar. 6, 1876.

D. O. Wood, General Freight Agent for Ontario, Allan Line Steamship Co., Toronto, born at Kleinburg, Ont., Mar. 16, 1864.

H. K. York, Car Foreman, C.P.R., North Transcona, Man., born at Victoria Corner, Carleton Co., N.B., Mar. 20, 1881.

Block Signal Systems in Canada and the United States are said to represent an investment of over \$108,000,000.

The Canadian Overseas Railway Construction Corps in Flanders.

Roland Hill, writing from the Canadian Army Corps Headquarters in Flanders to the Toronto Star, says:—"The specialization in the Canadian army strikes you immediately. Many other units that were looked upon as frills have proved more than useful overseas.

In the Railway Construction Corps each man is a specialist in something. It is such a useful organization that the Imperial authorities have borrowed it. I found them building railways. British military engineering rules are strict and unbreakable, but these Canadian engineers have mastered them and here they are building a standard gauge line within shell zone in Flanders with Canadian rails and ties, even Canadian steel work to brace bridges. Whilst I was chatting with a colonel, a request came in for two divers. They were wanted for the base. There were five in the battalion, so they had no trouble in sending two.

New Books, Etc.

Any of the books mentioned may be obtained through Canadian Railway and Marine World at the published price.

MAINTENANCE OF WAY AND STRUCTURES, by Wm. C. Willard, A.M.Am.Soc.C.E.; Assistant Professor of Railway Engineering, McGill University. Cloth, 6 x 9 in., 451 pages, 232 illustrations, 24 tables, McCraw Hill Book Co. Inc., New York, \$4.

This first edition contains the following chapters: 1, Introduction; 2, Organization and rules; 3, Roadway; 4, Ballast; 5, Wooden ties; 6, Substitute ties, economics of ties; 7, Preservation of timber; 8, Rails; 9 and 10, Track fastenings, rail joints, tie plates, track spikes, rail anchors, other track fastenings; 11, Stresses in the track; 12, Design of track; 13, Signs, fences and highway crossings; 14, Accessories to track; 15, Bridges, trestles and culverts; 16, Switches, frogs and turnouts; 17, Work of maintenance of way department; 18, Roadway machines, small tools and supplies; 19, Records; 20, Accounts; 21, Annual programme for maintenance of way and structures.

Canadian Pacific Ry. Summer Hotels—Following are the opening and closing dates for the 1916 season:—Algonquin Hotel, St. Andrews-by-the-Sea, June 20 to Sept. 30; Banff Springs Hotel, May 15 to Oct. 15; Chateau Lake Louise, June 1 to Oct. 15; Emerald Lake Chalet, June 15 to Sept. 30; Glacier House, May 15 to Oct. 15; Kootenay Lake Hotel, June 15 to Sept. 15. The other hotels operated by the company are open during the entire year.

The Belgo-Canadian Mines and Timber Lands Co. has been incorporated under the Dominion Companies Act with power, among other things, to construct railway sidings, tramway lines, telegraph and telephone lines on lands owned by the company, and necessary to its development. The company is to have a capital of \$100,000, and office in Montreal. The provisional directors are: C. Laurin, S. E. Melkinan, G. J. Barry, A. Beique, Miss L. Lavigne, Montreal.

Canada Nitro Products, Ltd., has been incorporated under the Dominion Companies Act, with \$5,000,000 capital and office at Toronto, to manufacture war munitions, explosives, etc., and in conjunction therewith to own and operate steam and other vessels, wharves, docks and other navigation facilities.

Railway Mechanical Methods and Devices.

Laying Off Segmental L Packing in Michigan Central Shops.

The arrangement shown in the accompanying illustration is in use in the Michigan Central Rd. locomotive shops at St. Thomas, Ont., for laying out segmental L packing rings preparatory to cutting and rivetting the sections together. The two component rings from which the final

edge. This scribed mark is then placed opposite the radial angle, which locates the second scribed line, and so, forth, until all the lines are marked off.

The rings are cut off in the lathe by mounting on a table on the tool carriage, with a saw cutter on an arbor between the lathe centres. Following the cutting up, the parts are drilled and rivetted together, forming the commonly found L piston packing ring.

One of these slide valves is shown on the right, the valve on the other cylinder being hid by the cylinder itself. The valve of the cylinder on the right is operated by the short vertical handle, while the other valve is operated from below by a treadle, located directly below the immediate foreground. The tube to be operated on is placed on the angle iron support, against the near jaw, the other jaw being forced against it by a pressure

Laying off Segmental L Packing Rings.

segmental ring is made are first machined and fitted the one on the other, and then taken to the table for laying off. The table consists of a planed face cast iron sheet, which can be mounted on any convenient stand or bench. On it are scribed a number of circles, varying in diameter by about $\frac{1}{4}$ in., for setting. On the face are four arms, held in quartering positions by means of knurled thumb

Hydraulic Tube End Expanding Machine with Piston Valves.

Hydraulic Tube End Expanding Machine in Grand Trunk Shops.

The process of handling locomotive boiler tubes through the safe-ending operation, as practiced in the G.T.R. shops at Stratford, Ont., was described in detail in Canadian Railway and Marine World for Nov. 1912, the article outlining the machine used for clamping the tubes while the end was being expanded

on the treadle, clamping the tube. Pushing in the other handle forces up the expanding mandrel into the tube. With the slide valve, the pressure required on either valve is very small, as the internal valve pressures are equalized as in a locomotive piston valve, as opposed to the ordinary D valve.

Elevator Record at Fort William.—It is announced that the Grand Trunk Pacific Elevator Co. has established a record

Coal Oil Storage Tank.

screws, and which can be radially adjusted as may be seen. By means of the scribed circles the radial fingers may be set for the particular sized ring to be marked. Hinged from the centre of the plate is a straight edge arm, fitting when depressed into a block in one corner. Marked on the face of the plate are radial scribed lines at the different angles to which the rings are to be cut.

A mark is first made on the ring with a scribe along the edge of the straight

Car Wheel Handling Truck.

by the forcing in of a mandrel. As originally made, this machine consisted essentially of two hydraulic cylinders, actuated by two flat slide valves. While performing the work satisfactorily, the hydraulic pressing on the back of the flat slide valve made the latter so hard to move that to handle the machine for a whole day was most fatiguing to the operator, especially as each tube end required four valve movements. In consequence, the machine has since been redesigned with piston valves, as shown in the accompanying illustration.

at its elevator at Fort William, Ont., in unloading from cars, between Oct. 1 and Dec. 23, 1915, 21,994,000 bush., or 18,500 cars of grain. This is an average of 241 cars a day of $12\frac{1}{2}$ working hours. During October, 6,500,000 bush. were loaded into vessels, 8,987,000 bush. in November, a daily average of 300,000 bush. Between Dec. 1 and 12, 5,700,000 bush. were loaded into vessels, a daily average of 475,000 bush.

Railway employees in Canada and the United States number approximately 1,900,000.

Coal Oil Storage Tank on Canadian Northern.

On account of the continual risk of accident incidental to the maintenance in sufficient quantities of inflammable oils at divisional points and terminals, it has been considered advisable by almost all good roads to develop a convenient and safe means of caring for this product, instead of allowing a multiplicity of oil cans to accumulate and be scattered around. The following arrangement is used by the Canadian Northern.

An old air brake reservoir forms the container, and is piped with air from the shop line, the oil intake being through a suitable funnel connection. The filling operation is carried out by closing the cut out valve near the reducer and opening the bleed cock, which permits the air to

Clegg, Air Brake Foreman, C.N.R., Winnipeg, for the above information.

Small Rod Jigs in Grand Trunk Shops.

For most of the standard rocker arms, radius links, etc., used on the G.T.R. motive power, the company's shops at Stratford, Ont., have special drilling and reaming jigs. A number of these are shown suspended from a shop column in the accompanying illustration. They are made of either iron castings or steel forgings, with inserted hardened steel bushings at all the holes. In the jig, the article to be drilled or reamed is held and centred by various means, the principal one being by means of set screws in close proximity to the hole in the work, bearings against the work.

Jigs for Drilling and Reaming Rod Pin Holes.

escape, allowing the whole of the reservoir to be filled with oil, after the cut out valve below the funnel has been opened. The reservoir being filled, it is only necessary to close the cut out valve below the funnel, open the one near the reducer and a good flow of oil will be obtained by opening the faucet. In closing down the system when tank is full of oil, it has been found advisable to shut off the reducing valve cut out, as well as the faucet, and open the bleed cock, which allows any accumulation of air to escape freely to the atmosphere. All piping and valves are located above the oil level, which makes it possible to avoid any leaking or dripping. The $\frac{1}{2}$ in. supply pipe inserted inside of the reservoir is held in place by a $\frac{1}{2}$ in. coupling, threaded at one end on the outside for $\frac{3}{4}$ in. The tank head, being threaded to suit, allows the whole to be inserted and held in place. The reducing valve is set at a pressure of 2 lbs. per sq. in. We are indebted to T.

Machining Hub Liners in Grand Trunk Shops.

The jig on which locomotive hub liners are machined at the G.T.R. shops, Stratford, Ont., is shown in the accompanying illustration. It is an old back cylinder cover, faced on the two ends to sit on the boring mill table, and receive the liner blank. There are 4 holes in the upper flange, corresponding to 4 stud holes that are drilled and tapped in the blank prior to the boring mill operation. By means of these the liners are held on the jig for facing and boring.

The Toronto University Engineering Society has 411 members on active military service.

Russian Freight Rates.—It is announced that rates on grain traffic, except oats, between Russia and China, for export, have been considerably reduced.

Car Wheel Handling Truck on Canadian Pacific.

D. Condell, Car Foreman, Canadian Pacific Ry., Nelson, B.C., has built a unique car wheel handling truck, which, as far as the writer knows, is the only one of its kind in use. As illustrated herewith, it is composed of two small trucks of four wheels each. The lower or main truck runs along a narrow gauge track parallel with and between the main repair tracks, while the upper and smaller truck, which carries the wheels, is placed on a combined revolving table, track and telescoping track section. The latter is adjustable to different distances to be bridged from the truck to repair tracks.

When wheels are to be changed the wheel truck is run along the narrow gauge track until opposite the storage,

Jig for Machining Hub Liners in the Boring Mill.

where the table is turned around and the telescoping track section pulled out until it engages the main repair track. This is bridged by a separate section carried on the truck at all times. The upper truck is then moved along its track until opposite the storage. The storage being parallel with the repair tracks the truck can be run until it comes in line with the storage, where wheels can be placed on the truck with very little effort, the tracks being level with the truck. The truck and wheels are then returned to the main narrow gauge track, track sections replaced, table turned round into position, and the truck run along its track until opposite the car requiring wheels. When in position the table is turned at right angles to the repair track and the operation of extending the track sections and running the upper truck into position on the repair track is repeated.

Two hardwood wedges, having boiler plate shoes to cover the track and hold

wedges in position, are placed on repair track in line and on a level with the wheels on truck, which are easily rolled off the wedges to the repair track. The wedges are reversed to the opposite side and old wheels placed and returned to the storage, all with one operation.

This truck was built from the scrap pile, the wheels being removed from an old plain wheel truck, such as is used at nearly every repair track. A pair of car wheels of any size can be easily moved by two men from any part of storage track to repair tracks. In the same yard,

before this truck was built, four to six men were required to place a pair of wheels on repair track. Wheel truck is built low enough so that, while loaded with a pair of wheels, it can be run under a car and the wheels placed in position without removing the car truck.

Orders by the Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which they were drawn.

General order 156. Jan. 18.—Ordering that, by Feb. 1, all railways which commence, terminate, or intersect any lines listed in Altitudes in Canada, by James White, as well as those which touch tidewater, be based upon mean sea level as provided in that book.

General Order 157. Jan. 31.—Ordering that, on and after Feb. 1, all profiles submitted by railway companies subject to Board's jurisdiction which commence at, terminate at, or intersect with any lines listed in "Altitudes," by James White, as well as those which touch tidewater and are not listed, be based upon mean sea level, as provided in "Altitudes," and rescinding general order 156, Jan. 18.

24636. Jan. 10.—Authorizing C.P.R. to build branch for Crows Nest Pass Lumber Co. at mileage 1.2, Waldo Subdivision, B.C., to be completed within six months.

24637. Jan. 11.—Authorizing C.P.R. to build at grade, diversion of portions of road allowances on south and west boundaries of s.w. $\frac{1}{4}$ Sec. 17-39-18, w.3.m., Sask.; and close diverted portions.

24638. Jan. 11.—Authorizing C.P.R. to build, at grade, road diversion adjoining southeast boundary of its right of way, in lieu of existing road allowance on western boundary of n.w. $\frac{1}{4}$ Sec. 13-34-3, w.4.m., Alta.; and close same.

24639. Jan. 7.—Authorizing Pontiac County, Que., to build highway crossing over C.P.R., in Pontiac.

24640. Jan. 10.—Authorizing the Niagara, St. Catharines & Toronto Ry. to open for traffic portion of its line from St. Catharines to Niagara-on-the-Lake, mileage 0 to 12.2; and extension to lake front on Lot 12, Con. 1, Grantham Tp., mileage 0 to 0.68.

24641. Jan. 10.—Authorizing C.P.R. to refund to Spanish River Pulp & Paper Mills, Sault Ste. Marie, Ont., \$333.84, overcharged on shipment of machinery from Ansonia, Conn., to Espanola, Ont.

24642, 24643. Jan. 10.—Approving Bell Telephone Co. agreement with Arundel Development Co., Dec. 30, 1915, and Lansdowne Rural Telephone Co., Dec. 29, 1915.

24644. Jan. 10.—Ordering Grand Trunk Pacific Ry. to erect, within 30 days, a station at Fort Fraser, B.C., with platform 230 ft. long, station not to be below Board's standard plan 1 B.

24645. Jan. 11.—Authorizing British Columbia Government to build highway crossing over Nelson & Fort Sheppard Ry. (G.N.R.) at Mountain station, Nelson.

24646. Jan. 10.—Ordering G.T.R. to plank Welland Ave., St. Catharines, Ont., from curb to curb; to move cedar post at s.e. corner; and erect crossing signboard at north side of track and street line; Niagara St. Catharines & Toronto Ry. to pay cost of laying and maintaining planking between its rails and for 8 ins. on each side thereof; work to be completed by Feb. 15.

24647. Jan. 12.—Amending order 24628, Jan. 10, re suspension of certain express companies' tariffs.

24648. Jan. 12.—Approving plan and specifications of A. Moore drain, to be built under Canada Southern Ry. in west half of Lot 30, Southwold Tp., Ont.

24649. Jan. 14.—Relieving C.P.R. from providing further protection at crossing at mileage 71.2, about 3 miles west of Point du Lac station, Que.

24650. Jan. 13.—Relieving C.P.R. from providing further protection at crossing at Hatton, Sask.

24651. Jan. 13.—Relieving, subject to certain conditions, C.P.R. from providing further protection at crossing $\frac{1}{2}$ mile east of Binscarth, Man.

24652. Jan. 11.—Amending order 23878, June 18, 1915, re Canadian Northern Ry. crossing north of Sec. 27-46-23, w.2m., Sask.

24653 to 24655. Jan. 14.—Authorizing New York Central Rd. to rebuild bridges A-40, 0.78 mile north of Athelstan; A-71, 1.1 miles north of St. Stanislas, and A-41, 0.83 mile north of Athelstan, Que.

24656. Jan. 15.—Dismissing Grand Trunk Pacific Ry. application to remove its regular station agent at New Hazelton, B.C.

24657. Jan. 14.—Approving revised location of Grand Trunk Pacific Branch Lines Co.'s. Moosejaw Northwest Branch, and land required for station grounds, in west half of Sec. 26-22-6, w.3.m., Sask.

24658. Jan. 17.—Authorizing C.P.R. to build spur for I. Georgetti, Trail, B.C.

24659. Jan. 17.—Authorizing G.T.R. to build extension to siding for William Davies Packing Co., Toronto.

24660. Jan. 15.—Approving Niagara, St. Catharines & Toronto Ry. crossing of road allowance between Secs. 9 and 10, Stamford Tp., Ont.

24661. Jan. 18.—Extending time for reconstruction of C.P.R. bridge at Notre Dame St., St. Pie, Que., so that plans may be filed by Mar. 1 and the work completed by Mar. 31.

24662. Jan. 17.—Authorizing London Railway Commission to construct a branch of London & Port Stanley Ry. for London Rolling Mills Co., and McClary Manufacturing Co., London, Ont., to be completed within six months.

24663. Jan. 18.—Authorizing C.P.R. to build spur for Ingersoll Machine Co., Ingersoll, Ont.

24664. Jan. 18.—Authorizing G.T.R. to rebuild bridges 15, 18 and 24 on District 22, Ontario Lines.

24665. Jan. 19.—Authorizing Canadian Northern Ontario Ry. to divert Park Drive, York Tp.

24666. Jan. 18.—Amending order 23219, Jan. 27, 1915, re Hamilton Radial Ry. tracks at Sherman Inlet, Hamilton, Ont.

24667. Jan. 18.—Authorizing Eastern Canadian Passenger Association to publish general order 151, Nov., 1915, and regulations attached thereto.

24668. Jan. 21.—Extending to June 1 time within which G.T.R. shall install bell at second highway crossing east of Baden station, Ont.

24669. Jan. 19.—Ordering Canadian Northern Ry. to appoint station agent at Plato, Sask., until May 1, and between Sept. 1 and May 1 in each year until otherwise ordered; caretaker to be employed when agent is withdrawn.

24670. Jan. 20.—Authorizing Pennsylvania Rd. pending further order, to operate trains over portion of International Bridge Co. and G.T.R., according to agreement of Mar. 31, 1913.

24671. Jan. 21.—Extending to June 1 time within which Canadian Northern Ontario Ry. shall build crossing over Second Concession road allowance in Goulbourn Tp.

24672. Jan. 22.—Ordering that crossing of London St. Ry. by London & Port Stanley Ry., required by order 24629, Jan. 7, be maintained by London Railway Commission.

24673. Jan. 22.—Suspending, pending further order, certain tariffs of Canadian Northern Ry., Grand Trunk Pacific Ry. and C.P.R., effective Feb. 1, cancelling all free return transportation for live stock shippers west of Port Arthur, Ont.

24674. Jan. 22.—Dismissing Western Retail Lumbermen's Association complaint against increase by railway companies in the carload minimum on brick in Western Canada.

24675. Jan. 24.—Authorizing Canadian Northern Ontario Ry. to build across highway between Lot 35, Con. 2, and Lot 35, Con. 3, Markham Tp.

24676. Jan. 22.—Ordering Canadian Northern Ry. to pay W. Bell, Winnipeg, \$1,600 for damage to his property, as provided under order 19120.

24677. Jan. 24.—Authorizing Grand Trunk Pacific Ry. to remove spur built for Inland Lumber & Building Co., in Edmonton, Alta.

24678. Jan. 24.—Approving revised location of Grand Trunk Pacific Ry. from Lot 5935 to north boundary of Lot 5277, mileage 134 to 144, Yellowhead Pass west, B.C.

24679. Jan. 26.—Amending order 24630, Jan. 7, by substituting Lake Erie & Northern Ry. for London & Lake Erie Ry. The error in the original order was noted and corrected in the summary published in Canadian Railway and Marine World for February.

24680. Jan. 27.—Suspending, pending hearing on Feb. 8, certain tariffs covering charges for the use of heated refrigerator cars on C.P.R., Canadian Northern Ry., G.T.R., and Toronto Hamilton & Buffalo Ry.

24681. Jan. 26.—Authorizing C.P.R. to build additional siding for O'Brien Munitions, Ltd., at Renfrew, Ont.

24682. Jan. 26.—Extending for 60 days from date time within which C.P.R. shall install gates at Talbot Ave., Winnipeg.

24683. Jan. 25.—Authorizing G.T.R. to build temporary spur and trestle in Toronto Harbor Industrial District, for Canadian Stewart Co.

24684. Jan. 26.—Relieving the G.T.R. from providing further protection at crossing at Stamford, Ont.

24685. Jan. 27.—Relieving Canadian Northern Ry. from providing further protection at crossing just east of Ashville station, Man.

24686. Jan. 26.—Dismissing application of milk shippers for general order fixing minimum number of milk cans, or minimum carload rate, necessary to entitle shipping station to separate car.

24687. Jan. 27.—Authorizing British Columbia Southern Ry. to build highway over its track at Erickson Road, Creston, B.C., cost to be paid by British Columbia Government.

24688. Jan. 26.—Dismissing application of village of Forward, Sask., for order directing C.P.R. to furnish site for coal shed; or for Canadian Northern Ry. to grant joint rate to junction at Forward that shall be at least as low as present C.P.R. tariff to Forward spur, or Axford station.

24689, 24690. Jan. 27.—Approving Bell Telephone Co. agreements with Mono Mills Independent Telephone Association, Jan. 13, and Udney Telephone Co., Jan. 11.

24691. Jan. 28.—Authorizing clearances at G.T.R. sidings serving Canada Forge Co., Welland, Ont.

24692. Jan. 28.—Ordering C.P.R. to carry out certain work on ditch at mileage 79.2, Quebec Subdivision, by May 1.

24693. Jan. 28.—Authorizing Grand Trunk Pacific Ry., pending further order, to remove regular agent at Willow River, B.C., caretaker to be appointed for accommodation of passengers and l.c.l. freight and express matter.

24694. Jan. 29.—Ordering G.T.R. to concur in joint freight tariffs to be published and filed by Canadian Northern Ry. to apply on grain and grain products, in carloads, from Port Arthur, Fort William, and Westfort, Ont., to G.T.R. stations, via North Bay, Ont. This order is given fully on another page.

24695. Jan. 22.—Authorizing City of Windsor, Ont., until Dec. 31, to permit pedestrians to cross Michigan Central Rd., pending application to have Michigan Central Rd. build level crossing at Wyandotte St., and reserving leave to city to apply for extension of time, in event of application not being finally determined prior to Dec. 31.

24696. Jan. 31.—Approving schedule showing train service on Vancouver, Fraser Valley & Southern Ry. (B.C. Electric Ry.).

24697. Jan. 31.—Ordering G.T.R. within 90 days to install automatic bell at highway just north of Allanburg station, Ont., 20 per cent. of cost to be paid out of railway grade crossing fund.

24698. Jan. 31.—Authorizing C.P.R. to build spur for Ford Motor Co. of Canada, Winnipeg.

24699. Jan. 31.—Ordering Canadian Northern Ry. to appoint station agent at Morrin, Alta.

24700. Feb. 1.—Authorizing Canadian Northern Ontario Ry. to build across certain highways in Mara Tp., between mileage 67 and 82.

24701. Jan. 31.—Authorizing Grand Trunk Pacific Ry., pending further order, that, after two weeks notice has been given making Gainford, Alta., a prepaid station, to remove the station agent, caretaker to be appointed for accommodation of passengers and l.c.l. freight and express matter.

24702. Feb. 2.—Ordering Canadian Northern Ontario Ry. to attach passenger car to trains 107 and 108, between Hawkesbury and Ottawa, to and from Henderson Ave. station, Ottawa, for passengers to and from Ottawa only; leaving Ottawa and Hawkesbury as at present; all stations may be treated as flag stations; service to be in effect for three months.

24702. Jan. 29.—Authorizing Canadian Northern Ry., pending further order, to remove station agent at Cumberland, Ont.; caretaker to be appointed.

24704. Feb. 1.—Authorizing C.P.R. to build spur and sidings for Dominion Sugar Co., at Chatham, Ont.

24705. Feb. 3.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to remove spur to Britannia Trading & Lumber Co., near Burnaby, B.C.

24706. Jan. 28.—Amending order 24462, Nov. 19, 1915, re sale of Canadian Northern Ry. tickets on main floor of Union Station, Toronto.

24707. Feb. 4.—Authorizing C.P.R. to operate over subway at Main St., Winnipeg.

24708. Feb. 4.—Ordering C.P.R. to keep station as Ashdod, Ont., clean, warm and properly lighted for accommodation of passengers and provide outside bracket lamp for platform, between station door and main walk to train.

24709. Feb. 4.—Extending to June 1 time within which G.T.R. shall install bell at highway just north of Allanburg station, Ont.

24710. Feb. 7.—Authorizing C.P.R. to build diversion of road allowance at mileage 52.3, Wilkie Subdivision, Sask.

24711. Feb. 5.—Authorizing G.T.R. to build siding for Hay & Co., Missouri West Tp., Ont.

24712. Feb. 7.—Ordering C.P.R. to install bell by June 1 at Main St., Chesterville, Ont., 20 per cent. of cost to be paid out of railway grade crossing fund, cut-out and bonding to be in front of platform on westbound track.

24713. Feb. 7.—Ordering Grand Trunk Pacific Ry. forthwith to appoint station agent at Quinton, Sask., until May 1, and between Sept. 1 and May 1 each year until otherwise ordered.

24714. Feb. 9.—Dismissing complaint of A. H. Mayland, Calgary, Alta., against completion of loading charge and diversion charge made by C.P.R. on pigs or livestock shipments through Calgary.

24715. Feb. 9.—Authorizing C.P.R. to build spur for John Deere Plow Co., Regina, Sask.

24716. Feb. 9.—Authorizing C.P.R. to build spur for Shell Co. of California, Inc., near Barnett, B.C.

24717. Feb. 8.—Approving plans and specifications of Southwold Tp., Ont., showing work to be done on the A. Moore drain under G.T.R.

24718. Feb. 9.—Authorizing Michigan Central Rd. to build siding for Norton Co., Chippawa, Ont.

24719. Feb. 10.—Relieving C.P.R. from providing further protection at crossing of Kemptonville Road, near Kempton, Ont.

24720. Feb. 5.—Authorizing Lachine, Jacques Cartier & Maisonneuve Ry. (G.T.R.) to build across certain highways between Cote de la Visitation Road and Belanger or Daniel Sts., Montreal; authority granted herein to be exercised by Dec. 31, 1917, or order to become inoperative.

24721. Feb. 11.—Authorizing C.P.R. to build spur for Port Moody Steel Works, Ltd., Port Moody, B.C.

24722. Feb. 14.—Relieving Canadian Northern Ry. from providing further protection at second crossing east of Oshawa station, Ont.

24723. Feb. 12.—Ordering C.P.R. to install improved automatic bell at highway west of Welsford station, N.B., by June 1, 20 per cent. of cost to be paid out of railway grade crossing fund.

24724. Feb. 14.—Suspending, until further order, proposed cancellation of joint rates from Eastern Canada to points in Western Canada, applying via routes published in Supplement 8 to G.T.R. tariff C.R.C. no. E-2962, and Supplement 18 to G.T.R. tariff C.R.C. no. E-2977, issued to take effect Feb. 15.

24725. Feb. 15.—Authorizing Algoma Central & Hudson Bay Ry. to use bridge at mileage 150.61, over Kaniwabe River, Tp. 28, R. 22, Algoma District, Ont.

24726. Feb. 15.—Approving agreement between Bell Telephone Co. and National Telephone Co., Dec. 31, 1915.

24727. Feb. 16.—Disallowing Canadian Northern Ry. special proportionate freight tariff, C.R.C. no. E-732, applicable from Toronto to Regina, Sask., on tank and steel structural material, in carloads, originating at Sarnia.

24728. Feb. 16.—Rescinding order 23483, Apr. 6, 1915; and ordering that C.P.R. trains crossing Portage Ave., Winnipeg, be limited to 6 miles an hour.

24729. Feb. 15.—Ordering Canadian Northern Ry. to appoint station agent at Brunkild, Man., Mar. 1.

24730. Feb. 15.—Authorizing Premier Coal Co. to carry its roads or entries under railway right of way.

24732. Feb. 15.—Approving agreement between Bell Telephone Co. and Kamouraska Telephone Co., Dec. 30, 1915.

24733. Feb. 17.—Approving clearances at country grain elevators for C.P.R., Grand Trunk Pacific Ry. and Canadian Northern Ry., and rescinding order 24157, Sept. 10, 1915.

24734. Feb. 17.—Authorizing C.P.R. to build extension to siding for M. J. O'Brien, Horton Tp., Ont.; and a siding for Energete Explosives, Ltd., at mileage 69.28, Chalk River Subdivision, Ont.

24735. Feb. 17.—Authorizing Grand Trunk Pacific Ry. to build connection between G.T.P. Edmonton Exhibition Association spur and Edmonton Radial Ry., Edmonton, Alta.

24736. Feb. 17.—Authorizing Canadian Northern Ry. to cross and divert highway in n.w. ¼ sec. 5-35-7, w.2m., Sask.

24737. Feb. 17.—Authorizing Algoma Central & Hudson Bay Ry. to open for traffic revision of its main line in Sec. 37, Vankoughnet Tp., and Lot 12, Con. 1, Deroche Tp., Algoma District, Ont.; and to use bridge at mileage 19.10.

24738. Feb. 17.—Authorizing G.T.R. and City of Toronto to rebuild Bathurst St. Bridge.

24739. Feb. 15.—Authorizing Canadian Northern Quebec Ry. to close Larose station during winter as flag station for passenger trains; station to be open from May 1 to Oct. 31 each year and to be lighted when required for accommodation of passengers.

General order, 158. Feb. 15.—Ordering that provisions of general order 153, Nov. 4, 1915, applicable to Canadian Freight Classification and any proposed new issue or supplement thereto, and to Canadian Freight Association, shall apply to Express Classification for Canada and to Express Association of Canada, in so far as they can be made applicable.

Canadian Pacific Railway Construction, Betterments, Etc.

In an interview at London, Ont., Feb. 8, George Bury, Vice President, is reported to have said there will be no new construction on the eastern lines during the year, and no new large works of betterment will be undertaken; all that will be done will be the necessary work of maintenance and ordinary and essential betterments.

Grant Hall, Vice President and General Manager, Western Lines, in an interview at Winnipeg on his return from a recent visit to Montreal is reported to have said, "There is no possibility of the C.P.R. embarking on any ambitious scheme during the continuance of the war. In view of the rather obscure financial outlook it has been decided not to proceed with the building of any new lines, but this matter will be given further consideration in the spring should conditions warrant. The necessary money for the completion of the Rogers Pass tunnel has been allotted, and that work will be completed this year. Provision has also been made for the erection of a commodious train shed or rather system of umbrella sheds at Winnipeg station, but the exact design to be followed has not been determined. In pursuance of the company's policy to encourage the live stock industry 35 additional stockyards will be built on the western lines during the year. Considerable expenditure will be made upon additions to the reservoir in connection with the water supply at Moose Jaw, Sask.; new icehouses will be erected at Weyburn, Sask., and Edmonton, Alta., and some new stations will be built on the line to Shaunavon. Generally the work for the year will include a considerable expenditure on ballasting, bank widening, etc., and 150 miles of track will be relaid with new heavy rails."

We are officially advised that the distance between Vantage, the present terminus of the Moose Jaw-Expanse branch, to the present terminus of the present Assiniboine branch is eight miles. The building of this mileage to connect the two branches is being urged, but the company has not at present in contemplation the construction of any new lines.

The fact that the water supply at Moose Jaw is to be increased is quoted as a sufficient answer to the press report that the company is considering the removal of the divisional point and shops from Moose Jaw to Swift Current.

We are officially advised that the betterments to be done on western lines during the current year will include the usual amount of renewals, the paving of the approaches to the freight shed at Regina, and the erection of umbrella sheds at Winnipeg station, the details for which have not yet been completed. The replacing of old with new steel will include 19.5 miles of 65 lbs. rails on the Aldersyde Subdivision, and the putting in of new 85 lb. steel as follows:—District 1, Manitoba Division, 41.1 miles; Winnipeg terminals, 5 miles; Brandon subdivision, 26 miles; Broadview subdivision, 12 miles; Swift Current subdivision, 1 mile; Medicine Hat subdivision, 15 miles; Calgary subdivision, 7 miles; Laggan subdivision, 4.4 miles; Cranbrook subdivision, 21.4 miles; Shuswap subdivision, 5.4 miles; Thompson subdivision, 9.2 miles; Cascade subdivision, 9 miles, a total of 177.1 miles.

The points at which new stockyards will be provided are:—Fertile, David and Regent, in Manitoba; Liberty, Brora, Grand Coulee, Lajord, Readlyn, Simpson, Tregarva, Belle Plains, Richardson, Lim-

erick, Renown, Kedleston, Pasqua, Griffith, Cadillac, Dilke, Holdfast, Forget, Froude, Kincaid, Young, Sifton, Tyvan, Ogema, Hazenmore, Penzance, Pilot Butte, Sedley, Ponteix, Stalwart, Wilkie, Tramping Lake, Naseby, Markinch, Leipzig, Kandahar and Biggar in Saskatchewan; Portreeve, Sceptre, Coaldale, Parkland and Beddington, in Alberta.

Railway Finance, Meetings, Etc.

Canadian Northern Ry.—There was deposited with the Secretary of State at Ottawa, Jan. 20, duplicate original of a trust agreement between the C.N.R. and the Central Trust Co. of New York, securing an issue of one year 5% secured gold notes. The issue is reported by New York papers to consist of \$2,500,000, of which \$2,000,000 is to be provided immediately and the balance on the deposit of some additional stock, and is secured by the deposit of \$205,000 of 4½% debenture stock of the C.N. Pacific Ry., guaranteed by the Province of British Columbia; \$209,000 of 4% C.N.R. debenture stock, and \$193,000 of 4½% first mortgage bonds of the C.N. Saskatchewan Ry., guaranteed by the Province of Saskatchewan.

Canadian Pacific Ry.—The directors on Feb. 15 authorized the payments of the following dividends for the period ended Dec. 31, 1915:—A dividend of 2% for the half year on the preference stock; a dividend of 2½% for the quarter on the common stock. The dividend on common stock is at the rate of 7% per annum from revenue and 3% from special income account. Both dividends are payable April 1 to shareholders of record Mar. 1.

Michigan Central Rd.—There has been deposited with the Secretary of State at Ottawa, an agreement dated Oct. 1, 1915, made between John Carstensen and other vendors, the Philadelphia Trust Co., trustee, and the Michigan Central Rd., relating to the M.C.R. Equipment Trust of 1915.

St. John & Quebec Ry.—The New Brunswick Government has called in for redemption the 4½% ten year bonds issued with the provincial guarantee, at the rate of 95 and accrued interest.

Temiscouata Ry.—Net earnings for Nov. 1915, \$3,502. Aggregate net earnings for 5 months ended Nov. 30, 1915, \$16,798.

Toronto, Hamilton & Buffalo Ry.—The Dominion Parliament is being asked to confirm an agreement made between the company, the Michigan Central Rd., the Canada Southern Ry., the New York Central Rd., the C.P.R., and the Trust Co., dated Feb. 1, making certain traffic arrangements for 50 years, and providing for the guarantee of consolidated mortgage bonds to be issued by the company.

Express Rates on Government Currency.—Ottawa press dispatch, Feb. 24. The Dominion Express Co. is making a bid for the carriage of all Government currency, exclusive of shipments of gold or silver. It has filed a special competitive tariff of rates on currency based on shipments forwarded or received by the Finance Department at Ottawa, to or from the Assistant Receivers-General, also on shipments moving between the latter at Victoria, Winnipeg, Toronto, Montreal, St. John, Halifax, and Charlottetown. The special currency rate per \$1,000 is \$2.10, and is said to be a decrease of about 60% from the old rates.

Improvement in Passenger Car Construction and Design.

By K. F. Nystrom, Chief Draughtsman, Car Department, Grand Trunk Railway.

The construction of a passenger car of today is radically different from what was considered the standard construction for a passenger car of, say, 10 years ago. We had then almost without exception, wooden cars, and each had practically the same construction, but through various causes nearly all railways have been forced to adopt a steel construction, at the same time maintaining the same design of car from a general viewpoint. As most railways have designed their own steel construction and each has its own particular merit, it is rather a difficult task to pick out one or two designs as being ideal, from the passenger as well as the railway point of view. It seems therefore timely, in a brief manner, to compare the old wooden car construction with the later designs of steel cars, from the standpoint of safety and comfort to the travelling public, and the initial cost and cost of maintenance from a railway standpoint.

The first cost, and cost of maintenance, are vital items to all railways today, as car equipment and maintenance run up to almost prohibitive figures and take a considerable portion of the railway company's yearly budget. Economy which could be exercised is sorely needed by every railway on this continent. We learn from statistics that approximately 42,000 miles of American railways are in the hands of receivers. An estimate based on authoritative figures, is said to show, that in the whole of the United

Figure 1.

States, less than 45,000 miles of railways earn an income of 6 per cent. or better on their total securities and that nearly 5/6 of the total mileage of the railways in the United States will probably not show an earning capacity of 6 per cent. on their securities during 1915. The fact is that the railways are forced to economize in every conceivable way, while on the other hand the travelling public is growing more and more pretentious and demand strong and up to date equipment with all modern luxuries. How long the railway companies will be able to meet the public demands under present laws and tariffs, is only a question of time. I hope, however, that the progress and development of the rolling stock for the comfort and welfare of the people will not be strangled by economic pressure.

Safety first is the slogan of the present time. The safety of the working man and of the people at large is at present considered as never before, and especially in passenger traffic on a railway this is carried to extremes, but the popular opinion regarding a safe public carrier does not always coincide with the actual facts, for instance an all steel car can be of weaker construction than a wooden car, but a passenger will be more satisfied to ride in a weaker steel car than in the stronger wooden car. The all steel car is considered by the travelling public as the only safe steam railway conveyance, however few practical men will deny that the superstructure of a well built wooden car

is as strong as the average superstructure of a modern steel car. They will, however, admit that the weakness in an all wood car lies in the underframe, on account of the continual increase of heavy trains and more powerful locomotives, which makes the service more severe on cars in long trains. In a good many instances a wooden underframe will be subject to more intense end shocks or im-

to sustain the forces imposed on a wood underframe. The wooden underframe is, therefore, a thing of the past in car construction for the reason stated above, and on account of the scarcity of suitable lumber. In studying a number of designs of cars I have found that in many cases it is economical to build the underframe sufficiently strong to carry the entire load, as well as to sustain the end

Figure 2.

fact than a wooden underframe should, or can stand. The passenger car truck will not be discussed in this paper, as there are at present two or three very good designs of clasp brake trucks which undoubtedly will become standard in the near future. Every car designer endeavors to get a design superior to any other construction. This, of course, is healthy competition, but the day when a stand-

shocks. If the underframe is of sufficient strength to withstand both the load and the end-shocks the side construction can be much simplified. This is particularly true of mail and baggage cars, as the side posts can be uniformly spaced, thus reducing the amount of detail work.

In order to illustrate the requirements of a modern underframe the following example is selected:—Figs. 1, 2 and 3

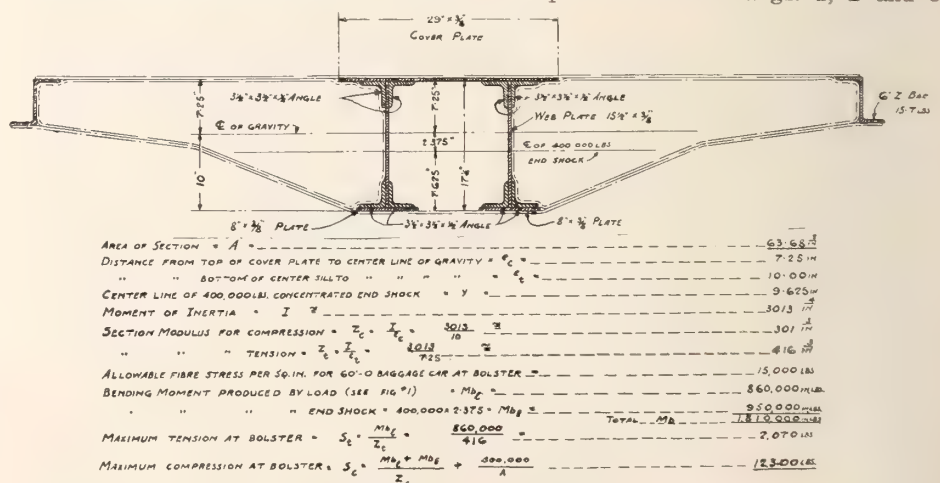

Figure 3, Section at Bolster.

ard passenger car, common to all railways can be adopted, is therefore, put off to an indefinite future.

The underframe, which is the back bone of the car, must be of sufficient strength to sustain all imposed loads, including those derived from end shocks. As the stresses produced from end shocks in a heavy modern passenger train are occasionally extremely high, we have to resort to steel underframe construction. The ultimate strength of wood is too low

show an underframe for a 60 ft. baggage car, considered as a beam on two supports, these supports being the two trucks under car. The weight of the car has been assumed as 70,000 lbs. for the car body, and 60,000 lbs. plus 10 per cent. for live load, making a total of 136,000 lbs. load on this underframe. This produces a bending moment of 5,882,000 in. lbs. at centre of car and 860,000 in. lbs. at bolster.

The weight of car represented in this

example is rather high and the live load is considered to be 66,000 lbs., which is considerably above the actual requirements for a baggage car or a mail car. The United States Railway Mail Service Department specification for a steel full postal car specifies a maximum of 50,000 lbs. live load. The bending moment in a 74 passenger car is less than in the above example. It can, therefore, be assumed that if an underframe is designed to withstand a bending moment of approximately 5,900,000 in. lbs. and an end shock of 400,000 lbs. it will be suitable for all classes of passenger cars.

The stresses imposed upon the underframe from end shocks must be dealt with separately. The underframe must be considered as a column and both direct and eccentric forces must be considered and for members in compression the stresses must be reduced in accordance with usual engineering practice. The American Railway Engineering Association has adopted an empirical formula reading as follows:—

$$\frac{L}{16000-70-\frac{R}{R}}$$

which has been approved by the U. S. A. Mail Service Department and allowed 20 per cent. greater fibre stresses than arrived at by using the above formula.

The above requirements for the underframe could easily be satisfied if the car designer could change the construction to suit the conditions, but unfortunately a number of standards are established which the car designed cannot change, such as truck height, coupler and buffer heights and the general clearance dimensions of cars. The car designer has, therefore, to compromise and be satisfied with a design which as closely as possible comes up to an ideal construction when considered from an engineering standpoint.

The sections shown in figs. 2 and 3 satisfy the requirements for a modern underframe in relation to load and end shocks. It will be observed from the respective figures that the extreme fibre stresses come well below the required limits of the U. S. A. Mail Service specification for all steel full mail cars, which is used as a foundation for all passenger car designs of today. The underframe considered in this example is probably not the most economical construction, for all designs but I have endeavored to give due attention to the construction from a maintenance standpoint, and not employed any section with less thickness than $\frac{3}{8}$ in., in order to provide ample bearing value for all rivets and to give reasonable allowance for deterioration, and an attempt has been made to reduce the number of different sizes of material so it will be noted that the size of centre sill cover plates and centre sill web plates are all the same. All angles employed are also of one size. All plates are $\frac{3}{8}$ in., so that the majority of details required can be obtained from the scrap cut from centre sills. The object, however, when analyzing the above underframe is not to produce an ideal design, but to show what a complex problem a car designer has to contend with.

End Framing.—It is necessary to have a substantial end frame to prevent telescoping, particularly if an efficient anti telescoping device is not employed. An end framing built in accordance with U. S. A. Mail Service Department specifications which calls for a section modulus for vertical end members not to be less than 65, of which 75 per cent. must be concentrated in the door posts and posts adjacent to door posts and the en-

tire framing well secured offers a very good construction which is amply strong.

Side Framing.—To prove that the superstructure of a wooden car is equally as strong as the steel construction of a steel car, I will compare the side posts in wood and steel cars. Fig. 4 shows a standard section of a wood post and fig. 5 shows a typical design of a steel post for steel cars. For comparison of strength of the two posts, as shown in figs. 4 and 5 consider the ultimate strength of ash to be 12,000 lbs. per sq. in. and 60,000 lbs. per sq. in. for steel; in other words, the steel to be five times as strong as ash, when these materials are subject to bending. In order to get expression as to strength for side posts, I wish to refer to the U. S. A. Post Office Department's specification for the construction of steel full postal cars, which reads as follows:—

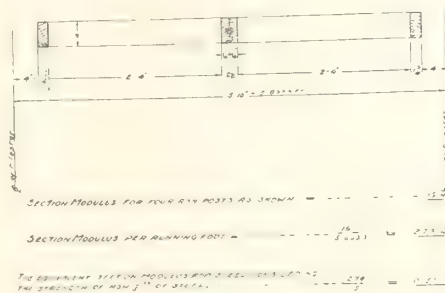

Figure 4.

"The sum of the section moduli taken at any horizontal section between floor line and top line of windows, of all posts and braces on each side of car, located between end posts, shall not be less than 0.30 multiplied by the distance in feet between the centre of end panels, a panel length being considered as the distance between lines of rivets in adjacent vertical post."

The quoted paragraph will probably be clearer to us if we reconstruct it to read as follows:—"The average section moduli on each side of car for side posts must not be less than 0.30 per running foot."

We will now consider one section of one side in a standard railway car, now being largely used, the section being from

Figure 5.

centre to centre of pilaster, which includes lower windows with gothic above. The length of such section in a railway car is, on an average, 5 ft. 6 ins., or 5.8333 ft. The number of posts in 5.8333 ft. section is 4 for wood cars, 2 narrow and 2 wide, and 3 for steel cars. Referring to figures 4 and 5 we note that comparative section modulus for steel is 0.5 and for wood 0.55, the wood posts being 10 per cent. stronger than the steel post. Both constructions, however, meet the U. S. A. Mail Service requirements. This comparison shows that, as far as the strength of the side of a wooden car, when considered perpendicular to its side, which is vital in case of wreck, is at least in some instances stronger than a steel car. I wish, however, to make it plain that no claim is made to the superiority of the side framing in a wooden car over a steel car, considering same as a carry-

ing member or truss. A combination of wood and steel for side framing seems to me to be most practical.

Roof.—No one familiar with car construction and maintenance of cars will deny that the canvas roof, properly laid, gives remarkably good service; in fact, it will outlast the car if given reasonable care. When I say canvas properly laid, I consider it properly laid when it is applied in the same manner as the practice in shipbuilding, when laying canvas on the cabin roof, which lasts almost indefinitely if not abused. The steel roof, on the other hand, has not, up to the present, proved a success. Steel roofs having vertical expansion joint, about $1\frac{1}{4}$ in. in height soon wear out on account of the abrasive action of cinders. The deck screens in an all steel car are objectionable on account of pockets being formed behind the screen, in which gases, moisture and cinders collect which destroy the paint and in a short time a serious corrosion takes place, which cannot be detected before a car is sent to the shops for general repair. A steel car roof must be frequently painted, and it cannot be done with a canvas roof, if the regular "shopping" period for any reason is prolonged. In connection with the canvas roof it is understood that wood roof framing is properly constructed and tied together at frequent intervals with steel carline which should extend in one piece from side plate to side plate, to which they should be firmly secured.

The inside finish in all steel car is hard to restore to its original appearance, in case it must be touched up at isolated places, where the paint has been scratched, worn or peeled off. Wooden cars having stained and polished wood finish, can easily be restored to their original appearance in case the finish should be damaged.

In summing up I realize that I have only outlined passenger car design in a very general way, but I have tried to show what I believe to be the best design of car, looking from every angle, namely, economical from a railway, and safety and comfort from the travelling public standpoint, and to put this in a concise form, I believe that in designing a car for present use the following are the principle points:—

1. A steel underframe which will take care of all loads, strains and buffing shocks imposed on car, with an efficient buffer, draft gear and some device which will lock the trucks to the body of the car in case of accident to prevent telescoping or a turnover of the car, is absolutely necessary.

2. A substantial end frame which will stand a very severe buffing shock and prevent telescoping.

3. A combination steel and wood side framing and wood exterior finish.

4. A combination wood and steel roof covered with canvas properly laid.

5. An interior wood finish.

With this construction the railway can repair its own cars, in the old wooden car repair shops, without going to the expense of installing a considerable amount of modern machinery, which would be necessary with all steel cars. The travelling public will be provided with a car which will compare favorably in strength with an all steel car. The inside finish can be made more artistic, easier to maintain and simpler to renew when required. In case of wreck the passengers will have a chance to cut their way out from the debris, which is impossible in an all steel car.

The adoption of steam from the locomotive for heating passenger cars, and

lighting by electricity, practically eliminates the danger of fire. The all steel car is probably more fireproof, but when we consider that upholstering material and varnish and other details are inflammable, this car is comparatively as fireproof as an all steel car, and the temperature in this car will not be subject to such sudden changes in weather con-

ditions as the all steel car. It will be warmer in winter and cooler in summer, and will not develop any sweating, which is so obnoxious in all steel cars. I am, therefore, convinced that this type of car is the most satisfactory to all concerned from every point of view.

The foregoing paper was read before the Canadian Railway Club recently.

Railway Rolling Stock Notes.

The G.T.R., during January, received one box car, which had been built at its Elsdon, Ill. shops.

The Canadian Northern Ry. has received three 75 ton wrecking cranes from the United States.

The Intercolonial Ry. has received 2 consolidation locomotives from Canadian Allis-Chalmers Ltd.

The Canadian Pacific Ry. has decided to change the lighting of 62 passenger cars from gas to electricity.

The Nova Scotia Steel & Coal Co., has ordered 200 steel mine cars of 2,000 lbs., capacity from the Eastern Car Co.

The Acadia Coal Co. has ordered 200 composite and 150 steel mine cars of 2,000 lbs. capacity from the Eastern Car Co.

The Timiskaming and Northern Ontario Ry. has received two steel first class passenger cars, nos. 244 and 245, and two steel baggage and express cars, nos. 213 and 214, from the Pullman Co.

The Eastern Car Co. has shipped 1,878 of 2,000 freight cars, which the Russian Government ordered recently for use on the State Railways. The balance was expected to have been shipped by the end of February.

The Canadian Pacific Ry. will probably place an order outside its own works in the near future for 6 Pacific type passenger locomotives which will be more powerful than any others of that type in Canada at present.

The Imperial Oil Co. has ordered 25 two compartment, and 20 three compartment tank car underframes and trucks, from Canadian Car and Foundry Co. They will be delivered at Sarnia, Ont., where they will be equipped with tanks, etc., by the owners.

The Canadian Locomotive Co., between Jan. 1 and Feb. 12, shipped 15 decapod locomotives for the Russian Government. These are part of an order for 50 which were fully described and illustrated in Canadian Railway and Marine World for Jan.

The French Government has ordered an additional 2,000 freight cars from the Eastern Car Co., for use on the State Railways, but whether these are to be the same type as those now under construction by this company, some details of which are given on this page, has not been definitely announced.

The Canadian Pacific Ry. is about to build at its Angus shops, Montreal, in addition to the cars mentioned in Canadian Railway and Marine World for Feb., 825 standard box cars, with steel underframes, wooden body and steel ends; 100 automobile cars, 200 freight refrigerator cars, 50 passenger refrigerator cars, 30 stock cars, 3 furniture cars, 25 steel coal and ore cars.

Following are the chief details of the 150 steel underframes for flat cars of 50 tons capacity, which the Michigan Central Rd. have ordered from the Can-

adian Car & Foundry Co., as mentioned in our last issue:—

Length over end sills	40 ft.
Length over striking plates	41 ft. 1 1/4 ins.
Truck centres	30 ft.
Wheel base	5 ft. 6 ins.
Width over side sills	9 ft.
Width over flooring	9 ft. 4 ins.
Width overall	9 ft. 11 1/4 ins.
Height from rail to top of flooring	4 ft. 2 ins.
Height from rail to centre of draft gear	2 ft. 10 1/2 ins.
Height from rail to top of brake mast	5 ft. 10 ins.

The fish belly and side sills will be built up with plates and angles. The draft gear will be arranged for class G springs, and the couplings will be of the bottom operating type with patent uncoupling device.

The Canadian Northern Railway is said to be contemplating ordering from 16 to 20 Pacific type passenger locomotives and 30 consolidation locomotives. The following are the probable dimensions, etc.

PACIFIC TYPE.

Gauge	4 ft. 8 1/2 ins.
Fuel	Bituminous coal
Weight on drivers in working order	153,000 lbs.
Capacity of tender, coal	24,000 lbs.
Capacity of tender, water	6,000 imp. gals.
Driving wheelbase	13 ft.
Cylinders	24 in. diam. by 28 in. stroke
Driving wheels	69 in. diam.
Working boiler pressure	200 lbs.
Maximum tractive effort	40,000 lbs.

CONSOLIDATION TYPE.

Gauge	4 ft. 8 1/2 ins.
Cylinders	24 x 32 ins.
Driving wheels	63 in. diam.
Boiler pressure	200 lbs. per sq. in.
Driving wheelbase	16 ft. 6 ins.
Engine wheelbase	25 ft. 5 ins.
Tractive effort	50,000 lbs.
Tender coal capacity	12 tons
Tender, water capacity	6,000 imp. gals.

The Eastern Car Co. is building 1,000 four-wheeled freight cars for the French State Railways, the contract for which was made in June 1915. These cars will be of material to C.P.R. specifications, with the exception of the screw coupling, drawbar hook and all springs, which are to a modified French specification suitable for American practice, especially regarding tests. All rolled shapes of American standard are interchangeable with the French as far as possible, and the side end stakes and floor stringers are of French section. The siding, ending and sheathing for cabin is of yellow pine, and the floor and cabin framing of oak. The buffers are of cast steel, and the brake of the usual clamp type with counterweights operated from the cabin. Brakeshoes are of cast iron with trussed type brake beam; journal boxes of malleable iron with drop forged wedges, lead lined bearings and special oil lubricator. The wheels are of solid forged steel, interchangeable with the French wheels of spoked type, and are on French type axle with journals 140 by 250 m.m. Following are the chief dimensions:—

Length over buffers	27 ft. 8 5/8 ins.
Wheel base	11 ft. 9 3/4 ins.
Width over side steps	10 ft. 5 1/8 ins.
Length over end sills	23 ft. 11 3/8 ins.
Length inside	21 ft. 7 7/8 ins.
Width inside	8 ft. 2 7/16 ins.
Height from top of rail to top of cabin	11 ft. 4 1/4 ins.

Canadian Northern Railway Construction, Betterments, Etc.

The Toronto, Niagara & Western Ry. Co., which is the title of the company under which C.N.R. interests have power to build a railway from Toronto to the Niagara frontier, and generally westerly of Toronto, is asking the Dominion Parliament to increase its bonding powers to \$75,000 a mile, and to extend the time limit for the building of the following lines of railway: from Toronto to Hamilton, along Burlington Beach; from Hamilton to the International Boundary at Grand Island or Niagara Falls, N.Y., and from Hamilton to Windsor, Ont. Power is also asked to repeal the statutory prohibition of the use of steam for the operation of the railway.

Toronto Terminals.—A 32 stall locomotive house will probably be built at Leaside, Toronto, this year.

Canadian Northern Ry.—M. H. MacLeod, Chief Engineer and General Manager, is reported to have said in a recent interview that the work in contemplation during this year includes the keeping up of the line to the standard and the making of improvements at various points where necessary to meet increasing traffic necessities. Track will probably be laid on several branches where grading has been completed, but it is not likely that any new grading will be done.

The Canadian Northern Alberta Ry. has been granted power by an order-in-council to occupy a portion of the bed of the Athabaska River in the n. 1/2 of sec. 1, Tp. 51, range 26, west 5th meridian, for building a bridge across the river.

Vancouver Terminals.—Negotiations are in progress between the C. N. Pacific Ry., the Great Northern Ry., the City of Vancouver and the British Columbia Government respecting the provision of joint terminals on the reclaimed False Creek flats, Vancouver. The city wants immediate progress to be made in accordance with the terms of the agreements with the two railway companies. The G.N.R. has filed its independent plans under the agreement, which the city and the B. C. Government do not consider to involve the expenditure promised. The C.N.P.R. has agreed to accept the new frontage line for its building, which is not the same as that on which the G.N.R. proposes to build. With the city pressing the companies to build, and the refusal of the B. C. Government to endorse the G.N.R. plans, it is thought that some definite action will be taken in the direction of the provision of a joint station which will suit the conveniences of the companies, with the requirements of the city as to the frontage line, and give the full value demanded by the agreement. M. H. MacLeod, Chief Engineer and General Manager, C.N.R., is reported to have said in Vancouver, Feb. 15, that while the company is prepared to go ahead with the work necessary to fulfil the terms of the agreement, it is undesirable from many points of view to abandon the project of a union station.

M. H. MacLeod, General Manager and Chief Engineer, C.N.R., had an interview with the Mayor of Vancouver Feb. 12, when he discussed the question of station building, dealing with the question of a separate building, and a joint building with the Great Northern Ry. The plans for a separate station are estimated to cost \$1,000,000 to carry out, while those for the union station would involve the expenditure of \$1,500,000. It is claimed that the adoption of the plans for a joint building will not interfere with anything

the Great Northern Ry. is planning at present, except setting the frontage line further back from Main St., than that company's plan shows. The plans were discussed by the city's railway and bridge committee on the same day, and by the City Council on Feb. 15, representatives of the Vancouver Board of Trade being present at the meeting. Further consideration is to be given to the matter.

Lines on Vancouver Island.—The Minister of Railways for British Columbia has authorized the making of a temporary level crossing for construction purposes over the Victoria & Sidney Ry. at the north end of the Saanich Peninsula near Bazar Bay, and another one across the British Columbia Electric Ry. at mileage 17.9 north of Tripp station. These two points are almost close together.

Material and supplies for tracklaying on the Victoria-Patricia Bay line have

been delivered in considerable quantities at Victoria, but tracklaying had to be put off on account of the heavy snowfalls at the end of January and in the early days of February. It is expected that a real start will be made with the work in March.

Plans and specifications for the car ferry slips and wharves at Patricia Bay, and for the temporary transfer slips at New Westminster, were given contractors proposing to tender for the works on Feb. 16.

We are officially advised in regard to a press report that the company was surveying a route for a line from Alberni to Nootka Sound, 15.6 miles, that this line was run two years ago, and that the distance between the two points is 160 miles. No other survey work on Vancouver Island is at present contemplated. (Feb., pg. 54.)

Causes and Preventatives of Heaving Track.

By J. W. Powers, Supervisor, N.Y.C. & H.R. Rd.

The season is at hand when trackmen on practically all roads situated in latitudes where snow and ice are formed, are troubled more or less with heaving roadbed, causing more or less serious defects in surface and line of track, the extent of damage depending on the condition of roadbed as to ballast and drainage. Heaved track is one of the most annoying things and is sometimes the direct cause of broken rails and occasionally of derailments and wrecks.

The cause of heaving roadbeds has been discussed and explained on several occasions but the cause and knowledge of how to prevent same cannot be disseminated too profusely. When water freezes it expands, which means that if one cubic foot of water freezes the resulting ice occupies a space considerably larger than that of water. This takes place when wet soil freezes. Each particle of water expands and takes up more room. Considering these actions of water in connection with track work, it is easily seen how a roadbed soaked with rain will heave when it freezes. The particles of water as they turn to ice expand and since the least resistance is upward, the roadbed raises bodily. If this raising was perfectly uniform it would not be of much consequence, since it would just raise the level of the entire line. As a matter of fact the heaving takes place in a very irregular manner, due to the greatly varying proportion of water in the roadbed and also depending on the depth to which the frost penetrates, the drainage and the amount and kind of ballast.

Clay, on account of its great capacity for holding water, is about the worst material of which a roadbed can be constructed. Hence the composition of the roadbed and ballast, together with proper drainage, is an important factor affecting the heaving of track.

It is not an unusual occurrence when filling up openings, such as culverts, trestles and tops of arches, which are often substitutes for iron bridges, to have the filling made with cinders or gravel. Sometimes this material is several feet deep, and as a result of its porous condition it will not heave in proportion to the track each side of same, which oftentimes consists of clay, making it necessary to shim where openings were filled. This could be avoided by using material to fill the opening similar to that used on each side of same. Another mistake which is sometimes made by the use of clay when

strengthening shoulder on fills, is allowing the clay to raise higher than the sub-grade, which is often done to save ballast, but as a result the drainage is retarded and forms a ditch under the track, as dense soil will not allow water which falls on track to pass off freely. Consequently clay should not be placed above sub-grade when track is ballasted with more porous material. It is a well known fact that loam is better ballast than clay, sand better than loam, gravel better than sand and broken stone better than gravel, as a preventative for heaving, due to the fact that these materials in the order named are more porous. This provides room for water to expand as it freezes, with the result that heaving is either not noticeable at all or only to a slight extent. Another important reason is that these materials let the water pass through quickly, thus diminishing the amount of water in the roadbed and thereby lessening the tendency of the track to heave.

Where there are wet clay cuts it may be necessary to cut out the clay down to the frost line and fill in with a material like gravel or cinders; also tile drains should be laid so as to carry off the water as quickly as possible. The remedy for heaving may be readily found after its causes are thoroughly understood. The preventative should be in two directions, namely, reduce the amount of water in roadbed to a minimum and use ballast which is sufficiently porous to provide room for freezing water which cannot be entirely eliminated by drainage. The importance of good drainage cannot be overestimated and the further water is removed from track and the sooner it can be diverted, the more stable will become the roadbed. A practical illustration of this occurs during a wet season, while poorly drained sections of roads are troubled with bad track, mud slides and washouts. A mud ballast track can even be made good by keeping water away from it, while rock ballast will not prove satisfactory unless properly drained. The most important work then, in connection with general track work, consists in keeping the roadbed as dry as possible.

As already referred to, good drainage obviates the necessity of shimming. There are various methods of shimming, many of them being good and safe, but it should be the practice to shim according to well defined methods governing such work. Whatever method of shim-

ming is employed it should never be at the expense of safety. The cost of material for shimming, such as wood, frost spike, braces, etc., together with the labor of inserting, renewing and removing shims, is very expensive on some railways and as the work is only temporary, it might be considered a waste of money and material and if the expense chargeable to this work was spent for ballast or to improve drainage, it would in a short time eliminate the necessity of shimming and provide better and safer track.

The probability of accidents, as already referred to, is greatly increased on account of heaving and shimming. As it is at this season of the year more than at any other, the duties of the track forces are of the most exacting and vigorous kind. This is particularly true in reference to protection of the traveling public, and anything accomplished to eliminate the liability to accident, we consider a step in the right direction. Hence the importance of good ballast and drainage which will permit trackmen to devote more time to other duties of equal importance, as for example snow storms which close up cuts in certain portions of the road, snow and ice which have packed solid in road crossings, frogs, switches and guard rails and which keep trackmen constantly on the alert to guard against accidents. Then again occasional warm rains or spells of warm weather fill the ditches with melted snow with little chance to run off. In yards the water formed during the day freezes about the switches during the night, causing much work keeping them in usable condition, and as the melted snow raises the water in streams, causing the ice to break up in the rivers and jam against piers, bridges and trestles, frequently damaging or even carrying them away.

Aside from these points, nearly every section has its own special features which have to be closely watched to avoid accidents to trains. For instance, where water tanks, water pans, interlocking plants, etc., are located, it requires careful watchfulness on the part of trackmen to prevent accidents at such points and shows the necessity for each foreman to study his surroundings carefully in order to best meet the emergencies which may arise, as it rests with the foreman to combat all of these elements and to entirely eliminate the possibility of damage and consequent danger. Thus it is seen that the proper protection of the traveling public depends upon the intelligence, ability and close attention to duty of the track forces who on numerous occasions go many hours without food and sleep when the safety of human lives requires such services.

Not many realize, as they rest on the luxurious cushions of parlor cars and speed along over smooth track at the phenomenal speed of 60 to 80 miles an hour on a cold stormy night, of the hard work, exposure and worry this comfort and safety of themselves has caused the trackman, whose greatest reward is in the knowledge that he has performed his duty faithfully. A little thought on the subject of the duties of trackmen will convince the most skeptical of the burden which rests upon the trackmen and the importance of the work they perform. Any neglect or oversight on their part may be the cause of serious consequences. Therefore they must be eternally alert and vigilant, even to the extent of supplying the deficiencies of men in other departments. Maintenance of Way Bulletin.

The Audit Department, and its Relationship to Railway Organization.

By W. C. Blake, Chief Clerk to General Auditor, Canadian Northern Ry., Winnipeg.

It is an extremely difficult task to attempt even merely to outline in one brief paper the relationship that the audit department bears to railway organization. It is a department as comprehensive as all of the other departments which go to complete the whole, consequently within its own sphere of operations it is subdivided into various divisions, thus we have an auditor of agencies, auditor of freight and passenger receipts, auditor of stores and mechanical accounts, auditor of disbursements, and car accountant, all reporting to the general auditor in pretty much the same manner as the heads of the other departments report to the general manager, with this difference, that the general auditor reports to the comptroller. On lines which control their own commercial telegraphs, the telegraph receipts are taken care of usually by the auditor of freight receipts, and in cases of sleeping and dining cars, by the auditor of passenger receipts.

First of all, why is it that the auditor of all the officials is, besides the treasurer, the only one not reporting direct to the general manager? It is because the duties of his office require that he should be free from local influences, in other words, through the comptroller he is responsible to the directors that every dollar due the company is collected and properly applied, and also that no money has been paid out without the proper authority for such expenditure. It is his prerogative to prescribe in what particular manner the books or records of the company shall be kept, and, being free from local influences, any recommendations he may have to make, as to the removal from the service or otherwise of incompetent servants, have more weight, and if they are worthy of consideration are promptly acted upon. To illustrate this let me record the experience of one of the pioneers in railway accounting on one of the trunk lines to the south of us. The line in question had suffered considerably from defalcations on the part of those to whom the collection of the company's moneys was trusted; he was sent for by the executive, and, after an expression of annoyance and apprehension, was asked who was responsible for the collection of the company's receipts. He replied, so far as he could ascertain, no one. The treasurer, traffic department, general manager, through his superintendent, together with himself, exercised a joint supervision, but the local superintendent, who was responsible for the physical operations of the road, had immediate charge, and reserved the right of exercising his discretion about dismissing or removal to inferior positions those caught stealing the company's moneys. They all acted intelligently in the discharge of their respective duties, but neither one nor the other was prepared to assume the responsibility, and consequently either acted hesitatingly, or more frequently not at all. The interview closed by an order being issued that the accounting officer thereafter had sole charge of the company's accounts and the collection of its receipts, and that it was the duty of all officers and agents absolutely to conform to his regulations in regard thereto. This is the basis as in existence at the present day.

In the administration of a railway it is as impossible for one man to be in the position of an oracle, that is, one whose mind is so forward as to be able to conceive and direct all the multifarious branches that exist in the operation of the road, as it is for a professor to say he can be an authority on law, medicine, philosophy, astronomy, and all the other sciences, therefore the auditor is the man who having made his accounts his study performs his work with that object in view. As I said at the start, our department is subdivided, each one whilst working along different lines reports to one head, with the one object in view. The auditor

P. 154.
W. C. Blake.
Chief Clerk to General Auditor, Canadian Northern Ry., Winnipeg.

of agencies is responsible for the accounts of the different stations and agencies along the line, he has a number of travelling auditors up and down the line visiting and checking up the accounts as they actually exist in the agent's books, he sees that records, etc., are kept in such a manner as to be intelligent, and that any information required can be obtained readily, he checks his cash transactions closely, and generally makes an opportunity of finding out the habits of those entrusted with the company's funds, etc., for instance, a cashier or agent who handles money and spends his time when off duty at an hotel bar or frequenting pool rooms, is not calculated to inspire his higher officials with much confidence. The travelling auditor also reports on the general condition of the stations and buildings, which report is sent to the local superintendent, and coming from what can be termed an independent source is usually of value. His reports on the accounts go to the auditor of agencies, by whom they are criticized and

compared with balance sheets as received from the agents themselves; the balance sheets are in turn checked up with report of remittances from the treasurer's department, as also with the result of the checking of reports and abstracts received by the auditor of freight and passenger receipts. The agents' credits are also checked to see that all cash they have paid out is for legitimate items and properly authorized; their outstandings are scrutinized closely, and any items outstanding for which they have not freight on hand to cover are rigorously followed up.

The auditor of freight receipts and of passenger receipts is sometimes one and the same person, and as their duties are somewhat along the same line they can be treated of together. The waybill is the foundation upon which the freight auditor works; the system differs on almost every road, but the results obtained are the same. The waybill covers the movement of freight traffic, it contains all information necessary for the identification of the freight, who shipped it, to whom it is consigned, what it consists of, weight rate upon which its charges are assessed, and so forth. The agent issuing it hands it to the conductor of the train carrying the goods, in fact a conductor is not allowed to handle freight unless he has a waybill. On arrival at destination it is turned over with the freight to the receiving agent, who checks it up in every detail as to quantity, marks, weight rate calculations, etc., making notations as to any discrepancies. If it is a prepaid shipment, and there is an undercharge on it, he collects the difference from the consignee before delivering the goods. On some roads, after the waybills are entered on the agents' abstracts the originals are sent either daily or weekly to the auditor of freight receipts, and the rates and extensions are again checked; on other roads they are filed away by being pasted in books in which case the agent issuing the bill forwards an impression copy (carbon or tissue) to the auditor, where the same process of checking is performed as when the original waybill is sent to him. At the end of the month abstracts, both forwarded and received, are checked and balanced in weight of freight, charges to collect, advances, pre-pays, etc., and on some roads they are then summarized in that office and sent to the auditor of agencies as the basis of checking with station balance sheets. As regards freight for a point destined on another company's line, settlement between companies can be made either between agents, on what is known as the junction settlement plan, where settlements are made mutually between agents at junction points, and draft drawn on whichever company the balance is due from, or by what is known as the audit office plan. When the latter system is adopted the receiving road is the principal factor in the handling of the waybill and accounting for it, all balances being drawn for on the 25th of the month following. Where there is no statistical department, other information, such as tonnage, movement, description of freight, etc., is got out to be used later, or when compiling the statistics required by the government, or for the company's annual

report. With passenger traffic, the system is much the same, only the ticket forms the basis on which the work is performed, instead of the waybill. Agents are required to report their tickets consecutively, the closing number from previous month is carefully recorded and they are promptly charged up with tickets not promptly. As all tickets are turned in by conductors, they are sorted and checked up with report of tickets sold as sent in by agents, as also with the conductors' reports of tickets issued by them. Through or interline tickets are handled much after the same manner as through freight traffic, with the exception that all settlements between companies are on the audit office plan. Baggage, milk, sleeping car, and dining car receipts are checked up on the same principle from the reports of agents, conductors, porters or stewards. The system in this respect differs from that in vogue in the United Kingdom, where there is no such a thing as a coupon ticket, or junction settlement. All settlements between companies are made through the Railway Clearing House, and no matter how many roads you travel over you only receive a card ticket. Thus, if you are travelling from London to Edinburgh, say via the east coast route, your ticket would read from London (King's Cross) to Edinburgh (Waverley), but to reach there, between London and York, you would travel over the Great Northern, the North Eastern, and the North British, your only transportation being a card the size of an ordinary card ticket as used in this country. The working of the Railway Clearing House would form a most interesting topic for discussion and comparison with our methods.

The Departments whose workings I have thus briefly covered, from the amount of detail required, engage possibly the largest clerical staff of any department, owing to the amount of detail required.

The auditor of disbursements is neither a divisional nor departmental accountant, each division or department should have its accountant to satisfy its superior officer as to the expense of his own particular branch. Our position is to review the work of the accountant in so far as his distributions, etc., are concerned, thus as it were forming a sort of court of review. Our present state of efficiency has more or less evolved by the lapse of time since the introduction of railways. In their infancy, the auditing department was, as it exists today, unknown, the accounts of the company were crude and in the majority of instances much of a one-man concern. As railways multiplied and commercial interchange was established, more elaborate systems were required than those kept by each department, as at that point they ended, a summary of the whole being presented to the directors and shareholders at the end of the year. As they so appeared they were formally audited by chartered accountants much as they are now, but when it came to a question of comparison as to expenditures of say maintenance of bridges, or equipment for one period against another, or one division against another, it was not forthcoming, and when asked for from the superintendents, the reply usually was, "We are not experts in the accounting department, and only keep such records as enable us in a rough way to show what we are doing." It goes without saying that such a situation could not last long, the result being that a department entirely separate and distinct from those already existing was

created to attend to this business, and not yearly nor half yearly, but month by month, submit for the directors such a tabulated statement as would show them at a glance how their road was progressing, or otherwise.

The auditor of disbursements must satisfy himself that expenditures for wages, material or other causes have been made on the requisition of the proper authority and charged to the proper accounts. We will assume the road has been constructed by capital raised by any of the various means for that purpose, the traffic revenue I have already dealt with, the maintenance of the road, and its operation must be met from the revenue derived, stores and supplies have to be purchased, and as the road is not run as a family institution nor for charitable purposes, economy with efficiency is the motto, and you can only obtain that end when an independent check is made of the working of each department, so as to arrive at the actual result as compared with previous periods. This perhaps will only appeal to my hearers as to the result of operation as a whole, but how does it affect us individually? How far am I concerned with the audit department? One or two illustrations will I think suffice for this, and these I may say are not what may be termed academic, but from my own experience. A passing track has been authorized to be put in at a certain mileage, requisition has been made on the storekeeper for spikes, bolts, switches, etc., and in due time they arrive on the section where the track is to be put in. For certain reasons, the track is not proceeded with. Eight or nine months afterwards, when it is decided to go on with the work, another requisition is put in, and another set of material sent out for the job, but what has happened to the first lot? Investigation will show that the material has been taken away and used, goodness knows where, for renewals, and neither section foreman, roadmaster nor anyone else thought for one moment it was necessary to notify headquarters that such a misappropriation had taken place. This is only one instance of many of a similar nature, and it illustrates the fact that maintenance of that particular section has been maintained at the expense of new work, for new work is not a charge against operating expenses, and when the material is taken for other than the purpose it was ordered, the accounts should have been promptly adjusted without entailing a volume of correspondence, tracing, etc., to get it done.

Occasionally the auditor is notified that a tool house, oil house, or coal shed has been erected at a certain place, and to effect the necessary insurance. He can find no record of any authority having been given from the general manager's department for the work, nor any requisition for material. He, however, discovers after a lot of correspondence, that the building has been erected from left over material from other structures. The theory of using up material left over may be and no doubt is a good one, but it is bad policy and management to erect a tool house or any other structure at the expense of a water tank say some thirty miles away, and probably the cost of the water tank was a charge against insurance, as its predecessor was destroyed by fire. Instances such as these should go to show why the audit department insists upon minute details as to distribution of not only labor and material, but what becomes of what is left over. This information is rarely, if ever, got from divisional

or departmental accountants, who give for their excuse:—"The supervisor or roadmaster did not advise me." This is one more instance of the old saying that the smart railway man is he who can shoulder the responsibility for his own deficiencies on to someone else.

To show that such discrepancies are not confined to any one branch of railroadng, I have a very vivid recollection of an official car being ordered to the shops for remodelling. It was of rather ancient date, and to bring it up to standard a large sum was to be spent on it, new lighting fixtures and internal fittings were ordered and delivered, a period of depression set in, and the car was in the shops for some six months or more, before it was decided to proceed with the work, and it was then found necessary to order a new set of fixtures, etc., those already supplied having been used on sleeping and day cars for renewals. Material ordered for specific work should be used for that work only, and not for any other purpose, except on order from the official ordering in the first instance, in which case the accounting department would have a clear record, and could adjust its charges accordingly.

Railway companies pay out a considerable amount each year for grain doors. In the west they are generally purchased ready made, and are calculated to fill the purpose for which they are required. They were never intended for flooring for a stock yard or building a section foreman's pig pen, neither were they intended to be used for the construction of a coal bin for the station agent, but still they are used, and when a shortage of doors is reported at the end of the month, the inquisitive auditor has to get busy to locate the missing doors, usually at some expense. Again, the majority of employees belong to one of the various brotherhoods which are governed by schedules, framed so as to be as incapable of interpretation in diverse ways as an act of parliament, and no matter how fine the line is drawn, there is always some one trying to step over on to the other side. So long as human nature exists, I presume it will always be so. To guard against this, as in all other infringements, the management has to rely on its auditing department. When question of interpretations of certain rules are required they are obtained from the proper authority, and when thus armed, the auditor gets after the party concerned through the head of his department.

In the operating accounts of a railway on this continent there are 182 sub-accounts, divided up as follows:—

Maintenance of ways and structures.....	79
Maintenance of equipment.....	36
Traffic department.....	8
Transportation rail and water lines.....	42
Miscellaneous operations.....	5
General administrative.....	12

182

These have all been agreed upon between the railways, the Dominion Department of Railways, and the Interstate Commerce Commission. The text books covering these accounts are explicit and the auditor's duty is to see that all expenditures in connection with the operating are strictly in accord therewith, so that at the end of the month when the operating statement is submitted to the president, it will exhibit to him (or rather should do so) a correct statement as to what it implies. To arrive at this result, an independent body must analyze the accounts and distributions of the various departments, drawing attention to any irregularities that may appear, and

promptly object to any charges for work done without the proper authority on file. You cannot get these results in any other manner, and the knowledge that your work is going to be, as it were, overhauled by such analysis, has, or should have, a great tendency to cause others to keep within bounds. We do not profess or presume to be experts like tracklayers, carpenters and builders, machinists, engineers, or any of the other multitudinous trades and professions that find scope for their energy on the railway, but we are responsible to the directors to see that all expenditures made are covered by proper authority and charged to their proper accounts, and also that material is economically used and properly cared for. Our relationship to the various departments comprising the operation of the road is along those lines, to enable us to obtain the results required. To put the whole thing in a nutshell, suppose you give a contractor a contract to build a house, say for \$8,000; when he has finished, or even before he has done so, you find it is going to cost you nearer \$10,000 than \$8,000. What do you do? You go right down into details to see where the fault lies, and even if your house is built for the \$8,000, you satisfy yourself that you are getting value for your money before paying. That is the position of the auditor. He is the one to see that value has been received for all of the company's funds expended, and that distribution has been made in accordance with government requirements.

In this department, to which is closely allied the stores and miscellaneous accounts, travelling auditors are employed on some roads, in fact, should be on all, whose duty is to visit all divisional points and storehouses, check up material and report as to condition of accounts, material and stock, and as to whether the same is properly cared for. Occasionally these men, instead of travelling on regular trains, cover the ground by motor car, and thus have an opportunity to see how section material is taken care of along the line, constituting as it were a check on the interest the roadmaster is taking in the care of the company's property entrusted to his keeping.

In this paper I have endeavored to deal with one of the principal points connected with the audit department. Of all the departments which comprise the whole in regard to railway management, so far as knowledge of our brother employes with whom we have to work, we are least known in person, and I think the most misunderstood. The comptroller of one of our large trunk lines to the south says it is because we are located usually on the top floor at headquarters, and to get there would necessitate a special journey, which is not considered worth while. When heads of departments, roadmasters, supervisors and others who report to the audit department, visit headquarters, it would, I think, be worth their while, occasionally to make the trip on the elevator or ascend the winding staircase to make the acquaintance of those whom hitherto they have known by correspondence only. It is true the natural instinct with mankind is to feel relieved when the auditor has finished his duties, and taken his departure. The audit department, I am glad to be able to say, has not now the reputation of being an asylum for useless and aged employes of other departments, and round men to fill square holes sent to officials for positions by well meaning friends with begging letters, and so far as our dealings with other departments are concerned, our interests in the wel-

The Canadian Pacific Railway's Roll of Honor.

C. H. Buell, Staff Registrar and Secretary, Pension Department, C.P.R., has issued list 8, which is prefixed as follows:—"Several thousand officers and employes of this company enlisted for active military duty with the Canadian Expeditionary Forces, and the majority of them are now in Europe, bravely battling for Canada and the Empire. As particulars of army reservists are not available, these lists of those who have given up their lives for their country or been wounded in action are necessarily incomplete, and do not therefore indicate fully the extent to which the Company's officers and employes have participated in the great struggle."

Ackerley, Percy	Clerk	Angus	Wounded
Allen, Charles T.	Freight checker	Montreal	Wounded
Blackett, William C.	Stenographer	MacLeod	Killed in action
Buchan, John	Loco. fireman	Ogden	Killed in action
Carr, Frederick	Apprentice	Quebec	Suffering from shock
Clent, George	Shed clerk	Regina	Killed in action
Clough, B. G.	Elevator boy	Vancouver	Wounded
Cummings, John	Painter	Winnipeg	Wounded
Daniels, F. W.	Chief clerk	Revelstoke	Wounded
Deblois, Joseph	Loco. engineer	Quebec	Wounded
Duff, John	Fitter	Ogden	Died of wounds
Gay, Aubrey H.	Loco. engineer	Calgary	Wounded
Geddes, Percy M.	Waiter	Montreal	Believed drowned
Glithero, John H.	Cabinetmaker	Angus	Wounded and prisoner
Goulet, Emanuel	Helper	Quebec	Wounded
Henry, William	Porter	Pt. McNicoll	Killed in action
Hodge, Robert S.	Hostler	Winnipeg	Died of wounds

Syder, James	Clerk	Montreal	Died of wounds
Thomas, George W.	Brakeman	MacLeod	Wounded
Wheelhouse, C.	Helper	Glen Yard	Wounded
Wood, Herbert	Template maker	Angus	Wounded

The following casualties to members of our European staff on active service have also been reported:

Candeland, William	Clerk	Liverpool	Killed in action
Harden, Robert J.	Junior clerk	London	Wounded
Moore, Edward G.	Clerk	London	Wounded
Paterson, John S.	Clerk	Liverpool	Killed in action
Rosci, Joseph	Clerk	Antwerp	Wounded
Stannard, Herbert J.	Clerk	London	Wounded

fare of the operation of the road are as keen as theirs, and if there is any misunderstanding, let us know what it is, and have it put right. Neither one of us can claim to know it all, and our little differences can assuredly be adjusted. If, therefore, the observances I have made have a tendency to facilitate the working between other departments and ourselves, to remove the hitherto imperfect knowledge of our requirements, and to show why we ask for certain details, the preparing of this paper will not have been in vain.

(The foregoing paper was read before the Western Canada Railway Club recently.)

An Amusing Contretemps.—As the chief guest at a public dinner at St. John, N.B., recently, F. P. Gutelius, General Manager, Canadian Government Railways, in responding to a toast to himself, spoke enthusiastically on the work accomplished on the Government railways, and optimistically as to the future. His speech was immediately followed by another toast, under the title of "Castles in the Air."

Jno. Martin, an Allan Line Steamship Co's official for 40 years, died at Liverpool, Eng., Feb. 24.

British Columbia Southern Ry. Land Grant.—The Imperial Privy Council on Feb. 6 gave judgment in the action of the British Columbia Government against the late F. A. Heinze's estate respecting taxes on the British Columbia Southern Ry. land grant. The grant covers some 600,000 acres in the West Kootenay district. The railway was built and passed by purchase to the C.P.R., and a few years ago that company forced a division of the land grant, upon which the Government sought to levy taxes on the part remaining in the hands of the Heinze estate. The matter went through various courts until now the Privy Council has decided that the land is to be taxed.

NOTICE is hereby given that the Annual Meeting of the Shareholders of the Victoria Rolling Stock & Realty Company of Ontario, Limited, will be held at the offices of Messrs. Osler and Hammond, 21 Jordan Street, Toronto, on Wednesday, March 1, 1916, at twelve o'clock noon, for the reception of the Annual Report and election of Directors for the ensuing year.

By order,
G. T. CHISHOLM,
Secretary.

Toronto, February 16, 1916.

Traffic Orders by Board of Railway Commissioners.

Carload Minimum on Bricks.

24674, Jan. 22. — Re complaint of Western Retail Lumbermen's Association of Canada against increases by railway companies in carload minimum on brick over their lines in Western Canada, from 40,000 to 50,000 lbs. Upon hearing the matter at Winnipeg, May 25, 1915, the Western Retail Lumbermen's Association of Canada, and the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific Railway Companies being represented, and upon reading the further submissions filed, it is ordered that the complaint be dismissed.

Charges for Heated Refrigerator Cars.

24680, Jan. 27. — Re complaint of Fruit Growers' Association of Ontario against proposed tariffs of the Canadian Pacific, Grand Trunk, Canadian Northern and Toronto, Hamilton and Buffalo Railway Companies, making charges for the use of heated refrigerator cars. It is ordered that the following tariffs be suspended, pending hearing at Ottawa, on Feb. 8, Canadian Pacific, C.R.C., no. E-3093; C.R.C., no. E-3094; Canadian Northern C.R.C., no. E-728; C.R.C., no. E-729; Grand Trunk, C.R.C., no. E-3319; C.R.C., no. E-3321; Toronto, Hamilton and Buffalo, C.R.C.; no. 1080; C.R.C., no. 1081.

Unloading Empty Milk Cans.

24686, Jan. 26. — Re application of milk shippers for a reconsideration of order 15413, Sept. 26, 1911, requiring, inter alia, that shippers supply a man to assist in unloading empty milk cans, and the question of the general handling of the same. And re the question of a general order fixing the minimum number of milk cans, or minimum carload rate, necessary to entitle a shipping station to a separate car. Upon hearing the application at Ottawa, Oct. 19, 1915, the Montreal Milk Shippers' Association, the Canadian Pacific and Grand Trunk Railway Companies and New York Central Rd. Co. being represented at the hearing, W. F. Empey appearing in person, it is ordered that the application be refused.

Charge For Diversion of Livestock

24714, Feb. 9, the complaint of A. H. Mayland of Calgary, Alta., against "completion of loading charge" and "diversion" charge made by the C.P.R. on shipments of pigs or on livestock shipments billed through Calgary. Upon hearing the complaint at Ottawa, Jan. 18, 1916, the Montreal Board of Trade and the C.P.R. being represented at the hearing, and the railway company, in the Board's opinion, having established that the charge is justifiable—it is ordered that the complaint be dismissed.

Interchange of Freight at North Bay.

24694, Jan. 29. — Re application of Canadian Northern Ry. Co., under sections 317 and 334 of the Railway Act, for an order directing the Grand Trunk Ry. to interchange freight traffic with the applicant company at North Bay, on an equality with the C.P.R. Co. Upon hearing the application at Ottawa, Jan. 25, 1916, the applicant company, the Grand Trunk Ry. Co., the Canadian Pacific Ry. Co., and the Quaker Oats Co. being represented, it is ordered that the Grand Trunk be directed to concur in joint freight tariffs to be forthwith published and filed by the applicant company to apply on grain and grain products, in carloads, from Port Arthur, Fort William and Westfort, Ont., to Grand Trunk stations, via North Bay, Ont., the joint

rates to be the same as those published and filed by the C.P.R. Co. from the said points of shipment to the said destinations, the said grain to be accorded the milling-in-transit privileges pertaining to shipments received by the Grand Trunk from the C.P.R.; the Grand Trunk proportion of the joint freight charges, when prepaid, to be paid to the Grand Trunk by the applicant company at North Bay upon the transfer of the car containing the grain or grain products in each case.

Sale of Canadian Northern Tickets at Toronto Union Station.

24706. — Re application of Canadian Northern Ry., for an order amending 24462, Nov. 19, 1915, directing the Grand Trunk Ry. Co. to sell tickets for the applicant company's and exchange the applicant company's tickets for orders, the applicant company to pay one-third of the cost of operating the ticket office, including salaries and actual disbursements, but not rental charges. Upon hearing the application at Ottawa, Jan. 25, 1916, in the presence of counsel for the railway companies interested, and what was alleged, it is ordered that the operative part of order 24462 be rescinded and the following substituted therefor: That temporarily, and for a period of six months from the date of this order, during which time the G.T.R. shall keep an account of the cost of operating and maintaining the ticket office and the amount chargeable pro rata against the applicant company on a wheelage basis, exclusive of rental charges, the G.T.R. be directed to sell tickets for the applicant company and exchange the applicant company's tickets for orders, the applicant company to pay to the G.T.R. in advance \$25 a month.

Rates from Eastern Canada via Fort Frances.

24724, Feb. 14. — Re complaint of Canadian Northern Ry., against the cancellation by the Grand Trunk Ry. of rates from points in Eastern Canada to stations in the Canadian Northwest, via Fort Frances, Ont. Upon reading what has been submitted, and in accordance with the understanding reached at the sittings in Ottawa, Feb. 8, 1916, that certain joint rates were to remain in effect pending arrangements between the Canadian Pacific, Grand Trunk, and Canadian Northern Railway Companies, it is ordered that the proposed cancellation of joint rates from Eastern Canada to points in Western Canada, applying via the routes specified below and published in Supplement 8 to G.T.R. Tariff C.R.C. no. E-2962, and Supplement 18 to G.T.R. Tariff C.R.C. no. E-2977, issued to take effect Feb. 15, 1916, be suspended until further order.

Canadian Northern via Duluth, Minnesota, Duluth, Winnipeg and Pacific Ry., and Fort Frances; via Duluth, Minnesota, Duluth, Missabe and Northern Ry., Duluth, Winnipeg and Pacific Ry., and Fort Frances; via Superior, Wisconsin, Duluth, Winnipeg and Pacific Ry., and Fort Frances.

Grand Trunk Pacific via Duluth, Minnesota, Duluth, Missabe and Northern Ry., Fort Frances, Canadian Northern Ry., and Winnipeg.

Grand Trunk Pacific via Duluth, Minnesota, Duluth, Winnipeg and Pacific Ry., Fort Frances, Canadian Northern Ry., and Winnipeg, via Superior, Wisconsin, Duluth, Winnipeg and Pacific Ry., Fort Frances, Canadian Northern Ry. and Winnipeg.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, for Western Lines, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,206,100	\$321,000	\$285,100	x\$145,400
Aug.	1,192,800	354,000	238,800	x5,900
Sept.	2,014,500	1,358,000	661,600	1,300
	\$4,413,600	\$3,227,000	\$1,186,600	x\$79,300
Decr.	\$658,300	\$579,000	\$79,300	

x Decrease.
Mileage in operation at Sept. 30, 1915, 4,965, against 4,670 at Sept. 30, 1914.

Commencing with October, the figures show the earnings of the entire system, both eastern and western lines.

	Gross Earnings	Expenses	Net Earnings	Increase
Oct.	\$3,678,500	\$2,421,500	\$1,257,000	\$537,800
Nov.	3,535,200	2,323,800	1,211,400	618,400
Dec.	3,435,600	2,233,500	1,202,100	768,900
	\$10,649,300	\$6,978,800	\$3,670,500	\$1,925,100
Inc.	\$4,033,400	\$2,108,300	\$1,925,100	

Approximate earnings for January, \$2,086,800, against \$1,439,400 for Jan., 1915, and for three weeks ended Feb. 21, \$1,441,500, against \$1,155,800 for same period 1915.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$7,895,375.47	\$5,094,972.35	\$2,800,403.12	\$978,042.71
Aug.	8,801,451.52	5,359,136.80	3,442,314.72	79,157.02
Sept.	10,273,165.45	5,527,864.81	4,475,300.64	378,252.25
Oct.	13,433,206.88	6,863,780.29	6,579,426.59	3,258,105.79
Nov.	13,351,283.51	6,996,870.48	6,354,413.03	3,710,340.86
Dec.	12,705,673.45	7,003,351.97	5,702,321.48	3,502,797.67
	\$66,170,161.84	\$36,845,976.70	\$29,324,185.14	\$9,950,610.88
Inc.	\$10,532,038.26	\$581,427.38	\$9,950,610.88	

Approximate earnings for January, \$3,880,000, against \$5,908,000 for Jan., 1915, and for three weeks ended Feb. 21, \$5,881,000, against \$4,688,000 for same period 1915.

Grand Trunk Railway Earnings.

The following figures show the earnings of the G.T.R. (including the Canada Atlantic Ry.), the G.T.W.R. and the D.G.H. & M.R., for January, compared with those for January, 1915: —

	1916	1915	Increase
G.T.R.	\$3,341,263	\$2,661,080	\$680,183
G.T.W.R.	689,786	559,938	129,848
D.G.H. & M.R.	229,279	192,131	37,148
	\$4,260,328	\$3,413,149	\$847,179

Approximate earnings for three weeks ended February 21, \$2,858,616, against \$2,426,849 for February, 1915.

Grand Trunk Pacific Railway Earnings.

The approximate earnings for the Prairie Section, 916 miles, for January, were \$314,344, against \$294,000 for January, 1915.

Canadian Locomotive Co., Ltd.—Consequent on the resignation of A. W. Wheatley, Vice President, to become President of the Lima Locomotive Corporation, F. G. Wallace, formerly of Pittsburgh, Pa., who has lived in Kingston for several years and is one of the Canadian Locomotive Co's directors, has been appointed Managing Director, and Wm. Casey, heretofore Assistant to the General Manager, has been appointed Manager.

Canadian Transfer Co., Ltd. The directors for the current year, elected at the recent annual meeting, are: C. C. Sells, Hugh Paton, G. R. Starke, Sir H. Montagu Allan and F. W. Molson. F. M. McRobie is General Manager and Secretary.

Canadian Exhibits in France. A London, Eng., cablegram says that three booths at the Lyons Industrial Exhibition have been taken by the C.P.R. The Canadian Consolidated Rubber Co. have engaged booths.

Mainly About Railway People Throughout Canada.

Sir Wm. Mackenzie, President, Canadian Northern Ry., and Lady Mackenzie left Toronto Jan. 21 for Winnipeg.

J. H. McKechnie, President, Canadian Consolidated Rubber Co., died in Montreal Feb. 8, of bronchial pneumonia.

M. W. Furlong, K.C., of St. John's, Nfld., who died at Montreal, Feb. 8, aged 53, was a director of the Reid Newfoundland Co.

J. H. Conklin, a member of the firm of J. D. McArthur Co., railway contractors, Winnipeg, died suddenly at Edmonton, Alta., Feb. 17, aged 74.

H. C. Rochester, Secretary to General Manager and Chief Engineer, Canadian Northern Ry., Winnipeg, has recovered after an operation for appendicitis.

A. Watt, District Locomotive Foreman, Grand Trunk Pacific Ry., Prince Rupert, B. C., was married at Winnipeg, Jan. 26 to Miss Jessie McMillan, of Magnetawan, Ont.

B. Winger, a G.T.R. Car Inspector, Stevensville, Ont., was killed Feb. 15 near Bridgeburg, Ont., by being run down by a train while riding on a motor car on an inspection trip.

A. Ferguson, a former station agent of the Great Western Ry., and G.T.R., at Brantford, Simcoe and other points in Ontario, died at Simcoe, recently, aged 82.

C. R. Morgan, City Passenger and Ticket Agent, G.T.R., Hamilton, Ont., has enlisted as a private in the 120th city of Hamilton Battalion, for overseas service.

Albert H. Scherzer, President, Scherzer Rolling Lift Bridge Co., was killed by falling down an elevator shaft in the Monadnock Building, Chicago, Ill., Jan. 28.

F. H. Phippen, K.C., General Counsel, Canadian Northern Ry., left Toronto Feb. 22 for Mexico, intending to be away about six weeks in connection with some of Sir Wm. Mackenzie's enterprises there.

F. P. Gutelius, M.Can.Soc.C.E., General Manager, Canadian Government Railways, was entertained to dinner at the Union Club, St. John, N.B., recently by a number of business and commercial men.

F. C. Salter, European Traffic Manager, G.T.R., and Canadian Express Co., London, Eng., underwent an operation for abdominal trouble, Feb. 7, and is reported as progressing satisfactorily.

Mrs. F. M. Spaidal, who died suddenly at Brockville, Ont., Feb. 16, was widow of the late F. M. Spaidal, General Superintendent, Quebec Division, Canadian Northern Ry., who died in Sept. 1915.

Mrs. McArthur, mother of J. D. McArthur, President, Alberta and Great Waterways Ry., Central Canada Ry., and Edmonton, Dunvegan and British Columbia Ry., died at Bainsville, Ont., recently, aged 98.

Hon. F. Cochrane, M.P., Minister of Railways and Canals, returned to Ottawa, Feb. 7, from a trip to Europe, in the course of which he visited a portion of the battlefield in Flanders, meeting two of his sons there.

E. J. Wearing, who has been appointed General Agent, G.T.R., Central Vermont Ry., and Canadian Express Co., Liverpool, Eng., was born at Birkenhead, and entered G.T.R. service in 1888, at Liverpool.

J. G. Taylor, General Superintendent, Saskatchewan Division, C.P.R., Moose Jaw, who has not been in good health for some time, has been granted leave of absence, and will spend the balance of the winter in the south.

Hon. George Riley, who died at Ottawa, Ont., recently, was born in St. Catharines, Ont., and settled in Victoria, B. C. in 1885, when he took service with the general contractors engaged in the construction of the Esquimalt and Naaimeo Ry.

Lieutenant J. E. Vaughan, 166th Battalion, who died at Toronto General Hospital, Feb. 7, after a few days illness, of pneumonia, was a nephew of R. C. Vaughan, Assistant to Third Vice President, Canadian Northern Ry., Toronto.

J. M. Gibbon, General Publicity Agent, C.P.R., Montreal, has written a novel, "Hearts and Face," dealing with the career of a young Scottish artist in London and Paris, and which is being published in London, Eng.

P. K. Manahan, who has been appointed Trainmaster, Pacific Division, Canadian Northern Ry., Vancouver, B. C., was, prior to leaving Saskatoon, Sask., where he had occupied a similar position, presented with a dining table and two leather covered chairs, by the local staff.

Duncan Macdonald, who died at Winnipeg, Feb. 2, aged 74, was formerly engaged in railway construction for several years, his last contract being on the Grand Trunk Pacific Ry., for a section between Portage la Prairie, Man., to near the Saskatchewan River, about 275 miles.

James Esslemont, Roadmaster, Vancouver-North Bend Subdivision, British Columbia Division, C.P.R., Vancouver, died there suddenly, Jan. 29, aged 54. He had served on the British Columbia Division for five years, and prior to that had been at other points west of Winnipeg, and at Fort William, Ont.

Hon. F. Cochrane, M.P., Minister of Railways and Canals, is suffering from a severe cold, and taking into account the fact that his health has not been good for some time, he has been ordered complete rest for a short time. Hon. J. D. Reid, Minister of Customs is acting also as Minister of Railway and Canals.

J. H. Plummer, President, Dominion Steel Corporation Ltd., controlling the Dominion Iron and Steel Co., the Dominion Coal Co., the Sydney and Louisburg Ry. and the Cumberland Steel and Coal Co., has retired from that position owing to ill health, and will in future act as Chairman of the Board, a new position.

E. H. Fitzhugh, formerly Vice President, G.T.R., and afterwards President and General Manager, Central Vermont Ry., and C. J. Crowley, M.Can.Soc.C.E., who was Resident Engineer on the G.T.R. at Toronto and afterwards at Detroit, Mich., some years ago, have established The Fitzhugh-Crowley Corporation, engineers, constructors and railway specialists, with office at 60 Broadway, New York.

A. L. Hertzberg, M.Can.Soc.C.E., Division Engineer, C.P.R., Toronto, was officially notified Feb. 17 that his son, Lieut. O. P. Hertzberg, of the 5th Battalion, Canadian Overseas Expeditionary Forces, had been slightly wounded in action. Another son, Capt. H. F. H. Hertzberg, of the Royal Canadian Engineers, was

wounded at the battle of Ypres, and a third son, Lieut. C. S. L. Hertzberg, of the Canadian Engineers, is also overseas.

M. J. O'Brien, contractor, of Renfrew, Ont., and President, Canada & Gulf Terminal Ry., has placed his yacht at the Minister of Militia's disposal, and on the opening of navigation it will cruise along the north and south shores of the St. Lawrence River to recruit for the Canadian Overseas Expeditionary Forces. The recruiting campaign will be in charge of H. J. Lyons, Vice President in charge of operation, Canada & Gulf Terminal Ry., who is qualifying for a captaincy.

W. B. Howard, whose appointment as District Passenger Agent, C.P.R., Toronto, was announced in our last issue, was entertained to dinner by a number of friends at St. John, N.B., Feb. 1, and was presented with a gold-headed umbrella, a smoking set, and a desk clock, by the staff, and local conductors, on his leaving after having occupied the position of District Passenger Agent there for some years.

J. J. Hill, formerly President, and Chairman, Great Northern Ry., is reported from St. Paul, Minn., to be engaged on a plan for the reconstruction of Belgian finances in preparation for the settlement after the war. This work, it is stated, has been undertaken at the request of the King of the Belgians, who, some years ago, was a guest of Mr. Hill on a tour through the western United States.

A. B. Smith, who owing to ill health resigned the position of Manager of Telegraphs, Grand Trunk and Grand Trunk Pacific Rys., has been presented with a very handsome gramophone and records by officials and employees of both companies who came under his jurisdiction, as a token of their regard and a souvenir of pleasant relations that at all times existed between himself and the staff. A bouquet of roses was presented to Mrs. Smith at the same time.

William Brunswick Howard, whose appointment as District Passenger Agent, C.P.R., Toronto, was announced in our last issue, was born at Chatham, N.B., Sept. 15, 1877, and entered C.P.R. service, Aug. 1897, since when he has been, to Aug. 1899, clerk; Aug. 1899 to Feb. 1902, Travelling Passenger Agent; Feb. 1902, to June 1906, chief clerk; June 1906, to Jan. 1907, acting District Passenger Agent; Jan. 1907, to Jan. 31, 1916, District Passenger Agent, all at St. John, N.B.

William E. Allison, who has been appointed Assistant General Baggage Agent, Eastern Lines, C.P.R., Montreal, was born at St. Eugen, Ont., Aug. 1, 1886, and entered C.P.R. service in Mar. 1905 since when he has been, to Mar. 1910, clerk in General Baggage Department, Montreal; Mar. 1910 to Nov. 1911, Travelling Baggage Agent, Montreal; Nov. 1911 to Mar. 1912, General Travelling Baggage Agent, Winnipeg; Mar. 1912 to Mar. 1913, District Baggage Agent, Calgary, Alta.; Mar. 1913 to Jan. 1, 1916, chief clerk, General Baggage Department Montreal.

The Minister of Railways and Canals, replying to questions in the House of Commons, Feb. 8, stated that W. R. Devenish, A.M.Can.Soc.C.E., who was recently appointed Superintendent, District 2, Intercolonial Ry., Campbellton,

N. B., was of Irish birth and had always been a British subject. His jurisdiction covers 290 miles of main line, 92 of which are in Quebec, and 362 miles of branch lines, including the Canada Eastern, International Ry. of New Brunswick and the St. John Valley Ry., none of which is in Quebec. He acted as secretary to F. P. Gutelius, M.Can.Soc.C.E., who was appointed a commission to enquire into the construction of the National Transcontinental Ry., and received a salary of \$2,400 a year.

C. C. Kirby, A.M.Can.Soc.C.E., whose appointment as Division Engineer, Atlantic Division, C.P.R., St. John, N. B., was announced in our last issue, was born at Newport, Monmouth, Eng., Mar. 8, 1880, and from 1898 to 1907, was pupil and Assistant Engineer with Kirby Son and Brown, there. He came to Canada in 1907, and has been, from June 1907 to Feb. 1908, instrument man, location survey, Kingston, Smiths Falls and Ottawa Ry., G.T.R., June 1908 to Apr. 1909, not in railway service; Apr. 1909 to May 1910, transit man, C.P.R., Ottawa, Ont.; May 1910 to Feb. 1912, Resident Engineer, District 3, Eastern Division, C.P.R., Montreal; Feb. 1912 to Jan. 1913 Resident Engineer, Montreal Terminals, C.P.R.; Jan. 1913 to Dec. 31, 1915, Assistant Engineer, C.P.R., Montreal.

William Tansley, who has been appointed Assistant Superintendent, District 2, Ontario Division, London, was born at Shelburne, Ont., Dec. 27, 1872, and entered C.P.R. service in 1889 since when he has been, to 1900, operator and agent at various points on the Ontario Division; 1900 to 1907, dispatcher, Toronto; 1907 to 1912, Chief Dispatcher, Toronto; 1912 to 1914, Assistant Superintendent, District 1, Ontario Division, Havelock; 1914 to May 18, 1915, Assistant Superintendent, District 3, Ontario Division, Toronto; May 18 to June 1915, Assistant Superintendent, District 5, Eastern Division, Smiths Falls, Ont.; June to Dec. 1915, acting Superintendent of Car Service, Eastern Lines, Montreal; Dec. 1915 to Feb. 1916, Assistant Superintendent, Montreal Terminals.

Alfred G. Richardson, who has been appointed District Passenger Agent, C. P.R., Winnipeg, was born at Rockford, Ill., Oct. 16, 1880, and entered railway service in Oct. 1898, since when he has been, to Dec. 1900, clerk in local freight office, Illinois Central Rd., Chicago, Ill.; June 1901 to Dec. 1903, clerk in general passenger office, Chicago Burlington and Quincy Rd., Chicago, Ill.; Jan. 1904 to Oct. 1905, stenographer general passenger office, Southern Pacific Co., Portland Ore.; Nov. 1905 to June 1907, ticket clerk, Northern Pacific Ry., Portland, Ore.; July 1907 to Apr. 1908, Travelling Passenger Agent, Chicago Rock Island and Pacific Ry., Portland, Ore.; Apr. 1908 to Mar. 1910, City Passenger Agent, C.P.R., Portland, Ore.; Apr. 1910 to Jan. 31, 1916, City Passenger Agent, C.P.R., Winnipeg.

August Kastella, Mechanical Superintendent of Dredges, Public Works Department, Ottawa, was dismissed from his position, Feb. 11. It appears that he was born in Germany, and came from Hanover to Canada in 1909, and entered G.T.R. service, in that year, as electrical engineer at Stratford, Ont., remaining there until Mar. 1913 when he was transferred to Ottawa in charge of light, heat and power at the G.T.R. station and the Chateau Laurier. He was appointed Mechanical Superintendent of Dredges, Public Works Department, May 20,

1914. It is stated that he had applied for naturalization since the outbreak of war. The Minister of Public Works has stated that the dismissal was owing to some irregularities and to unsatisfactory work in connection with the discharge of his departmental duties.

Herbert George Dring, whose appointment as General Passenger Agent, C.P.R., London, Eng., was announced in our last issue, was born at Easton, Northamptonshire, Eng., Mar. 8, 1881 and entered C.P.R. Passenger Department service in London, Mar. 1, 1897, since when he has been, to Sept. 30, 1897, junior clerk; Oct. 1, 1897 to Dec. 31, 1898, clerk; Jan. 1, to Dec. 31, 1899, shorthand clerk; Jan. 1, 1900 to June 30, 1901, general and correspondence clerk; July 1, 1901 to Mar. 31, 1904, booking and correspondence clerk; Apr. 1, 1904 to Aug. 31, 1905, chief booking and correspondence clerk; Sept. 1, 1905 to Mar. 31, 1907 chief clerk to General Passenger Agent; Apr. 1, 1908 to Dec. 31, 1915, Assistant General Passenger Agent. Since his appointment as General Passenger Agent, his former position has been abolished.

J. H. Boyle, who has been appointed Superintendent, District 1, Eastern Division, C.P.R., Farnham, Que., was born at Waterloo, Que., June 25, 1896, and entered C.P.R. service Apr. 12, 1888 since when he has been, to Aug. 1890, freight brakeman; Aug. 1890 to Nov. 1903, conductor; Nov. 1903 to Sept. 15, 1906, Trainmaster, District 1, Eastern Division, Farnham, Que.; Sept. 15, 1906 to Aug. 15, 1907, Trainmaster, District 3, Eastern Division, Montreal; Aug. 15, 1907 to Jan. 1, 1908, Trainmaster, District 2, Eastern Division, Smiths Falls, Ont.; Jan. 1 to May 13, 1908, Trainmaster, District 3, Eastern Division, Montreal; May 13, 1908 to Apr. 29, 1911, Assistant Superintendent, District 3, Eastern Division, Montreal; Apr. 29, 1911 to Apr. 1912 Assistant Superintendent, District 4, Eastern Division, Ottawa, Ont.; Aug. 1912 to Jan. 7, 1916, Superintendent, District 3, Lake Superior Division, Schreiber, Ont.

Sir Charles Rivers Wilson, G.C.M.G., C.B., former President, G.T.R., died in London, Eng., Feb. 9, after a long illness. He was born in London in 1831, and served the British Government in various capacities. He was for two years Finance Minister in Egypt, and was also one of the administrators of the Suez Canal Co., and later Vice President, and acting President during the absence of Count Ferdinand de Lesseps. From 1874, to 1894, he was also Comptroller-General of the National Debt Office, London, and resigned that office and also his connection with the Suez Canal on his appointment as President, G.T.R., early in 1895. During his period of office, the G.T.R. carried out what was really a scheme of general reconstruction, and undertook the building of the Grand Trunk Pacific Ry. He retired in 1909. In addition to receiving the Order of the Bath in recognition of his work in Egypt, he was given the Turkish Order of the Medjidie.

E. W. DuVal, who has been appointed acting General Superintendent, Saskatchewan Division, C.P.R., Moose Jaw, was born at Toledo, Ohio, June 5, 1885, and entered railway service July 1, 1902, since when he has been, to June 1, 1905, in Superintendent's office, Canadian Northern Ry., Winnipeg; June 1, 1905, to Jan. 2, 1911, successively, secretary to General Superintendent, Central Division,

C.P.R., Winnipeg; assistant chief clerk to General Superintendent, Central Division, C.P.R., Winnipeg; chief clerk to General Superintendent, Western Division, C.P.R., Calgary, Alta.; chief clerk to Assistant General Manager, and later to General Manager, Western Lines, C.P.R., Winnipeg; and Trainmaster, C.P.R. terminals, Calgary, Alta.; Jan. 2, 1911, to Apr. 6, 1912, Superintendent, District 1, Saskatchewan Division, C.P.R., Moose Jaw; Apr. 6, 1912, to May 1913, Superintendent, District 4, Manitoba Division, C.P.R., Souris; May 1913, to Feb. 1, 1916, Superintendent, District 3, Saskatchewan Division, C.P.R., Saskatoon.

Fred M. Rutter, A.M.Can.Soc.C.E., who has been appointed Superintendent, District 3, Ontario Division, C.P.R., Toronto, was born there, Dec. 26, 1880, and educated at Upper Canada College and the University of Toronto. He entered C.P.R. service Apr. 21, 1902, since when he has been, to Sept. 10, 1902, chainman, Labelle Extension; Sept. 10, 1902 to Apr. 18, 1908, clerk, Operating Department, Woodstock, N. B.; Apr. 18, 1903 to Apr. 7, 1904, rodman, North Bay, Ont.; Apr. 7 to Sept. 19, 1904, transitman, Sudbury, Ont., and Megantic, Que.; Sept. 19, 1904 to Feb. 8, 1906, Resident Engineer on construction, Toronto-Sudbury Line; Feb. 8, 1906 to Mar. 22, 1907 Assistant Engineer, Maintenance of Way, District 3, Eastern Division, Montreal; Mar. 22, 1907 to May 9, 1911, Resident Engineer, Maintenance of Way, Woodstock, N.B.; May 9, 1911 to July 16, 1913, Resident Engineer, Toronto, July 16, 1913, to May 1, 1915, Assistant Division Engineer, Eastern Division, Montreal; May 1, 1915 to Feb. 1, 1916, Assistant Superintendent, District 3, Ontario Division, Toronto.

A. W. Wheatley, who has been appointed President, Lima Locomotive Corporation, Lima, Ohio, on a change of ownership, was born at Ashford, Kent, Eng., and served an apprenticeship as machinist in the South Eastern Ry. shops there. In 1892 he went to the United States, since when he has been, to 1894 in Northern Pacific Ry. service, St. Paul, Minn.; 1894, in same service, Staples, Minn.; 1895 to 1900, Roundhouse Foreman, same place; 1900 to 1902, General Foreman same road, Livingstone, Mont.; Dec. 1902 to June 1903, Master Mechanic, Yellowstone Division, same road, Glendive, Mont.; June 1903 to Mar. 1904, General Master Mechanic, same road, St. Paul, Minn.; Feb. 1905 to Mar. 1906, Shop Superintendent, Chicago, Rock Island and Pacific Ry., Moline, Ill.; Mar. 1906 to June 1, 1907, Assistant Superintendent of Motive Power, Union Pacific Ry., Omaha, Neb.; June 1 to Oct. 1907, General Inspector, American Locomotive Co., Schenectady, N. Y.; Oct. 1907 to Nov. 1910 Manager, Montreal Locomotive Works, Ltd., Montreal; Nov. 1910 to Aug. 1911, Manager, American Locomotive Co., Dunkirk, N. Y.; Aug. 1911 he was appointed General Manager, and on the reorganization of the company, also Vice President, Canadian Locomotive Co., Ltd., Kingston, Ont.

Adam Rutherford Creelman, K.C., a director, and former General Counsel, C.P.R., died at Montreal, Feb. 6, after a lengthened illness. He was born at Richibucto, N. B., Sept. 21, 1849, and educated there and at Chatham, N. B. He studied law with the late Adam Crooks Q.C., and was called to the bar at Toronto in 1875, and entered the firm of Crooks, Kingsmill and Cattinach, leaving there in 1877 to become a partner in the firm of McCarthy, Osler, Hoskin

and Creelman, Toronto. He was created a Q.C. in 1889, and remained in private practice until July 1901, when he was appointed Chief Solicitor, C.P.R., Mon. He subsequently was appointed General Counsel, and was elected a director of the company in 1910, and was also a director of the Kingston and Pembroke Ry. He retired from active service in June 1913, when the following circular was issued over the signature of the President: "A. R. Creelman, K.C., General Counsel, having asked to be relieved of his duties that he may enjoy a well earned rest and recreation, the Board of Directors and Executive Officers in acceding to his wish, and accepting his resignation, desire to express their hearty appreciation of his advice and co-operation during the company's most progressive years. He continues his connection with the company, as a director, and will act on occasion as Special Counsel." The funeral took place at Toronto, Feb. 8, only relatives and intimate friends being present. E. W. Beatty, K.C., Vice President and General Counsel, C.P.R., represented the company.

Alexander Forrester Stewart, M.Can. Soc.C.E., who has been appointed Chief Engineer, Eastern Lines, Canadian Northern Ry., Toronto, was born at West Bay, Cape Breton, N.S., Jan. 8, 1864, and graduated from Dalhousie University, in arts, in 1887. He entered railway service May 15, 1887, since when he has been, to July 1887, chairman, Boston and Quebec Air Line, Skowhegan, Me.; Aug. to Dec. 1887, rodman, St. Paul, Minneapolis and Manitoba Ry., Dakota and Montana; Jan. to June, 1888, leveller on survey in Ontario, C.P.R.; June 1888 to Apr. 1889, leveller and transit man on surveys in Manitoba and Northwest Territories, C.P.R.; Apr. 1889 to Mar. 1891, leveller and transit man on surveys and Resident Engineer on construction in British Columbia, C.P.R.; Mar. 1891 to June 1895, Engineer in charge of branch line surveys and construction in British Columbia, C.P.R.; July 1895, to July 1896, Contractor's Engineer, South Coast Ry., Natal, South Africa; July 1896, to Mar. 1897, District Engineer of Surveys, Pretoria-Pietersburgh Ry., Transvaal, South Africa; Mar. 1897, to Nov. 1899, District Engineer on Construction, Orange Free State Government Railways, South Africa; Nov. 1899, to Feb. 1900, District Engineer of Surveys, Zululand Ry., Zululand, South Africa; Feb. to Aug. 1900, District Engineer of Surveys, Pauling and Co., Ltd., contractors, Cape Colony; Aug. 1900, to Dec. 1901, District Engineer of Maintenance and Reconstruction, Imperial Military Rys., Eastern Transvaal; May to June 1902, Division Engineer of Surveys, Halifax and South Western Ry., Halifax, N.S.; June 1902, to Mar. 1903, District Engineer of Maintenance, Central South Africa Government Rys., Pretoria; Mar. 1903, to Dec. 1904, District Engineer of Surveys, Cape Government Rys., Cape Colony; Dec. 1904, to Dec. 1906, District Engineer of Maintenance, Cape Government Rys., Kimberley, South Africa; Jan. 1907, to Dec. 1908, Assistant Chief Engineer of Construction, Mackenzie, Mann and Co., Ltd., Toronto; Dec. 1908, to Jan. 1916, Chief Engineer of Construction, Mackenzie, Mann and Co., Ltd., Toronto. In addition to being a member of the Canadian Society of Civil Engineers, he is a member of the Institute of Civil Engineers, (England), and of the South African Society of Civil Engineers.

George Herrick Duggan, who has been elected President of the Canadian So-

ciety of Civil Engineers, was born in Toronto, Canada, in 1862, and was educated at Upper Canada College, Toronto, and at the School of Practical Science, Toronto University. In 1884 he entered Canadian Pacific Ry. service and was assigned to location work on the mountain division. He remained with the railway until the end of 1885, before which time he had been assigned to the drawing office and placed in charge of the division of bridge erection and of a section of grading. In Jan. 1886, he entered the Dominion Bridge Co.'s drawing office, becoming chief draughtsman in 1889 and Chief Engineer in 1891, which position he held until the end of 1901. During this period the company erected a number of bridges, including the first Coteau bridge, the Grand Narrows and St. Mary's River bridges, the Interprovincial bridge at Ottawa, the swing bridge and the emergency dam at Sault St. Marie, Ont., as well as the first Canadian hydraulic liftlock, on the Trent Canal, at Peterborough, Ont. He went to Sydney, N.S., in Jan. 1902 as Assistant to the President of the Dominion Iron & Steel Co. and of the Dominion Coal Co. A considerable amount of civil engineering work was then being prosecuted by both companies, and he was placed in charge of it. In 1907 he became Third Vice President of both companies, and in 1905, when the companies separated, he was appointed Second Vice President and General Manager of the Dominion Coal Co., remaining in that capacity until 1910. He was responsible for the engineering work of the Dominion Coal Co. and for the opening of a number of new mines, the construction of docks and unloading plants and the extension and operation of the company's railway service. In 1910 he returned to the Dominion Bridge Co. as Chief Engineer, in which capacity he was responsible for the preparation of the design for the new Quebec bridge, for which tenders were being prepared at the time he became Chief Engineer. In 1912 he was appointed Vice President and General Manager of the Dominion Bridge Co. and Chief Engineer of the St. Lawrence Bridge Co., a company which was formed to bid on the superstructure of the new Quebec bridge and which was awarded that contract. He has continued actively since then in the great work of building this bridge.

Alleged German plots Against Canadian Railways.—A total of 81 indictments were returned against Francis Bopp, Consul General of the German Empire, and other officials and German firms and individuals in San Francisco, Cal., Feb. 10. Among the specific charges alleged by the United States Government agents, is that the accused or some of them had conspired to blow up the G.T.R. tunnel between Sarnia, Ont., and Port Huron, Mich., and the proposed conveyance of explosives into Canada for the purpose of blowing up C.P.R. tunnels in British Columbia.

Railway Lands Patented.—Letters patent were issued during Jan., in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

Calgary & Edmonton Ry.	Acres.
Canadian Northern Ry.	322.00
Grand Trunk Pacific Branch Lines Co.	4,315.90
Grand Trunk Pacific Ry.	51.99
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.	195.14
	5,356.80
Total	10,241.83

A Strategic Railway of about 100 miles is reported under construction between the Hadjaz Ry. and the Egyptian frontier.

Canadian Society of Civil Engineers' Officers.

The following officers, etc., were elected at the annual meeting in Montreal, Jan. 27:—President, G. H. Duggan, Vice President and General Manager, Dominion Bridge Co., Montreal; Vice President, T. H. White, Chief Engineer, Canadian Northern Pacific Ry., Vancouver.

Councillors:—District 1: W. J. Francis, Montreal; H. R. Safford, Chief Engineer, G.T.R., Montreal. District 2: H. Donkin, Deputy Commissioner, Public Works and Mines, Halifax, N.S.. District 3: A. E. Doucet, Quebec. District 4: E. D. Lafleur, Chief Engineer, Public Works Department, Ottawa. District 5: J. R. W. Ambrose, Chief Engineer, Toronto Terminals Ry., Toronto. District 6: D. A. Ross, Winnipeg. District 7: D. O. Lewis, District Engineer, Canadian Northern Pacific Ry., Victoria, B.C.

Treasurer, E. Marceau, Montreal. Secretary, C. H. McLeod, Montreal.

Two vice presidents and 16 councillors remain in office from the previous year.

Lima Locomotive Corporation.—The control of this corporation has been bought by J. S. Coffin, President, and S. G. Allen, First Vice President, Franklin Railway Supply Co., New York. The new officers are as follows:—Chairman of Board of Directors, J. S. Coffin; President, A. W. Wheatley, heretofore Vice President, Canadian Locomotive Co., Ltd., Kingston, Ont.; Vice President and General Sales Manager, J. E. Dixon, formerly of the American Locomotive Co.; Secretary and Treasurer, J. H. Guess, formerly General Purchasing Agent, Grand Trunk Ry., who will be in charge of purchasing.

The Canadian Railway Club's annual dinner in Montreal Jan. 29 was largely attended. In the absence of the President, L. C. Ord, Assistant Works Manager, Angus shops, C.P.R., on active military service, the Vice President, R. M. Hannaford, Assistant Chief Engineer, Montreal Tramways Co., occupied the chair. Among the other speakers were Sir Sam Hughes, Minister of Militia; F. P. Gutelius, General Manager, Canadian Government Railways; J. Coleman, Superintendent, Car Department, G.T.R.; T. C. Hudson, Division Master Mechanic, Canadian Northern Ry., and W. McNab, Valuation Engineer, G.T.R.

Interest on Guaranteed Railway Bonds.—Replying to question in the House of Commons Feb. 17, the Minister of Finance said the Government had not paid by special warrant the half yearly interest on Dominion and provincial guarantees of the Canadian Northern Ry., nor of the half yearly interest on the Dominion guarantee of the Grand Trunk Pacific Ry. There were no interest payments made on guarantees to railways by the Government during 1914 and 1915, nor up to the date of the answer given.

Railway Taxation in Manitoba.—The Manitoba Legislature has passed an act repealing the Revised Statutes of 1913, chap. 193, sec. 16, which enacted that "nothing contained in this act shall take away or lessen any exemption from taxation heretofore granted any railway company by or under any act of the Legislature of Manitoba."

The Public Works Department received tenders to Feb. 28, for the construction of timber lock gates and equipment, for the East River lock, near New Glasgow, N. S.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Express, Telegraph, and Railway and Canal
Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Progress of Rogers Pass Tunnel Construction.

The following table, for which we are indebted to J. G. Sullivan, M.Can.Soc.C.E. Chief Engineer, C.P.R., Winnipeg, shows the progress made from Dec. 30, 1915, to Jan. 17, and the total progress to Jan 27:—

EAST END.	Progress.	Total.
Main tunnel	806 ft.	9,548 ft.
WEST END.		
Main tunnel	557 ft.	9,849 ft.

One-man Car Operation.—Investigation by the American Electric Railway Association shows that out of a total of 111 American cities in which one-man car operation is in use, 30 cities in 1910 had a population of more than 25,000, which means that 27% of the cities using the one-man method of operation are cities of large population. Eight other cities ranged between 20,000 and 25,000 population and 45 others are between 10,000 and 20,000, leaving for the small city of less than 10,000 a total of but 28. Of the 30 companies operating in cities with more than 25,000 inhabitants there are two companies the population of whose cities are more than 500,000; one city over 200,000, and one over 100,000, which shows the favor with which one-man operation is being met, and its ascending popularity for larger city operation.

Navigation Seasons at Port Nelson.—The record of the first steamship arrivals at, and the last departures from, Port Nelson, Hudson Bay, for 1912 to 1915, was given in the House of Commons, Feb. 7, as follows:—1912, s.s. Beothic arrived off Nelson roads, July 24, but for lack of pilot did not proceed up river until July 29; after clearing, she proceeded to James Bay. 1913, s.s. Bonaventure arrived at Port Nelson, Aug. 6, and cleared from there, with the steamships Bellaventure and Sinbad, Oct. 13, being followed on Oct. 19 by the Dominion Government survey steamship Acadia. 1914, s.s. Bonaventure arrived at Port Nelson, Aug. 14; the steamships Bellaventure and Sheba cleared from there, Oct. 17. 1915, s.s. Bellaventure arrived at Port Nelson Aug. 1, and cleared from there, with the steamships Adventure and Sheba, Oct. 22.

Judgment was given in the October Court of Appeal, Jan. 24, in an action in which the County of Wentworth, the City of Hamilton and the Hamilton Radial Ry. were concerned. The railway extends from Hamilton to Oakville, the city and county authorities granting franchises, in respect of which certain payments are made. Some difference arose between the city and county respecting these payments, with the result that action was brought, and a verdict was given July 2, 1914, in favor of the county. Against this the city appealed, with the result that the appeal has been allowed and the original action dismissed.

Alaska halibut fishermen have petitioned the United States Government to take steps to protect the industry. It is alleged that owing to the opening of the Grand Trunk Pacific Ry., the centre of the fisheries in Alaskan waters has been shifted from Ketchikan, Alaska, to Prince Rupert, B.C.

The Canadian Ticket Agents Association will hold its next annual meeting and outing at Port Arthur, Ont., early in June.

The Dominion Government Railway to Hudson Bay engineering staff has given \$513.97 as a special donation to the Manitoba Patriotic Fund.

Grain Inspection at Western Points.

Following are the number of cars of grain inspected on the Canadian Pacific, Canadian Northern, Great Northern and Grand Trunk Pacific Rys. at Winnipeg and other points in the Western Division, in Jan. 1916, in the 5 months ended Jan. 1916, and in the 5 months ended Jan. 1915, respectively:—

	5 months to Jan. 1916	5 months to Jan. 1916	5 months to Jan. 1915
C.P.R.	5,630	107,840	41,089

Total	11,725	196,398	81,369

Too Late for Classification.

The Dominion Government s.s. Quadra was sunk off Nanaimo, B.C., Feb. 26, in collision with the C.P.R. s.s. Charmer, the crew being saved. She was valued at about \$80,000 and was engaged in the fishery patrol and lighthouse and buoy service on the Pacific coast.

Canada Steamship Lines' s.s. Empress of Fort William, which since Aug. 4, 1914, has been engaged in ocean service, was sunk by a mine off Dover, England, Feb. 26, while attempting to rescue the crew of the s.s. Maloja, which had struck a mine. The Empress of Fort William was built at Newcastle, England, in 1908, and was formerly owned by the Empress Transportation Co., Midland, Ont., and was later absorbed by Canada Steamship Lines, Ltd. Her dimensions were: Length 250 ft., breadth 43 ft., depth 25 ft., and she had a cargo capacity of 3,440 tons.

The Transit Co., Ltd., has been incorporated under the Dominion Companies Act, with \$250,000 authorized capital, and office at Toronto, to carry on a general shipowning and operating business, and in connection therewith to own and operate steam and other vessels, and to enter into agreements with steam and electric railway companies to move and operate their rolling stock. The incorporators are all connected with a Toronto legal firm.

The Manitoba Public Utilities Commissioner recently suspended the order directing the Winnipeg Electric Ry. to operate its cars over the Arlington St. bridge, Winnipeg. The Board of Control on Feb. 5, instructed the City Solicitor to apply for a renewal of the order. This new application will enable the question of the sufficiency of the existing brakes on the cars, to ensure safety on the gradient at the bridge, to be settled.

The Saskatchewan Co-operative Elevator Co. proposes to extend its system to include the ownership and operation of terminal elevator facilities at the head of the lakes, and is taking steps to have the matter discussed in the Legislature, with the view of having such extension authorized, and if necessary, obtaining the financial co-operation of the province.

C. H. Gaunt, heretofore General Manager, Pacific Division, Western Union Telegraph Co., San Francisco, Cal., has been appointed General Manager at Chicago, Ill., with jurisdiction over the company's lines in ten States. He is succeeded at San Francisco by M. T. Cook, heretofore Assistant General Manager, Chicago, Ill.

During 1915, 89,195,875 tons of bulk freight were handled on the Great Lakes, an increase of 16,256,272 over 1914.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Central & Hudson Bay Ry., Algoma Eastern Ry.—I. L. GODFREY, Comptroller, has also been appointed Treasurer, vice R. Barber, resigned to enter Algoma Steel Corporation's service. He will act in the dual capacities for the Receivers of the A.C. & H.B.R. and Algoma Central Terminals, Ltd., Algoma Eastern Ry., Algoma Eastern Terminals, Ltd., Superior Rolling Stock Co., British American Empress Co., and Algoma Rolling Stock Co. Office, Sault Ste. Marie, Ont.

E. B. BARBER has been appointed Assistant Comptroller and Assistant Treasurer of the above named companies. Office, Sault Ste. Marie, Ont.

Algoma Central Steamship Line.—W. J. McCORMACK, heretofore Superintendent. Northern Navigation Co., Sarnia, Ont., has been appointed Superintendent, Algoma Central Steamship Line, vice S. V. McLeod, resigned. Office, Sault Ste. Marie, Ont.

Canadian Northern Ry.—A. F. STEWART, heretofore Chief Engineer of Construction, Mackenzie, Mann & Co., Ltd., Toronto, has been appointed Chief Engineer, lines east of Port Arthur, Ont., C.N.R. Office, Toronto.

G. C. BRIGGS, heretofore Inspector of Buildings, Mackenzie, Mann & Co., Ltd., has been appointed Supervisor of Bridges and Buildings, Eastern Lines. C.N.R., his jurisdiction covering the design and construction of new buildings only. O. KERR, Supervisor of Bridges and Buildings, is in charge of the maintenance of bridges and buildings. Office, Toronto.

G. CLISSOLD, heretofore Night Locomotive Foreman, has been appointed Assistant Foreman, Rainy River, Ont., vice E. R. Mills, promoted.

B. T. PATTERSON, heretofore machinist, has been appointed Night Locomotive Foreman, Rainy River, Ont., vice G. Clissold, promoted.

E. R. MILLS, heretofore Assistant Foreman, Rainy River, Ont., has been appointed Locomotive Foreman, Dauphin, Man., vice J. Duncanson, assigned to other duties.

C. R. STOKES, heretofore Car Foreman, Saskatoon, Sask., has been appointed Car Foreman, Dauphin, Man., vice J. Grant, transferred.

J. GRANT, heretofore Car Foreman, Dauphin, Man., has been appointed Car Foreman, Saskatoon, Sask., vice C. R. Stokes, transferred.

P. K. MANAHAN, heretofore Trainmaster, Saskatoon, Sask., has been appointed acting Trainmaster, Kamloops Jct., B.C.

T. R. MACLEOD, heretofore Superintendent, New Westminster, B.C., has been appointed acting Superintendent of tracklaying on Patricia Bay Branch, Vancouver Island. Office, Belmont Block, Victoria.

F. A. YOUNG, who at the time of his retirement from the C.N.R. service some two years ago was Division Freight Agent, Ontario Lines, Toronto, has been appointed General Agent (Freight and Passenger) at 233 Broadway, New York, N.Y., where the company has opened an office.

Canadian Pacific Ocean Services, Ltd.—In addition to a number of appoint-

ments and transfers following on the organization of this company, already mentioned in Canadian Railway and Marine World, the following are reported: CAPT. E. BEETHAM, Marine Superintendent, Vancouver, B.C.; JAMES McGOWN, Assistant Superintendent Engineer, Vancouver, B.C.; W. J. SERGENT, Chief Superintendent Engineer, Liverpool, Eng.; KENNETH MACKENZIE, Assistant Superintendent Engineer, Liverpool, Eng.; L. J. COATES, Chief Accountant, Liverpool, Eng.; W. ADAM, Purchasing Agent, Liverpool, Eng.; Capt. D. R. W. PARSONS, Marine Superintendent, London, Eng.; G. H. BUTTERWORTH, Assistant Superintendent Engineer, London, Eng.; A. S. RAY, Agent, Bristol, Eng.; W. D. GROSSET, Agent, Glasgow, Scotland; Capt. W. CHRISTIE, Marine Superintendent, Glasgow, Scotland; JOHN RUSSELL, Assistant Super-

W. B. Howard,
District Passenger Agent, Canadian Pacific Railway, Toronto.

intendent Engineer, Glasgow, Scotland; H. T. RICHARDSON, Assistant Superintendent Engineer, Hong Kong, China.

Canadian Pacific Ry.—W. E. ALLISON, heretofore chief clerk, General Baggage Department, has been appointed Assistant General Baggage Agent, Eastern Lines. Office, Montreal.

J. H. BOYLE, heretofore Superintendent, District 3, Lake Superior Division, Schreiber, Ont., has been appointed Superintendent, District 1, Eastern Division, vice F. W. Cooper, whose transfer to Schreiber was announced in our last issue. Office, Farnham, Que.

J. B. BLAIR, heretofore General Yardmaster, Windsor, Ont., has been appointed Assistant Superintendent, Montreal Terminals, vice W. K. Tansley, transferred.

F. M. RUTTER, A.M.Can.Soc.C.E., heretofore Assistant Superintendent, District 3, Ontario Division, has been appointed Superintendent, District 3, On-

tario Division, vice W. K. Thompson, retired. Office, Toronto.

D. PAISLEY, heretofore conductor, has been appointed General Yardmaster, Windsor, Ont., vice J. B. Blair, promoted.

G. TWIST, heretofore Locomotive Foreman, Brandon, Man., has been appointed Locomotive Foreman, Fort William, Ont., vice A. Brown, promoted.

J. NEILL, formerly District Master Mechanic, Moose Jaw, Sask., who was recently appointed District Master Mechanic, Calgary, Alta., vice W. J. Renix, transferred to Revelstoke, B.C., has since been appointed District Master Mechanic, Kenora, Ont., vice S. West, transferred.

A. W. CLARK, heretofore Locomotive Foreman, Kamloops, B.C., has been appointed Locomotive Foreman, Brandon, Man., vice G. Twist, transferred.

A. BROWN, heretofore Locomotive Foreman, Fort William, Ont., has been appointed District Master Mechanic, Winnipeg, vice A. Piers, whose appointment as District Master Mechanic, Moose Jaw, Sask., was announced in our last issue.

A. G. RICHARDSON, heretofore City Passenger Agent, Winnipeg, has been appointed District Passenger Agent, there.

R. L. LOWE has been appointed Commissary Agent, Winnipeg, vice T. M. McKeown, whose appointment as Commissary Agent, Victoria, B.C., was announced in our last issue.

E. W. DUVAL, heretofore Superintendent, District 3, Saskatchewan Division, Saskatoon, has been appointed acting General Superintendent, Saskatchewan Division, during the absence of J. G. Taylor, who has been granted leave owing to ill health. Office, Moose Jaw.

S. WEST, heretofore District Master Mechanic, Kenora, Ont., has been appointed District Master Mechanic, Medicine Hat, Alta., vice R. Brown, who has received a commission as Lieutenant for overseas service.

P. S. BEATT, heretofore Locomotive Foreman, Coronation, Alta., has been appointed Locomotive Foreman, Ogden, Alta.

B. S. HUTCHINSON has been appointed General Foreman, Ogden, Alta., vice W. H. Wortman, transferred.

W. H. WORTMAN, heretofore General Foreman, Ogden, Alta., has been appointed Locomotive Foreman, Calgary, Alta., vice J. Neill, transferred.

H. HERLICK has been appointed Locomotive Foreman, Coronation, Alta., vice P. S. Beatt, transferred.

J. USHER, heretofore locomotive man, has been appointed Locomotive Foreman, Bassano, Alta.

L. FISHER, heretofore District Master Mechanic, Revelstoke, B.C., has been appointed District Master Mechanic, Cranbrook, B.C.

E. L. SHEEHAN, heretofore City Ticket Agent, Chicago, Ill., has been appointed General Agent, Passenger Department, St. Louis, Mo., vice A. J. Blaisdell, promoted. Office, 725 Olive St.

Duluth, Winnipeg & Pacific Ry.—E. W. MYERS is reported to have been appointed storekeeper at Virginia, Minn., vice F. S. Matthey, resigned.

Grand Trunk Ry.—SIR ARTHUR YORKE, C.B., formerly Inspector of Railways under the British Board of Trade, and a director of the Great Western, South Eastern, and London, Chatham & Dover Railways of England, has been

elected a director G.T.R., succeeding the late Lord Welby.

T. RODGER, heretofore Supervisor of Telegraphs, Grand Trunk Pacific Telegraph Co., Montreal, has been appointed Superintendent of Telegraphs, G.T.R. System. Office, Montreal.

R. WRIGHT has been appointed Division Agent, Ontario Lines, vice G. A. Stokes, who was appointed Superintendent, Sarnia Tunnel Terminals, Port Huron, Mich., in Nov. 1915. Office, Toronto.

S. R. JOYCE, heretofore ticket clerk in the City Ticket Office, Toronto, has been appointed Travelling Passenger Agent there, vice Jas. Anderson, promoted.

JAMES ANDERSON, heretofore Travelling Passenger Agent, Toronto, has been appointed City Passenger and Ticket Agent, Hamilton, Ont., vice C. R. Morgan, who has enlisted for military services overseas.

S. E. DEWEY, heretofore Commercial Agent, New York, has been appointed General Eastern Freight Agent, there, with territory as covered by him as Commercial Agent. The positions of General Agent and Commercial Agent have been abolished. We are officially advised that the position of General Agent, Passenger Department, New York, held by F. P. Dwyer, remains as before.

E. J. WEARING, heretofore Passenger Agent, G.T.R., and acting General Agent, Canadian Express Co., Liverpool, Eng., has been appointed General Agent, G.T.R. System, Central Vermont Ry., and Canadian Express Co., vice W. Cuthbertson deceased. Office, 20 Water St., Liverpool.

Grand Trunk Pacific Ry.—J. ABBOTT, heretofore Chief Dispatcher, Regina, Sask., has been appointed Assistant Superintendent there. The name was given as J. Brewer in error in our 1st issue.

B. B. EIDSON, heretofore Road Foreman of Locomotives, Smithers, B.C., has been appointed Road Foreman of Locomotives, Regina, Sask. No successor has been appointed at Smithers, B.C.

C. A. MUNRO, heretofore Car Foreman, Edson, Alta., has been appointed Car Foreman, Melville, Sask., vice W. Mills, resigned.

B. WOODCOCK, heretofore Car Inspector, Melville, Sask., has been appointed Car Foreman, Edson, Alta., vice C. A. Munro, transferred.

J. MORIARTY, heretofore Roadmaster, Edson, Alta., has been appointed Roadmaster, Subdivision 11 and 12, Endako, B.C., vice J. A. McM. Brown, resigned.

Michigan Central Rd.—A. K. MASTERS has been appointed Freight Claim Agent, and F. B. McILVAINE has been appointed Assistant Freight Claim Agent, Detroit, Mich.

National Transcontinental Ry.—A. DEVINE, heretofore District Master Mechanic, Districts 1 and 2, Cochrane, Ont., has been appointed District Master Mechanic, District 1. Office, Parent, Que.

JAMES CLARK has been appointed Locomotive Foreman, Parent, Que.

J. E. RIOUX has been appointed acting Roadmaster, Doucet Subdivision, Doucet, Que.

J. J. DOONER has been appointed acting Roadmaster, Parent Subdivision, Doucet, Que.

J. R. CASSIDY, heretofore acting Roadmaster, Parent, Que., has been appointed acting Roadmaster, Fitzpatrick Subdivision, Fitzpatrick, Que.

J. E. SIMPSON, heretofore Road-

master, Parent, Que., has been appointed acting Roadmaster, Quebec Subdivision, Fitzpatrick.

A. J. ROBERTS, heretofore Locomotive Foreman, Transcona, Man., has been appointed District Master Mechanic, District 2, vice A. Devine, District Master Mechanic, Districts 1 and 2, whose jurisdiction is now confined to District 1. Office, Grant, Ont.

C. H. MOULTON, heretofore acting Road Foreman of Locomotives, District 3, Redditt, Ont., has been appointed Locomotive Foreman, Transcona, Man., vice A. J. Roberts promoted, and his former position has been abolished.

Wabash Ry.—F. H. TRISTRAM, heretofore Assistant General Passenger Agent, Ill., has been appointed General Passenger Agent. Office, St. Louis, Mo. J. S. WALSH, Jr., has been appointed Industrial Agent. Office, St. Louis, Mo.

Dominion Government Elevator at Calgary.—The Minister of Trade and Commerce, in response to questions in the House of Commons, Feb. 3, gave details of the operation of the Dominion Government grain elevator at Calgary, Alta., as follows: It was opened to receive grain, Aug. 27, 1915, and from that date to Dec. 31, received 185,455 bush. It has a total capacity of 2,500,000 bush. The intention is that the elevator shall serve all territory from which grain can be shipped economically by the Pacific Ocean, either to the Orient, or Europe by way of Cape Horn or through the Panama Canal. It is also for storage purposes, cleaning and treatment, and was not intended primarily for the shipment of grain east. Up to Jan. 14, 248,367 bush. of grain had been received.

It is announced that Canadian Government Railways is making a division of its telegraph lines along the Intercolonial Ry. so that certain wires may be used exclusively for railway purposes, and others exclusively for commercial purposes. It is stated that the work of division has been under way for some time, and will be completed early in March. The commercial business is operated under lease by the Great North Western, and Western Union Telegraph Companies.

The Toronto, Hamilton & Buffalo Ry. has ordered 780 tons of 100 lbs. steel rails and 315 tons of 80 lbs., from the Algoma Steel Corporation. Delivery is to be made during April and May. The 100 lbs. will be used for relaying on the east mountain section and the 80 lbs. for relaying on other parts of the line. The released rails will be used for siding purposes. (Feb., pg. 50.)

Quebec Central Ry. Offices Burned.—Fire broke out in the Quebec Central Ry. offices at Quebec, Que., Feb. 15, and considerable damage was done to the building and contents, all of which, it is said is covered by insurance. The fire started in the upper story of the south wing, and spread throughout the building. Most of the valuable property in the building was saved.

Canadians Woods for Railway Work.—The Canadian Pacific Ry. management, in order to encourage the use of Canadian woods for interior decorations, has decided to use Canadian forest products exclusively for the interior finish of its buildings and passenger cars.

G.T.R., vs Pere Marquette.—The Grand Trunk has issued a writ at Osgoode Hall, Toronto, against the Pere Marquette Rd., claiming \$16,506 for the use of the G.T.R. station at London from Jan. 1909, to June, 1915.

Steam Railway Track Laid in 1915.

Since the issue of our February number we have received further information as to tracklaying done on Canadian Northern Ry. western lines, which adds 15.64 miles to the figures given before, making the total mileage of track laid by C.N.R. lines during the year 247.88 instead of 232.24. This alters the total for the Dominion to 729.90 miles; and increases the mileage laid in Alberta from 299.60 to 315.24 miles.

The mileage laid in the several provinces in comparison with that laid in 1914 was:—

	Miles.	Miles.
Alberta and Great Waterways.		
Mileage 78 to 174.5, Alberta.....	96.50	
Canadian Northern System.		
Canadian Northern Quebec—		
Arundel to Rouge River, Que..	2.00	
Canadian Northern—		
Grand Marais to Victoria Beach, Man.	14.07	
Canora to Sturgis, Sask.	21.44	
Bienfait to Estevan, Sask.	8.91	
Elrose to Eston, Sask.	34.81	
Peace River Line	2.15	
Canadian Northern Sask. Ry.—		
Wroxton to Willowbrook, Sask.	41.01	
Canadian Northern Western Ry.—		
Camrose southeasterly	56.49	
Canadian Northern Pacific.—		
Gladwin to bridge 4	32.00	
Bridge 5 to bridge 7.	8.00	
Hells Gate to Goose Creek, mileage 370 to 382	12.00	
Mileage 382 to 397	15.00	
	247.88	
Canadian Pacific.		
Coronation, Sask., west	0.75	
Foremost to Pakowki, Alta.	22.30	
	23.05	
Central Canada.		
McLennan to Heart River, Alta.	47.60	
Edmonton, Dunvegan and British Columbia.		
Mileage 246.7 to 336.9	90.20	
Essex Terminal.		
Near Sandwich to Ojibway, Ont..	1.00	
Grand Trunk Pacific.		
Track on Saskatchewan River bridge, Prince Albert Branch..	0.20	
Halifax South Western.		
Jordan Falls Station to Jordan Falls, N.S.	1.29	
Hudson Bay (Dominion Government.)		
Mileage 197.4 to 241.24	43.84	
Intercolonial.		
Connection with National Transcontinental, Moncton	0.85	
Dartmouth branch Edenbrook to Upper Musquodoboit, N.S.	17.00	
	17.85	
Kettle Valley Lines.		
Between Midway and Merritt, B.C.	31.00	
Coquihalla River Section	33.00	
	64.00	
Pacific Great Eastern.		
D'Arcy to Clinton, B.C.	81.20	
Quebec Central.		
From mileage 5 east of St. Camille to English Lake	14.00	
St. John and Quebec.		
From Fredericton, N.B., south....	1.29	
Total	729.90	2,041.31
	1915.	1914.
Alberta	315.24	513.12
British Columbia	212.20	679.26
Saskatchewan	107.12	215.97
Manitoba	57.91	300.15
Nova Scotia	18.29	47.80
Quebec	16.00	52.51
New Brunswick	2.14	29.99
Ontario	1.00	200.01
Prince Edward Island		2.50
Miles	729.90	2,041.31

U. S. Census Figures.—Reference was made in Canadian Railway and Marine World for Feb., pg. 61, to Canada's remarkable tracklaying record, and comparison was made with the tracklaying in the U.S., using census figures to obtain certain averages. It was stated that the population of the U.S., according to the census of 1910, was 99,451,000. These figures were obtained from a semi-official source, but it has been discovered that a mistake was made, the figures of the 1910 census showing a population of 91,972,266.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—J. D. McArthur, President, in an interview at Edmonton Feb. 7, is reported to have said that after the completion of track laying into Fort McMurray, which it was expected to have done by Mar. 31, that the company's energies will be devoted to the ballasting of the line, and the completion of the necessary buildings, and that no further construction beyond Fort McMurray is contemplated at present.

The A.&G.W.R. is now receiving about 7,000 tons of 60 lb. steel rails, to complete an order for 25,000 tons given the Algoma Steel Corporation last year (Feb., page 49).

Athabasca & Fort Vermilion Ry.—The following telegram is said to have been received in Athabasca Landing, Alta., from C. F. Law, Vancouver, B.C., representing Lord Rhondda (D. A. Thomas), who is behind this projected railway:—"Everything all right. Official authority to proceed." What this telegram implies is known only to the company's agents, but probably the only manifestation of activity is the work of a survey party, and the preparation of a bill for presentation to the Alberta Legislature, providing for the guarantee of the company's bonds for the building of the line from Athabasca Landing to Fort Vermilion. A deputation from the district is being arranged to ask the Government to take charge of the bill. (Nov., 1915, pg. 437.)

Atlin Ry.—The Dominion Parliament is being asked to extend the time for the building of this projected railway from Atlin, B.C., southerly to where the Taku River crosses the International Boundary between British Columbia and Alaska. (July, 1914, pg. 323.)

Canmore Ry.—The Alberta Legislature is being asked to incorporate a company with this title to build a railway from the C.P.R. to No. 2 Mine, Canmore, with branches to the Georgetown Colliery and No. 1 Mine, Canmore, in Tps. 24 and 25, ranges 10 and 11 west of the 5th meridian. Clarke, Carson, Macleod & Co., Calgary, Alta., solicitors for applicants.

Central Canada Ry.—In an interview at Edmonton, Alta., Feb. 7, J. D. McArthur, President, is reported to have said it is expected to have the Hart River bridge completed by Mar. 31. The track will then be laid to Peace River Landing, and train service will be established through to that point from McLennan on the Edmonton, Dunvegan and British Columbia Ry. Plans are being prepared for the steel bridge to be built across the Peace River at this point, the estimated cost of the bridge being \$750,000. It will be a combined railway and traffic bridge. At present traffic is carried across the river by a ferry under the British Columbia Government's control, but is liable to be interrupted by ice. It is not intended to do any work on the bridge this year, but it is hoped to start construction in the spring of 1917. The province has guaranteed bonds for the construction of the railway for 50 miles beyond the Peace River, to the Waterhole district. Although the line has been located, according to Mr. McArthur's statement, no grading will be done this year, the only work to be done being the ballasting of the 50 miles from McLennan to Peace River, and the completion of the buildings on the line.

We are officially advised that surveys have been made for an extension of the main line from Peace River Crossing to the Alberta-British Columbia boundary, 10 miles; and that a branch line is under contract from mileage 101 on the Alberta & Great Waterways Ry. easterly for 10 miles. Surveys are being made for an extension of this branch from mileage 10 to the Alberta-British Columbia boundary. (Feb., pg. 49.)

Churchill Southern Ry.—The Manitoba Legislature has extended the time for the building of this projected railway from Fort Churchill to Kettle Rapids on the Hudson Bay Ry., with branch lines to any point in Manitoba. A motion to read the bill a third time in six months was defeated Jan. 28 by 38 votes to 3. (Feb., pg. 49.)

Dominion Government Ry. to Hudson Bay.—It was stated by Mr. Blondin, on behalf of the Minister of Railways, in answer to questions in the House of Commons, Feb. 3, that there had been expended on account of this railway to Jan. 6, \$15,465,304.70. Of this amount, \$10,446,592.90 was expended upon the railway proper, including \$683,166.75 on bridges, trestles and culverts, while there had been expended on harbors and approaches \$5,018,711.74, including \$163,012.30 expended upon bridges. There were 378 miles of grading completed and steel had been laid to mileage 242. It is expected that steel will be laid to Port Nelson early in 1917, and that the harbor will be ready for traffic, though incomplete, about the time the railway will be ready for operation. The Marine Department had expended \$21,293.96 on the project.

Delivery has commenced of 10,000 tons of 80 lbs. steel rails ordered for this line last year from the Algoma Steel Corporation and is expected to be completed by the end of March. They are being shipped by rail from Sault Ste. Marie to Pas, Man. (Jan., pg. 10.)

Edmonton, Dunvegan & British Columbia Ry.—Tracklaying is reported to have been completed to Spirit River, 357 miles from Edmonton, Alta. It is expected to extend the train service from McLennan to Spirit River Mar. 1. Tracklaying on the branch line from Spirit River to the Grand Prairie Settlement was started Feb. 1, and was expected to be completed by Mar. 31. This branch will be 60 miles long. J. D. McArthur, President, in an interview at Edmonton, Feb. 6, is reported to have said that no further construction will be gone on with after the completion of tracklaying this year, as the whole of the company's energies will be devoted to ballasting and completing the lines already graded. (Feb., pg. 49.)

Gananoque & Arnprior Ry.—The Ontario Legislature is being asked to revive the company's act of incorporation and to extend the time for the building of the projected railway from Gananoque to Arnprior, with branches from Morton to Lyndhurst, and from an unnamed point on the line to Ottawa. The lines are to be operated by steam, electricity or other motive power. Chrysler and Higgerty, Ottawa, solicitors for applicants.

The Grand Trunk Ry. has ordered from the Algoma Steel Corporation 1,100 tons of 90 and 100 lb. rails, in short lengths, for frog and switch purposes. Delivery is to be made within 6 month.

Grand Trunk Pacific Ry.—The grading of the Prince Albert Branch we are officially advised has been completed into Prince Albert, Sask., and track was laid across the bridge over the Saskatchewan River, at mileage 57 from Young, during 1915. A train service is being operated to this point. The distance from the river to Prince Albert is about 25 miles, but it has not yet been decided when track laying will be gone on with.

The Saskatchewan Government has approved of plans for the carrying by the Grand Trunk Pacific Saskatchewan Ry: of Coteau Ave., Morton Ave. and Fourth Ave., across its Weyburn Branch. (Feb., pg. 49.)

Great Northern Ry. Lines in Canada.—The Minister of Railways for British Columbia informed the G.N.R., Feb. 2, that the plans submitted for the new station on the False Creek flats, Vancouver, do not fulfil the requirements of the agreement. In an interview the Minister of Public Works is reported to have said: "No detailed plans have been submitted, but in the preliminary drawings our engineer has seen, it appears, that the value guaranteed by the G.N.R. is not there, and we are not going to pass the plans until the value mentioned in the agreement signed by the G.N.R. is shown. We certainly expect the G.N.R. to live up to its agreement and spend the \$500,000 agreed upon."

O. S. Bowen, of the G.N.R. engineering staff, was in Vancouver Feb. 1, and is reported to have said the contractors had been given plans for the foundation work of the new station, and were preparing to start work. The question of the new frontage was being considered, but no decision had yet been reached. The proposal is that the frontage be set 75 ft. further back from Main St. than the plans showed. (Feb., pg. 49.)

High River, Saskatchewan & Hudson Bay Ry.—The Dominion Parliament is being asked to extend the time for the building of this projected railway from any point in Tps. 25 to 28, range 1, west 4 meridian, Alberta, to Saskatoon, Sask., to the Saskatchewan-Manitoba boundary between Tps. 52 and 56, and on to Pas, Man. The provisional directors mentioned in the original act, passed in 1912, are:—H. N. Sheppard, F. Crandell, T. E. Le Claire, C. A. Gigot and G. D. Stanley, High River, Alta., where the head office is situated. (Dec., 1914, pg. 544.)

Intercolonial Ry.—F. P. Gutelius, General Manager, Canadian Government Railways, is reported to have said at a public dinner in St. John, N.B., recently that the entire surplus of the Intercolonial Ry., for the year, which was estimated at \$1,000,000, would be expended upon betterments. Referring to the question of elevator accommodation at St. John, he said the improvements contemplated ultimately made reconstruction of the elevator on the old location impossible, and he was of opinion that the remedy was the provision of a slip and elevator on the Reid's Point area.

In an interview at Montreal, Jan. 31, Mr. Gutelius is reported to have said it was hoped to begin doing business at the new terminals at Halifax, N.S., next year. The cutting on the new line round the city was about completed, and it was expected that the contract for the new

station buildings would be given out in the spring. If that were done, construction would be well under way by the end of the year. (Jan., pg. 10.)

Replying to a question in the House of Commons Feb. 17, the Minister of Railways said the cost of the new ocean terminals at Halifax, N.S., to Dec. 31, 1915, was \$4,745,632.56. As detailed plans for the finishing of these works have not been completed, and are subject to modifications, it is impossible to give any estimate as to the final cost.

The Kootenay & Alberta Ry. which runs from the C.P.R. Crows Nest branch, about a mile west of Pincher, to the coal mines of the Western Coal & Coke Co., Beaver Creek, Alta., about 13 miles, formed part of the Canadian Coal & Coke Co.'s property sold at auction at Calgary recently for \$3,000,000, the purchaser being the North American Collieries, Limited. The line was built in 1911-12, and was operated solely for coal traffic. (Oct., 1912, pg. 501.)

Magdalene River Ry.—The Quebec Legislature has passed an act confirming the charter of incorporation, and extending the time for building the authorized line from near Cap a la Ours, Gaspé County, to the Little Falls of the Magdalene River, thence to a connection with the Atlantic, Quebec & Western Ry.'s projected inland section. The provisional directors named in the act of incorporation passed in 1907 were:—C. W. Mullen, S. H. Boardman, Bangor, Me.; C. D. Laning, Boston, Mass.; J. O. Drouin, E. Brasseur, Montreal. (Dec., 1913, pg. 574.)

National Transcontinental Ry.—An order-in-council was passed Jan. 28 granting the N.T.R. Commission an area of 6.06 acres of land across the s.w. ¼ of sec. 35, Tp. 10, range 11 east of the first principal meridian, Manitoba, for right of way purposes. (Dec., 1915, pg. 470.)

Pacific Great Eastern Ry.—The Minister of Public Works for British Columbia recently completed a tour of inspection through the province, and in an interview at Victoria, Feb. 7, is reported to have said the question of the completion of this railway from Vancouver to Prince George was of primary importance to the Province. The assurance which he was able to give to the people along the route of the line that the Government was making plans to bring this to pass were heartily received. There could be no doubt as to the necessity of pushing the construction of the line as far as Prince George at the earliest possible date and subsequently to the Peace River country. The resources of the country through which the line was projected amply justified construction. The Government's plans would be laid before the Legislature, which is called to meet Mar. 2. (Feb., pg. 49.)

Quebec Bridge.—A press report states that with the erection of the main cantilever arm all the steel work on the north shore end of the bridge across the St. Lawrence River, near Quebec, has been completed. Practically all the steel work for the south shore section of the bridge is reported to be ready for erection and is expected to be completed ready for the erection of the cantilever arm in the spring. It is expected to have this arm built this year. The steel work for the suspended span is being got ready and it is expected to have it erected on scows during the year, ready for floating into position in the spring of 1917. If these operations are fulfilled it is probable that trains may be operated over the bridge in the summer of 1917.

The Canadian Pacific Railway's Remarkable Earnings.

The C.P.R.'s earnings statement for December, apart from phenomenal gains shown in both gross and net earnings for the month, as compared with Dec. 1914, is notable as bringing to a fitting climax what is in many respects the greatest six months in the company's history. Gross earnings for the half year fell short of the corresponding totals for both 1912 and 1913, but net earnings established a new high record, passing the 1913 figures by about \$2,400,000 and the 1912 figures by about \$2,500,000.

As a result of the remarkable showing made through the last three months of 1915, the company earned the equivalent of its full 7% dividend on the common stock, paid out of railway earnings, and with something to spare. Estimates of the half year's surplus can only be approximate, as factors enter into fixed charges and earnings which later go to special income account, for instance, which are not easily determined in mid-year. But taking the various items of the income account for 1914-15 and allowing a corresponding proportion for the six months to Dec. 31, there would have to be deducted for the half year, before common stock dividends, the following amounts:—

Fixed charges	\$5,223,255
Pension fund	62,500
To special income account	747,076
Preference dividend	1,613,638

Total

Deducting this from the \$29,624,187, shown as net earnings for the six months, there would be a balance of \$21,977,708, against the \$18,200,000 required for a full year's payment of the 7% dividend on the common stock. That is, if charges and other deductions are allowed for the six months to Dec. 31, on a proportional basis with corresponding items for the full year 1914-1915, the company had a surplus equal to approximately 8.4% on its common stock. In saying then that the full 7% dividend has already been earned, there is a margin for error of nearly 1½% or about \$3,700,000.

The figures for the first half of the company's fiscal year, as compared with 1914 show gains of 19.1% in gross and 50.6% in net as follows:—

	1915	1914	Increase
Gross	\$66,470,163	\$55,938,125	\$10,532,038
Exp.	36,845,976	36,264,549	581,427
Net	\$29,624,187	\$19,673,576	\$9,950,610

Gross earnings for the six months, as already noted, have been exceeded in two years in the company's history, but net earnings constitute a record. Figures for five years, gross and net are:—

	Gross.	Net.
1915	\$66,470,163	\$29,624,187
1914	55,938,125	19,673,576
1913	75,286,162	27,211,436
1912	73,526,191	27,131,152
1911	62,566,365	24,470,247

Although both gross and net earnings for Dec. naturally fell below the levels of Oct. and Nov., they were notable in two respects. For one thing both gross and net were the largest ever reported by the company for the month and for another the percentage gains passed the already remarkable increases reported in the months immediately preceding. As compared with Dec. 1914, gross increased \$5,261,711, or 70.7% and net \$3,502,797, or 159.4%, Dec. comparisons follow:—

	1915	1914	Increase
Gross	\$12,705,673	\$7,443,962	\$5,261,711
Exp.	7,003,351	5,244,438	1,758,913
Net	\$5,702,321	\$2,199,523	\$3,502,797

As compared with the best previous

Dec. on record, the final month of 1915 showed an increase of about \$500,000 in gross and of about \$1,300,000 in net. Dec. figures for five years follow:—

	Gross.	Net.
1915	\$12,705,673	\$5,702,321
1914	7,443,962	2,199,523
1913	11,814,325	4,226,821
1912	12,219,278	4,395,719
1911	10,654,871	4,105,730

In detail by months, since the opening of the current fiscal year, gross and net figures offer the following comparisons with a year ago:—

	Gross.	in year. Change	P.C.
July	\$ 7,895,375	—\$ 2,586,596	24.2
Aug.	8,801,451	— 1,116,312	11.3
Sept.	10,273,165	— 480,974	4.5
Oct.	13,443,214	+ 4,160,285	44.8
Nov.	13,351,283	+ 5,293,924	65.7
Dec.	12,705,673	+ 5,261,711	70.7

Totals

	Gross.	in year. Change	P.C.
July	\$ 2,800,403	—\$ 978,042	25.9
Aug.	3,442,314	+ 79,157	2.4
Sept.	4,745,300	+ 378,252	8.7
Oct.	6,579,434	+ 3,258,105	98.1
Nov.	13,351,283	+ 5,293,924	65.7
Dec.	5,702,321	+ 3,502,797	159.4

Totals

Manitoba Public Utilities Commission—In connection with the appointment of P. A. MacDonald as Commissioner, which was mentioned in Canadian Railway and Marine World for Feb., we are officially advised that he will be assisted by an expert engineering staff, following the system in vogue in certain of the United States, where public utility laws have been more fully advanced. This staff will not only be servants of the commission in aiding investigations, and in settling technical disputes, but will also be available for the purpose of conferring with and advising on operation of telephones, gas, electric and water supply systems whether private or municipal, as to matters arising in the course of business. By this means the Commissioner will be relieved of the hearing of conferences between persons interested in purely technical matters, which has heretofore been found to increase the burden of his office.

Woodsmen's Battalion.—At the British War Office's request a Canadian foresting battalion is to be formed under Lt.-Col. Alex. McDougall, railway contractor, Ottawa. B. R. Hepburn, M.P., for Prince Edward, Ont. and formerly President, Bay of Quinte Steamship Co., will probably be one of the majors. Canadian woodsmen are wanted at once in Great Britain for timbering operations in connection with war requirements. Lumber is at an almost prohibitive price there, and ocean rates practically stop export from Canada. In Great Britain there are still large resources of standing timber which can be cut down and utilized for building operations, trench construction work, etc. It is planned to raise companies of experienced woodsmen from British Columbia, Alberta and northern Saskatchewan, the Ottawa Valley, Quebec and New Brunswick.

Prince Edward Island Ry.—It transpired in an action in the Queen's County Court, Charlottetown, P.E.I., recently, that the P.E.I. Ry. was not included as a Dominion Government railway in the statute respecting actions against the Government railways. The action was to recover \$140 damages for fire alleged to have been caused from a locomotive on the Murray Harbor branch.

Unprecedented Weather Conditions in the West.

The prairie provinces and British Columbia in Canada, and the United States territory southerly thereof as far as San Francisco, experienced during the last week in January and the first week of February the heaviest snowfalls and the most severe cold weather that has occurred for many years. The first snowfall covering practically all of this territory occurred between Jan. 21 and 24, and terminated in some parts of the area with rain. The fall of snow was particularly heavy, and with the low temperature, which accompanied the rain, in the coast regions, the snow was turned into an icy mass, making its removal difficult. The second storm, which was particularly severe in British Columbia, and the State of Washington, occurred Jan. 31, and Feb. 1, Vancouver reporting a continuous fall for 38 hours, while in Seattle, Wash., 18 inches of snow fell.

Electric railway traffic in all the Canadian western cities was interrupted, and steam railway trains were stalled all over the territory. So far as electric railway traffic was concerned the Brandon Municipal Ry. was worst hit. The council ordered the stoppage of traffic on Jan. 27, and the laying off of the conductors and motormen until the streets were cleared. In Winnipeg, Regina, Saskatoon, Calgary, Edmonton and Lethbridge and the British Columbia Electric Ry. the services were kept up, without very much delay, the railways having the necessary appliances to keep the tracks clear. General Superintendent Murrin of the last company reported, Feb. 12, that the snow clearing in Vancouver cost \$13,546. Between Jan. 6 and Feb. 9, the company's snow clearing equipment was being operated to its full extent on 24 days, running 4,149 miles in Vancouver, and 3,000 miles on the interurban lines. During the worst period 300 men were at work in the snow clearing gangs. The only real delay on the company's mainland lines was one of a couple of hours on the Burnaby Lake Branch, where owing to the weight of icy snow a section of trolley wire came down.

On the steam railways, while there was a general stallage of trains at various points on the lines during the first storm, there were not any very great delays on the Canadian Pacific and the Grand Trunk Pacific's prairie lines. The first named of these companies reported traffic normal Jan. 27, and to have been very little interrupted by the second storm. This applies to the British Columbia Division equally with the prairie divisions. West of the prairie provinces the G. T. Pacific traffic appears to have been held up for about a week. The Canadian Northern Ry. appears to have been hit the worst, the heaviest obstruction being in British Columbia, the lines in the prairie provinces being cleared with comparatively short delays. One report stated that for 200 miles the C.N. Pacific was a mass of snow and ice over a foot thick, which would have to be removed with pick and shovel. A number of trains in the prairie provinces were cancelled, and the traffic on the line in British Columbia was practically closed temporarily. The train with passengers from Winnipeg, Jan. 28, was held up on the Boston Bar section, B.C., and the passengers reached Vancouver Feb. 12, having been transferred across the Fraser River by an aerial cable and carried over the C.P.R. One of the passengers was M. H. MacLeod, General Manager and Chief Engineer, who reported 200 men with a

rotary and two other snowploughs between Pyramid and Lucerne, and gangs at work near Boston Bar and at other points. The drifts he said ran up to 30 ft. in depth, and with the changing character of the weather had packed in such a way that much of it had to be moved with pick and shovel, but the line was cleared within a few days, sufficient to allow trains to go through, and although the conditions in Canada were bad, those in the States appear to have been worse, as following the snow and the frost came a sudden thaw, which brought on mud slides on the Great Northern Ry., and other obstructions to traffic on other lines. The first train into Vancouver over the Great Northern got in Feb. 11, but prior to that passengers had been taken round the mud slides, to a second train, and then on to Vancouver.

So far as branch line traffic was concerned conditions were worse, as the chief attention of the officers of the companies was necessarily given to the opening up of the transcontinental lines. One Canadian Northern branch line is reported to have been blocked since Jan. 5, and other lines of this and the other companies, from 5 to 15 days. The result of this, following the congestion of freight traffic at the divisional points, passenger traffic being given the preference, caused almost a coal famine throughout the west.

The Pacific Great Eastern, between Squamish and Clinton, was blocked by the first storm, and as the company has no snowplough or other similar equipment, traffic was abandoned.

On Vancouver Island the conditions were not much different. The British Columbia Electric Ry. was able to maintain a service in Victoria, although some of the streets remained blocked from Feb. 1 to 3, and the Saanich Peninsula line was not opened up until Feb. 11. Traffic on the Esquimalt & Nanaimo and the Victoria & Sidney Railways was abandoned Feb. 1, but the lines were opened up again within a week.

Track Elevation or Depression in Hamilton.

The question of the elevation or depression of the Toronto, Hamilton & Buffalo Ry. tracks in Hamilton, Ont., which has been under consideration for a couple of years, has been advanced a stage by the report of G. A. Mountain, Chief Engineer of the Board of Railway Commissioners, a copy of which has been sent to the City Engineer.

Mr. Mountain discusses the elevation and depression plans, pointing out the merits and defects in each, and making suggestions in regard to them, and concludes: "In summing up, and taking everything into consideration that I can think of, I am of the opinion that if grade separation is to be made at this point, then in the greater interests of all parties track elevation is the proper method for economy of operation, business interests adjoining the railway, and for relief from the smoke nuisance, but I do not think that the T.H. & B. business at present through the city of Hamilton with gates protecting practically all its level crossings and with half interlockers protecting the electric car systems at crossings with the T.H. & B. warrants any change being made in the location of the tracks. I would add that there is an objectionable feature in the way that

the smoke comes out of the tunnel after trains have passed through, particularly at the portal next to James St. It can be noticed curling for some time after the train has passed through and is objectionable. I would suggest that the company consider the advisability of putting a shaft near the upper end of the tunnel, which is the easterly portal, and fanning the smoke up into the air where it disperses instead of it coming out of the roof of the tunnel and flowing over Park St. This is merely a suggestion which might be looked into."

Railway Profiles to be Based on Mean Sea Level.

The Board of Railway Commissioners general order 157, published in Canadian Railway and Marine World of Feb., has been rescinded and general order 157, dated Jan. 31 substituted of it, as follows:—Re matter of proposal that profiles of railway companies, whose lines commence at, terminate at, or intersect with, any of the lines listed in the work entitled *Altitudes in Canada*, edited by James White, Assistant Chairman, Commission of Conservation, including the lines of the said companies which touch tidewater, be based upon mean sea level as provided in *Altitudes*. Upon reading what is filed on behalf of the Canadian Pacific, Canadian Northern, Grand Trunk Pacific, and Grand Trunk Railway Companies, the said companies consenting to the proposal, and the report and recommendation of the Chief Engineer of the Board. That, on and after Feb. 1916, all profiles submitted by railway companies, which commence at, terminate at, or intersect with any of the lines listed in *Altitudes*, as well as those which touch tidewater and are not listed, be based upon mean sea level, as provided in *Altitudes*.

Port Mann Shops, Canadian Northern Ry.—Following is a list of machinery which has been procured by these shops to meet immediate requirements, and which will be added to as necessity arises: 80 in. driving wheel lathe; 26 in. x 36 in. x 14 ft. gap engine lathe; 24 in. upright shaper; 30 in. upright drill; stationary engine; 20 in. x 12 ft. engine lathe with quick change gears; 16 in. x 8 ft. engine lathe, with quick change gears; 48 in. car wheel boring machine; 84 in., 300 ton hydraulic wheel press, inclined type; single axle lathe for journal turning; 4 ft. plain radial drilling machine; 1,150 lb. single frame, steam hammer; pneumatic drop pit jack; straight line, compound steam driven air compressor with one A-39 and A-36 air and steam regulating valve for automatic control of steam supply; variety saw M-275 with tilting table; 2 in. triple head bolt cutter; No. 9 steel pressure blower with countershaft; 2 only, No. O O S, 38 x 42 stationary blacksmith forges with tank; 36 in. band saw; 24 in. pony planer.

British Columbia Halibut Fisheries.—During 1915 there were landed at five British Columbia ports 25,866,000 lbs. of halibut, valued at \$1,557,960, or about 42% of the total catch on the North Pacific Coast. Over 15,000,000 lbs. of this catch was landed at Prince Rupert, representing the major portion of the catch of 100 vessels which now make that port their outfitting station, and was shipped via Grand Trunk Pacific Ry. This portion of the trade, prior to the opening up of Prince Rupert and the G.T.P. Ry., went to Seattle, Wash.

Freight and Passenger Traffic Notes.

Magnolia is the name of a new Grand Trunk Pacific station at mileage 855 west of Winnipeg.

During the summer, weekend (Saturday to Monday) excursions will be run from Toronto to allround Muskoka Lakes and return at \$5.

The G.T.R. informs all ticket agents that tickets must be filled in with ink and not with indelible or other pencil. Reports on tickets must also be made out in ink.

The Canadian Government Railways has issued a folder containing the timetables of all the lines operated for the Dominion, viz., the Intercolonial, the National Transcontinental and the Prince Edward Island Railways.

The Canadian Northern Ry., according to a western press dispatch, has raised the embargo on grain shipments to Port Arthur in that it will now accept shipments consigned to Canadian Northern elevators at Port Arthur.

The Canadian Northern Ry. will probably make its transcontinental passenger service between Toronto and Vancouver daily beginning June 1, instead of three trains a week each way as at present.

The Canadian Northern Ry. has had in operation two agricultural trains for short course lectures in conjunction with the Alberta Government up to Feb. 23, and a similar train in Saskatchewan started a route on the Goose Lake Branch Feb. 29, to run to Mar. 14.

W. Eastland was fined \$20 and costs by a Vancouver, B.C., magistrate recently for selling a railway ticket in contravention of the Railway Act. He lent some money on the security of the ticket and was afterwards told to sell it for what he could get, the original holder of the ticket sending a purchaser.

In a recent interview at Edmonton, Alta., J. D. McArthur, President, Edmonton, Dunvegan and British Columbia Ry., said that after Apr. 1 three trains a week in each direction would be run between Edmonton and the Spirit River, 357 miles, and that it was expected to put a similar service on the branch from Spirit River to Grand Prairie by Aug. 1.

The C.P.R. through service between Nelson and Revelstoke, B. C. via West Robson has been temporarily discontinued owing to the conditions on Arrow Lake, and through passengers are being carried via Slocan. A local steamboat service is being operated on Arrow Lake between West Robson and Edgewood three times a week.

The Vancouver City Council decided, Feb. 1, to appoint a sub-committee to investigate Canadian Northern Pacific Ry. freight rates, in connection with the application being made to bring the railway under the Board of Railway Commissioners jurisdiction. The Vancouver Board of Trade has passed a resolution deprecating the city's action, and it is not unlikely that it will be stopped.

The Pacific Great Eastern Ry. announced Jan. 28, that it would have to abandon for an indefinite period the operation of trains on its Squamish-Clinton section. The heavy snowfalls of the end of January completely blocked the line, and it cannot be cleared without the aid of a rotary snowplough. As the other railway companies are using all such equipment on clearing and keeping their own lines clear, it is impossible to borrow one.

The Vancouver City Council decided, Feb. 4 to postpone for the present its application that the Canadian Northern Pacific Ry. be declared to be a railway for the general advantage of Canada and therefore subject to the Board of Railway Commissioners as to rates. The Vancouver Board of Trade on Feb. 9 passed a resolution asking the Provincial Government to appoint a Board of Railway Commissioners to have authority over all railways within the province subject to provincial control.

Replying to a question in the House of Commons, Feb. 3, Dr. Reid, on behalf of Minister of Railways said: There are through rates on lumber from all points on the National Transcontinental east of the St. Lawrence River; also from such points west of the river to Hearst, Ont., inclusive, from which lumber is likely to be shipped to points on the G.T.R. in Quebec and Ontario. No through rates are yet arranged to points on either the C.P.R. or Canadian Northern Ry. in Quebec and Ontario.

Passengers for Australia, who are not Canadians or other British subjects, now require passports to secure their admission to Australia and it is desirable that such passengers for New Zealand also provide themselves with passports. Round trip passengers for Australia and for New Zealand as well, whether they are Canadian or other British subjects or of United States or other foreign citizenship, require passports to permit of their leaving Australia or New Zealand on the return trip and should provide themselves with such documents before setting out.

The Canadian Pacific Ry. has given notice that agents at Chicago, Ill., St. Paul, Minn., and Fort William, Ont. and east thereof, will secure reservations for the Canadian-Australian Steamship Line from W. H. Snell, General Passenger Agent, C.P.R., Montreal, instead of from C. E. Benjamin, heretofore General Passenger Agent, Trans-Pacific Service, Montreal, and now G.P.A., Canadian Pacific Ocean Services Ltd., Montreal. Agents west of Chicago, St. Paul, St. Louis, and Fort William will continue to apply to J. C. Irons, General Agent, Canadian-Australian Line, Vancouver, B. C.

The Lake Erie and Northern Ry's timetable shows an hourly service every day, starting at 7 a.m., from Galt, and at 8 a.m., from Brantford, Ont., and continuing until 8.55 p.m. from Galt, and 10 p.m. from Brantford. With the exception of the first train in the morning, all the trains from Galt start five minutes before the odd numbered hours, while the trains from Brantford start on the even numbered hours. The timetable for Sundays is the same, except that the first train from Galt is at 8.55 a.m., and from Brantford is at 10 a.m. There is a connection with the Galt, Preston and Hespeler St. Ry. on Sundays, the cars running to and from Concession St., Galt. The line, which is an electric one, was opened for traffic Feb. 7.

The G.T.R. is appealing against being assessed for local improvements in London, Ont., alleging that the asphalt pavements and cement curbs on certain streets were put in for the benefit of the London & Port Stanley Ry., and that its properties are rendered inaccessible by the L. & P. S. Ry. tracks.

Lumber Rates from Beaudette, Minn. to Vincennes, Ind.

The Interstate Commerce Commission at Washington has given the following decision, dated Jan. 3, in the case of Bradley Timber and Railway Supply Co. vs. Canadian Northern Ry. Co.—Complainant is a corporation dealing in lumber at Duluth, Minn. By complaint, filed Nov. 26, 1914, it alleges that defendants' rate of 27c. per 100 lbs. for the transportation of a carload of lumber shipped from Beaudette, Minn., to Vincennes, Ind., Feb. 18, 1913 was unreasonable to the extent that it exceeded 26c. per 100 lbs. Reparation is asked. The shipment weighed 33,900 lbs. and charges were collected of \$91.53 at the 27c. rate assailed. Effective Apr. 1, 1913, defendants voluntarily established a rate of 26c. Previous to that date the rate from Beaudette to Chicago had been reduced by 1c. per 100 lbs.; and it is because the through rate from Beaudette to Vincennes was not reduced equally at the same time that this complaint was filed. For a number of years the rate to Vincennes had been made with some regard to the rate to Chicago. When the rate to Chicago was reduced the rate to Vincennes still was lower than the combination of the intermediate rates to and from Chicago by ½c. per 100 lbs. Effective Nov. 16, 1913, the rate to Vincennes was increased to 26½c. Complainant adduced no evidence relative to the unreasonableness of the rate assailed other than the changes in the rates to Chicago and Vincennes just described. We find that the rate charged is not shown to have been unreasonable, and an order dismissing the complaint will be entered.

National Transcontinental Ry. Transcona Shops.—The Minister of Railways informed the House of Commons recently in reply to a question by Hon. G. P. Graham, that the portion of the National Transcontinental shops at Transcona, Man., not required at present in connection with railway operation, being about one-twentieth of the floor space, and comprising the frog shop, and the south bay of the freight car shop, had been leased to the Transcona Shell Co., the lease being in the names of G. R. Drenon, President, and W. A. Petrie, Secretary. The space is being used for the manufacture of shells, the company paying \$6,780 a year, and the insurance premium on \$113,000, together with a rental for any machinery used calculated at 20 on the value of the machinery. No machinery can be used without the General Manager's approval. The first year's rental of \$6,780 had been paid.

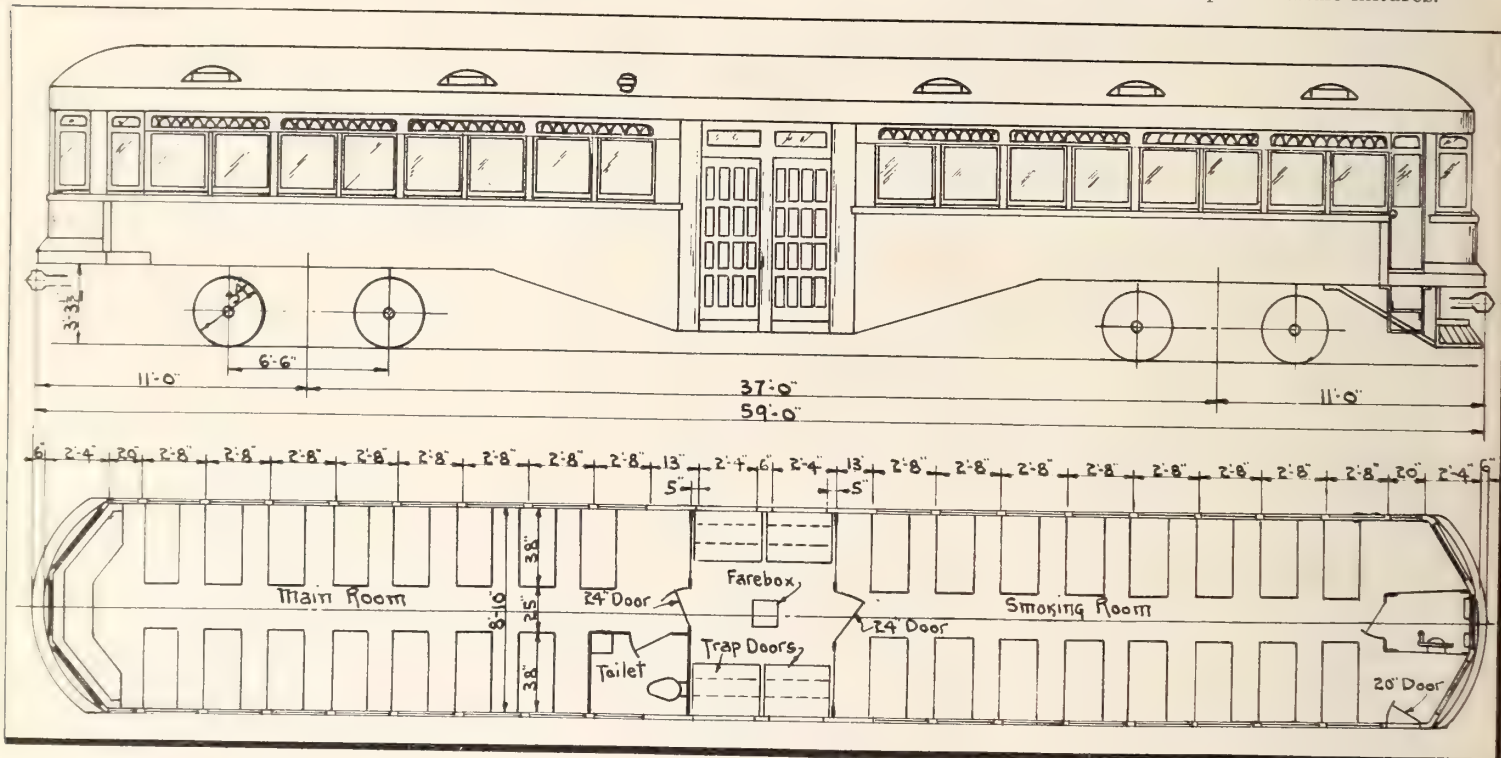

New Dominion War Taxation. In his annual budget statement in the House of Commons, Feb. 15, the Minister of Finance announced a new tax of 25 per cent. on the profits of incorporated companies in which a capital of over \$50,000 is engaged, exceeding 7 per cent. on the paid up capital stock, computed on every accounting period after Aug. 4, 1914. Included in the businesses covered, is that of transportation, whether continuously carried on or not. Any further issues of stock, or other increases of capital, or any changes therein, having the object, or the tendency, to increase the capital stock, made after Feb. 15, 1916, are subject to the minister's decision as to whether it is fair and proper to include such, when determining the company's capital and his decision is to be final.

Electric Railway Department

Length over buffers	59 ft.
Length over ends	58 ft.
Width over steel sheathing	8 ft 10 in.
Width overall	9 ft.
Height from top of rail to underside of side sill at bolster	3 ft. 2½ in.
Height from rail to top of first step tread	1 ft. 4½ in.
Height of step risers	10½ in.

the longitudinal member to the end member. The buffer beams are formed from 5 in. rolled steel channels, bent to proper contour, with flanges turned outward and projecting 6 ins. beyond the end sheathing. The tops of the buffer beams are flashed with sheet steel, which is bevelled upward forming an angle of 45 degrees. The body bolsters are of built up construction, with top and bottom cover plates 15 ins. wide, the first being 5/16 in. thick and the latter 3/8 in. The bolster diaphragm web plates are 3/16 in. thick stiffened top and bottom with 2 1/2 ins. by 2 1/2 ins. rolled steel angles.

body sashes are of the raising type and single storm sashes are also promised for side windows. The centre window in front vestibule is divided in two parts, the upper one made to drop and with provision for holding it at different heights. The two corner windows in each end are made to drop and are not provided with cross bars. Five automatic ventilators are provided in each compartment and one globe ventilator in lavatory. All of the side windows are fitted with pantasote curtains, mounted on 1 in. diameter concealed metal rollers and provided at the bottom with pinch handle fixtures.

Interurban Cars for Toronto Suburban Railway.

There are the usual walkover seats in the passenger and smoking compartment, an emergency exit door at motorman's end, right hand side, and the fare box is located in the centre of the car, making it possible to take full advantage of the large double door openings, which permit loading the maximum number of passengers found at any stopping point without the delay incident to undue crowding in discharging or receiving passengers. The cars are designed especially for through service and provided for single end operation only.

The design of the steel framing presents a striking feature in the omission of continuous centre sills between buffers. Although this constitutes a novelty for interurban service it conforms to the most modern practice in the design of side-girder steel cars where light weight is imperative and single car operation is contemplated. The main centre longitudinal members at each end, extending from buffer beam to bolsters, consist of 5 in. rolled steel channels spaced 16 ins. apart, back to back. Rolled steel angle braces extend diagonally from the intersection of the first crossing member and

The side framing is built up from 5 ins. rolled steel channel side sills, 2 x 1½ x ¼ in. rolled steel T iron side posts, so formed in one piece as to maintain the roof contour and join both side frames. Insulation is provided by a 1 in. thick wall of cork. The side and end sheathing and letter board plates are of No. 12 B. & S. gauge rolled levelled steel with double splice plates of ½ in. steel. All rivets in side and end frame above side sill are 5/16 in. diameter, the under frame rivets throughout being ¾ in. in diameter.

A turtle back roof is employed, formed by extension of steel side posts and wooden carlines spaced 9 ins. centre to centre and sheathed with $\frac{3}{4}$ pine and covered with No. 10 cotton duck laid in white lead and oil. The centre entrance steps are formed as part of the framing and are simply covered with composition treads 4 ins. wide. The interior finish of the car is of cherry and designed to have smooth flat surfaces so far as is possible. The transom and bottom panels of centre bulkheads are of steel, painted cherry color on both sides. Headlining throughout is of three ply poplar veneer. All

Thirty one walkover seats and one circular seat in two sections in the rear end are provided. Each seat is fitted with a stationary foot rest and polished bronze hand hold on the aisle end of the back. Smoking compartment has low back seats upholstered in green pantasote and the main compartment has high back seats with head roll and is upholstered in green plush. The cars are wired for lights, trolley control, heaters, headlights and air brake equipment, all of which is placed in conduit and insulated for 1500 volt d.c. operation. A foot gong 12 ins in diameter is placed under front platform. Signal bells are placed in motor-man's compartment, near fare box, with cord running along the centre of car entire length. Annunciator push buttons are furnished for each seat with connection buzzers near fare box and in motor-man's compartment, a switch being provided on the buzzer circuit wiring, so that it can be cut in or out by the conductor. Continuous basket racks and polished bronze trimmings are provided throughout. Drawbars are fitted to each end of car. Steel pilot is provided at motor-man's end of car, connected to body. Two

pneumatic sanders are provided per car.

The trucks are of following dimensions: Wheelbase, $6\frac{1}{2}$ ft.; diameter of wheels, 34 ins. (rolled steel); axles, journals, $4\frac{1}{4}$ x 8 in., M.C.B. The cars are being built by Preston Car & Coach Co.

The Ontario Railway and Municipal Board and Toronto Railway Cars.

On Nov. 9, 1914, the Ontario Railway and Municipal Board, in announcing its conclusions on a special report obtained as to the service furnished by the Toronto Ry. Co., and the requirements of the City of Toronto, required, among other things, that the company provide by June 30, 1915, 50 double truck motor cars of a design to be approved by the Board.

The chief objects which it was the aim of the parties to achieve, included the elimination of overcrowding on the cars, and of the outside running board on the summer cars. In the early part of 1915, the company equipped one of its cars with cross seats and a centre aisle, and six of its cars with half of the seats on each side, across the car and the other half arranged longitudinally, with a cross over aisle. Owing to the narrow devil strip between the tracks on the Toronto streets, the cars used are of necessity about a foot narrower than those on most of the large electric railways in Canada and the U. S. This causes considerable difficulty in planning a seat layout to introduce cross seats and to provide a sufficient width of aisle. On Apr. 30, the Board held a meeting to consider plans of cars, when it was stated that the company was proceeding to build cars according to the plans without having received the Board's sanction. It was stated that two were then built, and 18 were in course of construction. The Chairman of the Board announced that if the company built the cars without the Board's approval, it did so at its own risk, and the hearing was adjourned. On May 17, the matter again came before the Board, and plans were submitted by the city showing a composite type of car, and for the reconstruction of the existing type. The Toronto Ry. desired further time for the consideration of these plans, and the Board reserved judgment, deciding to leave it to its engineer, the City Engineer and an official of the company.

After some consultation, these officials arranged an existing type of car with cross seats on one side and a longitudinal seat on the other, the car body being set on the trucks, somewhat off centre, to obtain a little extra width without endangering passing cars. Although a car of this type, if adopted, would do away with the outside running board and the passenger capacity would be less than the existing type, the Board decided, Oct. 1, that the company must have 25 of these cars in operation by Dec. 1, subject to some slight alterations to the satisfaction of the Board's engineer. On Nov. 22, the Board in the meantime having relieved the company from the obligation of having the seats on its open summer cars so arranged that the passengers face forward, with an aisle through the centre of the car of sufficient width to allow the conductor to pass for the collection of fares, issued an interim order abolishing the running board and ordering the city and the company to confer within 30 days, as to the best type of car to be used, and if they failed to agree, the city would be given an additional 15 days to submit its plans. The

city declined to confer with the company on the subject and the Board, after further considering a report of its engineer on tests made with the experimental composite car, ordered on Jan. 25, that its order of Oct. 1, 1915, be rescinded, and that 25 of the double truck cars shall be of a type and character of construction as recommended in the report of its engineer, dated Jan. 11, 1915, and that these 25 cars shall be in operation by Mar. 1. A further order was issued Feb. 7, requiring that the balance of the 50 double truck cars, shall be built with the greatest possible interior width, having regard to the limitations imposed by the tracks and devil strip, and of a design to be approved by the Board on the recommendation of its engineer, and that they be placed in operation by May 15.

The first 25 cars have been built, and it was expected, when this was written, that they would be in operation on Mar. 1, as ordered. The second 25 are being proceeded with, and will be of the same type. The only difference between the two lots will be a few inches of extra interior width in the second lot.

The first 25 cars of the order of 50 will be practically the same as what is known as the palace car type. Numbered from 2,014 up, the only difference will be that the sections of the removable side will be permanently fastened and there will be ventilators placed in the upper parts of the windows. The seats will be longitudinal. The second 25 will be similar with the exception that they will be slightly wider cars, probably $2\frac{1}{2}$ inches.

The Winnipeg Electric Railway and Automobile Collisions.

A communication on street accidents was submitted to the Winnipeg City Council, Feb. 7, on behalf of the Winnipeg Electric Ry. as follows:—

"The report of our accident department for 1915 contains a comparison in respect to street accidents with 1914, which is of such a nature that I feel it my duty to bring it to your attention. It is as follows: Increase in automobile collisions, 38 per cent; decrease in pedestrians struck, 10 per cent.; decrease in all other vehicle collisions (includes bicycles, rigs and animals), 34. Our statistics show that automobile collisions are increasing altogether too rapidly, and our men are powerless to prevent them. This is evident when the great decrease in other classes of accidents is considered. The strictest observance of safety first principles by our men has failed to accomplish a reduction in the number of automobiles colliding with street cars. In 1915, 494 collisions with automobiles were reported by our men, an average of 41 a month; but, in Nov. and Dec. 1915, a total of 108 automobile collisions were reported, an average of 54 a month. On this basis we may expect 648 automobile collisions in 1916, if some exceptional steps are not taken by the council to control the operation of automobiles in the city. We are doing everything in our power to reduce the number of accidents occurring in connection with the street cars, and have almost entirely eliminated accidents to passengers. We feel, however, that collisions with automobiles are beyond our control under present conditions. Street cars operate along fixed rails, and cannot deviate from them. With co-operation on the part of owners and drivers of automobiles, such as we have had from owners and drivers of other vehicles, there is no reason why automo-

bile collisions should not decrease in the same ratio as other accidents. I note in the newspapers there is some agitation for an increase in the speed limit. In view of the foregoing facts, I would suggest that it would be very inadvisable to permit any increase in the speed limit within the city."

London and Port Stanley Railway Summer Traffic Rates.

At a meeting of the London, Ont. Railway Commission, Feb. 4, a decision is reported to have been reached to purchase the incline railway at Port Stanley, and to enlarge it so as to be able to handle the increased traffic anticipated during the coming summer. It was decided that a new schedule of rates will become effective May 24, to continue until after the Western Fair. The present 30 cent return excursion fare from London to Port Stanley on Wednesday and Saturday is to be continued, as the report states, but the rate on other days is to be reduced to 40c. for adults and 20c. for children. The payment of an additional 5c. will give the holder a rate up and down the Port Stanley Incline Ry. graph and cable companies, were resumed London and Lake Erie Ry. and Transportation Co., was present at the meeting and asked the commissioners not to reduce the rates. He pointed out that his line could not compete with the L. and P. S. Ry. The proposed rate would mean that his line would have to carry the through passengers at $\frac{1}{2}$ c. a mile. The present cost of operating a car is $16\frac{1}{2}$ c. a mile, or \$9.60 for the round trip, and the carrying capacity of the cars permits the earning of \$16 on the round trip, provided that every seat is occupied. The company's franchise provides that any rate given out of London should also apply for the benefit of travellers from Port Stanley to London.

Ottawa Traction Company's Annual Meeting.

The Ottawa Traction Co's annual meeting was held in Ottawa Feb. 7. The report, which included the Ottawa Electric Ry. Co's operations, and which is given in full further on in this issue, showed a falling off of about 1,000,000 passengers compared with 1914, owing principally to war conditions. Commencing with August, earnings began to show an increase over the previous year, which has continued each succeeding month. The percentage of operating expenses to receipts was $61\frac{1}{5}$ per cent. in 1915, against $60\frac{3}{5}$ per cent. in 1914.

The directors for the current year are: Thos. Ahearn, President; W. Y. Soper, Vice President; Jas. D. Fraser, Secretary-Treasurer; T. Workman, E. N. Soper, T. F. Ahearn, Redmond Quain, J. F. Smellie, G. P. Murphy. The only change in the Board was the election of G. P. Murphy to fill the vacancy caused by the death of Travers Lewis, K.C.

The Saskatoon Municipal Railway officials under the recent organization are: G. D. Archibald, Superintendent; J. P. McKenzie, Assistant Superintendent, and L. V. Clare, Secretary.

The deferred cable messages, which, owing to congestion of business, were discontinued a few weeks ago, by the telegraph and cable companies, were partially resumed at the end of January.

Calgary Municipal Railway Wage Schedule.

The Calgary, Alta., City Council has approved of a new wage schedule and agreement with the Calgary Municipal Ry. employees. The existing agreement expires in April, and the new agreement and schedule have been drawn up by the commissioners and by the committee of men representing the employees. The commissioners' report to the council sets out that the new wage schedule is the same as that now in force, except that there is a small increase in the case of men operating the one-man cars in the downtown district.

"The city has asked the men to forego the time and a quarter which has been paid for Sundays and time and a half for overtime. It has been a considerable burden to the system during these hard times having to pay this extra time on Sundays, consequently the service has been curtailed. In lieu of this concession made by the men we propose to operate a regular car service on Sundays (without extras), which should increase the revenue and will give the men six days work per week. This improvement of service will be of mutual benefit to the

Lake Erie and Northern Railway Operation.

The L.E. and N. Ry. started operating the Galt-Brantford section of its new electric railway, Feb. 7, the first train leaving Galt at 7 a.m. The service at present is a two hour one, the cars leaving Galt on the odd hours and Brantford on the even hours. It said that as soon as a connection is made with the Dominion Power and Transmission Co.'s line from Brantford, which will probably be early in March, that the service will be made an hourly one. The service put in operation Feb. 7, was for passengers only, but it was expected to put a freight service in operation later.

The line starts at the Soap Works in Galt, and follows the Grand River to Paris, running more or less parallel with the Grand Valley Ry., the right of way of which has been acquired by the company from the city of Brantford. In Paris the line leaves the river valley and follows the top of the bluff overlooking Paris from the east. On this bluff is the Paris station, which is built to C.P.R. standard plans. From Paris to Brantford the line continues to follow the Grand River, although there are a couple

each meeting attended, but the total remuneration receivable shall not exceed \$800 in any one year, while the chairman shall receive \$15 for each meeting attended, but not more than \$1,200 in any one year. The board to have exclusive control of the whole of the public utilities; to appoint a general manager, submit monthly reports to the Council, and pass all necessary bylaws, but to apply to the Council to pass bylaws for the raising of money for additional capital expenditures. The report of the committee as adopted has been forwarded to the council for consideration.

The Mayor of Edmonton, Alta., called the attention of the City Council on Feb. 2, to the fact that the outstanding bonds issued in respect of the Edmonton Radial Ry., amount to \$56,041 a mile of track, whereas under the powers of the act of incorporation of the E.R.Ry., the amount of the securities issued is limited to \$10,000 a mile. The matter was referred to the city charter committee to take the necessary steps to have it set right by the Legislature.

The Edmonton, Alta., city commissioners on Feb. 2, increased the salary of Superintendent Moir of the Edmonton Radial Ry. from \$150 to \$200 a month and approved of the estimates for the

Lake Erie & Northern Railway Car.

The illustration above shows one of the eight full vestibule interurban passenger cars put in service recently on the L. E. & N. R. and which were fully described in Canadian Railway and Marine World for February, pg. 67.

patrons as well as the street railway men." The Council approved the recommendation that the new schedule go into operation Feb. 1, the commissioners estimating that the saving effected by it would amount to \$5,256 during the year. The commissioners' report as to the wage schedule is as follows: "To employees in the service on this date and from the date other employees enter the service, under this agreement, after one year employment under emergency contract at 26c. an hour in any capacity on the system, and are qualified conductors and motormen, the wage schedule until the end of this agreement shall be, including police duty, first year 28c. an hour; after first year 30c.; after two years 33c.; after three years 35c."

When in charge of one-man cars (not including trailers or Ogden extra service), operating from outside to any point within the boundaries of Eighth Ave., Eighth St. west, Seventeenth Ave., Second St. east, 40c. an hour will be paid. Pay day for the employees shall not be later than the 6th and 21st of each month. Fifty cents will be allowed all employees for their attendance at lectures on street railway practice once a month, and also extra half time on May 24, Dominion Day, Civic holiday, and Labor Day, Good Friday and Thanksgiving Day, and extra full time Christmas Day and New Year.

of stretches where the river is not to be seen from the car. As Brantford is approached the line again runs close by the stream. The entrance into Brantford is through the Holmedale section of the city, and the only Brantford street to be crossed by the line is Mill St. Just before reaching the present terminus of the line at Lorne bridge, there is a freight shed, built on the style of the C.P.R. freight shed in Galt, and also a brick car barn, in which are also located the transformers.

Edmonton Municipal Railway Matters.

The Edmonton, Alta., Property Owners' Association, has adopted a resolution recommending the City Council to appoint a board of directors to administer the whole of the public utilities owned by the city. The report recommends that five directors be appointed by the city council from a list of 15 names to be nominated by the council of the board of trade and that these directors assume office Jan. 1, 1917. Of the first directors two it is proposed shall have office for three years and three for five years, directors subsequently elected to hold office for five years. Directors to be subject to removal without cause or a vote of ratepayers, and to receive \$10 for

current financial year. After all charges are met the estimates for the street railway provide for an anticipated deficit at the end of the year of \$95,829.77. A summary of the expenditures and revenue during the year is as follows: Revenue \$546,656; expenditure, operation, maintenance and power charges, \$356,778; capital charge, \$228,846.72; depreciation, \$25,557.05; bank interest and overdraft, \$31,200. The salaries of the permanent staff last year were \$38,857.30, and the sum asked for this year by the Superintendent was \$27,402, but the commissioners reduced the estimate to \$26,931.50. Motormen's and conductors' salaries amount to \$164,198.70, against \$156,163.84 last year. Power charges last year were \$97,516.05, and the estimate of \$97,600, as submitted was passed by the commissioners. The estimated cost of maintaining rolling stock was reduced from \$26,423.67 actually expended last year to \$20,000.

Hamilton St. Ry.—E. P. Coleman, General Manager, Dominion Power and Transmission Co., is reported to have informed the Hamilton City Council railway committee Feb. 15, that the relaying of the tracks on Herkimer St., between Queen and Locke Sts., will be strated in the spring, but the company cannot see its way clear to lay new tracks on King and York streets.

Toronto Railway Co's Annual Report.

Following are extracts from the directors report for the calendar year 1915:—

When one considers the effect of the abnormal traffic conditions upon the earnings of the company due to the continuance of the war, we think the company is to be congratulated upon the result of its operation throughout the year.

Gross earnings	\$5,694,136.43
Operating, maintenance, etc....	3,250,611.95
Net earnings	\$2,443,524.48
Dividends	\$857,952.00
Bond interest	167,356.67
	\$1,125,308.67
Payments to city	
Percentage on earnings	\$868,251.46
Pavement charges	96,576.89
General taxes	99,240.87
	1,064,072.22
	\$2,189,380.89

Passenger earnings were \$5,611,296.60, a decrease of \$432,215.55 from 1914. The various charges against the earnings for operation, maintenance, etc., were \$3,250,611.95. Payments made to the city during the year were \$1,064,072.22.

The fifth drawing of currency and sterling bonds, under the terms of the mortgage deed, took place June 21. The company draws annually during the last 10 years of its franchise, 5% of the amount of bonds issued, thus reducing the outstanding bonds within the said period to 50% of the original issue, and all bonds so drawn are to be redeemed on or after Aug. 3, following the date of drawing, and from which date no interest is payable on bonds so drawn. There has been drawn to date a total of \$1,137,653.32.

Careful attention has been paid to the maintenance of the plant, rolling stock equipment and other properties. Your directors declared out of the accumulated surplus earnings, 4 quarterly dividends of 2%, which were paid on the dates set for payment.

PROFIT AND LOSS ACCOUNT.

Balance from 1914	\$4,792,369.83
Surplus earnings, after payment of all expenses, interest, taxes, etc....	1,192,489.64
	\$5,984,859.37
Dividends, 4 of 2 per cent. each....	\$ 957,952.00
Balance from 1914	\$4,792,369.83
Surplus carried forward 234,537.54	
	5,026,907.37

	1915.	1914.
Gross income	\$5,694,136.43	\$6,127,096.77
Operating, maintenance charges, etc....	3,250,611.95	2,597,550.55
Net earnings	2,443,524.48	3,529,546.22
Passengers carried	142,061,258	152,966,153
Tonnes	62,398,638	65,778,022
Percentage of charges, etc., to passenger earnings	57.9	58.4

The board of directors was re-elected for the current year, as follows:—Sir William Mackenzie, President; Frederic Nicholls, Vice President; Sir Henry M. Pellatt, Sir Rodolphe Forget, E. R. Wood, W. D. Matthews, James Gunn.

The Shawinigan Water and Power Co's Electric Railways.

The annual meeting was held Feb. 15. The company owns the Shawinigan Terminal Ry., an electric line operating between the various industrial concerns at Shawinigan Falls, Que., and the several steam railways, and has a controlling interest in the Three Rivers Traction Co. Following is an extract from the report:—"Early in the year the Three Rivers Traction Co. control of which is

vested in your company, was formed to install and operate a street railway system in the city of Three Rivers, and obtained favorable franchises from the city. The geographical location of Three Rivers, together with the great power resources of the district of which it is the centre, makes it one of the most promising industrial communities in Canada. Your company already owns the North Shore Power Co., which supplies light and power to the city, and the acquisition of the tramway privileges rounds out the problem of supplying that community with light, power and transportation."

The directors for the current year:—are J. E. Aldred, President; Thos. McDougall, Chairman of the Board; H. Murray, J. C. Smith, Vice Presidents; Sir Herbert Holt, Montreal; Sir William Mackenzie, E. R. Wood, Toronto; D. Murphy, Ottawa; R. M. Aitken, London, Eng.; Sir M. Mitchell-Thomson, Edinburgh, Scotland.

London Street Railway Co.'s Annual Report.

Following are extracts from the report for the calendar year 1915.

	1915	1914
Passenger earnings	\$393,299.00	\$370,915.62
Miscellaneous earnings	5,559.00	4,979.66
Gross earnings	\$398,858.00	\$375,895.28
Maintenance		
Way and structures	\$ 35,619.11	\$ 31,732.73
Equipment	29,046.60	34,669.66
Power	38,365.25	42,291.79
Car service	131,308.94	123,796.29
General expenses	40,771.81	35,410.36

Total operating expenses	\$275,212.04	\$267,900.83
Net earnings	\$123,645.96	\$107,994.45
Interest on bonds	\$ 32,769.63	\$ 31,908.59
Interest on overdraft	23.50	40.35

Total deductions	\$ 32,793.13	\$ 31,948.94
Net Income	\$ 90,852.83	\$ 76,045.51

During the year \$42,189.29 was expended in construction and equipment.

No extensions of tracks were made. A considerable amount of new paving and reconstruction of tracks was done, all of which was required on account of the city laying new pavements where none had existed before. The four new cars obtained late in 1914 were put into service early in the year. Three of the older cars were rebuilt to conform with the p-a-y-e type like the new cars, as this type has been found to be of great benefit, especially with regard to preventing accidents. Rearrangement of motors under the double truck cars, by using 2 or more modern type instead of 4 under each car, has resulted in considerable saving in repairs and in power consumption. Hydro electric power has continued to give good satisfaction during the year; delays on account of the power being off being negligible. Under the terms of our contract for power, a further slight reduction in the rate is anticipated for the year 1916. The bylaw passed by the city for one years' trial of Sunday car service, was extended without change of detail for 2 months and then for another period of one year, which will end with the operation on Sunday, April 20, 1916, unless extended as heretofore. Some public agitation arose during the summer for Sunday car service to Springbank Park, but when it was found nothing could be done without legislative action, the matter was laid over. It remains to be seen whether or not it will be taken up again. General financial conditions having become settled, after the excitement consequent upon the outbreak of the war, the British slogan "Business as usual" seemed to prevail generally and so the com-

pany's business enjoyed its usual normal growth, and at present the prospects look good for the next year.

	1915	1914
Expenses, per cent. of earnings	69.0	71.2
Passengers carried	10,801,531	10,286,448
Car earnings, per revenue passenger	3.68c	3.64c
Transfers	1,765,067	1,697,963
Total passengers	12,566,598	11,984,411
Car earnings, per passenger	3.13c	3.09c
Car mileage	1,946,439	1,908,175
Gross earnings, per car mile	20.48c	19.69c
Operating expenses, per car mile	14.13c	14.03c
Net earnings, per car mile	6.35c	5.66c
Miles of track	35.19	35.19
Gross earnings per mile of track	\$11,234.41	\$10,681.88

At the annual meeting, Feb. 2, the President, E. W. Moore, of Cleveland, Ohio, occupied the chair. The directors were re-elected, the board being as follows:—E. W. Moore, President; T. H. Smallman, London, Vice President; C. B. King, London, Manager; P. W. D. Broderick, Toronto; St. Herbert Holt, Montreal; W. M. Spencer, C. H. Ivey, London. The Secretary-Treasurer, G. C. Holding, tendered his resignation, which the directors declined to accept, and he continues.

Berlin and Waterloo Street Railway Report.

The Berlin, Ont., Light Commissioners, who operate the B. & W. S. R. for the city, under the management of V. S. McIntyre, Superintendent, have issued their statement for the calendar year 1915, from which the following is taken:—

RECEIPTS.

Cash fares	\$17,931.70
Tickets sold	24,593.60
Parcels	253.81
Advertising	512.00
B. & N. St. Ry. Co.	1,786.92
Mail contracts	1,750.00

\$18,628.03

EXPENDITURES.

Operating Expenses—	
Power	\$ 6,629.73
Supplies	2,095.61
Wages	11,817.51
Snow cleaning	871.91
Salaries	1,272.01
Tools	56.21
Coal account	41.45
Crossing expenses	541.97
Heating car barn	307.66
Maintenance and Repairs	
Building repairs	31.15
Car and motor repairs	1,039.16
Car painting	14.80
Storage battery repairs	8.20
Track and line repairs	1,315.63
	5,409.24

General Expense	
Printing, telephones, advertising, etc.	\$1,549.10
Insurance	1,073.11
Interest	126.83
Legal fees	65.50
Office furniture	13.14
Office expense	245.99
Rent account	672.51

Accounts receivable written off	1,460.88
Debenture interest	581.00

Gross profit	\$11,901.43
Depreciation	\$ 6,726.60

Net profit	\$ 5,174.83
------------------	-------------

It is pointed out that while the receipts showed a decrease of 5.6% from 1914, there was a saving of 9.1% in operating expense. After paying debenture interest \$7,851.60 and writing off depreciation, \$5,497.72 the net profit shown of \$1,228.88 is approximately \$800 more than that shown for 1914.

W. C. Webb has been appointed chief clerk to Superintendent, Canadian Ex. Co., Winnipeg, vice Z. M. Middleton, transferred.

Safety First on Ottawa Electric Railway.

In prosecuting its safety first campaign, the Ottawa Electric Ry. is paying special attention to the education of the public, and for this purpose has issued a large monthly sheet calendar, each sheet having four short sentences, arranged round the calendar, covering information as to the company's work for the reduction of accidents, or some apposite maxim for the benefit of the public as well as employees. Following are examples of the matter, some of which are constantly before one in using the calendar, carrying a reminder which will undoubtedly have a beneficial effect:—

Accidents cause widows, orphans, cripples, poverty, suffering.

Ninety per cent. of all accidents are the direct result of carelessness and could be prevented.

Accidents belong to the old age of waste and inefficiency.

Will you co-operate with us to make an accident, even the smallest, a rare occurrence in Ottawa?

Accidents occur daily in every walk of life, in the factory, the shop, the home, on the street everywhere.

When caution becomes a habit there will be few accidents.

We are working unceasingly to educate our employes to prevent accidents. How about yours?

To save any part of the huge annual loss through accidents is good business, and pays dividends to everyone. It can be done, but not without your co-operation.

Chauffeurs and drivers. Changes in temperature cause a greasy rail. When brakes are applied the wheels stop, but the car slides forwards.

The average street car weighs 30 tons. It cannot be stopped in a few feet.

Slow down approaching car track streets, and look both ways before crossing.

Our men are carefully instructed to do everything possible to prevent accidents, but sometimes they are helpless, unless you co-operate.

When you have occasion to cross behind a car, remember there may be another car or vehicle coming from the opposite direction which you cannot see.

You have no right to take chances. Your family may have to stand the consequences.

Carelessness has destroyed more human lives and property than all the wars of the world.

Don't try to jump on a moving car. Take the next one. Better to miss an appointment than break a leg.

Parents. The causes of most accidents to children are carelessness and fear. Instruct them how to avoid the perils of the streets.

Do mothers realize a parting word of caution may be the most effective means of preventing an accident?

Teach your children the safest route between home and school, and point out the dangerous places.

Don't let the youngsters play on the car tracks and busy streets. If they must play on the street, the sidewalk is the only safe place.

To take a car, with the right hand clasp the bar, and hold with the firmest grasp, Then step up with the left foot first, And you are braced to meet the worst; For, if the car should move at all, Your right foot saves you from a fall But when you wish to leave the car, Be sure the left hand grips the bar, Set first the right foot on the ground,

Then facing front you will be found, And though the car may start or stay, You can with safety wend your way.

Don't ask the conductor or motorman to open the exit door before the car stops. He is forbidden to do so.

Wait till the car stops. A moment then may save a month in the hospital.

If a car is crowded it is usually behind time, and you will find another of the same line within a block or two.

When a motorman rings his gong, he is appealing to you to help him prevent an accident.

Don't try to board or leave a moving car. Your life may pay for undue haste.

Get rid of the careless habit. Acquire the safety habit. It is better to be careful than crippled.

Chauffeurs and drivers. Obey the traffic rules of the city. Keep to the right, and when turning to the left, go around the centre of the crossing.

The law commands you not to pass a standing car. If you are in a hurry take a side street.

Don't be offended at the motorman's gong. He is thinking of your safety.

The car must stick to the rails. You have the rest of the street. Keep off the tracks whenever you can, and give the motorman a chance.

Always look both ways before crossing car tracks. You may not hear the gong in the noise and bustle of a busy street.

When on your feet in a moving car, take hold of the grab rail, strap or seat back. The motion of the car may throw you out.

Don't expect that every car will stop when it approaches a crossing. It may be going through.

If a car does not stop on your signal, don't try to board it. Look and see if there is another following close behind. If not, take the number of the car that has passed you, and report it.

When an accident happens, give your name to the conductor. If we are at fault we want to know it, in the interest of public safety. If we are not at fault you will be protecting the conductor or the motorman from unjust censure.

The most reliable information of an accident always comes from the unbiased statements of disinterested witnesses.

We are not trying to avoid the payment of just claims, but to eliminate accidents by carefully investigating those that do happen.

If ladies would carry hand bags, parcels, etc., in the right hand they would instinctively use the left hand on the grab handle, and would leave the car the safe way, facing the front.

There is no compromise with accidents. The only cure is prevention through carefulness.

Don't depend upon a car to stop. Wait until it has stopped.

Remember when leaving a car, face the front, and use the left hand for the grab handle.

Cars do not stop at every crossing. If they did, rapid transit would be impossible. Drivers and chauffeurs can help to prevent many collisions by carefulness at intersections.

We all have the same rights on the streets, but the motorman has the hardest job. He can't turn out to avoid an accident.

Habits are the hardest things in life to change. Teach the children the value of carefulness so they will instinctively act for safety.

British Columbia Electric Railway Matters.

The Board of Railway Commissioners has approved the schedule showing train service put in effect on Vancouver, Fraser Valley and Southern Ry., which is a subsidiary of the B.C.E.R.

B.C.E.R. officers complain of the theft of large quantities of copper wire from occasionally used and unused spur lines, particularly on the Fraser Valley lines.

When the B.C.E.R. notified the public that "tango" tickets would not be used after Feb. 1, there were about 20,000 outstanding. It was reported Feb. 1, that only about \$20 worth were redeemed in cash, the balance either having been used or exchanged for the new green tickets.

The B.C.E.R., in addition to the service put in effect on its Vancouver lines on Jan. 15, put extra cars on its Georgia East, Main St. South, Nanaimo St. and Sasamat and Dunbar St. lines on Jan. 19. On Jan. 30 a new Sunday schedule was first in operation in Vancouver, provision being made for the running of special cars as required.

As a result of the visit of a Board of Railway Commissioners' inspector to New Westminster, the B.C.E.R. gave notice Jan. 24, that a new and improved car service would be put in operation at once on the Burnaby Lake line. The new schedule provides for an hourly service during half the day, and a two hourly service for the remainder, with an extra car on Saturday nights, between New Westminster and Vancouver, and a special church service on Sunday.

The Jitney Situation in Canada.

The City Solicitor of Montreal has advised the Montreal City Council that it is not yet in a position to compel the Canadian Autobus Co. to put into effect the service on the streets called for in the contract with the city. The one action to upset the franchise has been settled by the Imperial Privy Council, but the other action which has remained in suspense must be disposed of before the city can make any move in the direction of compelling the company to give any service.

There were 86 licenses to operate jitneys issued in Edmonton, Alta., during 1915, but it is estimated that not more than 50 cars were in operation at one time. With the introduction of the license fee a number went out of business. Only 4 licenses are reported to have been taken out for 1916, but the city's license inspector states that this number will be added to, and that during the summer there will be as many jitneys in operation as last year.

The jitney men are taking an active part in municipal politics in Vancouver, B.C., according to a statement reported to have been made by R. G. Gordon, Secretary of the recently formed jitney association.

It was reported at the Vancouver city hall, Feb. 14, that on Dec. 31 there were 190 jitneys for which bonds were in existence. Since that date 60 of the bonds have been cancelled.

Toronto Civic Ry. Ticket Advertising Privileges—The Toronto Works Department received tenders Feb. 29, for the privilege of advertising on a portion of the back of tickets issued on the Toronto Civic Ry. The contract will cover the issue of 25,000,000 tickets, which, it is estimated will last for two years.

Electric Railway Projects, Construction, Betterments Etc.

Brantford Municipal Ry.—The Brantford City Council is asking the Dominion Parliament to authorize it to extend the Grand Valley Ry. from its present terminus in the township of Brantford to Cainsville, in the same township; to confirm the bylaw constituting the Brantford Railway Commission, and to provide that the commission's powers may at any time be vested in any commission which may hereafter be created by the council for the management and control of two or more of its public utilities.

We are officially advised that the proposed application for power to build a line to Cainsville was inserted in the bill with the idea that it might prove useful at some future time. The commission has no definite views as to where such a line would start, or its route, or whether it will be necessary to build it at all. (Sept. 1915, pg. 359).

The Dominion Power & Transmission Co. will resume work early in March on the construction of its east end power station in Hamilton, Ont.

Edmonton Power Co.—The Alliance Trust Co., Calgary, Alta., has made a tentative offer of electric power to the Edmonton City Council, on terms which, it is claimed, are lower than those set out in the franchise which it is proposed to grant to the Edmonton Power Co., a summary of which company's project was given in our February issue, page 72. The plans of the company in which the Alliance Trust Co. is interested have not been made public, but it was stated in Edmonton, Feb. 3, that it was proposed to generate power at the Viking gas fields by the use of gas engines. The cost of the plan and transmission lines is estimated at \$2,000,000.

The Edmonton City Council's power committee met on Feb. 7, when R. B. Bennett, M.P., President of the Alliance Trust Co., alleged that the bylaw was illegal, and if it was repealed his company was prepared to enter into competition with the E. P. Co., for a legal agreement. A letter was read from the E. P. Co., protesting against further delay, and threatening an action for damages if the Council does not go on with the project now that it has approved of the bylaw. At a meeting of the Edmonton City Council Feb. 8, Alderman Wilson gave notice that he would move for the repeal of the bylaw passed recently agreeing to give a franchise to the Edmonton Power Co.

The London Street Ry. expects to rebuild some track this year and do some paving as may be determined by the city. An order has been given for the season's supply of paving brick.

Morrisburg & Ottawa Electric Ry.—An Ottawa paper says that the annual meeting was held there Feb. 8 and gives the following report of it: "There was a fairly large attendance of shareholders, about \$100,000 of stock being represented. The report said that it is hoped to start construction by May. Most of the right of way is held outright by the company and the remainder is held under option. The engineering work on the main line and the branch lines has been completed and reports were also presented setting out the estimated earnings. It was stated that while the company has three years yet under its charter to complete the road, it would be better to go

to the Ontario Railway and Municipal Board to get an extension to five years in order to improve the company's financial status when it comes to sell bonds. A motion was passed authorizing the directors to call a special meeting of shareholders to deal with delinquent subscribers who are not considered financially strong and it might perhaps be advisable to cancel their shares." The directors for the current year are J. G. Hilt, President and Managing Director; R. J. Biggar, W. C. Strader, and J. B. Boggart. R. A. Bishop is Secretary-Treasurer.

Mount McKay & Kakabeka Falls Ry.—The Ontario Legislature is being asked to extend the time for the completion of the company's railway in the vicinity of Fort William, Ont., and to authorize it to use any kind of motive power, including steam. The line is about five miles long, and connects with the Fort William Electric Ry.; it was opened for traffic in 1909, but has not been operated lately except for freight purposes, and is equipped for operation by electricity.

Ontario Hydro Electric Railways.—A press report says that the Hydro Electric Power Commission of Ontario has had a survey made for an electric railway from Toronto to Niagara Falls, that the projected Toronto-London line will be used from Toronto to Port Credit and that the Niagara line will diverge at the latter point passing through Oakville, Burlington and Hamilton. The report says that bylaws to provide the money will be submitted to the municipalities interested in a few weeks.

Sudbury-Copper Cliff Suburban Electric Ry.—The Ontario Legislature is being asked to confirm an agreement dated Sept. 15, 1915, authorizing the guarantee by the town of Sudbury of the company's bonds for \$75,000, upon the security of a mortgage of the company's real and personal property and franchises.

Three Rivers Traction Co.—The property owners of Cap a la Madeleine, Que., on Jan. 29, by a majority of 49, decided to grant a franchise to the T. R. T. Co., for the operation of an electric railway in the municipality. The franchise is to run for 20 years. The municipality has hitherto refused to grant such a franchise and the company took steps to obtain legislative authority to build the line notwithstanding the refusal to grant the franchise. (Feb., pg. 73.)

Toronto, Barrie and Orillia Ry.—The Ontario Government was asked by the company Feb. 17, to issue the necessary proclamation to bring in force the act passed in 1915, granting an extension of time for the building of the projected railway. Under the original charter, viz., that of the Monarch Ry., and the amendments thereto, up to and including the act of 1914, the company has power to build a railway from Toronto to Barrie, with a branch to the C.P.R. near Utopia; a local line in Barrie, and a line from Barrie to Orillia, with branch lines. A franchise within the town of Barrie was obtained from the town council, and surveys were made for the line from Barrie to the C.P.R. in 1913, but nothing in the way of construction has been done. A route was also partly located by the Monarch Ry. for some distance out from Toronto, and some negotiations with the municipalities interested were carried on. The company claims that \$55,000 has

been expended upon surveys, etc. Under the act of 1915, the company's plans for the railway were to be approved as to gauge, etc., by the Hydro Electric Power Commission of Ontario, which was given authority to acquire the undertaking. This was the only one of the large electric railway undertakings which survived the opposition of the H. E. P. Commission in the Legislature last year. The total mileage of the lines projected is: Toronto to Barrie, 60 miles; Barrie to Utopia 8 miles; Barrie to Orillia 30 miles, total 90 miles. The company says it is asking for the bringing into force of the act in order to take up the building of the line from Barrie to Utopia, and is also asking the Barrie town council for a removal of the local franchise. A. Bicknell, Toronto, is solicitor for the company. (Dec. 1915, pg. 483).

The Windsor, Essex & Lake Shore Rapid Ry. expects to do some paving in Leamington, Ont., during this year.

Kingston, Portsmouth and Catarqui Electric Railway Wages.

This company has advanced its conductors' and motormen's wages, the following table showing the old and new rates per day.

	Old.	New.
1st 3 months	\$1.50	\$1.75
2nd 3 months	1.55	1.85
2nd 6 months	1.60	1.90

Under the old schedule, after the 2nd 6 months, the pay was advanced 5c a day every 6 months till \$2 was reached. Under the new schedule the pay is to be advanced 5c a day after every year.

Nova Scotia Tramways & Power Co.—The Nova Scotia Public Utilities Commission, on Feb. 9, filed its decision on the application of the Nova Scotia Tramways & Power Co. for leave to issue \$6,250,000 of capital stock, \$3,250,000 of preferred stock and \$3,000,000 bonds. The Board finds that the company should be permitted to raise \$5,550,000 by the issue of \$3,000,000 of 5% thirty year bonds at 90; \$2,500,000 in preferred stock at 75, and \$2,500,000 in common stock at 40.

Toronto Suburban Ry. Toronto Franchise.—The Mayor and the City Solicitor of Toronto waited on the Attorney General of Ontario, Feb. 4, to discuss the proposal to cancel the Toronto Suburban Ry. franchise granted by West Toronto, now a part of the city. They explained the position of the city and the company, and asked that the city be granted power to give a service in West Toronto. The Attorney General asked that a memorandum be submitted for his consideration.

Lighting of Lake Erie & Northern Ry. Cars.—The article describing the L. E. & N. R. passenger cars in Canadian Railway and Marine World for February contained the following sentence in referring to the lighting fixtures. "Supplementing the above, a number of Crouse-Hinds type J.R.R.H. hoods, with Crouse-Hinds pendants No. 8294." The Safety Car Heating & Lighting Co. advises us that this sentence should have read as follows: "Supplementing the above a number of Crouse-Hinds type JRRH hoods with Safety Car Heating & Lighting Co. pendants No. 8294."

G.T.R. officials and employees are being asked to give one day's pay to the Canadian Patriotic Fund in Feb., May, Aug. and Nov. this year.

Canadian and United States Railways are said to have spent over \$10,000,000 in newspaper advertising in 1915.

Accident Case Decided in Ottawa Electric Ry. Co.'s Favor.

The Supreme Court of Canada gave judgment Feb. 10., in the case of Mrs. J. P. Hayes, vs. the Ottawa Electric Ry. Co. On Aug. 18, 1913, J. P. Hayes came into collision with an Ottawa Electric Ry. car on Somerset St., near the corner of Bronson Ave., sustaining injuries from which he died the following morning. His widow and children brought an action against the company, claiming \$5,000 damages, and in the action, which was tried before Sir William Mulock, with a jury, on Jan. 11 and 12, 1915, recovered a verdict against the company for \$3,500.

The judgment at the trial was appealed by the company to the Appellate Division of the Supreme Court of Ontario, which gave judgment on May 11, 1915, affirming the trial judgment. The company then appealed to the Supreme Court of Canada, which on Feb. 10 gave a unanimous judgment in favor of the company, allowing the appeal and dismissing the action with costs.

The case is one of considerable public interest, involving the liability of a street railway company for an accident such as this, where the evidence disclosed that Hayes did not take proper precautions in crossing the street. The jury found that the company's motorman was negligent, and that Hayes' contributory negligence did not continue up to the moment of the accident. The Supreme Court holds that in this particular case there was no evidence to support the finding of the jury of the company's negligence. It appears from the reasons which are thus far available that the facts are that the motorman first saw Hayes as he stepped off the curb; that, because he then apprehended that an accident might happen, he immediately rang the gong to warn Hayes; that at 30 ft.—or about one second later—he realized that Hayes was not going to stop, and became seriously apprehensive, and at once applied the brakes as vigorously as he could, still "gonging," and also shouting at Hayes, who continued to walk on with his head down, apparently oblivious of danger.

The Supreme Court holds that the motorman did all in his power, and exercised his best judgment from the moment he was 30 or 35 ft. from the point of contact. The court further states that there is nothing in the facts of the case to warrant a finding of fault or negligence on the motorman's part and that, if he made any mistake at all, it was at most an error of judgment in a sudden emergency, but even that was not established. The judges are careful to point out that no doubt a motorman driving a street car must always be alert; but having regard to the practical necessities of street car operation, the court is not prepared to hold that it was open to the jury to find under the circumstances of this case, that in failing to apply his brakes instantaneously upon Hayes stepping off the curb, and before the motorman had seen or had any reason to think that the sharp clanging of the gong would be ineffective, the motorman was guilty of any negligence.

The Ontario Railway and Municipal Board sat in Windsor, Feb. 21, to hear complaints against the Sandwich, Windsor & Amherstburg Ry's car equipments, etc. The question of air brakes and lavatories on the interurban cars were discussed and the whole matter was held over for consideration.

Mainly About Electric Railway People.

R. Barber has been appointed Treasurer, International Transit Co., Sault Ste. Marie, Ont., vice J. Hawson.

F. T. Leversuch, Traffic Manager, London and Port Stanley, having resigned,

F. D. Burpee,
Superintendent, Ottawa Electric Railway.

P. A. Macdonald,
Public Utilities Commissioner for Manitoba.

J. E. Richards, heretofore Auditor and Treasurer, has been appointed Treasurer and Traffic Manager, Office, London, Ont.

W. H. Munro, Local Manager, Peterborough Radial Ry., Peterborough, Ont., who went overseas last summer with the Canadian Army Service Corps, mechanical transport branch, as a lieutenant, has been promoted to a captaincy.

W. F. Graves, Chief Engineer, Montreal Tramways Co., who was operated on in a New York hospital Jan. 5, left for Atlantic City Jan. 29 to convalesce.

A. E. Ames, Toronto, has been elected Chairman of the Board of Directors of the Duluth-Superior Traction Co., Duluth, Minn., a new office created by bylaw following the death of C. G. Goodrich, who had been President.

E. A. Evans, M.Can.Soc.C.E., formerly General Manager, Quebec Ry. Light and Power Co., Quebec, has been re-elected Grand Master of the Grand Lodge of Quebec, A.F. and A.M., for the current year.

Col. H. H. McLean, K.C., M.P., President, St. John Ry. Co., has been appointed in charge of the military district of New Brunswick, which has now been separated from Nova Scotia for military administration purposes. His son, Hugh McLean, has been admitted to the English bar recently and has been given a commission in the British Cavalry Reserve.

Geo. W. Lang, who has been appointed Claim Agent, Ottawa Electric Ry., Ottawa, Ont., was born there June 13, 1872 and entered that company's service in June 1892, since when he has been, to July 1896, conductor; July 1896 to Oct. 1908, Inspector; 1908 to 1909, Assistant Superintendent. He left the company's service in 1909, and until his present appointment, was engaged in private business in Calgary, Alta.

Wilford Phillips, Manager, Winnipeg Electric Ry., has been granted six months leave of absence, owing to ill health, and is now at Los Angeles, California. During his absence Harry Hartwell is acting Manager. The latter is a member of the American Society of Civil Engineers and the American Society of Mechanical Engineers and the for the past four years has been Assistant to Vice President, Pearson Engineering Corporation, New York, N.Y.

Capt. F. D. Burpee, Superintendent, Ottawa Electric Railway, will, it is said, be appointed Major of the 207th Battalion which is being organized for overseas service. During his absence, G. W. Lang, who was appointed recently as the company's Claims Agent, will act as Superintendent. Mr. Lang was in the company's service for a number of years and was Assistant Superintendent under J. E. Hutcheson. He removed to Calgary, Alta., where he was in the real estate business. A few days after volunteering for active military service he lost a leg in an automobile accident.

The Toronto Railway's advertising privileges on its cars have been leased to the Toronto Car Advertising Co. Inc., which was incorporated in New York State in 1915, the President being Henry Weinburg, 527 Fifth Avenue, New York, who is also President of the Car Advertising Co. and of the Keystone News Co. The Toronto Car Advertising Co. has been licensed to do business in Ontario and has an office at 304 C.P.R. Building, Toronto, M. Bloch being Manager. The Car Advertising Co., New York, handles the advertising in the Philadelphia Rapid Transit Co's cars at Philadelphia, Pa.

The London and Port Stanley Ry., which is operated by the London Railway Commission, London, Ont. is in the market for trailers cars and 90 tons of 80 lb. rails.

Opposition to Extension of Railway Charters in the Niagara Peninsula.

Among the bills before the Dominion Parliament's Railway Committee are two, viz., the Niagara, St. Catharines & Toronto Ry., and the Toronto, Niagara & Western Ry., in regard to which considerable opposition has developed on the part of the City of Toronto, and the Hydro Electric Power Commission of Ontario. The first named company obtained power in 1899 to build an extension of the old St. Catharines & Niagara Central Ry. to the Niagara River near Fort Erie, and an extension to Toronto, via Hamilton, and in 1913, was granted an extension of time for building this and certain branch lines in the Niagara Peninsula. The second company was originally incorporated as the Toronto & Hamilton Ry., to build an electric railway from Toronto to Hamilton, the projected route being along the right of way of the Niagara Power Co's line. The title of this company was subsequently changed to the Toronto, Niagara & Western Ry., and in 1903 it was enacted among other things that nothing in the act should give it power to construct its line along Burlington Beach, without the consent of Nelson Tp. respecting the part in the County of Halton, and the Burlington Beach Commission respecting the part in the County of Wentworth. In 1904 it was given power to extend its line from Hamilton to Niagara Falls, and in 1906 it was given power to extend its line from Hamilton to Windsor. These several acts were continued by amending acts, the last being in 1914, the prohibition as to building along Burlington Beach being continued, and three sections being added respecting the company's rights in the City of Toronto. Sec. 5 of the act of 1914 prohibits the receiving or discharging of passengers between the terminals in the city and the west boundary of the city, unless under the terms of a bylaw duly passed; sec. 6 prohibits the picking up or discharging of local passengers between the terminals and the western boundary of the city, but does not prevent the discharging of passengers from outside points at any place within the city limits; and sec. 7 deals with the rights of the City of Toronto as to construction within the city. Both these lines are being promoted by the same interests, the Canadian Northern Ry. Co.

The first bill came up a second time before the Railway Committee Feb. 22, when it was arranged to take it up again Mar. 2, in conjunction with that of the Toronto, Niagara & Western Ry. It is said that in addition to the City of Toronto, and the Hydro Electric Power Commission of Ontario, various municipalities interested in the Ontario Hydro Electric Railway Association of Ontario will appear in opposition to the bills.

Electric Railway Notes.

The London Street Ry. expects to rebuild some old cars in the near future.

The Sudbury-Copper Cliff Suburban Electric Ry. has bought two double truck cars from the Third Ave. Ry., New York.

The Sherbrooke Railway Light and Power Co. is in the market for two new men, near side cars.

The Hamilton St. Ry has put in operation at the request of the city council a cross town service on Sanford and Birch Avenues, from King St. to the base line, to relieve the congestion of traffic in the factory district.

The Edmonton Power Co. is applying

to the Alberta Legislature for the confirmation of a bylaw passed by the City of Edmonton, authorizing the execution of an agreement for a franchise to supply electric power in the city.

Commissioner Freeman is working out a new schedule for the Lethbridge, Alta., Municipal Ry., under which it is calculated that cars will travel a much less distance to give the same of service, and that they will be much more evenly distributed over the line.

The British Columbia Electric Ry., in return for aid given by soldiers in training in Victoria in keeping the tracks clear during the recent snow storms, is reported to have granted permission for all soldiers to travel free on the Victoria lines for a month.

The question of the cost of taking up and relaying the street railway tracks under the 13th St. subway, which has been in dispute between the Lethbridge, Alta., City Council, and the C.P.R., is being taken by the C.P.R., to the Board of Railway Commissioners for settlement. The amount involved is \$405.

The City Council of Windsor, and the councils of the towns of Walkerville, Sandwich, Ford City and Ojibway, are applying to the Ontario Legislature to constitute, with the assent of the electors of the several places, a joint public utilities

commission, to have all the powers under the Public Utilities Act in each of the municipalities. The reason given for the application is that the five municipalities are adjoining and front upon the Detroit River, and it would be more economical and more practical that the utilities and powers in which each of the municipalities have a common interest should be exercised by a joint commission having authority in each of the municipalities rather than by the existing separate authorities.

Judgment was delivered in the Quebec Superior Court, Montreal, Feb. 7, by Justice MacLennan, in the action brought against Mayor Martin, Controller Cote and ex-Controller Hebert, for contempt of court in passing a resolution granting a franchise to the Montreal Tramways Co., June 20, 1914, in face of an injunction restraining them from doing so. The judge held that there had been "a deliberate, wilful and discreditable breach of the injunction" on the part of Mayor Martin and ex-Controller Hebert, and fined them each \$1,000 and costs. The case against Controller Cote, who voted for the franchise, was held over for further consideration. Controller McDonald protested against the passing of the resolution. An appeal will, it is said, be made against the decision.

Electric Railway Finance, Meetings, Etc.

Brantford Municipal Ry.—The bylaw selling the Paris-Galt section of the Grand Valley Ry., to the Lake Erie and Northern Ry., on terms and conditions mentioned in Canadian Railway and Marine World for February, page 76, was finally approved by the Brantford, Ont., City Council, Jan. 28, by 10 votes to 3.

British Columbia Electric Ry., and allied companies:—

	Dec. 1915	Dec. 1914	July 1 to Dec. 31, 1915	July 1 to Dec. 31, 1914
Gross	\$600,667	\$671,063	\$3,210,146	\$3,998,899
Expenses	478,129	512,663	2,885,302	3,074,568
Net earnings	122,538	161,400	354,844	924,331

Cape Breton Electric Co.:—

	Dec. 1915	Dec. 1914	July 1 to Dec. 31, 1915	July 1 to Dec. 31, 1914
Gross	\$36,267.87	\$29,794.13	\$201,616.55	\$182,571.87
Expenses	19,625.69	18,777.62	108,316.46	110,115.80
Net	16,642.18	11,016.51	93,300.09	72,456.07

Dominion Power & Transmission Co.—

The statement presented at the annual meeting in Hamilton, Ont., Feb. 21, showed gross earnings for the year of \$2,353,956, and operating expenses \$1,352,001. After providing for bond interest, maintenance, renewal, and dividends and transferring \$500,000 from the profit and loss account of \$1,139,259 to the reserve fund, the net profits were \$639,259. The directors were re-elected. It was announced that 83 employees have enlisted.

Hamilton St. Ry.—Gross earnings for three months ended Dec. 31, 1915, \$158,730.28, against \$135,287.58 for same period 1914. Percentage paid to city, \$12,698.42 for quarter ended Dec. 31, 1915, against \$10,823.01 for same period 1914. Total percentage paid to the city in 1915, \$53,095.37, against \$54,712.08 in 1914.

Lethbridge Municipal Ry.—Returns for 1915 as submitted to the Lethbridge, Alta., City Commissioners, show that there was a surplus of \$3,677.64 over operating expenses for the year. The total gross earnings reported were \$41,740.51; operating expenses, \$38,062.87. The actual deficit on the railway to Dec. 31, is \$34,708.96. The commissioners have estimated the revenue for the cur-

rent year at \$45,070, and the expenditure at \$39,550.40. The amount estimated to be raised from the general taxes against the estimated deficit is given as \$31,590.40.

London St. Ry.:—

	Jan. 1916	Jan. 1915
Gross	\$32,462.68	\$30,616.10
Expenses	21,641.53	21,518.62
Net	10,821.15	9,097.48

Moncton Tramways, Electricity & Gas Co.—The annual meeting called to be held in Moncton, N.B., Feb. 9, was adjourned to Mar. 9, there not being a quorum present.

The Eastern Trust Co., as trustee under the company's trust mortgage deed of Jan. 16, 1912, received tenders, Jan. 31, for the sale of sufficient bonds at prices not in excess of 5% above par, to exhaust the sum of \$13,000 at the credit of the sinking fund. The trust deed provides for the drawing of bonds to be redeemed in the event of bondholders not offering to sell.

Toronto Ry. The receipts, and percentages paid to the city for 1916, compared with those for 1915, are as follows:

January, 1916—Receipts, \$473,784.15; city percentage, \$68,846.83.

January, 1915—Receipts, \$471,226.33; city percentage, \$70,486.33.

Winnipeg Electric Ry.:—

	Dec. 1915	Dec. 1914	Jan. 1 to Dec. 31, 1915	Jan. 1 to Dec. 31, 1914
Gross	\$377,121	\$368,100	\$3,199,711	\$3,199,711
Expenses	210,427	230,719	2,246,519	2,416,209
Net	166,694	137,381	1,253,222	1,685,093

Winnipeg Electric Ry.—At the adjourned annual meeting Feb. 24 it was announced that the financial statements would be issued in a few days thereafter. The directors were re-elected and J. D. McArthur, contractor, Winnipeg, was elected to fill the vacancy caused by Sir Wm. Van Horne's death. The following is the board for the current year:—Sir Wm. Mackenzie, President; A. M. Nanton, Vice President; F. Morton Morse, Secretary-Treasurer; Sir Donald Mann, D. B. Hanna, G. V. Hastings, Hugh Sutherland, J. D. McArthur, R. J. Mackenzie.

Marine Department

St. Lawrence Ship Channel Improvements.

During 1915, 15 dredges and attending plant were kept at work day and night, deepening and improving the ship channel, from Montreal to Island of Orleans, removing a total of 8,462,957 cub. yds. of material, varying from soft clay to hard shale rock. Considerable work was done widening the channel through Montreal harbor, in St. Mary's current and Longueuil shoal, where it is proposed to widen the channel from 700 to 800 ft. Good progress in deepening the channel to 35 ft. at extreme low water was made, between Three Rivers and Montreal, 8 miles having been accomplished. There remains very little of the channel through lake St. Peter that is not deepened to 35 ft. The Cap Charles channel, Cap-a-la-Roche district, was completed to 30 ft. at extreme low water, and widened from 300 to 450 ft. and to 650 ft. at the curve. A new range of lights was constructed to mark the new centre line. The channel was buoyed to give the increased width and opened to navigation. The Grondines channel was also completed to 30 ft. deep and 450 ft. wide. A new range of lights was built to mark the new centre line. This channel was also buoyed out to give the increased width. The widening of Cap-a-la-Roche curve is almost completed, but there remains considerable deepening and cleaning up to be done yet. There is a large area of rock which has been broken by the rock cutter, in readiness for work during the current year.

The new channel for light draught vessels and tows, through the islands opposite Sorel, to Lake St. Peter was completed to 15 ft. deep at low water and a minimum width of 400 ft. and will be opened for navigation in the spring. New lighthouses have been built to mark the different courses. This will oblige all tows, etc., to keep out of the ship channel. There is now a distance of over 50 miles, between Lake St. Peter and Montreal, where the tows and light draught vessels can keep out of the ship channel. This will avoid the delays and annoyance caused to ocean steamers by these vessels.

Dredging operations in the north channel below Quebec were carried on vigorously, and good progress was made, two dredges being kept at work during the whole season. They removed 2,197,568 cu. yds., there still remains 6,928,805 cu. yds. to be dredged. This channel is to be 1,000 ft. wide and is being deepened to 35 ft. at extreme low tide. Where there was only 7 ft. at low tide, there is now a depth of about 26 ft.

With the new dredge now building by Canadian Vickers, Ltd., Montreal, greater progress will be made. The completion of this dredge has been unavoidably delayed owing to conditions arising out of the war.

A commencement has been made on the construction of the compensation dams, as recommended by the commission appointed to investigate upon the water levels of the St. Lawrence river at and below Montreal. In order to lessen the cost, it was decided to utilize the dredging material taken from the ship channel and deposit it on the site of the proposed dam. A considerable amount was dumped at Repentigny (between Ile

a Bague and Ile Bellegarde), chenal Corbeaux (between Ile de Grace and Stone island), chenal des Barques (between Ile aux Barques and Ile du Moine), Pointe du Lac, at foot of Lake St. Peter. It is proposed to continue depositing at these points in the spring while the water is high, in order to be able to utilize as much of the dredged material as possible.

The Batiscan-Bengore Head Collision Judgment Reviewed.

The Minister of Marine has reviewed the sentence passed on Capt. Green of the s.s. Batiscan, in connection with the collision with the s.s. Bengore Head in the St. Lawrence River, Aug. 1, 1915. The sentence given by the Dominion Wreck Commissioner, and concurred in by one of the assessors, the other dissenting, was suspension of his master's certificate for two years, with the issue of a first mate's certificate for the second half of the suspension term. As mentioned in Canadian Railway and Marine World for Feb., this matter was taken up by the Mercantile Marine Association in England, of which the captain is a member, and the British Board of Trade was approached with a view to having the sentence changed, but without effect. It was then taken up with the Dominion Minister of Marine, and representations were made, pointing out "the severity of the punishment and its disproportion with sentences inflicted by other tribunals of like character, and suggesting that although the evidence before the court was conflicting, the penalty would be amply met by the issuing of a first mate's certificate to the master, and the suspension being reduced to one year." The Minister of Marine has confirmed the suspension of the master's certificate for the full two years, and has decided that a first mate's certificate be granted for the whole period of the suspension.

St. Lawrence River Navigation.

Mention has been made in Canadian Railway and Marine World, at intervals, of the undoubted bias which certain Liverpool interests evidence against the navigation of the St. Lawrence River. It is therefore somewhat pleasant to note report of the Liverpool Underwriters Association for 1915, from which the following is extracted:—"This subject has occupied the attention of the committee on frequent occasions during many years, and has been referred to repeatedly in these reports. It is gratifying to the committee to be able to state in this report that on the opening of navigation in May new regulations framed by the Dominion Government were brought into operation. Under these regulations separate channels were assigned for large and small vessels, so as to minimize the risk of collision, and a uniform system of lighting these channels by gas buoys and gas beacons was set up, those on the starboard hand going up stream being occulting red lights and those on the port hand occulting white lights. In addition to these improvements the pilotage system was placed on a more satisfactory footing, and instead of being controlled by a corporation, as heretofore, it is now in charge of the Minister of Marine and Fisheries."

Canada's Shipping Under Present War Conditions and its Future.

The condition of Canada's shipping under the existing circumstances, and the question as to what steps should be taken by the Government for its future development formed the chief topic of a discussion in the House of Commons, Feb. 10. A. K. Maclean, M.P. for Halifax questioned the Government as to whether it had, during the past year considered the idea of supplying some tonnage in Canada, or of encouraging it by advancing money for the construction of vessels. He pointed out that Canadian trade was likely to suffer in the future owing to the present lack of tonnage, and stated that France had undertaken to advance money to persons willing to buy ships or to have them built.

The Minister of Marine said that the subject had received the Government's serious consideration, but there were certain difficulties in the way. For the present, the Admiralty has assigned 53 vessels to the Atlantic trade, and these are taking away, from St. John and Halifax, Canadian goods, as fast, as the railway companies can get them to these ports, so that there is little disturbance of Canadian trade at present. In regard to the suggestion that people should be encouraged to increase tonnage, he said that the people did not appear disposed to put their money very largely into ships, the expense of building and the cost of raw materials being so high. Of course, on the other hand freights are exceedingly high, but there is great uncertainty as to how long such a condition will continue.

Hon. W. Pugsley contended that the Government should immediately take steps to encourage shipbuilding, irrespective of whether the war lasted one year or ten years, and members of other maritime constituencies stated that shipbuilding could not be carried on successfully in the Dominion so long as the present tariff obtained, because so long as British shipbuilders can build vessels from 35 to 50% below what they can be built for in Canada, there is little prospect of vessels being built to any extent on this side. Vessels built in Great Britain enter Canada without paying any duty, but Canadian shipbuilders have to pay high duty on a number of articles used in building vessels, adding, it is stated, \$10 a ton to the cost of building. It was pointed out that when certain machinery is built in Canada and exported, the manufacturer can obtain a rebate of 99% of the amount paid for duty on articles used in the manufacture of that machinery, and it was suggested that vessels built in Canada and exported, should be allowed the same rebate. Shippers should also be able to go into outside markets, purchase vessels and register them in Canada free of all duty, irrespective of where the vessel was built.

Shipbuilders throughout Canada have for several years been agitating for Government assistance in the building up of the shipbuilding trade, and have suggested subsidies for the home built article and high tariffs for the imported one, but no decision has been reached upon which any policy could be formulated, and the discussion above noted was purely academic.

Dry Dock Project at Vancouver, B.C.

The North Vancouver city council, at a meeting at the end of January, passed a resolution accepting the amended offer of the Amalgamated Dry Dock & Engineering Co. for the construction of a dry dock and shipbuilding plant at an estimated cost of \$5,458,418.37, and issuing instructions for the preparation of a by-law providing for a fixed assessment at a nominal rate for 35 years, and for the guaranteeing of bonds, as to principal only, to the extent of \$750,000, for submission to the ratepayers. In regard to a Dominion Government subsidy under the act granting aid for the construction of dry docks, it is said that application has been made to the Government for the subsidy, and while no subsidy agreement has been entered into, the Government has expressed its willingness to grant the aid provided the company can finance the undertaking. The dimensions of the proposed dock are as follows,—length from caisson stop to head wall 1,150 ft., width of entrance 110 ft., depth over sill at extreme high water spring tides 41 ft., depth over sill at low water spring tides 24.25 ft., the dock to be divided into two parts 650 and 500 ft., respectively. The subsidy provided by the Government would be at the rate of 4 per cent. for 35 years on an agreed capital expenditure. It is stated that arrangements for the financing of the project have been completed in New York.

Great Lakes Vessels in Ocean or Coasting Trade.

The Canadian Lake Protective Association has compiled the following particulars respecting lake steamships enrolled in the Association. On Aug. 4, 1915, the following vessels were down as engaged in Trans Atlantic or European trade or coasting south of the Gulf of St. Lawrence and in the West Indies:—Newona, Tagona, Kenora, Midland Queen, Glenellah, Dundee, Dunelm, Donnacona, Strathcona, Winona, Neepawah, C. A. Jaques, Turret Court, Scottish Hero, Neebing, Port Colborne, Dwyer, Glenfoyle, Glenmavis, Fairmount, Glenmount, Stormount, Westmount, Northmount, Kaministiquia. The Midland Queen, Dunelm, Donnacona and Fairmount were lost at sea.

On Aug. 4, 1915, the following vessels were trading between Montreal and Sydney, N.S.—Acadian, Canadian, D. A. Gordon, A. E. McKinstry, Renvoyle, Fordonian, Empress of Fort William, Empress of Midland, Rosedale, Meaford, Kinmount, Rosemount, Ungava, Turret Crown.

On Sept. 23, 1915, a list compiled showed slightly less than half of the above vessels returned to the lakes for the movement of the new crop with some few others to come in. In December, immediately after the close of navigation, a list compiled showed these vessels at sea:—Acadian, D. A. Gordon, A. E. McKinstry, Canadian, Empress of Midland, Stormount, Glenmount, Kinmount, Northmount, Rosemount, C. A. Jaques, Dundee, Glenellah, Scottish Hero, Empress of Fort William, Kenora, Neepawah, Renvoyle, Strathcona, Tagona, Winona, Newona, Neebing, Kaministiquia, G. R. Crowe, Glenfoyle, Glenmavis, Calgary, Port Colborne, Port Dalhousie, Dwyer, Algonquin. The Northmount was lost at sea in December and the G. R. Crowe and the Algonquin while still on the lakes have been sold for ocean trade.

Navigation by Masters with Coasting Certificates.

A bill was introduced in the House of Commons, Feb. 7, to amend the Canada Shipping Act, by repealing sec 3, ch. 65, of 1908, and to substitute the following:

(f) Coasting voyage means a voyage between any port or place on the eastern coast of Canada and any other port or place on such coast, or in Newfoundland, Labrador, St. Pierre or Miquelon, or any port or place on the eastern coast of the United States of America, Mexico, Central America or in the West Indies, or on the eastern coast of South America, not further south than 40 deg. south latitude; and also means a voyage between any port or place on the western coast of Canada and any other port or place on such coast, or on the western coast of the territory of Alaska, or of the United States of America, the western coast of Mexico, Central America or South America, not further south than 40 deg. south latitude."

A bill making similar provisions was introduced in 1914, and was referred to the Committee on Marine and Fisheries, where it rested.

On a discussion re masters' and mates' examinations, in the House of Commons, Feb. 10, this matter was mentioned, and the Minister of Marine said that he had suggested that in addition to a deep sea certificate, and a coasting certificate, there might be another certificate, which might be called a limited foreign certificate, enabling captains to go, not only on coasting voyages, but to greater distances than at present, and when the bill comes up, the Government will be in a position to give a matured opinion on the subject. It is stated that owing to the limitations of a coasting certificate many Canadian vessels have withdrawn from the register, and there is a tendency to register in the U. S. rather than in Canada.

Steamship Service between Great Britain and Sweden—A press dispatch stated to have been received from Stockholm, Sweden, via London, in commenting on a proposed steamship service between Great Britain, Sweden and Russia, says,—"It is learned that steam ferries carry merchandise trucks between Gothenburg, Sweden, and Birmingham, Eng., without trans-shipment." It would be interesting to know if these vessels are of what is known as the alligator type.

Government Aid to Shipbuilders in Great Britain—A Glasgow, Scotland press report states that the British Government has decided to grant facilities and financial assistance to shipbuilders, to complete about 500,000 tons of mercantile shipping which is nearing the launching and fitting out stages, and thus relieve the markets from the excessive freight rates.

The Blantyre Transportation and Coal Co., Ltd. has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital and office at Montreal, to carry on a general lumber and coal business, and in connection therewith to own and operate steam and other vessels, and to carry passengers and merchandise.

The Long Sault Development Co's project to dam the St. Lawrence River at the Long Sault Rapids, is expected to come before the United States Supreme Court during March. The charter, which was granted by New York State, has been declared to be unconstitutional, and the company has filed an application for the reopening of its case.

Dominion Government Steamships and Icebreakers.

During a discussion in the House of Commons, Feb. 10, on a vote for \$1,180,000 for maintenance and repairs to Government steamships and icebreakers, the Minister of Marine stated that there are 27 vessels in the ocean and river service, viz,—Aberdeen, Aranmore, Bellechasse, Brant, Champlain, Dollard, Druid, Estevan, Frontenac, Grenville, Lady Grey, Lady Laurier, Lambton, Lansdowne, Maggie May, Montcalm, Montmagny, Newington, Prince Edward Island, Rouville, Scout, Shamrock, Simcoe, St. nley and Vercheres, and the new icebreaker now under construction at Montreal. The s.s. Montmagny was sunk in collision in the St. Lawrence about two years ago, and the Department has entered into a contract to raise the vessel and place her in dock at Levis, on the no cure no pay principle, for \$27,000. It is expected that the vessel will be successfully raised, repaired and ready for operation by the summer, and \$55,000 has been included in the estimate for such repair. The s.s. Prince Edward Island, which is really under the Department of Railways and Canals, as a car ferry, is being operated across Northumberland Strait in place of the s.s. Minto, sold to the Russian Government, and is giving satisfactory service. Four icebreakers are in service, the Lady Grey and Montcalm in the St. Lawrence, and the Prince Edward Island and Stanley in the Northumberland Strait between New Brunswick and Prince Edward Island.

British Columbia Merchant Marine Limited.

Reference was made in our last issue to arrangements which were being made for the organization of a company with the name of the British Columbia Merchant Marine, Ltd., to meet the requirements of the province as regards vessel accommodation, and develop shipbuilding. The Manufacturers' Association of British Columbia, an organization comprising all forms of industry in the province, announces that it is acting as godfather to the project, and is proceeding to inaugurate the movement for the formation of the company, to make the enterprise a provincial organization, to prepare draft incorporation papers as a basis on which the association can go to the public, to eliminate all question of watered stock, promotion expenses or commission, to ask the public to subscribe to a general scheme with the understanding that subscribers themselves elect a provisional board of directors who shall decide the company's policy in all respects, including the building and type of ships, trade routes and general handling of the routine of the business, to give the services of the association and its officers free to the new organization until it is handed over to the provisional directors, and after a thorough canvas of the province, to call a meeting of subscribers to elect a provisional directorate and thereupon to hand over to it the whole affairs of the incorporation for decision in regard to approaching the Government for assistance or otherwise.

From present indications it is the company's intention to build wooden vessels at first, and they will probably be equipped with Diesel oil engines. When the steel market is more favorable, steel vessels will probably be built.

Mainly About Marine People.

J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Ltd., returned to Montreal, Feb. 2, after a business trip to England.

W. J. McCormack, heretofore Superintendent, Northern Navigation Co., Sarnia, Ont., has been appointed Superintendent, Algoma Central Steamship Line, Sault Ste. Marie, Ont., vice S. V. McLeod, resigned.

Capt. Alfred Ellis, formerly in the Canada Atlantic and Plant Line Steamship Co.'s service, died at Halifax, N.S., Feb. 5. He had been with the company for 25 years, and, at various times, had been in command of the steamships A. W. Perry, Evangeline and Halifax. He retired from active service in 1915, shortly after the loss of the company's s.s. A. W. Perry, on June 8.

Commander Engineer John Carmichael, R.N.R., who was awarded the D.S.O. recently for bravery and devotion to duty in mine sweeping and mine laying operations, is serving on the auxiliary cruiser Princess Marguerite, one of the vessels built recently in Scotland for the C.P.R. Pacific Coast Service, and which, with the s.s. Princess Irene, was taken over by the Admiralty early in the war. He was formerly chief engineer on the C.P.R. s.s. Charmer.

Alex Lewis, Secretary, Toronto Harbor Commission, who has been granted leave of absence and is at present a captain in the Queens Own Rifles, Toronto, will, it is said, be second in command of the Bantam Battalion which is to be organized in Toronto. **M. R. McCallum**, Assistant Secretary of the Commission, who has been acting as Secretary since Mr. Lewis was granted leave of absence, is also going to the front as Assistant Adjutant in the same battalion.

Hugh Strain Carmichael, whose appointment as Passenger and Freight Manager, Canadian Pacific Ocean Services, Ltd., London, England, was announced in our last issue, was born at Glasgow, Scotland, Mar. 7, 1874, and entered transportation service in Mar. 1889, since when he has been, to Apr. 7, 1891, in Passenger Department, State Line, Glasgow; Apr. 7, 1891, to Dec. 12, 1895, in Passenger Department, Allan Line, Glasgow; Dec. 13, 1895, to May 18, 1903, in Freight and Passenger Department, C.P.R., Glasgow; May 19, 1903, to June 30, 1905, in Passenger Department, C.P.R., Liverpool; July 1, 1905, to Apr. 14, 1907, Passenger Agent, C.P.R., Liverpool; Apr. 14, 1907, to Dec. 31, 1915, General Passenger Agent for Great Britain and Europe, C.P.R., London, Eng.

W. E. Burke, who has been elected President, Dominion Marine Association, for the current year, was born at Belleville, Ont., Sept. 23, 1881, and entered transportation service May 1, 1905, since when he has been, to Dec. 1, 1905, purser on s.s. Picton, Richelieu & Ontario Navigation Co., Montreal, and Toronto; Dec. 1, 1905, to Dec. 31, 1906, Soliciting Freight Agent, R. & O. N. Co., Toronto; Dec. 31, 1906, to Dec. 31, 1907, Travelling Freight Agent, same company, Toronto; Dec. 31, 1907, to Apr. 19, 1909, Travelling Freight Agent, Mutual Steamship Co., Toronto; Apr. 10, 1909, to Apr. 1, 1910, General Freight Agent, Merchants' Mutual Line, Toronto; Apr. 1, 1910, to Jan. 1, 1914, Traffic Manager, Merchants' Mutual Line, Toronto; since Jan. 1, 1914, Assistant Manager, Canada Steamship Lines, Ltd., Montreal and Toronto.

Shipping Federation of Canada.

The annual meeting was held at Montreal, Feb. 9, when the report showed that 810 vessels arrived at Montreal during 1915, against 916 in 1914. A large

W. E. Burke.
Assistant Manager, Canada Steamship Lines, Ltd.,
and President, Dominion Marine Association.

H. S. Carmichael.
Passenger and Freight Manager, Canadian Pacific
Ocean Services, Limited.

number of the vessels usually trading with Canada were requisitioned by the Admiralty for war purposes, and a number of tramps were engaged for the extra export business. Nine vessels enrolled

with the Federation were lost owing to German submarines. In most of the exports, large increases were shown, but considerable decreases took place in the quantities of grain and flour shipped. (It ought to be mentioned here, that, owing to shortage of tonnage, and other causes, large quantities of Canadian wheat and flour were shipped to Europe from U. S. ports. EDITOR.)

The President, A. A. Allan, paid tribute to the co-operation of the shipping companies and their employees, in connection with war shipments, including the transportation of troops, and also stated that the thanks of the Federation were due to the Minister and Deputy Minister of Marine, for the attention given to all matters brought to their attention, and also to the Militia Department.

The officers for the current year are:—President, A. A. Allan; Treasurer, J. R. Binning; Assistant Treasurer, E. W. Foulds; Executive Committee A. A. Allan; W. R. Eakin, J. R. Binning, R. W. Reford, D. W. Campbell, Jno. Torrance and A. MacKenzie; sub-committees, bill of lading, W. I. Gear, John Torrance, J. R. Binning and D. A. Watt; harbor equipment, A. A. Allan, W. I. Gear and John Torrance; Manager and Secretary, Thos. Robb.

Atlantic and Pacific Ocean Marine.

Furness Withy and Co. have purchased the steamship Kilbridge, Kilchattan and Kilkerran, from Connel Bros. Ltd., Glasgow, Scotland. The first named was built in 1901 and the two latter in 1906.

The C.P.R. s.s. Princess Ena, of the British Columbia Coast Service, is now running between Vancouver and Vladivostok, with war supplies. She was operated on the Alaskan run with freight cargoes for some time, but has been laid up at Victoria for about 18 months.

The C.P.R., s.s. Metagama, which had been for some time, under requisition by the Admiralty, and released, was scheduled to sail in her regular service, from St. John, N. B., Feb. 5. Her sailings have however been cancelled for the present, as she has again been requisitioned by the Admiralty.

The Union Steamship Co. of New Zealand's s.s. Leirtrim has been completed at Middlesbrough, Eng., and has undergone her open sea trials, which were reported as satisfactory. She is of the three deck type with bridge and forecastle, and has a deadweight capacity of 13,000 tons. Her dimensions are, length 491 ft. 7 ins., breadth 60 ft., depth 39 ft. 4 ins.

The crew of the s.s. Beothic returned to St. John's, Nfld., Feb. 1, from Archangel, Russia, where they had taken the vessel for use as an icebreaker by the Russian Government. She sailed from Sydney, N.S., Nov. 23, 1915, via Belle Isle Strait and the coast of Greenland, and reached the White Sea, Dec. 9. On account of ice conditions there, delivery of the vessel was made at Vega, instead of Archangel, and the crew returned via Petrograd, Newcastle-upon-Tyne, Eng. and St. John, N. B.

The s.s. Paliki, stated to be owned by F. E. Hall and Co., Montreal, and now lying at Liverpool, England, is reported sold there for £28,500. She was formerly owned by the Algoma Central Steamship Line, a subsidiary of the Algoma Central and Hudson Bay Ry., and has been under charter for Atlantic service for some time. She was built at Sunderland, Eng.

in 1889, and is of steel construction and equipped with triple expansion engines with cylinders 19, 30 and 48 ins. diam., by 36 ins. stroke, supplied with steam by a Scotch boiler 15½ by 10½ ft. at 180 lbs. Her dimensions are, length 240 ft., breadth 36 ft., depth 17 ft., tonnage, 1,578 gross, 993 register.

Canada Steamship Lines s.s. Dunelm, which sailed from Sydney, N. S. in Oct. 1915, for Manchester, Eng., and after reporting from Cape Race, Oct. 17, has not since been heard from, has now been officially declared as missing. She was built at Sunderland, Eng. in 1907, for R. O. & A. B. Mackay, Hamilton, Ont., and was later absorbed, with other vessels of that company, into Inland Lines Ltd., and eventually into Canada Steamship Lines Ltd. She was of steel construction with steel tank top, steel boiler house, four water tight bulkheads, hatches spaced 24 ft. centres, complete electric plant, and was also equipped with triple expansion engines with cylinders 19½, 33 and 54 ins. diam., by 36 ins. stroke, supplied with steam by 2 Scotch boilers under forced draught, 12½ by 11½ ft., 180 lbs. Her dimensions were, length 250 ft., breadth 43 ft. 1 in., depth 26½ ft.; tonnage, 2,318 gross, 1,480 register. Along with other vessels under the same ownership, she was chartered for Atlantic Ocean service about a year ago, and has since been running to and from English ports.

Maritime Provinces and Newfoundland.

A press report states that W. F. Coaker, St. John's Nfld., intends to erect a shipbuilding plant at Catalina, on the north shore of the colony.

The Marine Department fog alarm station and oil store at Cape Spencer, Bay of Fundy, was burnt out, Feb. 5, the damage being estimated at \$6,000.

The Miramichi Navigation Co's board of directors as elected at the recent annual meeting at Chatham, N. B., is as follows: Hon J. P. Burchill, President; J. D. Creaghen, Vice President; John McDonald, W. B. Snowball, J. D. B. F. McKenzie, Robt. Murray and R. A. Snowball.

It is announced that it was decided at a recent meeting of directors of the Nova Scotia Steel and Coal Co., to take up in a practical way the building of steel vessels at New Glasgow, or Ternton, N.S., and that the company will experiment on the matter by building a vessel for its own use.

The Nova Scotia schooner H. R. Silver, bound from St. John's Nfld. to Brazil with fish, was abandoned at sea recently, and the crew saved by the s.s. Carthaginian, and landed early in Feb. at Halifax. The vessel has been reported as a floating derelict and a menace to navigation.

The Minister of Marine and Fisheries announced in the House of Commons, Feb. 9, that regulations have been issued requiring French trawlers, after coaling at Canadian ports, and obtaining clearance, to give an undertaking not to fish within 12 miles of land, and the Dominion Government is exercising the necessary supervision to prevent breaches of such undertaking.

The Victoria Steamship Co's s.s. Victoria was burned to the water's edge, Feb. 4, while in winter quarters at St. John, N. B. There was no watchman on board, and the origin of the fire is un-

known. The loss is stated to be covered by insurance. She was built at St. John in 1897, and was equipped with machinery from the old U. S. s.s. St. Lawrence, which was taken to St. John during the civil war. For the past 18 years she has provided a service between St. John and Fredericton, but has not been financially successful. Arrangements were in progress for a change of ownership, the control having passed from St. John to Fredericton hands, with a view, it is said of selling to a U. S. syndicate. Her dimensions were, length 191.2 ft., breadth 30 ft., depth 7.9 ft.; tonnage, 1,002 gross, 631 register.

Ontario and the Great Lakes.

The Chatham, Ont., Board of Trade is arranging to send a deputation to the Dominion Government to urge that the Thames River be dredged as far as Chatham, so that lake vessels will be able to navigate to that point.

A press report states that Canada Steamship Lines s.s. Rochester will take the place of the Northern Navigation Co's s.s. Majestic recently destroyed by fire, during next summer. The Northern Navigation Co. is a subsidiary of Canada Steamship Lines Ltd.

A. B. Mackay, formerly of R. O. & A. B. Mackay, Hamilton, who has recently been engaged in buying and selling steamships, has issued a writ against the Reid Wrecking Co., Sarnia, for the recovery of \$12,000 said to be due on an agreement of sale in connection with a vessel.

The s.s. L. C. Waldo, formerly owned by the Roby Transportation Co., Detroit, Mich., and wrecked during the storm on the Great Lakes in Nov. 1913, and abandoned as a total loss, has, after being salvaged and overhauled, been re-registered at Toronto, under the name of Riverton. She is owned by the Mathews Steamship Co., Toronto.

The Niagara, St. Catharines and Toronto Navigation Co's s.s. Garden City has had her engines overhauled during the winter. There is no confirmation of the press report that the company is negotiating for the sale of the Garden City, and for the purchase of the s.s. Rapids King from Canada Steamship Lines Ltd.

The U. S. Survey reports the levels of the Great Lakes in feet above tidewater for Jan., as follows: Superior 602.59; Michigan and Huron 579.22; Erie 571.68; Ontario 245.05. Compared with the average January levels for the past ten years, Superior was 0.62 ft. above; Michigan and Huron 0.76 ft. below; Erie 0.09 ft. below and Ontario 0.51 ft. below.

The Public Works Department has completed the dredging of a channel 22 ft. deep from the north point of Low Island, Lake Huron, west of Little Current, to deep water west of Picnic Island. The cut between the two islands is 200 ft. wide, and is to be increased to 300 ft. The channel will be marked by buoys by the reopening of navigation.

A press report from Michigan states that the U. S. Government will spend between \$100,000 and \$200,000 during the current year, on bettering the waterways, erecting lights and improving conditions generally for mariners, in the neighborhood of Keeweenaw Point. At Five Mile Point, about five miles southeast of Eagle River, a lighthouse is to be built, costing about \$75,000.

The International Joint Waterways

Commission held meetings at International Falls, Minn., at the end of Jan., to hear evidence regarding the levels of Rainy Lake and Rainy River, which, it is alleged have been lowered by the development of water power at International Falls by the Minnesota and Ontario Power Co. Evidence was also taken with the view of maintaining a regular level in the Lake of the Woods.

The Great Lakes Transportation Co., of which Jas. Playfair, of Midland, Ont., is President, is reported to have purchased the s.s. A. E. Stewart from the Stewart Transportation Co., Detroit Mich., for \$225,000. She was built at West Bay City, Mich. in 1902, of steel on the channel system with steel tank top, three watertight and two non-watertight bulkheads, steel boiler house, steam pump wells and complete electric light plant. She was built under special survey and is equipped with triple expansion engines with cylinders 20, 33 and 45 in. diam. by 42 in. stroke, 1,100 i.h.p. at 85 r.p.m., and is supplied with steam by 2 Scotch boilers, 14 by 12 ft. at 170 lbs. Her dimensions are, length 356 ft., breadth 50 ft., depth 28 ft.; tonnage, 3,943 gross, 2,049 register.

British Columbia and Pacific Coast.

The Grand Trunk Pacific Coast Steamship Co's s.s. Prince Rupert has resumed service between Vancouver, Prince Rupert and Anyox after overhauling, replacing the s.s. Prince George, which is now being overhauled.

The Dominion Government lighthouse and buoy tending steamship Quadra, which broke one of her propeller blades recently, has been repaired at Esquimalt, and has returned to the Gulf of Georgia, where an acetylene beacon buoy is being established on the Drew Harbor spit in the Sutil channel.

The West Vancouver Ferry Co. has instructed its Secretary to offer to sell its assets to the municipality for the amount of its outstanding liabilities. It is stated that a majority of the ratepayers favor the proposal, and it is likely that a bylaw will be submitted at an early date, to authorize the purchase.

A press report from Vancouver states that the C.P.R. will put on an increased steamship service between Victoria and the north during the coming summer, owing to the heavy advance bookings for the season. The s.s. Princess Charlotte will it is said be utilized during June, which is the heaviest traffic month on this route.

At a meeting of the Port Moody, B.C., City Council, Feb. 8, a proposal, said to emanate from a group of prominent shipping interests, was discussed. It was announced that an option had been obtained on certain land with a large water frontage on Burrard Inlet, and provided certain concessions could be secured, it was the intention to locate a large shipbuilding plant there.

The St. Michael's Trading Co., Wrangel, Alaska, will operate a bi-weekly launch service between Wrangel and Telegraph Creek, during next summer. The vessels will be driven by gasoline power, and will have accommodation for about 12 passengers and five tons of freight. The service will be from the opening of navigation about the end of May, to the close of navigation early in October. The trip occupies about three days.

The Alaska Steamship Co's s.s. Mari-

posa, which was wrecked in the Lama Passage, Oct. 8, 1915, is being overhauled and repaired at Esquimalt. She was floated on Nov. 23, by the British Columbia Salvage Co., and repairs to the hull were made at Seattle, the balance of the work being undertaken by Yarrows Ltd. It is stated that the repairs will cost about \$250,000, and that when completed, the vessel will re-enter the Alaska trade.

The Grand Trunk Pacific Coast Steamship Co. announces that it will extend its service to Alaska next summer. It is stated that the service will probably be started by one of the company's smaller vessels, but during the tourist season, the steamships Prince George and Prince Rupert will be run through from Seattle, Victoria, Vancouver to Prince Rupert, Ketchikan, Wrangel, Juneau and Skagway. A tri-weekly service will be run between Seattle and Prince Rupert and a weekly service between Prince Rupert and Skagway.

British Control of Shipping.—An Imperial order in council has been issued providing for a more stringent control of shipping. After Mar. 1, no British vessel exceeding 500 tons, except it is engaged in the coasting trade, will be allowed to proceed on any voyage, unless a license to do so has been granted by the Board of Trade. Another order in council provides for a restriction of imports, so that a number of vessels may be released for war purposes. Almost the whole of the steamships engaged in Canadian trade are registered in Great Britain, but as these have been, more or less, engaged in war trade since the commencement of the war, it is not anticipated that they can suffer any further restriction.

The Wire Drag has revolutionized hydrographic surveying, says the annual report of the United States Coast and Geodetic Survey. It has long been realized that soundings with the leadline, no matter how carefully and closely spaced, were not infallible, and that submerged rocks and ledges were often missed, as has been demonstrated by numerous wrecks and frequent damage due to striking unknown rocks in surveyed waters; but with the development of wire drag hydrography, these submerged dangers have been discovered and charted.

The Huntsville, Lake of Bays and Lake Simcoe Navigation Co's annual meeting was held at Huntsville, Ont., Feb. 11, when the annual report was adopted. The balance remaining in hand for 1915 was carried to the credit of profit and loss, no dividend being declared. The directors were re-elected as follows:—C. O. Shaw, Huntsville, President; H. Foster Caffee, Brockville, Ont., Vice President; W. J. Moore, Huntsville, General Manager and Secretary; J. W. McKee, Huntsville, Treasurer.

Harbor Expenditure at Port Nelson.—Replying to questions in the House of Commons on Feb. 8, the Minister of Railways and Canals stated that expenditures on dredging, lighting and other improvements at Port Nelson, Hudson Bay, so far as his department was concerned, were, to Jan. 1, 1916, \$5,018,711.74, and estimated amount required to complete the work, \$5,000,000.

Montreal Transportation Co. Ltd.—The board of directors elected for the current year at the recent annual meeting, is as follows:—B. McLennan, President; Farquhar Robertson, Vice President; L. L. Henderson, Managing Director; H. A. Calvin, A. Kingman, G. L. Ogilvie and A. G. Thomson. The Secretary is W. Crawford.

Montreal Harbor Commissioners Propose Railway Electrification.

An important feature of the Montreal Harbor Board's annual report is the section dealing with the electrification of the existing harbor railways, and the necessary future extension of the same. The report says:—"The increase in the railway traffic of the port and the mileage of trackage in operation makes it important to proceed with the utmost dispatch in establishing facilities which will not only retain Canadian trade, but which, by their superiority over those provided at competitive ports, will attract additional business. With this object in view the commissioners have, during the past year, devoted much time and thought to a study of a scheme for the complete electrification of the harbor railway terminals, visiting and inspecting in the meantime the electric freight terminals of the New York Central, Pennsylvania, and New York, New Haven & Hartford Railroads at New York, Oak Point, New Rochelle, etc., where the application of electricity had proved successful in the movement of freight at the various terminals. It was also ascertained that, in addition to the primary object of overcoming the smoke nuisance, the application of electricity had proved that it had, among many other, the following advantages over steam for railroad traction:—Economy in operation and maintenance; flexibility of control; availability for immediate service; fewer units required for equal service; elimination of corrosion of steel and galvanized iron by acid gases; fire danger reduced; and standby losses much lowered. As a result of this investigation, an expert electrical engineer has, for some time

past, been engaged in studying on the ground the railway conditions of the port, and preparing a report as to designs, types and estimates, upon receipt of which it is proposed, should the report confirm the conclusions arrived at by the commissioners, to proceed at once with the work of completely electrifying the Montreal harbor terminals, upon the consummation of which Montreal will have the distinction of being the first port in the world possessing a complete system of electrified freight terminals."

The report also deals with the question of the extension of the harbor works in order to cope with the growing necessities of the port. One part of the plans under consideration includes the erection of a bridge from the Mackay Pier to St. Helens Island and thence to the south shore of the St. Lawrence. This bridge, it is suggested, will be 90 ft. wide, providing for 2 footpaths, street railway tracks and railwa ytracks, the latter being electrified in the same manner as it is proposed the rest of the harbor tracks will be, and these railways will be connected up with the lines now in operation on the south shore. The proposed extension of the Bickerdike and Mackay Piers will permit the building of a railway which will give direct communication with the main shore wharves of the harbor and the two piers, instead of the traffic having to go almost up to the G.T.R. yards and the Victoria Bridge before getting to the piers.

The traffic returns show an increase of more than 15 per cent.; the total cars handled being 157,480 against 114,449 in 1914. The commissioners' railway department was organized in 1907, in which year 70,856 cars were handled. The disbursements on capital account during 1915 so far as the railway is concerned were \$145,065.93.

Canadian Lake Protective Association's Annual Meeting.

At the annual meeting in Toronto Feb. 3, the ex-officio Chairman, W. E. Burke, of the Canada Steamship Lines, President of the Dominion Marine Association, presided. The report, which is given in full below, was unanimously adopted. The following were elected as the executive committee: W. J. Bassett, Bassett Steamship Co.; R. Duguid, Canada Steamship Lines; G. E. Fair, Farrar Transportation Co.; Robt. Fraser, Montreal Transportation Co.; Gilbert Johnston, Canada Steamship Lines; A. E. Mathews, J. T. Mathews, Mathews Steamship Co.; W. L. Reed, Canadian Northwest Steamship Co.; J. Waller, Keystone Transportation Co.; A. A. Wright, St. Lawrence & Chicago Steam Navigation Co. The President of the Dominion Marine Association is ex officio Chairman of the Canadian Lake Protective Association.

Following is the annual report signed by A. E. Mathews, Chairman of the committee, and Francis King, Counsel for the Association.

In this brief summary of the Association's work during 1915, inasmuch as the chief purpose of the organization is to secure safe navigation and so cut down the losses due to preventable casualties, first place is given to the statement that once more the records show that no vessel enrolled has been lost within the waters over which the Association exercises any supervision. The committee is also pleased to note that the accidents which have occurred, with the exception of a few glaring cases of which special mention will be made, have been for the most part either unavoidable, excusable or of comparatively little moment. It is regrettable that the exceptions referred to mar the record, but even here one finds cause for congratulation in that the serious cases are so few in number and that in the analysis substantial fault is found to be attributable to so few of the master mariners with whom your committee has had to deal. Several lake vessels have been lost in foreign waters during the past season, but it must be noted here that these losses are purely incidental to existing war conditions, and have no bearing upon the records covered by this report, which, as will be again stated in a later paragraph, relate only to casualties occurring within the limits covered by a master's certificate for inland waters.

Weather conditions have on the whole been favorable, except during the late autumn, when heavy gales prevailed. But water has been low and a number of accidents are attributable to this cause. In the St. Lawrence this may have been particularly noticeable and draft permitted has in some cases been restricted to less than the customary canal limit.

An appendix sets out the casualties of the year under the usual headings. Strandings and groundings have again been grouped together according to the method adopted by the committee of 1914, and together they number 28, an increase of 10 over 1914. Under this heading are to be found all the serious casualties reported for the year, excepting one of grave moment which appears in the list of collisions, and one or two fairly serious but not so culpable in connection with locking in the canals. Of these 28 groundings or strandings, one at the opening of navigation in the Kaministiquia River was stated to be due to ice formed on the steamer's bottom during the winter, one was on a submerged obstruction close to a harbor dock, one was

a rubbing contact in the Rapide Plat of the St. Lawrence, one was a similar contact with the Maxwell Shoal in the St. Lawrence marked on the charts as having been removed, several of a similar nature and on account of low water conditions occurred in other narrow channels, five of comparatively slight importance were in the canals or canal approaches, one was a deliberate beaching of the ship at the difficult upper entrance to the Morrisburg Canal for the purpose of avoiding collision with an upbound tug and tow, and one was a deliberate beaching in a gale to avoid foundering when the ship sprang a leak which could not be controlled.

In addition to the above the list of groundings contained one or two cases of varying importance due to fog. The records are faulty in two cases in which the masters, having been summarily dealt with by owners, failed to report to the Association. The default of the master and the owner's action in each case has been noted in the records and may be considered later as occasion arises. A peculiar case that received special consideration and resulted in much correspondence and finally in a vote of censure was a stranding on Blake Point Shoal, Lake Superior, due to Blake Point gas buoy being mistaken for Passage Island Light which was not yet burning at the date of the accident. A stranding on Drummond Island eight miles east of Detour on a course from the Ducks is still under consideration. The remaining cases of special importance were strandings on Niagara Shoal in Lake Ontario, on Gull Island Shoal below Clayton in the St. Lawrence River, on the Olympia Shoal between Kingston and Knapp's Point in the St. Lawrence, and on a shoal adjoining Red Island off the mouth of the Saguenay River. All these four cases were considered quite inexcusable and votes of censure have been recorded against master or pilot. Wreck investigations have been held by the Dominion Wreck Commissioner in two of these cases and his judgments contain severe condemnation of the pilots. In one of the four cases an investigation asked for has only been delayed by the absence of the master, who left the lakes on one of the boats which went into the ocean trade.

The list of collisions, numbering 15 as against 23 in 1914, includes five cases of but slight importance which occurred in making landings at or moving near docks, seven involving comparatively light damage in one or other of the canals when with one unimportant exception steamers enrolled in this Association come in contact with dredges, scows, buoys or other vessels of outside classes, and two more of equally slight importance, one with an anchored schooner improperly lighted and one with a motor launch, in the rivers. In no one of these 14 cases referred to did your committee impute blame to the master, and in accordance with the settled rule in the one case involving two vessels enrolled in the Association consideration was deferred pending negotiation between the owners. The 15th case, however, was no light matter and on the contrary its serious character is a blot on what would have been an exceptionally clean collision record. On July 12, in a dead calm, about six miles off Presqu'île in Lake Huron, the Wahcondah rammed and sank the whaleback Choctaw while going full speed in a dense fog. There seem to have been no redeeming features

in the manoeuvres to avoid the impending collision or in the subsequent efforts to rescue the crew of the Choctaw, all of whom were nevertheless fortunately able to take to their boats and were ultimately picked up by the Wahcondah. The master of the Wahcondah was censured and brought before the Wreck Commissioner, with the result that his certificate was suspended for the remainder of the season.

There are 10 cases of canal damage reported, due to striking walls or gates. In one only were gates broken by a vessel enrolled in the Association. The case well exemplified the risk run through the failure of the canal authorities to equip the gates with safety devices. On May 3 the Rosemount, snubbing in ordinary course and in the usual manner in a lock of the Lachine Canal, touched the headgates by reason of the steel snubbing cable slipping in the steamer's compressor. Forced but a few inches out of mitre, the headgates fell back under the head of water above, and the Rosemount was swept out of the lock, serious damage being only averted by prompt action of the master, who brought the ship up on her anchors. The committee passed this case without censure, but in one other in which the steamer's engines, ordered astern, were put ahead, an engineer was censured. Fortunately in this case no serious damage resulted. The other eight cases were passed, after due consideration of each, making allowances in every case for the peculiar difficulties attendant upon canal navigation and especially for those due to the cross currents developed by waste weirs and power sluices. In none of the 13 cases also reported relating to contact with docks, bridges, and harbors and channel banks was the damage serious and in each of these cases the committee believed the circumstances such that no fault could be attributed to the navigator.

To review, after giving careful consideration to each case as it arose, the committee passed them all except the one collision above particularly mentioned, one striking of lock gates, and eight of the strandings or groundings. Nine votes of censure were recorded, three upon masters engaged as such, four upon masters engaged on lake vessels as pilots or sailing masters, one upon a mate, and one upon an engineer, while in three cases, through the Wreck Commissioner's Court, penalties were also imposed by way of suspension of certificates; in one case that of a master engaged as such, in one case that of a mate, in one case that of a master engaged as sailing master on a lake vessel. One serious stranding is still under consideration.

It devolved upon your committee to deal also with some six or seven reports relating to 1914 casualties which had either been held over during that year pending investigation of circumstances, or were filed after the close of the season too late for consideration and final action. These were in due course considered and all were passed with the exception of one case in which a vote of censure was recorded against the master on account of the absence of a certificated officer from the bridge when the ship grounded while making a bend in the St. Mary's River.

These casualty reports constantly raise questions as to the need of improvement or alteration of conditions with relation to currents, depths, obstructions or aids

to navigation and they form a fruitful source of information and suggestion with regard to all the travelled routes. The committee has endeavored to make good use of suggestions received in this way and has brought to the attention of the authorities whatever information or recommendations it seemed proper to present from time to time. In four cases where obstructions were reported arrangements were made for sweeping of channels and the necessary removal of boulders or other deposits. In certain other cases buoys were found to be improperly placed and their rearrangement with the addition of necessary extra spars was brought about. The plea of a master that no information is available at the Canadian ports at the head of the lakes as to the dates of lighting or discontinuing aids to navigation maintained by the United States led to correspondence with a view to having definite information in this respect furnished to The Lake Shippers Clearance Association at Fort William. Steps have also been taken in the hope of having Harbor Beach, Lake Huron, improved so as to permit its use as a harbor of refuge by vessels of any draft.

The canal casualties in particular have led to renewed efforts to improve conditions. The records by no means indicate the real extent of the damages received in canalling, and it would appear that masters continue to refrain from filing reports regarding their slighter accidents and the less embarrassing difficulties they encounter, but the reports filed indicate clearly enough the urgent need of various improvement for which this Association has repeatedly asked. The installation of comparatively simple and inexpensive devices would go far to lessen or prevent the difficulties complained of, and your committee has on several occasions during the season filed recommendations accordingly at Ottawa.

An urgent petition has been presented asking for attention to previous requests for the adoption of means to prevent lock gates from giving way under water pressure when forced slightly out of mitre. Very recently the matter has been followed up by letters to the superintendents of the various canals asking for a free expression of opinion and advice regarding the practicability of the proposal and as to the best method to adopt. The committee suggest that the answers received and the information already referred to in correspondence be made use of by a deputation in personal interview with the Minister and officials of the Department of Railways and Canals at Ottawa. The committee has also renewed the request for protection of lock entrances by clusters of spring spiles, floating booms or other devices, and as the recommendation has apparently received no attention it should also be discussed with the authorities at the proposed interview. Casualties arising from cross currents and low water in the canals have in some special instances revived complaints and correspondence during the past season, but apparently these questions must be dealt with chiefly in connection with the general discussion of power development, as to which a better and more definite understanding with the Dominion Government is being urged by the Dominion Marine Association.

Perhaps the most startling instances of the inadequacy of the protection given vessels in the canals is found in the system or lack of system in lighting lock gates at night. By a custom now practically universal, bridges when closed to navigation show a red light to approach-

ing vessels. One would expect a light of the same color to be exhibited to an approaching vessel on every pair of lock gates when they are closed against the ship. But while the red light is found in use on some of the canals it is found exhibited on the closed gate visible upstream and downstream at the same time with the apparent intention that a vessel approaching from either direction may distinguish which pair of gates, upper or lower, is closed, but with the result that an approaching pilot is not always able to distinguish readily which pair of gates carries the light. Again in other canals a white light is used and not always in the same position, and in some the light is merely carried out of the lock house on to the canal bank. The lack of uniformity in method is serious and the opportunity for trouble to arise through error or neglect of operators is all too apparent. The matter was called prominently to the attention of the committee by an accident in one of the canals this season which led to some dispute as to the proper character and location of the signal light, and the committee after investigation recommended to the Department the simple expedient of placing a red light, screened on three sides, on the top of the outer end of one of each pair of gates, to be visible only upstream on a pair of closed head gates, and only downstream on a pair of closed footgates, and invisible up or downstream when the gates are open. The absence of a red light would then indicate to an approaching vessel that the lock is open, while the presence of a red light must prove it closed. It is important that this recommendation should be pressed further upon the attention of the authorities.

The one serious collision which involved a vessel of this Association during the season, occurring as it did in mid-lake, causing the total loss of the other ship and almost entailing serious loss of life, revived discussion of the double courses in Lake Huron and led your committee finally to recommend to all masters of boats enrolled in the Association the adoption of the exact courses recommended to masters of ships enrolled in the sister association of the United States. In this connection the committee also took up the question of double courses for Lake Superior, suggesting that for that lake the courses in fog be laid east and west of Caribou Island. The Great Lakes Protective Association, to which the suggestion was submitted because of the entrance of U. S. tonnage into this trade at certain seasons of the year, recommended that the proposed courses be used in all weathers. The committee determined to consult masters on the subject before coming to any conclusion. Of the answers received, only one agreed in the proposal. The great majority objected strongly, alleging a variety of reasons, chief among which were the invisibility of Caribou Light to the eastward, and the suggestion that the inconvenience and loss of time would have no real compensating advantages. Under the circumstances your committee has not pressed the suggestion and at its last meeting determined to drop the proposal.

The stranding of the Glenmount on Gull Island Shoal below Clayton, N.Y., and the subsequent wreck investigation in which the pilot was severely censured, proved the inadequacy of the means adopted in 1914 to bring the pilots of the Upper St. Lawrence under the jurisdiction of the Wreck Commissioner. The regulation adopted during 1914 by this Association required that no one should

be engaged as a pilot for these waters unless he held a certificate as master which would be subject to suspension or cancellation by the Commissioner. But in the Glenmount case the Commissioner, while not sparing the pilot in his comments upon the navigation of the ship, nevertheless held that he could not impose a penalty on a man who was not "an officer of the vessel." The matter was later discussed by the Counsel for the Association with the Deputy Minister of Marine and by the Deputy Minister with the Department of Justice, and in the end with the consent of the Department, the committee recommended that these pilots must not only comply with the previous requirements as to holding master's certificates but must also be signed on the ship's articles as mate and pilot.

The officers of three vessels enrolled in the Association were under examination in the Wreck Commissioner's court this season. In the Glenmount case above mentioned the master was absolved and the pilot found in fault. The latter's certificate was not dealt with for the reason mentioned in the preceding paragraph. In the case of the Haddington, which grounded at Red Island off the mouth of the Saguenay, the regular officers of the ship were also absolved but the sailing master engaged for the lower St. Lawrence and Gulf was censured and his certificate suspended for six months. The third case was the Wahcondah-Choctaw collision and, as stated elsewhere, severe censure was passed upon master and mate of the Wahcondah and their certificates were suspended for twelve and six months respectively.

The insurance rate for 1915 risks was substantially reduced and policies contained some new concessions. It is understood that the standard rates paid on steel hulls covering to the foot of Lake Erie for a period of one year with a navigating season from April 15 at midnight to Nov. 30 at midnight was 3¼ per cent. The usual extra ½ per cent. for the season was charged for navigation not east of Kingston, with a further ½ per cent. for navigation not east of Montreal, while an additional ½ per cent. was charged for navigation as far as Cape Breton. A new and welcome provision in the policies this year extended the sailing season up to December 12 at midnight on payment of an additional 1 per cent., and permitted a boat to make a one-way trip after Nov. 30 at the following fractional charges:—Sailing up to midnight Dec. 5, ½ per cent.; sailing up to midnight Dec. 8, ¾ per cent.; sailing up to midnight Dec. 12, 1 per cent., or to make a one way trip on one lake after Dec. 12 at ¼ per cent. additional. The policies also gave the new privilege of navigating from April 1 to 15 in the ensuing season of 1916 at pro rata of the season rate.

Recently the committee has again had under consideration the form of the policy and has taken action by way of protest against the deductible average clause, recommending to underwriters that the clause serves no good purpose and that its omission from the policy would be in the best interest of all parties. The committee also recommended to underwriters that the layup rebate clause should be amended to provide for additional proportionate rebate for any number of days in excess of the 15 day period covered by the clause. Brokers have been advised of these recommendations and asked to assist.

On account of the withdrawal of a great number of boats from ordinary trade routes by the exigencies of the war,

quite a number of vessels enrolled in this Association left the lakes during 1915 to engage in trade on the ocean, some of them going under charter along the Atlantic coast and as far in some cases as the coast of South America, while others crossed the ocean and in some cases engaged more or less permanently in European trade. A considerable number of these vessels returned to the Great Lakes for the fall trade, not only because of the ordinary inducements in that trade, but also because the Minister of Trade and Commerce raised the question of the possibility of shortage of Canadian tonnage on the lakes and consequent suspension of the coasting laws. A considerable number remain at sea and five unfortunately have been totally lost, one of them having been torpedoed, one not reported, two foundered, and one stranded in the West Indies. Questions arose naturally as to the extent of the jurisdiction this Association should exercise under these circumstances, and underwriters having also made enquiry on the subject, the committee decided at a meeting in Toronto on Aug. 11 that the Association should deal only with casualties occurring within the limits covered by certificates issued to masters for inland waters. No doubt all members of the Association will concur in this at the annual general meeting.

The bulletins issued in 1915 have been sent to all masters of enrolled steamers, to all members of the Association, and to the various underwriters and brokers interested. Circular letters have been issued to members as occasion arose, and a mass of correspondence has been conducted regarding the special questions raised by the casualty reports and in connection with the various other matters referred to in the foregoing paragraphs. No general meetings have been held since the annual meeting as the matters dealt with have been all within the powers of the committee. Members of the Association have nevertheless been kept advised of special action taken at any time, and have corresponded fully on subjects of special or general interest. If all would make full use of the privileges of membership and co-operate with the officers by suggestion and advice as to the conduct of the Association's work, it would be of great advantage to the undertaking.

Special benefits will come from strict compliance with the rule as to filing reports and all members are asked to see that their masters are supplied with forms and use them on all occasions. This is a matter peculiarly within the power of the management of ships, and co-operation in this respect is essential. Owners receiving reports should also see that they are promptly filed with the Association and should themselves send in notice where for any reason the master is known to have failed or to be likely to fail in complying with the rule.

ANALYSIS OF ACCIDENTS REPORTED. 1915.	
Groundings	28
Collisions	15
Striking locks or gates	10
Striking bridges, docks, piers and harbor and channel banks	13

St. Lawrence River	1

Correspondence was read regarding alterations asked for in the 1916 marine insurance policy with respect to the deductible average and layup rebate clauses and the matter was referred to the executive committee for the current year.

Dominion Marine Association's Annual Meeting.

The annual meeting was held in Toronto Feb. 3, the President, A. E. Mathews, of the Mathews Steamship Co., in the chair. The executive committee presented a comprehensive report over the signatures of the President and of the Counsel, F. King, showing that the tonnage enrolled continues to increase, the steam tonnage being now over 210,000 net registered tons against about 200,000 tons in 1914, although naturally enough the barge or sailing tonnage shows some slight decrease, the figures being just over 32,000 as against 33,500 in 1914. The report dealt in full detail with the past year's work, including the following subjects: Legislation; Canada Shipping Act; bill to place carriers by water under Board of Railway Commissioners; Seamen's Bill, United States; grain cargoes, discrepancies in weights and the bill of lading; amendment of the Grain Act; trimming of cargoes; elevator hours; coasting laws; sessions of the Grain Commission; rules of the road, piloting on the Upper St. Lawrence; U. S. customs report of entry into Lake Michigan; masters for British registered ships in the coasting trade; competition of unregistered and unlicensed small craft, including motor boats; screening of bituminous coal in bond; power development; the canals, New Welland Canal, Lake Ontario entrance, Morrisburg Canal upper entrance, lighting of the Cardinal Canal, military regulations for canal protection, bulletin boards, general improvements; harbor and channel improvements, Kaministiquia River, channel at Algoma Central dock, Little Current, Goderich Harbor, Port Colborne Harbor, Port Dalhousie, Port Weller, Trenton Harbor, Kingston Harbor, St. Lawrence River, Lachine cut; aids to navigation; new school of navigation; lake vessels in ocean trade, general business, membership and tonnage. The report was unanimously adopted.

It was decided that the executive com-

mittee seek a continuance of the method of adjustment of grain cargo outturns in force during 1915.

The question of trimming arrangements at Fort William, including that of installing mechanical devices, was referred to the executive committee with a request for prompt action. The President announced the withdrawal of the trimming charges at Port Colborne.

The question of procuring authority to sign river pilots on ships' articles in advance of their boarding the vessels, and if possible for a number of ships and for considerable periods, was referred to the Canadian Lake Protective Association with request for action and with the suggestion that the Association's counsel discuss the matter with the Marine Department and endeavor to procure a favorable ruling upon some practical method.

The competition of unlicensed motor boats and other small craft was discussed and it was decided to request the speedy enactment of the provisions of the bill to amend the Canada Shipping Act, which would to some extent provide the desired remedy.

The decided opinions of the Association previously expressed at various times, are to be again presented to the Dominion Government, in the general terms that no water should be diverted from the St. Lawrence River for power purposes unless in accordance with some comprehensive scheme for the development of the whole river worked out by commission or otherwise, and that the interests of navigation be consistently treated as paramount.

The executive committee was asked to seek an interview with the Minister of Marine and to urge upon him the installation of safety devices on lock gates, spring spiles or guiding booms at lock entrances and properly adjusted automatically operated signal lights on lock gates, as recommended in the report.

A resolution from the Kingston Board of Trade, calling attention to the need of immediate preparation of Kingston harbor, to accommodate vessels which will pass through the Welland Ship Canal, and asking the Association to assist in bringing the matter before the Government, was approved and the executive committee was asked to petition for surveys, plans and proposals and for such further action as the Government may feel able to take.

The President reported upon the new 14 ft. Canadian channel through the Thousand Islands and presented plans of the same. It was decided to congratulate the authorities upon the completion of the undertaking. Later in the day the Canadian Lake Protective Association agreed to endeavor to bring about the use of this channel and to co-operate in testing it and proving its practicability.

Four members of the executive committee retired by effluxion of time, namely, L. Henderson, Montreal Transportation Co.; G. E. Fair, Farrar Transportation Co.; H. H. Gildersleeve, Northern Navigation Co., and H. W. Richardson, Great Lakes Transportation Co. Messrs. Henderson & Fair were re-elected, and James Playfair, Great Lakes Transportation Co., and J. F. M. Stewart, Lake Commerce, Ltd., and Point Anne Quarries, Ltd., were elected to succeed Messrs. Gildersleeve and Richardson. The other members of the committee are as follows: Term expiring in 1917—H. W. Cowan, Canada Steamship Lines; C. B. Harris, Canadian Lake & Ocean Navigation Co.; W. J. McCormack, Algoma Central Steamship Co. (who was elected to succeed S. V. McLeod, who is on active

military service); A. A. Wright, St. Lawrence & Chicago Steam Navigation Co. Term expiring in 1917—A. E. Mathews, Mathews Steamship Co.; W. L. Reed, Canadian Northwest Steamship Co.; D. Murphy, Ottawa Transportation Co.; W. E. Burke, Canada Steamship Lines.

The executive committee elected the following officers: President, W. E. Burke, Canada Steamship Lines; First Vice President, G. E. Fair, Farrar Transportation Co.; Second Vice President, A. E. Mathews, Mathews Steamship Co.

The following were elected as a committee on aids to navigation. A. A. Wright, St. Lawrence & Chicago Steam Navigation Co.; Robt. Fraser, Montreal Transportation Co.; Gilbert Johnson, R. Duguid, Canada Steamship Lines; James Playfair, Great Lakes Transportation Co.; J. F. Sowards, Kingston, Ont.; A. E. Mathews, Mathews Steamship Co.

Among the Express Companies.

J. H. Whitehouse has been appointed agent, Dominion Ex. Co., Cranbrook, B.C., vice C. Potter, transferred to the messenger service.

E. J. Wearing, who has been acting General Agent, Canadian Ex. Co., Liverpool, Eng., since the death of W. Cuthbertson, has been appointed General Agent.

The Canadian Northern Ex. Co. has placed its service in effect over the Canadian Northern Ry. from Luxton to Estevan, Canora to Sturgis Jct., Elrose Jct. to Dumblane, Elrose to Eston and Laird to Carlton, Sask.

The Assistant Adjutant and Quarter Master General of the Canadian Training Division at Shorncliffe, England, has written the Canadian Ex. Co., in complimentary terms regarding the handling of parcels for the troops at that point.

The Canadian Northern Ex. Co. has opened offices at Bolger, Caramat, Devlin and Mowat, Ont.; Amaranth, Man.; Bienfait, Dumblane, Estevan, Eston and Plato, Sask.; Carrot Creek, Alta., and Ashcroft, Langley, Lytton and Matsqui, B.C.

The Toronto City Council is asking that the matter of the extension of express collection and delivery limits for the city, which has been before the Board of Railway Commissioners for some time, be taken up, and the Board requested to expedite a judgment.

The Dominion Ex. Co. has opened offices at Dragon, Que.; Nicholson, Ont.; Storthoaks, Man., and Portreeve, Sask.; and has closed its offices at Penfield and Jardine Brook, N.B.; Burnside, Oberon and Stockton, Man.; Yeomans, Sask., and Edgewood and Westholme, B.C.

The British Government has dropped the case against E. Wienacht, formerly Manager, Adams Ex. Co., London, Eng., for trading with the enemy. The charge was that he had transferred about 5,000 marks from London to the company's agent at Hamburg, Germany. For the defence it was claimed that the transaction was completed at Rotterdam, Holland, and that the intention in transferring the money was to utilize it in Holland, as it was worthless in England.

The Canadian Ex. Co.'s receipts and expenditures for Sept., 1915, compared with those for Sept., 1914, are as follows:

	1915	1914
Mileage covered	10,238	9,676
Charges for transportation....	\$374,451	\$296,134
Express privileges, Dr.	197,200	150,184
Operation other than transportation	4,881	5,187
Total operating revenue	182,132	151,137
Operating expenses	144,075	132,607
Net operating revenue	38,056	18,529
Express taxes	4,200	4,000
Operating income	33,776	14,529

The American Ex. Co. has readjusted its divisions in New England states and Quebec, as follows,—all offices in Maine hitherto in the Massachusetts division, now constitute the Maine division; all offices in New Hampshire hitherto in the Massachusetts division, now form the Vermont, New Hampshire and Quebec division; all offices in Massachusetts and Connecticut, hitherto in the Vermont, New Hampshire and Quebec division, now form the Massachusetts division; and American Ex. Co. and National Ex. Co. offices in Greater Boston form the Boston division.

Telegraph, Telephone and Cable Matters.

The Great North Western Telegraph Co. has opened offices at Bas les Ebolements, Capucins, Daaquam, English Lake and Les Ebolements wharf, Que.; Amaranth and Fisher Branch, Man., and Plato, Sask., and has closed its office at Parry, Sask.

Belvidere Brooks, Vice President Western Union Telegraph Co., died suddenly at New York, Feb. 10. He was born at Wheelock, Tex., July 6, 1859, and entered Western Union service in 1879 as an operator.

The Montreal Telegraph Co.'s report for the past year gives the total assets as \$2,311,683. Cash, accounts, receivable and securities make up \$159,859 of this amount. The lines are operated under lease by the Great North Western Telegraph Co. The excess in value of property operated by the G. N. W. T. Co. over shareholders' capital is given at \$151,895.85.

The Anglo-American Telegraph Co. has paid a balance dividend of 1½ per cent. on the ordinary consolidated stock, for 1915, making a total dividend of 3¼ per cent.; a balance dividend of 1½ per cent. on the preferred stock, making a total of 6 per cent. for the year, and a first and final dividend of 1½ per cent. on the deferred stock. In addition, a bonus of 1s. 9d. per cent. on the undivided ordinary stock and 3s. 6d. per cent. on the deferred stock, was declared payable Feb. 1 to shareholders of record at Dec. 31, 1915.

Various reports from different sources state that seven of the telegraphic cables connecting America with Great Britain have been cut recently, and that this has caused some delay in the transmission of messages, by overloading other cables. This report has been denied by several of the companies interested, and they also state that any delay which may have occurred has been caused by general congestion of business, which caused the temporary suspension of deferred messages at lower rates, which latter have now been resumed.

Questions asked in the House of Commons, Feb. 10, relating to the suspension of deferred cablegrams with Great Britain, elicited the information that the Western Union Telegraph Co.'s rates for soldiers cabling from Europe were not interfered with, and the suspension of deferred rates and week end messages from Canada had been cancelled. The Commercial Cable Co. accepts no deferred or week end cables to or from Canada, but soldiers messages are not interfered with. The Marconi Wireless Telegraph Co. suspended all deferred and week end rates, the special rate for soldiers still being in operation. The Anglo-American Telegraph Co. is not accepting deferred cables for dispatch from Europe, but is receiving such matter from Canada. The Board of Railway Commissioners announced that the C.P.R. had announced its inability to accept deferred cables, and this resulted in the business being turned over to the Great North Western Telegraph Co. and the Marconi Wireless Telegraph Co., and these latter companies were unable to handle it. For this reason they temporarily suspended the acceptance of these cables, but since Feb. 1, the G.N.W.T. Co. has accepted them. The Board of Railway Commissioners has no authority over cable or wireless telegraph companies operating across the oceans.

Hotel Dennis

ATLANTIC CITY, N.J.

An American Plan Hotel that for the past fifteen years has been under the same management and developed on lines that appeal to people of refined taste.

It has a superior location. It is thoroughly modern. It is a recognized standard of excellence.

Capacity 600.

WALTER J. BUZBY

Ottawa Traction Company, Limited

Second Annual Report for Year Ending December 31, 1915

Your directors have much pleasure in submitting their second annual report for the year ending 31st December, 1915, including the operation of The Ottawa Electric Railway Company.

Gross earnings of The Ottawa Electric Railway Company were ..\$1,041,100 26
Operating expenses and maintenance 657,325 68

Net earnings\$ 383,774 58
Net earnings, 1914 431,232 41

Decrease 1915\$ 47,457 83
The net earnings were disposed of as follows:—
Four quarterly dividends of 3% and a bonus of 3%\$ 281,535 00
Interest on bonds and loans 47,926 54
Mileage payments 17,216 71
Taxes 19,654 87
Transferred to credit or profit and loss 17,441 46

Passengers carried in 1915 24,361,867
Passengers carried in 1914 25,321,547

Decrease 1915 959,680
In common with all other street railways throughout the country the depressing effects of the war were felt by this company during the past year, but not to as great an extent as might have been anticipated. The month of August showed the greatest falling off in receipts, since which time business has been normal, and generally showing a slight increase over 1914. In the meantime no new work is contemplated, our efforts being directed to the maintenance of the road bed and equipment in an efficient state in order to give the best service possible to the public.

All of which is respectfully submitted.

T. AHEARN,
President.

Ottawa, 7th February, 1916.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Franklin Railway Supply Co., New York and Montreal, has issued a booklet, *McLaughlin Flexible Conduit, Franklin Ball Joints and Franklin Single Water Joint*, 28 pgs., 6 x 9 ins., describing and illustrating the specialties named.

Goldschmidt Thermit Co.—The quarterly *Reactions* contains a number of illustrated descriptions of thermit welds on railway rolling stock, and also on stern wheel shafts and rudder stocks of steamships. Results of prize contests for articles on thermit welding are also announced.

The Brown Hoisting Machinery Co., Cleveland, Ohio, has issued a catalogue, *Brownhoist Tramrail Systems, Trolleys, Electric Hoists*, 68 pp., 6 x 9 ins., illustrated. Among the illustrations, is one of two Brownhoist monorail man trolleys, each equipped with a Brownhoist patented grab bucket, as installed for the Ottawa Gas Co., Ottawa, Ont.

The Scherzer Rolling Lift Bridge Co., Chicago, announces that following the death of Albert H. Scherzer, President, the entire stock of the company has been purchased by a syndicate of its officials who have been connected with the business from its inception, and that there will be no change in the personnel of the organization, Mr. Scherzer having taken no active part in the company's affairs for several years.

Goldschmidt Thermit Co., 103 Richmond St. West, Toronto, have issued a large wall calendar containing a map of most of the United States and Canada, on which is shown territories in which eastern, central, mountain and Pacific times respectively are in use. In addition to a monthly calendar there are also given a number of illustrations of the use of the Thermit process for welding, etc.

Lyman Tube & Supply Co., Ltd.—F. D. Lyman, who bought recently from John Millen & Son, Ltd., their railway supply department, announces that it will be conducted hereafter as Lyman Tube & Supply Co., Ltd., instead of the name first chosen, Lyman & Lyman Ltd. The head office is at 323 St. James St., Montreal, with a branch at 90 Adelaide St. West, Toronto.

The Shipmasters' Association of the Great Lakes, at its recent annual meetings at Toronto, elected the following officers for the current year:—President, W. J. Crosby, Detroit, Mich.; First Vice President, A. W. Stalker, Toledo, Ohio; Second Vice President, J. B. Mann, Toronto; Treasurer, J. H. MacDonald, Toledo, Ohio. The next annual meeting will be held at Cleveland, Ohio.

The C. P. R. steamship service from Summerland, on Okanagan Lake, B.C., has been temporarily suspended on account of ice, and tickets are now being sold via Okanagan Landing beyond Summerland.

Engineers, Manufacturers and Erectors of Steel Structures.
CAPACITY 135,000 TONS.

Railway and Highway Bridges, Swing and Bascule Spans, Buildings of all kinds, Hemispherical Bottom and other Tanks, Transmission Poles and Towers, Riveted Pipe, Caissons, Barges, Turntables, Electric and Hand Power Cranes, Hoisting Appliances, Lift Locks, Hydraulic Regulating Gates, etc. Gear Cutting and General Machine Work.

Large Stock of Standard Structural Material at all Works.

"BEATTY" HOISTS

For situation where the work is severe and the service exacting "a Beatty always fills the bill"

Derrick car engaged with an 8 x 12 four drum Beatty Hoist placing an 80 foot deck plate girder span in Skugog River Bridge.

Let us know your requirements for
Hoisting Engines, Steel Derricks, Derrick Irons, Electric Hoists, Clamshell Buckets, Centrifugal Pumps, Dredges, Steel Scows, etc.

We will gladly send full information.

NOS. 346 and 348 BROADWAY,
N.Y. CITY, U.S.A.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing, and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

Flange Lubrication Should be Automatic

Flange lubrication to be efficient should be automatic, absolutely independent of your engineer, and at the same time the device itself should be so simple and yet so accurate that it will be practically trouble proof. The

Detroit Automatic Flange Lubricator (Pendulum Type)

is absolutely automatic and at the same time simple. It is all in the pendulum. Any lateral movement of the locomotive causes the pendulum to swing. This oscillation rotates, rocker-like, the pendulum shaft, which produces alternating strokes of the two plungers in the pumping unit.

The use of the Detroit Automatic Flange Lubricator insures positive lubrication just when it is needed. May we send booklet F-O 81? It contains all the facts as well as drawings. Write to-day.

"The Toothless Wonder"

Designed Especially to handle pipes spaced closely as in coil work. No. 2½ wrench illustrated requires but three-quarter inch space between pipes.

Positive Grip instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

Ratchet-like Action. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

Can't Chew. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

Can't Crush. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

Motorize Your Hauling With NATIONAL Worm Drive Trucks

One of the four NATIONAL Models will meet your requirements for hauling and delivery purposes up to three-and-a-half tons capacity.

The superiority of the design, materials and workmanship in the NATIONAL MOTOR TRUCKS is acknowledged by competent engineers to have set a new standard for Motor Trucks in Canada.

The NATIONAL MOTOR TRUCK is built to give every-day-year 'round service to Canadian business houses. Actual conditions have been fully taken into consideration by our Engineering Department through a thorough study of load capacities required, condition of streets and roads, length of haul and continuity of service.

The Truck as a method of transportation is acknowledged to be the most economical means of hauling that can be employed. NATIONAL TRUCKS are in daily use giving splendid service, and cutting the cost of deliveries. Why not investigate? A copy of the NATIONAL TRUCK Catalogue is yours for the asking. Mention the nature of your business, capacity required, and average length of haul when writing.

Why employ 20 to 40 men to handle your material? A

BROWNHOIST Locomotive Crane

will do the same amount of work with a decided saving to you. Its cost, including 6% interest on investment, depreciation, and operating costs, is only \$6.00 to \$10.00 per day. It is one man operated, powerful, quick-acting, and built to withstand hard and continuous service. Records prove this.

Adaptability. The equipment is interchangeable. It only takes a short time to apply the Grab Bucket, Bottom Block, Drag-Line Bucket, Pile Driving Attachment, Lifting Magnet, or Shovel Equipment. This makes practically six machines in one.

Railroads all over the country are realizing more and more the advantage and economy of having a Brownhoist Locomotive Crane on the job, because it is always ready to work in case of emergency. A Brownhoist Crane can be relied upon. One road uses thirty of them.

*INVESTIGATE TO-DAY. Catalogue I shows how
and where some of these cranes are used.*

Why Dynamic Indication is the always-safe principle in G R S Electric Interlocking

The fundamental safety first principle of **G R S Electric Interlocking Dynamic Indication** remains as it was invented 13 years ago. This test of years is the most convincing evidence in the unfailing integrity of Dynamic Indication.

This indication is not secured from energy existent at the function prior to the movement of that function and dependent only on closing of a single break in the indication circuit, as is the case in A. C. and battery indication systems; but being a dynamic current generated by the momentum of the motor, **it can be secured only after actual operation of the function.** Since it is impossible to obtain an indication upon the lever controlling the function in any other way than by this generated current pro-

duced by the motor after the completed movement of the function, this system is **always safe.** Furthermore, dynamic indication is solely and **only a G R S principle.**

This **only — always — safe** principle of Dynamic Indication with several other features has brought this system into marked favor with the result that 80% of the power interlocking in use to-day is **G R S Electric.**

This system is equally suited to the 8 and 24 lever plant as it is to the Grand Central Terminal which is the largest interlocking in the world.

Why not install the **only — always — safe — system,** the **G R S Electric Interlocking** employing Dynamic Indication?

Cut Filing Costs in Half

Filing is like drilling. The moment the file wears smooth, it takes twice, or three times, the energy to accomplish the desired result. Engineers have got it down to a scientific basis in drilling. The moment a drill reaches its "inefficient point," it is discarded and this "efficient point" is determined by the amount of power used to drill a certain dimension.

Workmen are not machinery; consequently you have to depend upon

the personal element and educate your men up to the point where they will know at once when their files have reached the "inefficient point". If you can educate your men to do this you will get double the results at the bench, compared by results when men have been working with files that are inefficient.

Write for our booklet "File Philosophy." It is well worth reading by any manufacturer, shop superintendent, shop foreman or workman who is concerned with the use of files.

Berry Brothers' Railway Varnishes

Represent Nearly 60 Years of Varnish Making Experience

Berry Brothers' extensive line of Railway Varnishes makes it possible for you to purchase the right varnish for any demand.

Here are a few finishes you should know.

Locomotive Black

A fossil gum varnish of the highest grade--- for the best attainable finish on locomotives, tenders and valuable rolling stock, combines excellence with durability-- efficient because its use is true economy--- a case of the best being the cheapest.

Front End Black

For the front end of locomotives. It covers well, makes a handsome jet black finish, and stands a high degree of heat without injury.

Smoke Stack Black

Made especially for use on smoke stacks, producing a jet black and brilliant lustre, and resisting heat of a high degree without injury.

465 Railroad Shops in the United States and Canada Use the Thermit Welding Process

Let us send you this pamphlet.

This comprises practically all the shops of importance in North America, and it can be said without exaggeration that the list of railroads using Thermit includes practically every system from the small road having only three or four locomotives to the largest system in the world having many thousand locomotives.

If by any chance your shop is not using Thermit, you should investigate the process and see how effectively and economically it will handle the many repairs on locomotive frames and other sections.

Remember that the greatest railway systems in the world use hundreds of thousands of pounds of Thermit. They do not use it for any reason except that it "delivers the goods" and has proven itself a profitable investment.

Let us mail you our new pamphlet, No. 2144, which contains full information on the use of Thermit in Railroad Shops.

We have a well equipped shop in Toronto, Ont., for the manufacture of Thermit and appliances used with it.

Goldschmidt Thermit Company

It is an Established Fact

That fireboxes of all types equipped with the Tate Flexible Staybolt show the lowest maintenance cost and highest earnings.

The Flexibility in the bolt serves to accommodate the relative expansion of plates under working operations of the fire box and boiler in a manner that has afforded less destruction to the sheets and seams than were found under conditions where fireboxes were rigidly stayed.

The Tate Flexible Staybolt is designed and made to give satisfactory results in the final measure of its usefulness, as an economic, safe and reliable factor in reducing the costs of firebox repairs and maintenance.

In use on all the prominent railroad systems of Canada.

FLANNERY BOLT COMPANY, Vanadium Building, Pittsburgh, Pa.

Manufactured and sold in Canada by Canadian Allis-Chalmers, Limited, General Offices, Toronto, Ont.

Scientific Treatment of Boiler Waters Dearborn Service to Railroads

Every time an engine failure takes place it means a large expense in dollars to the railroad company in time lost, impairment of service, and cost to send another engine to the rescue. Every time a locomotive goes to shop for repairs, it represents many thousands of dollars invested capital which is earning no revenue.

By the use of Dearborn Treatment engine failures due to the boiler foaming or leaking can be entirely eliminated. Dearborn Treatment counteracts the foaming tendency in waters of that type, and prevents scale formation, and the corrosive and pitting action that results in leaks. By thus overcoming the bad effects of the waters used, and keeping the boiler tubes and sheets free from

incrustation, the engine may be kept in service longer between boiler washings, and the period between shop-pings for repairs of this character will be much longer. There are also great savings in fuel and lubricating oil, and the engine will always be in condition to haul full tonnage.

Dearborn Chemical Company of Canada, Limited

Office and Works : 1220-1230 Dundas Street, Toronto, Canada

Garlock High Pressure Piston Rod Packing

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

Canadian Locomotive Company, Limited
KINGSTON, ONTARIO

REG. U. S. PAT. OFF.

Every square inch of Du Pont FABRIKOID is as good as the inch next to it; rarely ever so with the finest leather and never with coated splits.

Examination of a leather hide in various places shows plainly that the strength is never the same in any two places in the hide.

Uniformity in strength of materials used by railroads for curtain bindings, cab cushions and vestibule curtains, is an absolute essential when you consider the extremely hard wear to which this class of material is subjected and there can be no other conclusion than "Buy Du Pont FABRIKOID," when you compare its cost and the length of service, with all other materials on the market.

It will pay you to take time, today, to ask for samples and prices.

Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE—INTERCOLONIAL RAILWAY

Total weight of engine, 24,000 pounds; weight on drivers, 15,000 pounds; diameter of drivers, 7' inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

Montreal Locomotive Works, Limited

DOMINION EXPRESS BUILDING, MONTREAL, CANADA

For Safety's Sake Specify—

Northern Electric "R. S. A." Wire

- ☐ Buying wire for railway signalling purposes on a price basis is a crime.
- ☐ Climatic conditions, especially in Canada, seriously affect the wire connecting the signals. Extremes of heat and cold, gases, acids, and oils are some of the many elements, that railway signal wire is subjected to and must combat.
- ☐ Northern Electric Railway Signal Wire stands the tests of time. It not only meets but exceeds the "R. S. A." Specifications. It is backed by the largest makers of wires and cables in the country, and sells on a quality instead of a price basis.

A Clear Track To Promotion

How to get off the side track—how to break the couplings that hold them near the bottom of the pay roll—is the one big problem that troubles most railroaders.

There's a clear track to promotion—without grade or curve—open to the man that has the backbone and grit to take it. Before you can travel this track to promotion and bigger pay you must "coal up" with knowledge—you must be specially trained.

The Railway Instruction Department of the International Correspondence Schools is able and ready to give you the training you must have. You can get it right at home without losing an hour's time from your present job.

It will not cost anything to find out how the I.C.S. can train you for a better job. Put an "X" near the class of work you would like to follow, in the attached coupon, and mail it to the I.C.S. This won't obligate you in the least. It will simply bring full information by return mail.

Mark the Coupon NOW

Fire Tube Marine Superheater -- Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler h.p. from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

LOCOMOTIVE SUPERHEATER COMPANY

Works and Sales Department: Sault Ste. Marie, Ontario, Canada

The Light of Day on the Right of Way

Headlights

Commercial Acetylene furnishes a strong, penetrating light without being blinding. Nothing to get out of order. Economical to maintain. Small gas cylinder supplies several weeks' lighting.

Car Lighting

Commercial Acetylene furnishes an ideal system for all kinds of passenger cars. It combines efficiency with economy. Standard cylinder supplies from one to two months' lighting of the average car.

Signals

Commercial Acetylene furnishes an absolutely reliable light. Failures eliminated and cost of maintenance reduced. Cylinder placed at foot of pole supplies several months' lighting without attention.

These Reinforced Brake Shoes weighed approximately twenty pounds each when put in service. When ready for the scrap heap, after long and satisfactory use, they weighed about six pounds each.

Just compare this record with that of ordinary unreinforced brake shoes. Almost invariably they go to pieces before being half worn out, and their average scrap weight is about fifteen pounds.

No argument for ordinary shoes can meet the demonstrated facts that stand behind Reinforced Brake Shoes.

Manufactured in Canada.

April, 1916.

Toronto Hamilton and Buffalo Ry. Grade Separation in Hamilton.

The question of raising or depressing the T.H.&B.R. main line through Hamilton, Ont., or of moving the tracks to another location altogether, has been agitated for several years. In 1914, Westinghouse, Church, Kerr & Co., who were employed by the company to investigate the matter, prepared a scheme for track elevation, and in 1915, W. F. Tye, M.Can.Soc.C.E., of Montreal, on behalf of the applicants for grade separation, presented an alternative plan of depression. The question was before the Board of Railway Commissioners on several occasions and was referred to its Chief Engineer, G. A. Mountain, who made two reports, copies of which we have been favored with.

In the first report dated Jan. 15, 1915, Mr. Mountain said: In accordance with the Board's instructions, at a meeting held in Hamilton, on Dec. 14, 1914, in connection with the application of Sealey and others for track depression of the T.H.&B.R., from the tunnel across James, John and other streets in Hamilton, to Victoria St., a conference of engineers was held in my office, presided over by the Engineer, on Jan. 13 and 14, 1915. The representatives were W. F. Tye, M.Can. Soc.C.E., for the applicants, A. F. McCallum, City Engineer, for the city and R. L. Latham, Chief Engineer for the T.H.&B.R. Associated with the latter were L. W. Tucker, and G. W. Burpee, of Westinghouse, Church, Kerr & Co. There was also present J. W. Pfau, C.E., Engineer of Construction, New York Central Rd., A. L. Sarvey, Assistant Valuation Engineer, Michigan Central Rd., J. W. Orrock Principal Assistant Engineer, C.P.R., A. S. Going, Engineer of Construction, G.T. Ry., E. G. Hewson, Division Engineer, G.T.R., Toronto, the latter road being interested in the connection of the branch line from Ferguson Ave. Subsequently, the railway company filed a plan for track elevation instead of track depression, along the same section. We went thoroughly into the merits of both track elevation and track depression and the cost of the same, and Mr. Tye, representing Sealey and others, decided he would want more time to revise some estimates and check over some of the estimates submitted by the T.H.&B.R. on the cost of track depression. I suggested a modification of both plans and that the parties get out estimates on that suggestion, which they thought was well worth considering. It was also decided to make a test pit at the mouth of the tunnel.

Mr. Mountain's second report dated Jan. 18, 1916, is as follows: The parties met again in Hamilton, in April, 1915 and went thoroughly into the examination of the test pit that had been opened by the T.H.&B.R. authorities at a point designated and satisfactory to all parties. We found material in this test pit that might be considered of a quick sand nature and also that water rose in the pit to pretty near the surface of the ground. We then continued to work out the actual cost of the work and on this all parties have agreed.

The cost of the track elevation is

\$673,000. The cost of the track depression is \$965,000. R. L. Latham, Chief Engineer of the T.H.&B.R., agreed to this cost with a proviso that no unforeseen conditions arose. I understand from that that he means from this such conditions as we felt were indicated by this test pit in excavating for lowering the tunnel 12 ft. at its portal. The engineers associated with Mr. Latham, and Mr. Tye, acting for the city, felt that business could be continued through this tunnel during the time that it was being lowered for a length of 800 ft. from nothing to 12 ft. at the portal. My opinion is that this would be a very difficult thing to do and I have very much doubt whether it would be possible to continue traffic through while it was being lowered. In addition to the construction there is the cost of the right of way. I have spent a lot of time on this and have not been able to arrive at a very satisfactory result. It is very difficult to estimate the value of land when it is to be purchased for this purpose. However, there is no doubt that the land required for the track depression exceeds the land required for the track elevation, and I roughly estimate the land damage on the track elevation at \$331,000 and on the track depression at \$537,000. It was stated that owing to the fact that the track depression would carry the railway away from its present station facilities, they would be available for sale, but to give the company the equivalent of the land it already has on its present facilities, would add an increased cost to the land expenses, which would be about even to the sale of the present station property. In addition to that there would be consequential damages, which are only estimated, and which I have put in for the track elevation at \$151,000 and for track depression at \$148,000. Adding these I make the approximate cost of track depression \$1,650,000 and the track elevation at \$1,161,000. While there has been a good deal of discussion as to the amount of the land damages, and I have made several trips and gone thoroughly over the ground several times, I feel that I am unable to arrive at any other conclusion as to the land damages but that it is only approximate and may vary \$100,000 one way or the other. The items on the cost of construction are, I think, as close as it is possible to get and the land damages are what might be termed an approximation.

As to the merits of the case. The track depression suggested by the city lends itself to the opening of Hunter St. its entire distance, except that the crossings by overhead bridges would slope well out on Hunter St. at several places, for instance at Charles, McNab, James, John and Catherine. Hunter St. would then be like an up and down grade at these points, but nevertheless open for traffic. At present Hunter St. stops at Park St. and then the tracks run on the level from Park St. to practically Catherine St., but vehicular traffic has been allowed to use it, driving alongside the tracks. This is a pretty dangerous pre-

cedure and should not have been allowed, but apparently it has been going on for years. Most of the traffic is in connection with railway work along Hunter St. between John and James Sts., to express company's warehouses which are situated in that section.

The track elevation scheme would practically cut out the use of Hunter St. from Park to Catherine; that is it would prevent any use of that portion of the street for vehicular traffic and, in addition, would leave Charles and McNabb Sts. at grade level, protected by gates as they are at present, or else closed to vehicular traffic and opened by pedestrian subway, which is all that could be got at these points. These streets are not important and would not, unless the whole question of grade separation came up, be over considered as points warranting subways, as practically all the business is done first on James St. and second on John and other streets to the east, which would all be taken care of by track elevation or depression as far as Ferguson Ave.

In connection with the operation of trains, I attach a plan which is explanatory of the conditions as they are on the level, as they would be elevated, and as they would be depressed. The present station facilities lie between James and John Sts. and whether it be track elevation or depression, that location would not be changed. The operation of trains is easier at their present location, at ground level than either of the other means, elevation or depression. Elevating the tracks would continue a 1% grade rising from the mouth of the tunnel to James St., about 1,000 ft. Depressing the track from the tunnel to James St. for 1,300 ft., would give a falling grade of 9/10%. This depressed grade would then continue level for 1,800 ft. approximately 16 ft. below the present level of the ground, and would then rise 1,750 ft. by a 1% grade to the surface at Victoria Ave. This, to my mind, would make a tremendous difference in the operation of the railway. Heavy trains coming through, both freight and passenger, particularly if they had to stop at the station, which all passenger trains would have to do, would have great difficulty in making these grades in either direction and would be a most serious drawback to the operation of the railway. It would make it one of the worst places conceivable for the location of a station and would hamper the operation of the road through Hamilton to a very great extent.

The city's second idea was that the T.H.&B.R. be moved to the location of the G.T.R. present tracks, and that, to my mind, would be the proper solution of this question but it has been found impossible to do it. The T.H.&B.R. has spent a great deal of money in building its tunnel and on other works in connection with its present location, which could not be picked up and moved easily.

The noise from trains running in track depression in this locality would be less than on track elevation, but the smoke

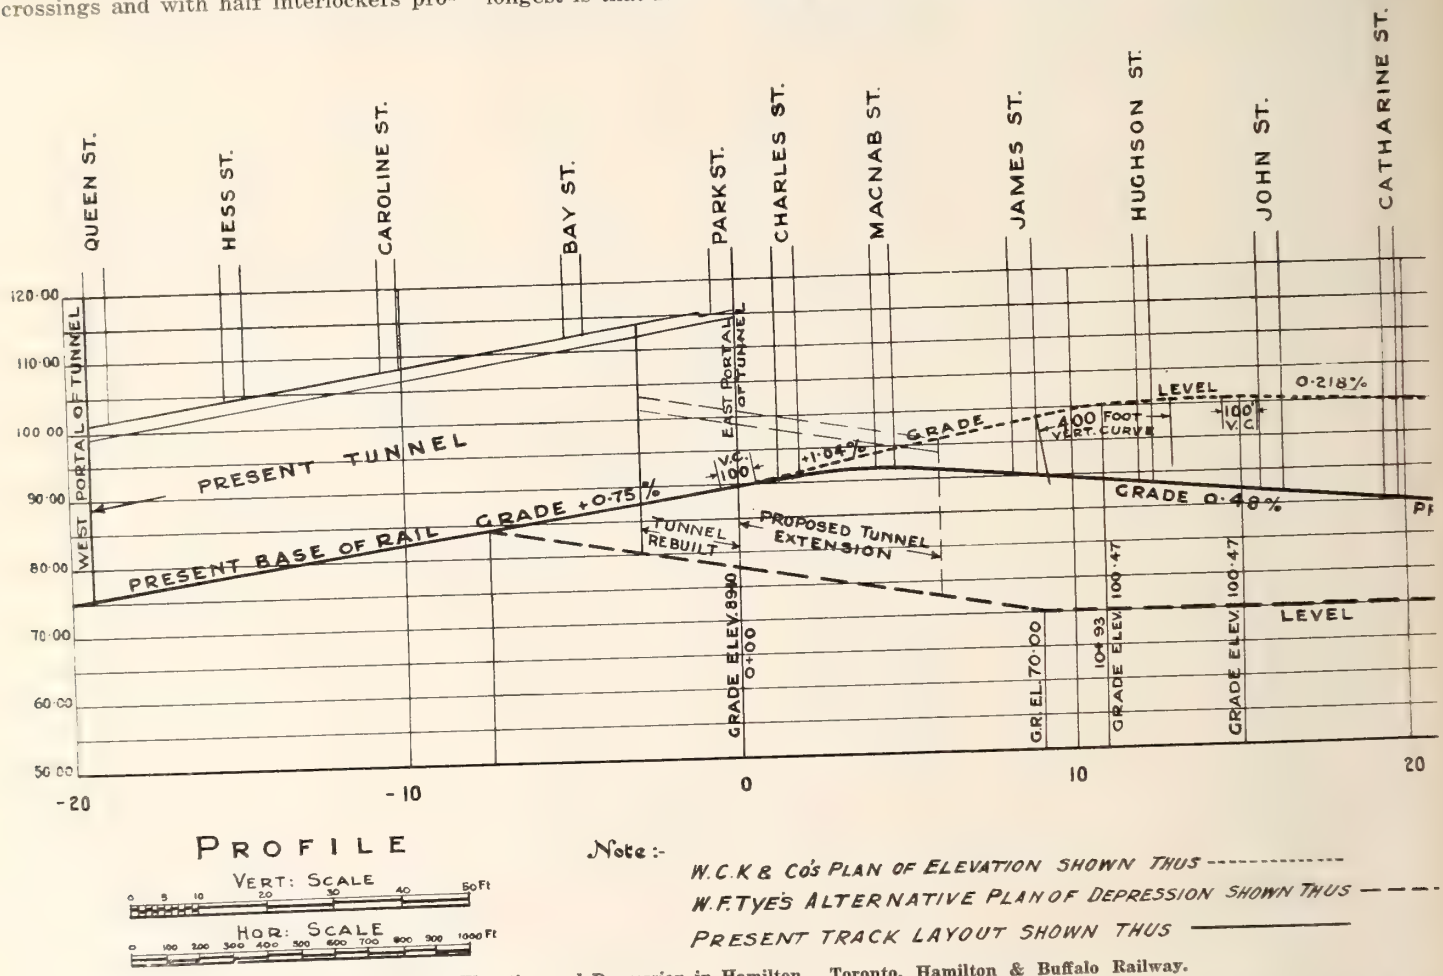

there is one of the big nuisances complained of in the application, and it would be greater in track depression than on elevation so long as steam power is used; and it does not seem to me that the density of the T.H.&B.R. traffic would warrant going to electric motors through this section at present. Taking everything into consideration that I can think of, I am of opinion that if grade separation is to be made at this point, then in the greater interest of all parties, track elevation is the proper method for economy of operation, business interests adjoining the railway and for relief from the smoke nuisance, but I do not think that the T.H.&B.R. business at present time through the City of Hamilton, with gates protecting practically all its level crossings and with half interlockers pro-

portal of the tunnel, but it has not advanced any suggestions officially. It is added that the question of eliminating the smoke is rather a difficult one, that the installation would be expensive and the operating cost extremely high.

The Railways of Venezuela.

H. K. Wicksteed, M.Can.Soc.C.E., Chief Engineer of Surveys, Mackenzie, Mann & Co., Ltd., Toronto, who spent some time in Venezuela last year in connection with a railway and coal mining proposition, wrote an interesting article on the country, which was published in Canadian Courier, from which the following is reproduced: "Of the railways, the longest is that from Caracas to Valencia,

an extraordinary descent along the mountain slopes of Las Tejas. There are 86 tunnels and over 100 steel viaducts on this piece of line; or, roughly, two of each for each mile of road, and the scenery is magnificent. But in a tropical climate, windows must of necessity be open, and in the long tunnels the smoke and gases from the engine make one imagine himself in a Belgian trench, and are somewhat trying to lungs and throat. It is possibly in the operation of this railway that the Germans got their ideas of asphyxiation. At Las Tejas, the railway reaches the bottom of the valley, in which is situated Valecia, its lake and many smaller towns, and the construction is comparatively easy and cheap. As a financial venture, the railway is a failure."

tecting the electric car system at crossings with the T.H.&B.R. warrants any change being made in the location of the tracks.

There is an objectionable feature in the way smoke comes out of the tunnel after trains have passed through, particularly at the portal next to James St. It can be noticed curling for some time after a train has passed through and is objectionable. I suggest that the company consider the advisability of putting a shaft near the upper end of the tunnel, which is the easterly portal, and fanning the smoke up into the air where it would disperse instead of coming out of the roof of the tunnel and flowing over Park St. This is merely a suggestion which might be looked into.

In reference to Mr. Mountain's suggestion as given above, we are advised that the T.H.&B.R. management has considered the question of providing ventilation to prevent smoke rolling out of the east

some 220 kilometers, or 130 miles, built and controlled by the Germans. The most lucrative is the English road from Caracas to its seaport, La Guayra, about 27 miles. The last is among the scenic and engineering curiosities of the world, climbing an elevation of 3,100 ft. in 25 miles, with grades of nearly 4%, and almost continuous curvature, as sharp as 140 ft. radius. In spite of these economic drawbacks, the traffic has been carried on continuously without accident for many years and pays good dividends on its stock. Considering that its passengers pay 10c. a mile, and freight in proportion, and that it connects a population of 150,000 or more people with the outside world, it should pay.

"The German railway is a much bolder conception, and cost over its mountain section of 40 or 50 miles a much larger sum of money. It winds up the canyons of the Guayra to its source, tunnels through the Andes and then commences

The Chicago Railway Terminal Problem is again to be taken up by the city with a view to the concentration of the present passenger terminal stations. Under ordinances passed some time ago the Illinois Central Rd., is required to build a new terminal station on a site adjacent to the present station, in order to make way for the extension of 12th St. to the lake front and for the improvement of Grant Park. The council committee on railway terminals has been directed to confer with the several railways entering from the south in order to determine upon the exact location of the new Illinois Central terminal and to provide for its use by other roads which now run beyond 12th St. and use the Dearborn, La Salle and Grand Central terminal stations.

V. J. Smith, heretofore at Windsor, Ont., has been appointed agent, Canadian Ex. Co., St. Thomas, Ont., vice C. W. Ward, resigned.

Freight Rate on Tank and Still Structural Material from Sarnia to Regina.

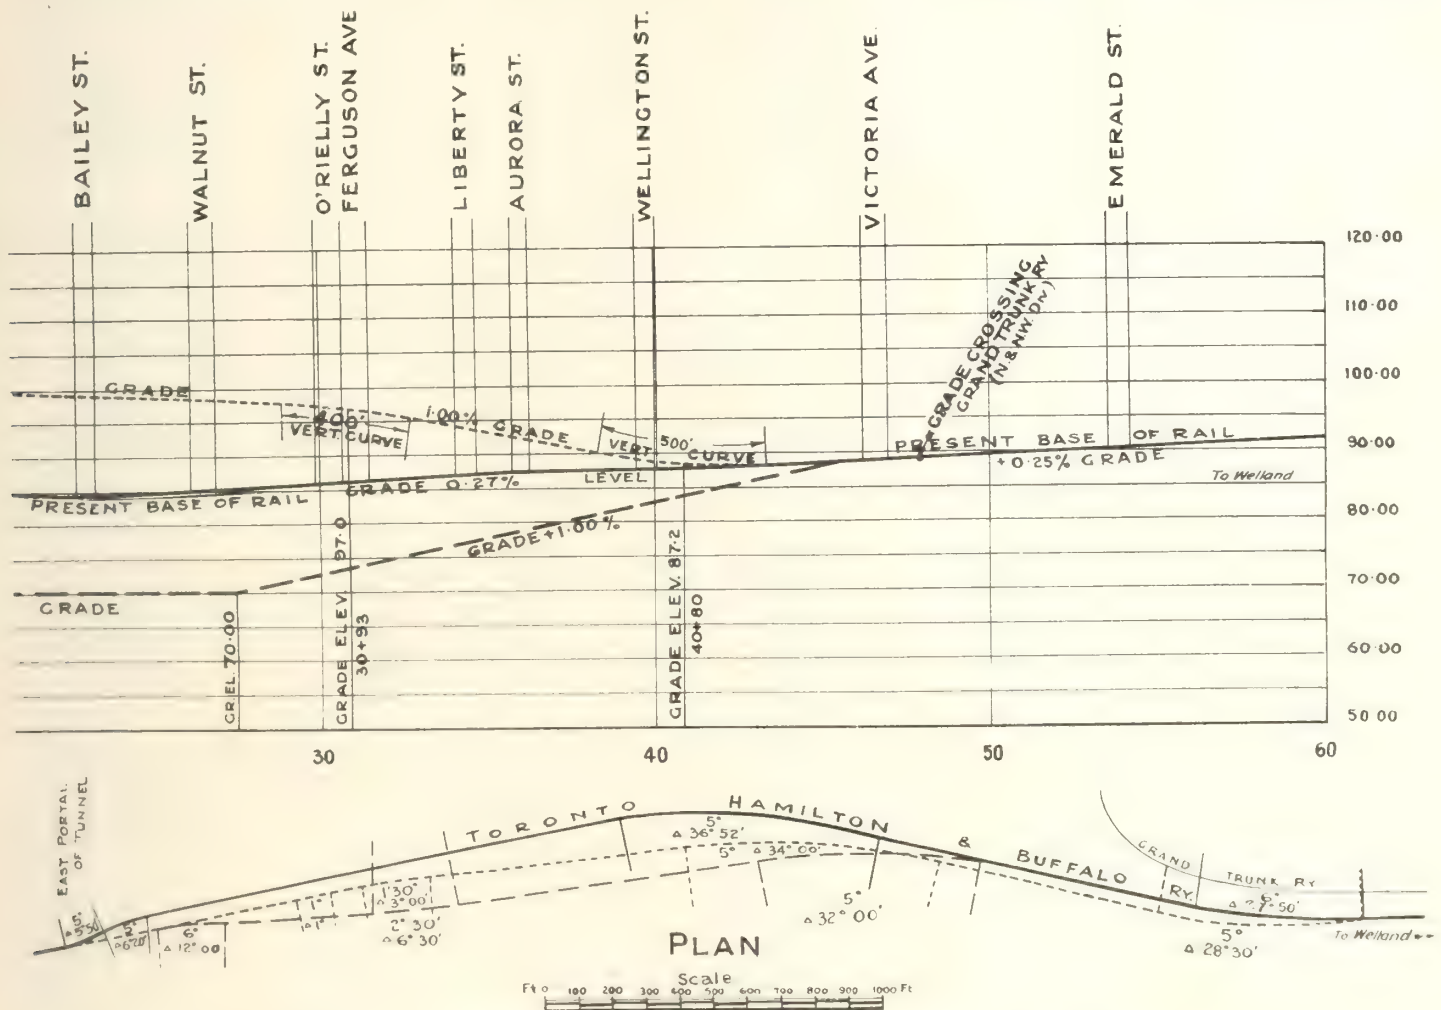

The Chief Commissioner of the Board of Railway Commissioners, Sir Henry L. Drayton, K.C., has given the following judgment, which has been concurred in by Commissioners McLean and Goodeve:

At the Board's sitting held in Ottawa on Feb. 9, two cases closely related were heard, and considered together. The one involved the consideration of Special Freight Tariff C.R.C. no. E. 732, issued by the Canadian Northern Ry., the company being required to support the tariff and show cause why it should not be cancelled as being made in contravention of

of oils and gasoline was confined to a three months period, and as during that period, which may be termed the "peak," three or four times the number of containers and transportation facilities (tank cars, and the like) are required than at other times of the year, it determined that it was necessary to erect a refinery in Regina and distribute from that point. Desiring to have the steel materials necessary for the erection of the plant fabricated in Canada and at their Sarnia works, the Imperial Oil Co. approached the Pere Marquette Rd. with

International Boundary refused to reduce their rate and probably brought pressure to bear upon the Pere Marquette, so as to prevent the long haul on the movement out of Sarnia being enjoyed by the United States companies.

The Canadian carriers were then approached, but the Imperial Oil Co. was unable to obtain any concessions from any of the carriers having connection with Sarnia. The Canadian Northern, however, subsequently agreed to put in the tariff in the question and filed it. The special rate of 75c. that the Imperial

Schemes for Track Elevation and Depression in Hamilton. Toronto, Hamilton & Buffalo Railway.

the "Equality" and "Joint Tariff" provisions of the act. The other application was one made by the Imperial Oil Co., for an order under sec. 344 of the Railway Act, requiring that a joint tariff should be filled from Sarnia to Regina, at a rate of 75c. per 100 lbs., applicable on tank and steel structural material. The Pere Marquette Rd. and the Canadian Pacific, Canadian Northern, and Grand Trunk Railways being interested, either in portions of through movements or in alternative routes. Reference to the circumstances under which the so-called Canadian Northern Proportional Special Tariff came to be put in is necessary.

The Imperial Oil Co., carrying on a very large business in the Northwest, stated that in view of the fact that by far the largest part of the distribution

the view of obtaining a special rate from the Pere Marquette of 75c. to Regina. The Pere Marquette representative agreed to make this special rate of 75c. transportation to be made via Chicago over the lines of the American companies connecting with that system, with the result that the American lines would get the long haul. The Imperial Oil Co. thereupon obtained its materials in Pittsburgh, shipped them to Sarnia, and have at least in part already fabricated them. The movement is considerable, some 5,000 tons being involved. The Pere Marquette then declined to maintain the rate, or indeed to put it into effect; and, while nothing is said as to the reason for it, I take it for granted that the Canadian roads over whose tracks the shipment would have to go to Regina from the

Oil Co. desired in the first instance from Sarnia to Regina was required so as to meet Pittsburgh rate of 93.9c. to Regina, the rate from Pittsburgh to Sarnia being 18.9c. As the Canadian Northern has no connection with Sarnia, the traffic from Sarnia to Toronto, moving on the Pere Marquette and Canadian Pacific railways would pay the established rate of 16½c. and, therefore, it became necessary that, in order to equal the 75c. rate as desired by the Imperial Oil Co., a special rate of 58½c. should be made by the Canadian Northern from Toronto to Regina. The tariff that company filed is said to be a Special Proportionate Freight Tariff of rate on Tank and Still Structural Material from Toronto to Regina, and is made applicable only on shipments originating at Sarnia and does not apply to points

intermediate to Regina. The required rate of 58½c. is made. The Canadian Northern supports the tariff as being proper under the provisions of sec. 326, s.s. 3, of the Railway Act, which reads as follows:

The special freight tariffs shall specify the toll to be paid, lower than in the standard freight tariff, as determined by the company for any particular commodity or commodities, or for each or any class or classes of the freight classification, or to or from a certain point or points on the railway; and greater tolls shall not be charged therein for a shorter than for a longer distance over the same line in the same direction, if such shorter distance is included in the longer."

This provision undoubtedly allows special freight tariffs and commodity rates. These tariffs, however, are just as much subject to the provisions of the act, relating to equality and to joint rate movements, as are the original standard tariffs. The section itself provides that greater tolls shall not be charged under such special tariffs for a shorter than for a longer distance over the same line in the same direction, if such shorter distance is included in the longer.

The tariff is confined in its operation to shipments originating in Sarnia, 232 miles from Toronto; and provides for the carriage of the material in question to Regina, 357 miles west of Winnipeg. The rate is not extended to Winnipeg, and the Canadian Northern tariffs, before the tariff under consideration was filed, provided a rate from Toronto to Winnipeg 62c. and to Regina 86c. The articles forwarded do not all take the same class, but 6th class to all intents and purposes applies and the rates quoted are those of the 6th class. The rate from Sarnia to Regina is 86c, the same as the rate from Toronto to Regina. The tariff in question reduces the rate applicable on the Canadian Northern lines 27½c. The Canadian Northern does not suggest that the 86c. rate is too high. On the other hand, the consistent position taken by that company in cases being considered by the Board, is that it requires every cent of revenue that it can get and that it should not be called upon to forego any. The tariff is sought, however, to be sustained as a competitive freight tariff. So far as the Canadian Northern line is concerned, it is difficult to see how any effect can be given to this argument. The Canadian lines have the right to differentiate any rates to the extent necessary to meet the advantages enjoyed by one company over the other that a shorter mileage creates. Carriers cannot go further than this without rendering their tariffs subject to attack, unless the tariff scheme is carried out in its entirety. In the regular existing tariff the Canadian Northern has already met the shorter Canadian Pacific mileage to Regina and publishes the same rate. It cannot be contended that Toronto—Regina business or Sarnia—Regina business is more highly competitive than business to Winnipeg, or that concessions granted to manufacturers at one point should be denied those at others when similar conditions prevail.

The Winnipeg Board of Trade has intervened. Its telegram read, at the hearing, is as follows:

"Informed Commission will tomorrow deal with reduced rate structural steel ex Sarnia, Toronto, Regina 58½c. On behalf members seriously affected, this Board protests strenuously against any reduction eastern to western points unless corresponding reductions made rates into and out of Winnipeg to keep manufacturers fabricating steel at Winnipeg at least in same relative position to eastern manufacturers that now exists under Commission's decision in Western Rates Case. Writings."

This telegram has been followed up by the following written submission:

"If reduced and special rates below those ordered

by your Commission in the Western Rates Case are made from manufacturing centres in Eastern Canada to points in Western Canada as occasion arises, without any corresponding reductions in rates into and out of Winnipeg, it must be readily apparent to your Commission that Winnipeg manufacturers will be deprived of their just rights to compete with Eastern manufacturers on requirements at Western points, and this section feels that the Commission should not, and no doubt will not, lend its sanction to any basis of rates that will bring about such disastrous results to Western manufacturers."

In this connection, the different mileages involved are as follows: Pittsburg to Sarnia and Sarnia to Regina, via Grand Trunk and Canadian Pacific, 2,163 miles. Pittsburg to Sarnia, and Sarnia to Toronto (P.M. & C.P.) Toronto to Regina, the route that the proposed tariff takes advantage of, 2,288 miles. Pittsburg to Sarnia, Sarnia to Regina, via Pere Marquette, Chicago Line, and Northgate, which would appear to be the route originally contemplated by the Pere Marquette, 1,958 miles. Pittsburg to Winnipeg, Winnipeg to Regina, 1,697 miles. It will be observed that the route covered by the tariff in question is 125 miles longer than if ordinary route from Sarnia to Regina had been adopted, while steel originating at Pittsburg, fabricated at Winnipeg instead of being fabricated at Sarnia, has a mileage of but 1,697 miles, 591 miles less.

One of the matters which received very careful consideration in the Western Rates Case, and an underlying principle applying to tariffs, is the right of distributing points or manufacturing centres to the advantages of their geographical situation which should not be taken from them by any artificial or discriminatory rates. Apart from some special circumstances or extraordinary rate, it is quite clear that there would have been an advantage in fabricating this steel in Winnipeg rather than in Sarnia. Had the shipment taken this course, the rate would have been \$1.01.2 6th class, against the regular Sarnia rate of \$1.04.9. Again the regular Canadian Northern rate from Toronto to Winnipeg is 62c, while the rate in question carries the same commodity over the same lines in the same direction through Winnipeg and 357 additional miles to Regina for 58½c. Apart from these considerations, sec. 333 of the Railway Act provides for joint traffic. The duty is cast on the railway companies to put in joint rates, a duty which can be enforced in case of failure under sec. 334. Joint rates were in effect applicable to the traffic in question—joint rates which the Canadian Northern does not attempt to show are excessive or improper. The whole answer is that of competition. Reference should be made in this connection to sec. 337, which provides:

"No company shall, by any combination, contract or agreement, expressed or implied, or by other means or devices, prevent the carriage of goods from being continuous from the place of shipment to the place of destination."

The scheme of the act is that traffic moving over the lines of two or more companies shall be considered and carried as through traffic on the one bill of lading, and not that local rates should be filed as proportionals and the traffic move under separate bills. The proportionals rate is something which the act does not provide for in terms at all; and, while it is quite true that through traffic shipped on a through bill of lading may move on the sum of the locals so that in a sense the local is a proportion of the through rate, it nevertheless is true that the local rate is open for every shipper to take advantage of and is not confined to a shipment originating at some particular point miles away on the one hand,

or to a particular destination on the other. The present rate, although claimed to be proportional, can hardly be so described when the result is not to maintain the joint rate out of Sarnia but to reduce it 27½c. Special arrangements cannot be given effect to between railways and shippers. Traffic must be moved on the tariffs filed—no more and no less; and these tariffs must be free of unjust discrimination and comply not only with the general sections but, in cases applicable, with the joint traffic sections of the Act.

There remains to be considered the application made by the Imperial Oil Co. for an order directing the companies affected to file through tariffs providing a commodity rate on the material in question from Sarnia to Regina of 75c. The application is urged in the public interest. The applicants show that the cost of fabricating in Sarnia amounted to \$9 a ton; so that fabricating in Sarnia resulted in an expenditure of \$45,000 in Canada, something unquestionably in the public interest. The position of the Canadian Pacific Ry. on the question of fabricating is that Customs Tariff, items 331 and 382, provides a tariff of \$3 and \$7 a ton on different classes of unfabricated iron and steel material, while item 391 provides for a duty of 35%, amounting as claimed by the Canadian Pacific to a duty of \$20 to \$24.50 a ton on the fabricated material. The applicants showed that on the material in question the difference in duty did not exceed \$7 a ton, and that of this \$7 a ton, the additional cost of fabricating in Canada absorbed over \$5, with the result that a sum less than \$2 represented the company of Canadian fabrication, with the further result that, on a freight basis, the economy worked would represent a sum not exceeding and possibly less than 10c. a 100 lbs.

There is, of course, another public interest to be considered. That is the transportation interest—possibly representing, next to the great agricultural industry of the country, the largest public interest. On the large movement in question, its carriage through the United States, instead of through Canada as originally arranged, would represent a loss to the Canadian railway industry, based on a 75c. rate, of \$75,000 of revenue, less, of course, the short local movement which would still remain available to the Canadian roads. The applicants give no evidence as to the unreasonableness or otherwise of the present Sarnia rate, except that which may be inferred from the fact that the Pittsburg-Regina rate is lower than the combination of the Pittsburg-Sarnia and Sarnia-Regina rates, amounting to \$1.04.9, and from the further fact that the Pere Marquette Rd. at one time voluntarily agreed to this 75c. rate. The larger part, however, of the earnings under that rate meant just so much found business to the United States lines; and it was a rate which they chose to put in, doubtless in order to get the business, and not a rate fixed by any rate regulating tribunal as reasonable. On the other hand the Pittsburg-Regina mileage is 1,591, while the Sarnia-Regina mileage is 1,773. At a rate of 93.9 the Pittsburg movement makes a mileage return of 1.18c. and the 86c. Sarnia movement 97 hundredths of a cent per ton mile. The Pittsburg rate proves nothing, except that iron and steel commodities can move west more cheaply out of Pittsburg direct than out via Sarnia. It affords no evidence whatever that the Sarnia rate is unreasonable.

The statement is also made that the

rate is only a paper rate, and that no traffic moves under it. The iron and steel rates of the country stand in a certain relationship one to the other. The commodity moves, speaking generally, under the 5th and 6th class in carloads; and, while there may or may not have been any traffic to move out of Sarnia and none moving from that point, there is no doubt at all that traffic of this character moves and is moving freely. The same 86c. rate applies from Hamilton and Montreal, and also from Walkerville, where there is also a bridge plant. The large viaducts and bridges in the west, many of them fabricated in the east, need only be instanced. At present, it is true, that a large portion of this business, perhaps indeed most of it, is now fabricated in the west for the west. The large plant of the Manitoba Bridge Co. and the branch factory established by the Dominion Bridge Co. in Winnipeg, may be taken as evidence of this fact. While this is true, no new tariff structure can be justified, the effect of which would be to favor the eastern fabricator of iron and steel as against his western competitor in the western market.

Before the Board can give effect to the application, the unreasonableness of the present rate must be established. If unreasonable ex Sarnia, they cannot very well be reasonable ex Hamilton, with its shorter mileage. The simple fact that the Imperial Oil Co. has a specially large shipment to make and on which large traffic returns could be earned cannot be considered by the Board as overruling other considerations. It is true that under the act the tolls for larger quantities may be proportionately less than the tolls for smaller quantities (s.315, s.s.3). Effect has been given to this section in the lower car lot rates—in the lower rate basis given the carload as against less than carload movements. Further than this the Board has not, and in my opinion ought not to go. There is no real handicap on the smaller manufacturer or dealer under this system. Practically all engaged in the handling of the different commodities that move in carloads have enough business to provide for a carload movement, which in turn represents a greater transportation facility and lessens railway expenses. On the other hand, were rates for movement of 5,000 tons, for example, less than for 2,500 tons, it would be simply handicapping the smaller dealers and bonusing the larger. If the system were applied to the movement of any commodities moving in large volume, such as coal, the only effect in the long run would be to work the extinction of the smaller dealers and place the business of the country in the hands of large distributors. The application must be dismissed.

To Protect Bottom Flanges of girders over railway tracks from the rapid deterioration due to the chemical action of smoke and gas, together with the erosive effects of engine blasts, it was found, after trying several other devices, that $\frac{3}{8}$ -in. plain oak sheathing held firmly in place by iron clamps, the sheathing being first covered on its upper side by a paste composed of red lead and Portland cement, was very satisfactory. As stated by L. M. Hastings, city engineer of Cambridge, Mass., the oak sheathing showed surprising resistance to the destructive action of the blast. Some pieces of oak taken from the bridge after 10 or 12 years exposure showed a loss of thickness of not more than $\frac{1}{4}$ in.

Tank Cars for Canadian Northern Railway.

The C.N.R. has received recently, from the United States, 4 tank cars, nos. 7161 to 7164, of which the following are the principal particulars:—

Length over striking plates.....34 ft. 6 ins.
Width over side sill channels.....8 ft. 10 ins.
Diameter of tank inside.....90 ins.
Length of tank over heads.....31 ft. 2 ins.
Height top of rail to centre of tank.....7 ft. 10 $\frac{3}{16}$ ins.
Truck centres.....22 ft. 10 ins.
Truck wheel base.....5 ft. 6 ins.
Truck wheels.....33 ins. diameter, 725 lbs. each
Axles.....5 $\frac{1}{2}$ x 10 ins., MCB journal
Capacity.....10,000 U.S. gallons

The centre construction consists of two 15 in. 55 lb. rolled steel channels, spaced 12 $\frac{7}{8}$ in. apart, running continuous from end sill to end sill and reinforced on top by two cover plates 20 $\frac{1}{2}$ in. x $\frac{1}{4}$ in. running from bolster saddle to anchor. The end sills are formed from 8 in. 13.75 lb. rolled steel channels, with flanges facing inward, connecting at the corner through $\frac{5}{8}$ in. gusset plate, forming a tie for the 3 x 3 x $\frac{3}{8}$ in. rolled steel diagonal brace

The tank proper is made up of 5 circumferential sheets of $\frac{1}{4}$ in. plate and 1 bottom sheet of $\frac{3}{8}$ in. plate. Longitudinal seams are double rivetted and circumferential seams single rivetted. The dome is fitted with malleable iron cover, and ring $\frac{5}{8}$ in. double safety valves. The base of the tank is also provided with 6 in. outlet nozzle and cap. Sill steps formed from 2 x $\frac{3}{8}$ in. steel are provided and located according to Interstate Commerce Commission requirements. The draft gear is of friction type, the air brakes, New York schedule H-C, 1012. The trucks are of 50 tons capacity, having top bars 4 $\frac{1}{2}$ x 1 $\frac{1}{2}$, bottom bars 4 $\frac{1}{2}$ x 1 $\frac{3}{8}$ and tie-bar 4 $\frac{1}{4}$ x $\frac{5}{8}$. Wheels are 33 in. diameter, 725 lbs. each. The bolsters are fitted with class D, M.C.B. springs.

Each end of tank is provided with a head 7/16 in. thick, flanged and dished and single rivetted to shell. The dome sheet is of $\frac{1}{4}$ in. plate flanged and single rivetted. The dome head of $\frac{1}{4}$ in. plate is

Canadian Northern Railway Tank Car.

and side sill, the latter being of the same section as the end sill.

The bolster construction consists of two pressed steel diaphragms formed from $\frac{1}{4}$ in. plate and tied, at the bottom by a plate 24 x $\frac{3}{8}$ in., at the top by a plate 10 x $\frac{3}{8}$ in. The two tank saddles consist of 10 x 15 lb. rolled steel channels, located with flanges facing upward and having yellow pine filler to suit contour of tank. The four bottom anchors for tank, extending between the outside and centre crossties, are formed from 3 x 3 x $\frac{1}{2}$ in. U-shaped bracings. The three crossties, one being located at the centre of the frame, the others being spaced 5 x 8 $\frac{1}{2}$ in. each side of centre, consisting of $\frac{1}{4}$ in. steel plate pressings, and are connected to the side sill with 3 x 3 x $\frac{1}{4}$ in. angle plate. The running bars consist of 2 x 12 in. yellow pine and hand rails are provided 12 in. above the centre line of the tank, formed from 1 in. pipe. The end sill is reinforced at striking plate by a steel plate $\frac{3}{4}$ in. thick. The bolster is reinforced between centre sills by a malleable iron filler. Four hold down straps, formed from 2 x $\frac{3}{8}$ in. steel bars, terminating in 1 $\frac{1}{4}$ in. rods, are provided and located each side of centre of tank and 7 ft. 4 in. centre to centre of outside straps.

flanged and dished and single rivetted to dome sheet. The 5 in. double safety valve is rivetted directly to the dome sheet, and the tank outlet nozzle is fitted with valve and operating rod, valve being operated from dome with a malleable iron can. The tanks are tested before erection to 60 lbs. pressure per square inch, all seams being caulked.

Canadian Ticket Agents' Association.

The next annual meeting and outing will be held at Port Arthur, Ont., June 12. The party will start from Sarnia by Northern Navigation Co.'s steamship, returning by Canadian Pacific steamship to Port McNicoll.

Public Ownership of Public Utilities.

The Royal Commission on the high cost of living, in its report presented recently, advocates public ownership of all public utilities, including electric railways, water, gas and electric light in cities and towns.

The Montreal Warehousing Co.'s annual meeting was held at Montreal, Mar. 1.

The directors for the current year are E. J. Chamberlin, President; H. G. Kelley, Vice President; J. E. Dalrymple, Frank Scott and John Pullen. The Manager and Secretary is C. J. Smith.

Spring Track Work.

By J. W. Powers, Supervisor, New York Central Railroad.

With the advent of spring come many of the hardships of trackmen. The roadway, having passed through the rigors of winter, is frequently in a condition which requires vigorous and immediate attention. As the frost leaves the ground, the heaving often goes out in an irregular manner and shimmed track must be watched closely in order to avoid accident. This is particularly true where there are shims on curves, as any settlement which will effect the elevation must have prompt attention. Thick shims should be removed gradually as the frost leaves the ground. When necessary thin shims should be substituted until the track resumes its permanent position. The necessity of shimming is due to insufficient or poor ballast or drainage. Such points should be located and steps taken to eliminate the necessity of shimming.

During this season of the year, some roads are troubled with bank slides. Such slides sometimes occur in cuts, filling in ditches and burying the track. In some cases the embankment of the road will crumble away to such an extent as to endanger the safety of traffic. The magnitude of such slides depends on circumstances and varies from a few yards to landslides which interrupt traffic for several days, requiring service of steam shovel or ditcher to remove. In connection with land slides, washouts have to be contended with, as they usually occur at this season of the year, causing more or less damage, due to heavy rains together with melting snow. It is remarkable how quickly a flood of water under certain conditions can destroy the works of man. Embankments and bridges which required considerable labor and skill extending over years, perhaps only to be washed away in a few hours or minutes, showing how little man's efforts mean when attacked by natural forces. It also shows the necessity that in order to make our work of a permanent character, we must plan it so that it will not conflict with the unchangeable laws of nature.

While some washouts cannot be prevented by the efforts of trackmen, when the forces of nature combine to produce unusual volumes of water without adequate avenues of escape, there are, however, a great many washouts which can easily be averted if proper precautions are taken. Thus by keeping the ditches and waterways open, removing rubbish from under bridges and cleaning out culverts as often as obstructions may gather there, observant foremen can save the company many expensive washouts, which shows that safety of trains depends to a large extent upon the degree of energy, intelligence and integrity displayed by trackmen.

The most important regular work of the spring season is the renewal of ties, which should be taken in hand as soon as roadbed is in condition for it. The constantly increasing cost of new and suitable cross ties, coupled with their ever growing scarcity, makes it imperative that trackmen should handle the track question with the greatest circumspection and care, hence facts tending to reduce waste in this direction should be encouraged, as our timber resources are no longer boundless.

The best method of putting in ties is one of vital importance, but on account of the widely diverse conditions existing

on many roads, it is apparent that but few general remarks are applicable to all. A matter of great importance in the renewal of ties is to determine what ones should be taken out or just what ties, if left in another year, would by further decay weaken the track to such an extent as to be detrimental. Several weak ties should not be left together, the ties on curves should be inspected very closely and decayed ones should not be allowed to remain in curved track. A tie on a tangent will sometimes last much longer than on curves, thus a tie may be safe for one year in one place where it would not be safe in another. This means that the inspector when he condemns ties to be renewed must exercise good and clear judgment and should not injure good ties when testing for renewals. But it is false economy to allow ties to remain in track that are not sound enough to support the rail properly, for ties not furnishing their proportion of rail support increase the load on the adjacent ties and cause excessive rail cutting and rough riding track. Similar defects will be caused by new ties if not put in properly. The roadmaster or supervisor or their assistants should examine all ties which are to be removed, so that no good ones will be taken out, as many ties have to be prematurely removed from track on account of injuries inflicted upon them during renewals. Still more injury is done by not plugging spike holes, as an unplugged or improperly plugged spike hole in a tie is by far the quickest road to its destruction, as it acts as an easy avenue for the absorption of water, which very thoroughly permeates throughout the body of the tie. Great care should be used when putting in new ties. Much can be done during the process of renewal to shorten or lengthen the life of the tie. Tie tongs should be used to pull new ties in track and men should not be allowed to use picks for this purpose as the holes left by the picks will make an easy place for water to lodge. Neither should they be placed heart side up as this accelerates the destruction of the tie by the converging fibres. If placed heart side down, the fibres of the timber tend to shed water away from the inner timber.

The renewal of ties naturally causes disturbance in the general condition of the track that cannot be immediately corrected, therefore the old bed should not be disturbed unless it is absolutely necessary. In order to reduce the period of such disturbance to a minimum, the renewals should be carried on without interruption. It has been a matter of much discussion whether it is best to put the final surface on track as ties are renewed, or put in ties and leave track in fairly good condition in order to expedite the work of renewals. Both methods have very strong adherents and arguments to sustain them, but the most logical conclusion is that conditions govern as to which is the best course to pursue on any particular road. Where the old ties to be removed and the new ones to be installed are of different dimensions, much time can be saved by using new ties about the same sizes as the old ones, and if old ties were properly spaced it helps to keep the spacing uniform. To obtain the best results, ties should be of the same length and of uniform cross section. With perfectly uniform ties laid at right

angles to the track and evenly spaced, the maintenance expenses would, undoubtedly, be greatly decreased without incurring any heavier expense in the first cost of ties.

The necessity for using appliances and adopting methods of economy and efficiency in these days of sharp competition and adverse railway legislation must be apparent to all officers who are responsible for the expenses in their respective departments. With this idea in view, the maintenance of way departments are economizing by a more liberal use of chemically treated ties with tie plates. The necessity of properly constructed tie plates has become more and more apparent. With the increase in weight of motive power, carloads and speed of trains, the demand for good ties, chemically treated, is increasing as the forest supply decreases and prices advance. The life of a tie is shortened by two principal causes, that is by the chemical process of decay and the mechanical wear under the rail. The life of some ties can be doubled and trebled by proper chemical treatment. Yet this would by no means solve the tie question unless provision is made to prevent the rail from wearing away the tie. It is a fact that many ties are removed from track, not because of decay, but on account of being weakened by rail base cutting into the wood. A properly constructed tie plate will increase the life of the tie, decrease the cost of tie renewals, maintain the rails in their normal positions, prevent excessive wear on the side head of rail, affect a large saving in the labor of track maintenance and increase safety in operation.

There is a diversity of opinion among track men as to the economy and efficiency of using a bevel tie plate. If such plates were used on every tie, we believe they would give good results. But we all know that after an ordinary rail has lain in track for a period of time, it is not the same shape nor has it the same bearing on ties as when it was first laid, because the wheel loads passing over it have canted it to a certain extent. Opinions vary as to the practicability of their use in rails adjoining frogs and switches. If bevel plates are not placed on all ties, the rail bears on such plates only on the outside of the base of the rail, which places it in torsion and tends to cause half moon breaks. Therefore all of these things have to be considered and properly adjusted or else we have an imperfect device.

There is one feature which should be observed in all kinds of track work and that is the safety of trains and men. This forms the main part of a trackman's responsibility and attention has been called to it so often that it would seem unnecessary to do so again. Still, we believe that we cannot be reminded too often of the necessity of using extra precautions for the protection of the traveling public, our fellow workmen and ourselves. Safety of the track is all important, but we must have intelligent safety or safety that is not wasteful either in labor or material.—Maintenance of Way Bulletin.

M. E. McLeod has been appointed agent, Canadian Ex. Co., Prince George, B.C., vice A. Sholey, who has resumed his former position as messenger.

Birthdays of Transportation Men in April.

F. G. Adams, Commercial Agent, G.T.R., and Division Freight Agent, G. T. Pacific Ry., Winnipeg, born at St. John's, Nfld., Apr. 6, 1878.

W. H. Ardley, Comptroller, G.T.R., G. T. Pacific Ry., Montreal, born at London, Eng., Apr. 24, 1858.

Jas. Black, Freight Claim Agent, C.P.R., Vancouver, B.C., born near Seaforth, Ont., Apr. 19, 1858.

C. G. Bowker, General Superintendent Eastern Lines, G.T.R., Montreal, born at Medford, N.J., Apr. 21, 1871.

A. V. Collins, Canada Steamship Lines, Ltd., Toronto, born at Island Pond, Vt., Apr. 21, 1868.

R. J. Collins, Chief Dispatcher, District 4, Alberta Division, C.P.R., Edmonton, born at Winnipeg, Apr. 30, 1883.

Sir Henry L. Drayton, K.C., Chief Railway Commissioner for Canada, Ottawa, Ont., born at Kingston, Ont., Apr. 27, 1869.

A. E. Edmonds, General Agent, C.P.R., Detroit, Mich., born at Woodstock, Ont., Apr. 8, 1866.

B. C. Gesner, Moncton, N.B., formerly Air Brake Inspector, I.R.C., now Eastern Sales Agent, Galena Signal Oil Co., born at Cornwallis, N.S., April 23, 1859.

J. Murray Gibbon, General Publicity Agent, C.P.R., Montreal, born at Ude-wella, Ceylon, Apr. 12, 1875.

V. A. Harshaw, Assistant Superintendent, District 3, Eastern Division, C.P.R., Montreal, born at Mono, Ont., Apr. 26, 1865.

J. M. Horn, Assistant General Freight Agent, Canadian Northern Ry., Winnipeg, born at Allanton Mills, Lanarkshire, Scotland, Apr. 12, 1880.

B. S. Jenkins, ex General Superintendent, C.P.R. Telegraphs, Winnipeg, born Apr. 8, 1859.

J. H. Johnston, Superintendent of Bridges and Buildings, Eastern Lines, G.T.R., Montreal, born at Uxbridge, Ont., Apr. 22, 1866.

G. W. Lee, Commissioner, Timiskaming and Northern Ontario Ry., North Bay, Ont., born at Renfrew, Ont., Apr. 15, 1871.

J. A. Macgregor, Superintendent, District 4, Alberta Division, C.P.R., Edmonton, born at Dufftown, Scotland, Apr. 5, 1873.

B. R. Marsales, District Freight Agent, Canadian Northern Ry., Calgary, Alta., born at Guelph, Ont., Apr. 13, 1887.

J. H. Mills, Master Mechanic, Lake Superior Division, C.P.R., North Bay, Ont., born at Sherbrooke, Que., Apr. 23, 1865.

P. Mooney, General Freight and Passenger Agent, Halifax and South Western Ry., Halifax, N.S., born at St. Catherines, Que., April 19, 1871.

F. L. Nason, General Agent, Passenger Department, C.P.R., San Francisco, Cal., born at Newton, N.H., Apr. 16, 1880.

G. D. Perry, General Manager, Great North Western Telegraph Co., Toronto, born at Whitby, Ont., April 19, 1858.

R. A. Pyne, Superintendent of Shops, C.P.R., Winnipeg, born at Toronto, April 10, 1874.

R. S. Richardson, Superintendent, District 3, National Transcontinental Ry., Fort William, Ont., born at Napanee, Ont., April 9, 1865.

F. Rioux, Assistant to President, Reid Newfoundland Co., St. John's, Nfld., born at Trois Pistoles, Que., April 18, 1867.

W. A. Ritchie, District Superintendent, Pullman Co., Montreal, born at Edinburgh, Scotland, Apr. 13, 1854.

E. W. Smith, Superintendent, Dining and Parlor Car Service, G.T.R., Toronto, born at North Bridge, Mass., Apr. 21, 1869.

G. St. George Sproule, Engineer of Tests, C.P.R., Montreal, born there, Apr. 23, 1885.

W. S. Tilston, Chief of Montreal Board of Trade Transportation Bureau, born at Manchester, Eng., Apr. 14, 1877.

C. H. Towle, Assistant Superintendent, District 1, Atlantic Division, C.P.R., Brownville Jct., Me., born at Enfield, Me., Apr. 13, 1878.

E. D. Toye, Storekeeper, Ontario Division, Canadian Northern Ry., Trenton, born at Dalston, Ont., Apr. 27, 1891.

H. J. White, Supervisor of Car Work, Eastern Lines, Canadian Northern Ry., Toronto, born at Brownington, Vt., Apr. 1, 1871.

E. M. Wood, Deputy Municipal and Railway Commissioner for Manitoba, born at Brantford, Ont., Apr. 20, 1858.

W. Woollatt, Vice President and General Manager, Essex Terminal Ry., Walkerville, Ont., born at Weedon, Hertfordshire, Eng., Apr. 2, 1855.

Freight Cars for Nigerian Railways.

As announced in Canadian Railway and Marine World for January, the Nigerian Ry. in West Africa ordered through the Crown Agents for the Colonies, from Canadian Car & Foundry Co. 100 ten-ton, end tipping coal cars. As they are being built to a typical design of European equipment, so much of which is now being built in Canada, a description of them will be of general interest. The principal dimensions are as follows:

Length over end sills and top frame.....	17 ft. 0 ins.
Length of rigid wheelbase.....	9 ft. 6 ins.
Width over wooden siding.....	7 ft. 0 ins.
Width inside.....	6 ft. 7 1/4 ins.
Height, top of rail to side sill.....	3 ft. 4 3/8 ins.
Height, top of rail to top of side.....	7 ft. 7 1/2 ins.
Height, top of rail to centre of coupler.....	2 ft. 10 ins.
Centre to centre of journals.....	5 ft. 4 ins.
Cubical capacity.....	440 cu. ft.
Capacity.....	10 tons (2240 lbs. each)
Diameter of wheels.....	33 1/2 ins.
Size of journal.....	4 1/4 x 8 ins.

The framing throughout is of composite construction, embodying the use of 2 1/2 in. wooden flooring, 2 3/8 in. thick wooden ends and sides secured to a metal

Nigerian Railway Freight Car.

underframe. The 8 in. rolled steel side sills proper are set back to suit the location of the pedestals, brackets being secured to take the 2 1/2 x 5 in. rolled steel, angle auxiliary, side sill member, with its short leg placed parallel to the outside face of the siding. The main draft members are of 3 1/2 x 8 in. rolled steel, section tied to the end sills by U shaped plates and secured to the bolster by angle plates. Two large hinged end doors 6 ft. 6 3/4 ins. long are located as shown by the accompanying illustration. Two body bolsters located 2 1/2 ft. each side from centre of car are provided and secured by top cover plates. The end sills are of 12 in. rolled steel channel section, being tied at the centre by channel braces secured to the

centre sills. The draft gear consists chiefly in the use of an A. B. C. automatic coupler fitted with a set of coil springs, the round shank of the coupler passing through same and secured at the back by double nuts. The springs are formed in two units, one located in front of the end sill to take buffing shock, and the other placed behind it, taking pulling strains. The brake gear is controlled from a hand screw located at diagonal corners at end of car, and operates a bell crank, secured to a centre cross shaft which connects to the brake shoes and forces them against the treads of the wheels. Very little shoe clearance is provided and the necessary power can be applied from either end of the car. The trucks are of the 4 wheel rigid wheelbase type, with pedestals secured directly to the side sills, having the 7 leaf, semi-elliptic equalizer springs located immediately in front, and resting in a bearing secured to the lower flange of the side sill. The journal boxes are of the double bolted cover type, having equalizer spring seats, and single pedestal jaws fitted to them, the whole being tied at the bottom by through braces. The necessary safety appliances, door locks, brake hangers and guides are provided, and the cars in general have a very neat and serviceable appearance. They are to be shipped with underframe in one package, and the sides and ends crated.

Lights for Cars or Locomotives Obstructing Main Tracks.

The Board of Railway Commissioners passed the following general order 159, Feb. 18: Re application of Brotherhood of Locomotive Engineers and Brotherhood of Locomotive Firemen and Enginemen for an order prohibiting railway companies from placing and leaving cars on main tracks at any point (in yards or otherwise) on any railway during the hours of darkness, without lights placed upon such cars. Upon reading what is filed in support of the application and on behalf of the railway companies, and the report and recommendation of the Board's Chief Operating Officer, it is ordered that the following be added to rule 93 of the train rules designated as the Uniform Code for Canadian Railways, approved by order 7563, July 12, 1909, viz. 'By night or in foggy or stormy weather proper lights must be placed on cars or engines obstructing main tracks within yard limits.'

Track Laid.—The Toronto Globe says: "The amount of new track laid in any calendar year, not being a matter to which the Government statisticians devote attention, is always the subject of controversy. There is more than ordinary diversity of opinion this year, but the statistics just compiled by the Canadian Railway and Marine World would seem to be conclusive. Acton Burrows reports a total new mileage of 714.26 miles, which, while considerably below any one year for the past 12 years, is in excess of estimates at the beginning of 1915."

Freight Bills.—The Interstate Commerce Commission has decided at Washington, that freight bills presented to the ultimate consignees of shipments re-consigned in transit ought not to disclose the name of the original consignors; neither should they show the original point of shipment nor the route of movement to the reconsigning point except in instances where the ultimate consignee is required to pay the through charges.

Tests of British Columbia Ties in England.

The table in the left hand column of this page gives results of experiments made in England by the Great Eastern Ry., to ascertain the resistance to depression and rupture, under a gradually in-

creased thrusting stress, of specimens prepared from samples of timber received from the British Columbia Lands Department's Forest Branch.

The table below shows tensile tests.

Test No.	Description (Specimens prepared from samples 10 x 5 in., 3 ft. long.)	Dimensions.		Ultimate Strength.		Remarks.
		Size. inches.	Area. sq. in.	Total lbs.	Per square inch. lbs.	
2738	Baltic Timber	1.99 x 0.99	1.97	11,180	5,680	Fracture rather short.
2739		1.99 x 1.00	1.99	11,500	5,780	
2742	Douglas Fir	1.98 x 1.00	1.98	23,800	12,000	Jagged fracture.
2743		2.00 x 0.99	1.98	21,600	10,900	Jagged fracture.
2746	Red Cedar	2.00 x 1.00	2.00	5,720	2,860	Short fracture.
2747		1.99 x 1.00	1.99	7,440	3,740	Jagged fracture.

Acceptance of Shipments of Explosives from Canadian Northern Ry.

The Assistant Chief Commissioner, Board of Railway Commissioners, D'Arcy Scott, has given the following decision, which has been concurred in by the Chief Commissioner and Commissioners McLean, Nantel and Goodeve:

The Canadian Pacific and Grand Trunk Railways have given notice to the Canadian Northern that in future they will decline to accept shipments of explosives from the latter. This action was brought about by the Canadian Northern refusing to maintain its membership in the American Railway Association's Bureau for the Safe Transportation of Explosives and Other Dangerous Articles. For the Canadian Northern lines in Ontario, I understand it would cost about \$500 a year for membership in the Bureau. The Canadian Northern says that the National Explosives Ltd., of Deseronto, is the only explosive factory exclusively on its line in Ontario. Manufacturers of explosives are permitted to become members of the Bureau of Explosives. If the National Explosives Ltd. joined the bureau, the other railway companies would not refuse shipments from the explosive company originating on the Canadian Northern; or, if the Canadian Northern became a member of the bureau, no shipment originating on its line would be refused by other railways. The question is, whether under present conditions the Canadian Pacific and the Grand Trunk would be justified in refusing shipment of explosives originating on the Canadian Northern.

Sec. 286 of the Railway Act provides that a railway company shall not be required to carry explosives, but, if it decides to carry them they can only be carried if the regulations for the transportation of explosives prescribed by the Board, by general order 100, are complied with. Clause (b) of these regulations provides that explosives "may be received for transportation, provided the following regulations are complied with, and provided their method of manufacture and packing, so far as it affects safe transportation, is open to inspection by a duly authorized representative of the initial carrier, or of the Bureau of the Safe Transportation of Explosives and Other Dangerous Articles of the American Association if it be so designated by the Canadian carrier. Shipments of ex-

plosives that do not comply with these regulations must not be received. There is nothing in the regulations which makes it obligatory for the Canadian Northern to join the Bureau. If the Canadian Northern will appoint a competent inspector to visit the factory of the shippers of explosives and he makes sure that the Board's regulations are followed, the railway company may receive the shipment and carry it over its railway.

Sec. 317 of the Railway Act, s.s.3 (b) provides that: "No company shall, by any unreasonable delay or otherwise however, make any difference in treatment in the receiving, loading, forwarding, unloading, or delivery of the goods of a similar character in favor of or against any particular person, or company." As it is admitted that the Grand Trunk and Canadian Pacific carry some explosives they are bound by the provisions of the Railway Act, just quoted, to carry all explosives tendered to them for transportation provided the Board's regulations respecting same have been followed. Unless they have good ground to doubt its bona fides, a certificate of the initial carrier should be sufficient evidence for the Grand Trunk or the Canadian Pacific that the Board's regulations have been followed.

An order directing the Canadian Pacific and the Grand Trunk to receive shipments of explosives from the Canadian Northern will not issue until the latter has satisfied the Board that it has appointed a competent inspector and made proper arrangements for the inspection of shipments of explosives originating on its line.

Satisfactory Movement of Western Grain.—At the Canadian Credit Men's Association annual meeting in Toronto recently, General Manager Detchon of Winnipeg said: "In reference to the criticism of transportation facilities for moving the crops last fall, I wish to say that there is no reason for criticizing the railways. The crops were so immense that they could not move them. Why, even today I can show you elevators filled to the brim with the golden wheat, and around the elevators have been constructed temporary cribs, filled to the top and overflowing."

The G.T.R. is suing the Pere Marquette Rd. for \$16,506.32 for the use of the G.T.R. station at London, Ont., from Jan. 1, 1909, to June 30, 1915.

Railway Mechanical Methods and Devices.

Boring Chime Whistles at Grand Trunk Shops.

Boring the central hole in chime whistles is performed in the G.T.R. shops at Stratford, Ont., in the drill press, holding the whistle in a special jig, which is shown in the accompanying illustration. The jig is an iron casting, machined only

to act as a shear for severing the sprue. The lid is free to move laterally on its hinges, and after the metal is poured and set, the handle, on the inner end of which there is a cam, is given a partial turn, the cam bearing against the cover plate, moving it to the left, cutting off the sprue. The cover is then raised, the air cylinder actuated, raising the ring from the mould.

illustration was developed during a time when it was necessary to find some ready relief as regards caring for steam heat hose bands during bad weather, and the dimensions relate to a device principally for this style of band. It is also just as applicable for use with air brake and signal hose bands, which are of smaller size. The base is formed from an old drawbar follower plate and the lever may be

Jig for Boring Chime Whistles.

on the under side, for bearing on the drill press table. It is of odd shape, consisting essentially of a cylindrical block with two projecting arms for bolting down on the table. Through the centre, there is a drilled hole for aligning, the upper part of the hole where cored being larger than the drilled section. On one side of the cored cavity is a segmental cavity, and on the upper surface are two segmental block projections, of different heights, the cavity and projections forming the bearings for the steps of the whistle, also preventing the whistle from turning in the jig without bolting down.

The jig is set up on the table centrally, aligning with the central hole. The whistle is set in the jig, in the drill run down through the cored hole in the base of the whistle, which is upside down in the jig. This method has been found to be materially quicker than the older method of boring out in the lathe. The jig, from its simplicity, was not costly, requiring only the making of a pattern.

Casting Valve Gland Packing Rings in Grand Trunk Shops.

The practice in casting valve gland packing rings in the G.T.R. shops, at Stratford, Ont., is shown in the accompanying illustration. The combination die which is used will make any of 15 different sizes. It consists essentially of two die plates, in the lower one of which, at A, there are the die cavities, lined up with which over top, there are the pouring holes coming directly over the sides of the rings, all contained in the plate B. Each of the holes in plate A has a stripper plunger, which contains the form of the inner and bottom faces of the ring, as shown; all these stripper plungers being attached to a plate C, which is operated by the air cylinder D, beneath the mounting table. The hinged cover plate B is lowered on the die plate, and clamped there, and the metal poured through the desired pour hole. Each of these pour holes has a tempered steel bushing,

Hose Band Opener, Canadian Northern Ry.

Hose mounting and dismounting operations are carried on at practically all terminal points and there is a great dif-

ference in the time involved for such work, directly proportional, in almost every instance, to the efficiency of the devices and designs of machines used for the purpose. During the winter a great deal more work of this kind is carried on than in the warmer season, as steam heat hose, in conjunction with regular air brake and signal equipment, has to be maintained.

Hose Band Opener, Canadian Northern Railway

The device shown in the accompanying

securely to a bench before being used. We are indebted to T. Clegg, Air Brake Foreman, Canadian Northern Ry., Winnipeg, for this information.

Windsor, Ont., ratepayers passed a by-law, Mar. 5, to expend \$1,500 for the purchase of a lot to provide railway sidings for the Maxwell Motor Co., of Detroit, Mich., which is establishing a plant in Windsor.

Interchange of Traffic with Canadian Northern Railway at North Bay.

The Canadian Northern applied to the Board of Railway Commissioners recently, under secs. 317 and 334 of the Railway Act, for an order directing the Grand Trunk to interchange freight traffic with it on an equality with the Canadian Pacific. The Chief Commissioner, Sir Henry Drayton, gave the following judgment, Mar. 9:

This application was heard in Ottawa, Jan. 25, F. H. Phippen, K.C., appearing for the Canadian Northern, and W. C. Chisholm, K.C., for the Grand Trunk. The questions involved are of great importance to the companies interested, the Grand Trunk being particularly desirous of maintaining its traffic connections afforded by the Timiskaming & Northern Ontario from North Bay to Cochrane, by the National Transcontinental from Cochrane to Winnipeg, and the Grand Trunk Pacific from Winnipeg west; and, apart from any other consideration, the Grand Trunk is, of course, interested, and vitally interested, in the future of the Grand Trunk Pacific. On the other hand, the Canadian Northern is equally interested in transferring freight to Grand Trunk points in Ontario at such a point as will enable it to get the benefit of the long haul on the traffic that it originates, and to obtain its share of the benefit of Grand Trunk construction in Ontario, and to be able to compete with other western carriers for traffic originating on Grand Trunk lines in that district.

The Section particularly relied on by Mr. Phippen is 317, and in particular ss. 1, 2 and 4. They read as follows:—

"All companies shall, according to their respective powers, afford to all persons and companies all reasonable and proper facilities for the receiving, forwarding and delivering of traffic upon and from their several railways, for the interchange of traffic between their respective railways, and for the return of rolling stock."

"2. Such facilities to be so afforded shall include the due and reasonable receiving, forwarding and delivering by the company, at the request of any other company, of through traffic, and, in the case of goods shipped by car load, of the car with the goods shipped therein, to and from the railway of such other company, at a through rate; and also the due and reasonable receiving, forwarding and delivering by the company, at the request of any person interested in through traffic, of such traffic and through rates."

"4. Every company which has or works a railway forming part of a continuous line with, or which intersects any other railway, or which has any terminus, station or wharf near to any terminus, station or wharf of any other railway, shall afford all due and reasonable facilities for delivering to such other railway, or for receiving from and forwarding by its railway, all the traffic arriving by such other railway without any unreasonable delay, and without any such preference or advantage, or prejudice or disadvantage as aforesaid, and so that no obstruction is offered to the public desirous of using such railways as a continuous line of communication, and so that all reasonable accommodation, by means of the railways of the several companies, is, at all times, afforded to the public in that behalf."

And counsel contends that the mere fact that North Bay is the terminus of the Grand Trunk makes the statute absolutely applicable and entitles the Canadian Northern to an order as asked, as a matter of strict right.

Mr. Chisholm argues that where there are satisfactory joint rates and joint routes in existence, no other route should be ordered against the protests of a participating carrier, or at the instance of a company which desires resultant greater revenue. He attacks the financial stability of the Canadian Northern, relying on the action of the Interstate Commerce Commission in declining to force railway companies to have traffic relations with other railways whose stability they did not recognize; and relies on the Board's

decision in the case of the Great Northern against the Canadian Northern, 11 C.R.C., pg. 425. The result of Mr. Chisholm's objections is that the interests of the public must be established before any effect can be given to the application.

The submissions of the Quaker Oats Co. showed that the shortage of grain at Peterborough from which they were suffering was ample justification to require the acceptance of Canadian Northern traffic by the Grand Trunk. Order 24698 was, therefore, made at the hearing, directing the Grand Trunk to concur in joint freight tariffs which were to be forthwith published and filed by the Canadian Northern, applicable on grain and grain products in carloads from Port Arthur, Fort William, and Westfort to Grand Trunk stations via North Bay. A direction was also made that the joint rates were to be the same as those published and filed by the Canadian Pacific from points of shipment to the same destinations, and the grain to be carried was to be accorded milling in transit privileges pertaining to shipments received by the Grand Trunk from the Canadian Pacific. Mr. Chisholm desired the opportunity of taking the question up with the National Transcontinental and the Temiskaming & Northern Ontario Railways; and judgment was reserved on the general issue.

No public interest was established at the hearing in any movement except that of grain and grain products from the west to the east, with the result that the main question, as presented for consideration, is supported by the requirements and interests of the Canadian Northern itself. Interchange tracks exist between the Canadian Northern and the Grand Trunk Pacific, the connecting carrier of the Grand Trunk, at different points west of Winnipeg. None of these need be considered. There are also interchange tracks in Winnipeg and Fort William. The Grand Trunk itself can interchange traffic at North Bay through the Timiskaming & Northern Ontario's interchange tracks. There are also interchange tracks available to the Grand Trunk and Canadian Northern at James Bay Jet., and different points in Southern Ontario which are not necessary at mention. So far as the facilities for interchange are concerned, no issue is now raised. The question is as to extending their use and the publication of joint tariffs which will render the movement possible.

An application involving somewhat similar principles was the Muskoka Rates Case. The application there was made by the Canadian Northern against the Grand Trunk and Canadian Pacific, and was made under the same sections as those here invoked. The application there was an application compelling the Grand Trunk and Canadian Pacific to issue through tickets at through rates from all points on their lines to all points on the Canadian Northern by any junction the passenger wished to take. The underlying reason of the application was the fact that much of the Muskoka business came through Buffalo and points west of Toronto. The Canadian Northern had a line serving the Muskoka district, but, being without any western connections, had no opportunity of obtaining any of the Muskoka business originating west of Toronto. The late Chief Commissioner Mabey, in his judgment dismissing the application in so far as traffic having its

origin at Grand Trunk and Canadian Pacific points was concerned, said:

"It does not seem to be a reasonable proposition that one railway company should be at liberty to use the act for the purpose of diverting to its line traffic that has been originated only at great expense and trouble by another railway or other railways, without at least showing a great preponderance of convenience to the public. It must be borne in mind that this application comes from the railway company, and no evidence was given that any inconvenience was being caused to the public from existing conditions, or that there would be any appreciable advantage to the public if the change asked for was granted; and that the change would be for the pecuniary benefit of the applicant railway company is not of itself any sufficient reason for granting the application. Under sec. 317, the facilities to be afforded are to be reasonable; the preference or advantage that would be given, or the delay or difference in treatment that may be permitted, is not to be unreasonable; so it is apparent that the whole section is intended to provide for the establishment of fair and reasonable business relations. Is it fair that the applicant should be permitted to make use of the act to divert from the Grand Trunk and Canadian Pacific at Toronto the tourist traffic that they have spent years in developing? That this would be to the advantage of the applicant is clear, but it has not been shown that the public is to any appreciable extent interested. I agree with the argument of the applicant that the physical situation of the railways falls within subsec. 4; but it has not been shown that any obstruction is offered to the public desirous of using such railways as a continuous line of communication. I do not agree with the contention that existing conditions must be changed merely because a few and inconsiderable number of people might desire to change at Toronto to the applicant's lines; and I cannot regard it as reasonable or proper that railways should, in the application of this section, be put to serious loss and inconvenience when it is apparent that the rail object of the application is not to offer greater facilities to the public, but to enhance the earning power of the applicant's lines."

This authority was followed by the Board in the Fort William Coal Case and its principles applied, the Board there stating that its powers under the Railway Act should not be used to divert traffic from the lines of one company to those of another without any benefit to the public. Mr. Phippen distinguishes the coal case, on the ground that no revenue to the Grand Trunk would be sacrificed, this being the terminus of its line. While this in one sense is undoubtedly true, as it occurs to me, the statute makes no difference as to the duties of the companies to provide facilities and joint routes at terminal points as against other points on their systems proper for that purpose. In any event, however, the effect of these decisions, establishing as they do the manner in which the Board in the past has construed the statute, is entirely against the contention advanced on behalf of the applicant that the terms of the statute itself compel railway companies to afford to all persons and companies at all points where an interchange is capable of being made, interchange facilities and joint rates covering any possible movement that might be made over the interchange.

It is, of course, obvious that if the Board could refuse an application under the section because the objecting company would lose revenue thereby, that the application could be refused on other grounds and that the question is one requiring the exercise of the Board's judicial and discretionary functions. It would not be just to the Canadian Northern to refuse the present application, or to carry the principles on which the Muskoka rates and Fort William coal cases were adjudicated to their logical conclusions. There are other questions which must be considered. The rule established by Board's decisions that the initiating company is entitled to the benefit of the long haul would be entirely disregarded

if the application was dismissed in so far as the Canadian Northern is concerned. The effect would be that the Canadian Northern would be obliged to hand over to the National Transcontinental at Winnipeg, or to the Canadian Pacific at Port Arthur, all traffic originating on its lines in the west destined to Grand Trunk Ontario points intermediate to the transfer tracks at Toronto. The business of the Canadian Northern is entitled to just as much consideration as that of the Grand Trunk.

It is necessary for the Board, however, to determine some principle on which these interchange tracks and through rates are to proceed. The statute calls for reasonable and proper facilities for the interchange of traffic and for the return of rolling stock. With the large amount of regrettable duplication of railways, it certainly would not be either reasonable or proper that such interchange tracks, involving reasonable or proper that such interchange tracks, not only for construction but also for maintenance and operation, should be installed at every point possible; and, if joint rates had to be filed as and when such possible interchange tracks were put in, the only result would be to absurdly duplicate tariffs and add to the cost of railway operation without any resultant benefit to traffic conditions. North Bay is a point at which the Grand Trunk should interchange traffic with the Canadian Northern. It is also a point of interchange calling for the establishment of joint rates, bearing in mind the general principle that the initiating carrier is entitled to the long haul on its lines, subject to the limitation, which will be rigidly enforced, that the resultant joint route is reasonable and practical and involves no back haul or increased cost to the public. It occurs to me that in considering the matter of haul, the Grand Trunk and Ontario and Dominion Government lines should be considered as one route.

No formal direction should now be made as to the exact principles on which the joint rates are to be put in. The parties must have an opportunity of making any submissions they desire upon that point; and, in case the bases of division and territories are not agreed to within a fortnight, a hearing will be had at the request of either of the parties to the issue, and the matter determined. So far as divisions are concerned, the Canadian Northern offered to accept the existing divisions between the Grand Trunk, Timiskaming & Northern Ontario and National Transcontinental. This offer would seem to me to be fair and should be adopted unless sufficient cause to the contrary is shown.

A Snow Plough's Adventures.—During the recent heavy snow storms in the west, when considerable trouble was experienced in keeping certain of the railway tracks clear, M. Donaldson, vice President and General Manager, Grand Trunk Pacific, who had had his private car attached to a Canadian Northern eastern bound train, was held up near the Yellowhead Pass, on account of the snow. To help matters, he had one of the G.T.P.R. wing snow ploughs transferred to the C.N.R. tracks, at a point where the two lines run parallel. During the operation of clearing the snow, the plough jumped the track and turned turtle on the G.T.P. tracks about 100 ft. below, where it caught fire from the stove carried on board, everything being destroyed but the metal work.

Railway Finance, Meetings, Etc.

Algoma Central & Hudson Bay Ry.—

A general meeting of shareholders was called to be held at Sault Ste. Marie, Ont., Mar. 23, to consider a scheme of arrangement between the company and its creditors, and steps taken to have the scheme approved by the Exchequer Court, also to approve an application by the receivers and managers for parliamentary sanction of the scheme proposed.

Canadian Northern Ontario Ry.—

There has been deposited with the Secretary of State at Ottawa, duplicate original of an additional mortgage, dated Dec. 20, 1915, made between the C.N.O. Ry., the British Empire Trust Co., and the National Trust Co., as trustees, covering certain shares and bonds deposited with the trustees of a trust deed, dated June 28, 1909, made to secure certain 4% perpetual consolidated debenture stock and bonds.

Greater Winnipeg Water District Ry.—

The report of the Commissioners of the Greater Winnipeg Water District, laid before a meeting on Feb. 25, gave the following information respecting the operations of its railway from near St. Boniface to Shoal Lake, 90 miles: Passengers carried 13,875; freight carried 349,204,159 lbs., of which 27,391,433 lbs. did not produce any revenue; gross revenue \$147,028.88. After paying operating expenses, and charging interest on cost of construction there was an apparent operating loss of \$21,000. The Commissioners expressed the opinion that this was a good showing, and it was stated that the revenue from the train service had increased so as to cover the cost of operation.

Michigan Central Rd.—There has been deposited with the Secretary of State at Ottawa, copy of a lease dated Jan 15, made between the Philadelphia Trust Co., and the M.C.R., relating to the Michigan Central Rd. Equipment Trust of 1915.

Pere Marquette Rd.—The sale of this line, which has been in the receivers' hands for several years, has been postponed by the United States District Court at Detroit, Mich., until July 5.

Spokane and British Columbia Ry.—

The officers for the current year are: President and Treasurer, W. T. Beck, Republic, Wash.; Vice President and General Manager, F. M. Holland, Toronto; Secretary, M. Allyn, Republic, Wash.; Superintendent, W. H. Kirkpatrick, Grand Forks, B.C. Connections are made with the Kettle Valley Ry. at the International Boundary, and with the Great Northern Ry. at Republic.

Temiscouata Ry.—Net earnings for Dec. 1915, \$4,797, and for six months ended Dec. 31, 1915, \$21,595.

Timiskaming and Northern Ontario Ry.—The Treasurer of Ontario stated in the Legislature recently, that the railway's net income for the last year was \$330,000, and of its electric subsidiary the Nipissing Central Ry., \$25,000, of which the commissioners had paid \$250,000 into the Treasury. He looked forward to the time when the railway would meet its annual interest of \$800,000.

White Pass and Yukon Route. Gross earnings for January, \$9,220, against \$6,275 for Jan. 1915.

C.P.R. Employees on the Western Lines enlisted in the Canadian Overseas Forces to Feb. 29, numbered 2,336.

Campbellford, Lake Ontario and Western Ry. Construction Suit.

The judicial committee of the Imperial Privy Council gave judgment recently in the case of Cook v Deeks, etc. This suit which has aroused a good deal of attention in contracting and railway circles, arose in connection with the contract for the construction of the Campbellford, Lake Ontario & Western Ry., otherwise known as the C.P.R.'s Lake Ontario Shore Line Branch, which was commenced in 1912, and amounted to considerably over \$5,000,000.

A. B. Cook, G. S. Deeks, T. R. Hinds and G. M. Deeks had for some years prior to 1912 been associated, as Toronto Construction Company, Ltd., in railway construction and had carried out several important contracts. When, however, the contract for the Shore Line came into the market, Deeks, Hinds and Deeks formed the project of securing it for themselves, to the exclusion of Mr. Cook. This project they successfully carried out, while still maintaining their apparent association with Cook and their position as directors in Toronto Construction Co., keeping Cook in the dark as to the course of events until the coup was accomplished. On learning the facts, Cook protested vigorously, but in vain, his former associates asserting their legal right to do as they had done. Hence the litigation. Cook's action met with no success at the trial, was dismissed by Judge Middleton in May 1914, and the Court of Appeal for Ontario, confirmed that decision. The Privy Council has now allowed his appeal and has ruled, in effect, that his former associates must admit him to a share of the profits of the Shore Line contract.

Progress of Rogers Pass Tunnel Construction.

The following table, for which we are indebted to J. G. Sullivan, M.Can.Soc.C.E., Chief Engineer, C.P.R., Winnipeg, shows the progress made from Jan. 27 to Feb. 26, and the total progress to Feb. 26:—

EAST END—		Progress.	Total.
Main tunnel	603 ft.	10,151 ft.	
WEST END—			
Main tunnel	619 ft.	8,868 ft.	

The main tunnel faces, at Feb. 26, were 7,381 ft. or 1.4 miles apart.

A railway land damage question.—An interesting point in connection with the expropriation of land for railway construction purposes is before the Ontario courts in Lake Erie & Northern Ry. vs. J. W. Lee. The arbitrators granted Lee \$6,785 for 5 acres taken from a farm near Simcoe and the company appealed against this figure. The matter was argued before the Court of Appeal in Toronto, Mar. 16, and judgment was reserved. The company when incorporated was given power by the Dominion Parliament to use either steam or electricity as a motive power, and during the survey and construction stage it was generally understood that electricity would be the power, although it was not definitely decided until the middle of 1915. It was argued on behalf of the railway company that the difference between the value of the farm without the railway, and its value with the railway should be the measure of damage. In other places farms had been increased in value owing to the building of an electric railway.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Athabasca & Fort Vermilion Ry.—We are officially advised that while preparations have been going on to complete final arrangements for the building of this railway from Athabasca Landing, Alta., to Fort Vermilion, 330 miles, it has been decided to postpone actual construction until the spring of 1917.

Canada Western Ry.—The Dominion Parliament has extended the time for the building of this projected railway from Winnipeg, northwesterly via Yorkton, Saskatoon and Battleford to Edmonton, Alta. (Feb., pg. 48.)

Canadian Pacific Ry.—Tenders are under consideration for the supply of labor and material to complete all work in connection with paving the approaches to the freight sheds at Regina, Sask.; for the excavation of a reservoir above the dam at Moose Jaw, Sask., and for the building of standard 2 stations at Admiral, Scotsguard, and Meyvonne on the Shaunavon subdivision, Sask.

The Calgary & Edmonton Ry. has been granted an extension of time by the Dominion Parliament for the building of the following lines: From its Macleod Branch in Tps. 19, 20 and 21 westerly to the south branch of Sheep Creek, range 4, west of the 5th meridian; a branch to the north branch of Sheep Creek in range 2, 3 or 4 west of the 5th meridian, and a second branch to Trap Creek in range 2, 3 or 4 west of the 5th meridian, Alta. (Mar., pg. 91.)

Canton & Grand Lake Ry.—The New Brunswick Legislature is being asked to incorporate a company with this title to build a railway from Canton, Sunbury County, to Syphers Cove, Queen's County, and to extend the same to Gagetown on the St. John & Quebec Ry. The object is to develop coal mines and other resources. J. S. Armstrong, solicitor for applicants.

Essex Terminal Ry.—The Ontario Legislature is being asked to ratify a by-law passed by the Windsor City Council, granting a right of way and other rights to the company. The city, under the provisions of an Act of 1907, was authorized to grant or lease lands for manufacturing sites by way of bonus or aid to industries. In order to make these sites available, the council entered into an agreement with the E.T.R., to lay tracks, sidings, etc., on such lands, and certain tracks and sidings were laid. The bylaw confirms the grant of the right of way to the company, and such future right of way as may be arranged for, the grant to continue so long as the lands are used for the purpose granted; that all material used for the construction of the lines shall be purchased in Canada, and that the city shall obtain the confirmation of the bylaw and pay all costs incidental to the same. The plan dated April 1, 1914, made by Owen McKay, Chief Engineer, E.T.R., is declared to form part of the bylaw. (Feb., pg. 49.)

Grand Trunk Ry.—A press report states that construction was started Mar. 20, on a new wharf and dock at Sarnia, Ont., to be 850 ft. long, and built on a pile foundation.

Another report says that the company proposes to build large new freight sheds at Point Edward, Ont., for the Port Huron & Duluth Steamship Line, the sheds to be

1,200 ft. long, but we are officially advised that no decision has been arrived at. The report adds that a new grain elevator will also be built at Point Edward this year. (Mar., pg. 106.)

High River & Hudson Bay Ry.—The Alberta Legislature is being asked to extend the time for the building of this projected railway east and west from High River. This project is connected with that of the High River, Saskatchewan & Hudson Bay Ry., and the promoters are also interested in the Calgary & Fernie Ry., for both of which Dominion charters are in existence. (Mar., pg. 106.)

Intercolonial Ry.—The acting Minister of Railways, replying to questions in the House of Commons, Feb. 24, said the Blue River M. & L. Co., of Riviere Blue, Temiscouata County, Que., received the permission and support of the Department of Railways for the building of a spur line to its mill. The company agreed to pay the cost of the perishable material and labor furnished by the railway and an annual rental on the rails and fastenings, the railway to make a refund of the cost of perishable material and labor at the rate of \$2 a car on all cars loaded by others than the company since the siding was constructed, and until the railway provides its own facilities at this point. The Department had not been advised that the company was charging exorbitant rates for the use of its facilities, but investigation was being made as to the rates being charged to lumber merchants and colonists.

Senator Loughheed, replying to questions in the Senate recently, said the cost of the subway under Main St., Moncton, N.B., was \$106,960.27, exclusive of property damage claims not yet settled. The contractors were Soper & McDougall, Ltd., Ottawa, and Rhodes, Curry & Co., Ltd., Amherst, N.S., the work being done at schedule prices. (Mar., pg. 106.)

Lake Huron & Northern Ontario Ry.—Replying to a question in the Ontario Legislature Mar. 7, the Minister of Lands said the Lieutenant Governor had not issued a proclamation bringing into force the Act passed last session of the Legislature, granting the company an extension of time for proceeding with the construction of the projected extension of its railway from Rock Lake, Algoma, the present terminus, to a junction with the National Transcontinental Ry., between Hearst and Cochrane, Ont. (Sept., 1915, pg. 341.)

National Transcontinental Ry.—The citizens of Port Arthur, Ont., have sent a largely signed petition to the Dominion Government, asking that the Lake Superior branch, which is leased by the Department of Railways from the Grand Trunk Pacific, be extended from its present terminus in Fort William, Ont., into Port Arthur. (Dec., 1915, pg. 470.)

Ontario Niagara Connecting Bridge Co.—The incorporation of a company with this title is being asked from the Dominion Parliament, with E. R. Wood, Toronto; R. P. Slater, Niagara Falls, Ont.; A. Fraser, F. A. Dudley, E. Shepard, A. J. Porter, Niagara Falls, N.Y.; W. E. B. McKenzie, Chippewa, Ont., and E. G. Connette, President International Ry., Buffalo, N.Y., as provisional directors; office at Niagara Falls, and a capital

of \$300,000. Parliament is asked to authorize the construction of a railway and general traffic bridge with approaches and terminal facilities, across the Niagara River, starting from the Ontario bank at some point not more than 6,000 ft. north of the intersection of the northern boundary line of Welland County with the river bank. No work is to be done upon the bridge or terminals until the plans have been filed with the Railways Department and approved by the Governor in Council; and the works and plans shall in no way interfere with the construction and operation of the low level railway, which the Commissioners of the Queen Victoria Niagara Falls Park has power to build. The Board of Railway Commissioners is to have power to decide what area of land may be required for this purpose. Subject to the provisions of the Railway Act, the company may unite with a company formed under New York State or United States laws for the purpose of building the bridge, and operating any railways crossing it. The company is authorized to issue bonds for \$2,000,000, and may join with the U.S. company in issuing \$4,000,000 of bonds for construction purposes. The bridge is to be begun within two years and completed in five years. Power is given to other railways having terminals in Niagara Falls to use the bridge on terms to be fixed by the Board of Railway Commissioners. (Jan., pg. 11.)

Pacific Great Eastern Ry.—The Premier of British Columbia announced recently that while the Government did not propose to grant any further aid towards the construction of the Vancouver-Prince George section, the Legislature would be asked to approve of the granting of a short term loan on suitable security. The line between Squamish and Prince George, he said, was approximately 80% completed, and construction was closed down because it was impossible for the company or the contractors to secure further funds. The proceeds of the company's guaranteed securities sold prior to the outbreak of war had been exhausted; the unsold securities had been pledged to secure advances and the contractors had also secured advances from the banks on their own resources. It was estimated that it would require \$6,500,000 additional to complete the line and put it in operation. (Mar., pg. 107.)

Peace River Tramway & Navigation Co.—Vancouver, B.C., press dispatch, Feb. 22: "A syndicate of British capitalists, of which Lord Rhondda (D. A. Thomas), the Welsh coal baron, is head, has acquired the Peace River Trading & Land Co., in northern Alberta and the Peace River districts. The Peace River Tramway & Navigation Co., with which the Thomas interests are also prominently identified, is preparing the right of way for the portage line to be built at Vermilion Falls as a unit of transportation system that will provide navigation facilities over 200 miles on northern waterways."

Peace River Tramway & Navigation Co.—We are officially advised that the right of way for the tramway over the portage at Peace River Falls, Alta., six miles, is being cleared. It is in the immediate vicinity of the company's oil drilling operations which were discontinued in Oct., 1915. Oil drilling will be re-

sumed, it is expected, about May 1. The interests associated with the company have acquired the entire assets of the Peace River Trading & Lands Co. from the liquidators, consisting of trading posts and stores at Peace River Crossing, Fort Vermilion, and Lake Saskatoon, warehouses, boat landings and property holdings. The new owners propose to prosecute the development of this business, of which Mr. Sinclair, of Peace River Crossing, has been appointed Manager. (Jan., pg. 11.)

See also Athabasca & Fort Vermilion Ry.

Prince Edward Island Ry.—Replying to questions in the Senate recently, Senator Loughheed said A. T. Mackie, Toronto, had the contract for the terminals at Cape Tormentine, N.B., at schedule rates, estimated to amount to \$571,590.56; and that Roger Miller & Sons, Toronto, had the contract for the Carleton Point, P.E. I., terminals at schedule prices, estimated to amount to \$949,250. (Oct., 1915, pg. 352.)

Quebec Central Ry.—The Quebec Legislature has extended the time for building the Chaudiere extension, which now terminates at English Lake, Que., to a junction with the Temiscouata Ry. (Feb., pg. 50.)

Quebec, Montreal & Southern Ry.—The Dominion Parliament has extended the time for the building of the projected line from Noyan Jct., Que., to the International Boundary, and for the completion of any unfinished line which the old South Shore Ry. was authorized to build. This uncompleted line is that projected along the south shore of the St. Lawrence River, which has its present terminus near St. Francis du Lac. (Jan., pg. 11.)

Roberval-Saguenay Ry.—The Quebec Legislature has extended the time for the building of this projected railway from Roberval, on the Quebec & Lake St. John Ry., round Lake St. John to the Peribonka River, and thence southeasterly to Jonquieres, on the Q. & L. St. J. R., for the completion of the lines authorized to be built by the Ha Ha Bay Ry., and for a line to the St. Maurice River. (Dec., 1915, pg. 470.)

St. Francis Valley Ry.—The Quebec Legislature has extended the time for the building of this projected railway. The company has secured the charter of the L'Avenir & Melbourne Ry., which had power to build a line from Richmond or Melbourne to Drummondville, and has power under its own charter to build a line to the International Boundary near Stanstead. (Feb., pg. 50.)

St. John & Quebec Ry.—The speech from the throne at the opening of the New Brunswick Legislature, Mar. 9, said legislation would be presented providing for the early completion of this railway, and ensuring not only direct connection with the east and west sides of St. John harbor, but, as well, an independent route from that city to the New England States and a new channel for the export of the forest production of central and northern New Brunswick. Referring to this statement, a press report says it is proposed that a spur line will be built to form a connection between the St. J. & Q. R. and the Maine Central Rd.

Replying to a question in the House of Commons, Mar. 6, the acting Minister of Railways said a new arrangement between the Department and the Province of New Brunswick respecting the St. J. & Q. R. has been under discussion for some time, but the negotiations were not completed. The question asked was based

on a press report that an arrangement had been made not to build any further than the present northern terminus at Centreville; to abandon the building of the proposed bridges across the St. John and Kennebecasis Rivers, and to make a connection with the C.P.R. tracks at Westfield, N.B. (Jan., pg. 11.)

Taber Transit Co.—The Alberta Legislature is being asked to extend the time for the building of a series of radial railways centering on Taber, to give connection with collieries in the vicinity; the C.P.R. Suffield branch, and with Bow City. No construction has yet been undertaken. (June, 1915, pg. 212.)

Toronto, Hamilton & Buffalo Ry.—It was reported, Mar. 9, that the company had acquired the Albion Hotel property,

Hunter St., Hamilton, thus giving it possession of all the property south of the tracks between Macnab and John Sts., with the exception of one piece opposite the station. The report adds that it is proposed to build a modern station on the site of the present building, and to utilize the land acquired for additional trackage. (Feb., pg. 50.)

Toronto Terminals Ry. Co.—George Bury, Vice President, C.P.R., while in Toronto, Mar. 10, went over the site of the new union station. He is reported to have said in an interview that the caissons had been sunk, and that the concrete work was being rushed in order to have the foundations in readiness for starting steel work early in April. (Jan., pg. 11.)

Railway Rolling Stock Notes.

The G.T.R. is reported to have ordered 2 postal cars in the United States.

Sir John C. Eaton, Toronto, has ordered a private car from the Pullman Co., Chicago.

The Canadian Northern Ry., between Feb. 11 and Mar. 11, received 2 first class passenger cars, nos. 8219 and 8220, from National Steel Car Co.

The Minister of Railways stated in the House of Commons recently, that the purchasing of additional cars for the Canadian Government Railways was under consideration.

Canadian Government Railways have ordered one high power self propelling steel track pile driver, for use on the National Transcontinental, from F. H. Hopkins and Co.

The Canadian Locomotive Co. has shipped 10 decapod locomotives for the Russian Government. Description and illustration have already appeared in Canadian Railway and Marine World.

The French Government, according to a press report, has ordered 2,000 additional steel freight cars from National Steel Car Co., Hamilton, Ont., which is said to have already built about 5,000 similar cars for that government.

The Eastern Car Co. has delivered at Halifax, for shipment to Russia, 175 freight cars of an order of 2,000, which has been mentioned in previous issues. The company has also completed the sample car of the lot of 1,000 cars for the French State Railways.

The Canadian Northern sleeping car Virginia is being changed in the company's Winnipeg shops to an official car, to be called Ontario, for L. C. Fritch, General Manager, Eastern Lines, whose present official car, Quebec, will probably be transferred to the Quebec Division for the General Superintendent, W. A. Kingsland.

The Canadian Northern private car Atikokan, which is used by the President, Sir Wm. Mackenzie, is being rebuilt at the company's Winnipeg shops, and Sir William is at present using the all steel private car Natalie, which was formerly used by the late F. S. Pearson, as President of the Denver & Salt Lake Rd., and which was built by the Pullman Co. in 1913 and was lettered "300."

The Lake Erie and Northern Ry. has received final deliveries, from the Preston Car and Coach Co., of its order for rolling stock, comprising 4 full passenger motor cars, 2 combination passenger and baggage motor cars, and 2 trailer cars of the same type as the full passenger cars. These have already been described

and illustrated in Canadian Railway and Marine World.

The Timiskaming and Northern Ontario Ry. has ordered 6 mikado (2-8-2) locomotives from Canadian Locomotive Co., for delivery in July. Following are the chief details:

Weight in working order on drivers.....	188,000 lbs.
Weight, total.....	246,000 lbs.
Wheel base of engine, rigid.....	16 ft. 6 ins.
Wheel base of engine, total.....	34 ft. 8 ins.
Wheel base of engine and tender.....	63 ft. 4½ ins.
Heating surface, firebox.....	208 sq. ft.
Heating surface, tubes.....	3,162 sq. ft.
Heating surface, total.....	3,370 sq. ft.
Driving wheels, diam.....	63 ins.
Driving wheels, centres.....	cast steel
Driving journals, diam. and length.....	10 and 9 by 14 ins.

Cylinders, diam. and stroke.....	25 by 30 ins.
Boiler, type.....	radial stay
Boiler pressure.....	180 lbs.
Tubes, no. and diam.....	216—2 ins.; 32—5½ ins.
Tubes, length.....	20 ft.
Injectors.....	locomotive type
Brakes.....	Westinghouse American E. T.
Packing.....	Metallic
Superheater.....	Locomotive Superheater Co., Type A
Rear frame.....	Cast steel cradle
Engine frame, and springs.....	Vanadium steel
Weight of tender, loaded.....	143,000 lbs.
Tank capacity.....	7,000 U.S. Gals.
Coal capacity.....	12 tons
Truck, type.....	outside equalized
Wheels, diam.....	36 ins.
Wheels, type.....	Steel tired with retaining rings
Journal, diam. and length.....	5½ by 10 ins.
Brake beam.....	Hercules with adjustable heads

In our last issue mention was made that the French Government had ordered 2,000 freight cars from the Eastern Car Co. They are intended for the Paris and Orleans Ry., and will be of the 4 wheeled type with Paris and Orleans Ry. standard pedestals and leaf elliptic springs, and drawbar and buffer arrangements with standard volute springs, standard hand brake separated from the cabin on one end of the car. They will be box cars, with one door on each side with bottom rollers, and shutter windows on each side. Following are the chief dimensions:

Capacity.....	20 metric tons
Length inside.....	25 ft. 0 7/16 ins.
Width.....	8 ft. 4¾ ins.
Height.....	6 ft. 8 11/16 ins.

The C.P.R. has ordered 20 all steel Otis dump cars, 50 tons capacity, from Hart-Otis Car Co., Ltd., for delivery in June. They are being built by Canadian Car & Foundry Co. Following are the chief details:

Length over end sills.....	24 ft. 4½ ins.
Width over side sills.....	9 ft. 11¼ ins.
Width inside.....	9 ft. 6 ins.
Length inside.....	22 ft. 6 ins.
Height inside.....	5 ft. 6 ins.
Doors, on each side.....	24 by 2 ins. by 22 ft.
Door openings.....	24 by 2 ins. by 22 ft.
Air brakes.....	Westinghouse K.D. 11
Draft springs.....	M.C.B., Class G
Truck.....	Standard
Journal boxes.....	McCord mall. iron, 5½ by 10 ins.
Truck bolsters.....	Simplex, 60 tons.
Side bearings.....	Susemihl
Brake beams.....	Standard
Brake shoes.....	Doninion Brakeshoe Co., steel back

Relief of Grain Congestion in Goose Lake District.

An act passed by the House of Commons and Senate was assented to Mar. 7, by which the following section was added to the Railway Act:

"317A. If the company is unable or fails to provide sufficient facilities for the movement of grain from the western provinces to the elevators at the head of Lake Superior, or to destinations east thereof, after the close of navigation on the Great Lakes and before the next harvest, and grain in certain sections or districts cannot by reason thereof be marketed, the Board (of Railway Commissioners) may require the said company to furnish all facilities within its powers for the carriage of such grain in such sections or districts to any intermediate point or points of interchange with another company or any terminal elevator, and there to make delivery thereof to such other company or companies or to such elevator for carriage by such other company or companies as the Board may direct; and the Board may require such other company or companies to transport such grain and supply the necessary cars and engines therefor, and the rates lawfully published and filed by the company in default and obtaining on its route shall apply over the joint route or routes so directed and shall be apportioned between the companies as the Board may direct."

The Board of Railway Commissioners' Action.

Sir Henry Drayton, Chief Railway Commissioner, gave the following decision Mar. 4: The Board is advised that bill 47, as passed by the House of Commons, Mar. 1, has been adopted in the Senate without amendment. The duty is cast upon the Board, in view of the admitted congestion in the Goose Lake district, to take immediate action under it. There is no issue whatever which requires the taking of evidence or the consideration of any submissions as to the facts. In co-operation with the Grain Board, the Railway Board has had the question of the movement of grain up with the different railways from time to time.

The first complaint as to the situation in the Goose Lake district was made in October, and the matter was then taken up by the Board's Inspector with Messrs. Murphy and Brown, of the Canadian Northern, and, on Nov. 6, Mr. MacLeod, the General Manager, was telegraphed that at that time the elevators were already filled, if not to capacity, and his personal attention and distribution of cars was required. On Nov. 8, Mr. MacLeod wired that he expected to send in the next 24 hours 250 empty box cars to Goose Lake points; and on Nov. 9, he was advised that, while that supply would help the situation, from the information on hand it would take more than that to really catch up, and that particular attention should be given to the demands of the district, owing to the fact that storage capacity had been practically all taken up, leaving an immense amount of grain which at that time could neither be stored nor forwarded. On Nov. 15, the Board's Inspector advised that the Canadian Northern had supplied in the district in question from Nov. 8 to 13, inclusive, 204 cars, leaving, however, still a shortage in the district of 1,500 cars. The Board's Inspector continued to press for a larger delivery.

The Board sent its Chief Operating

Officer, Mr. Spencer, to the west, with instructions to see that everything was done that possibly could be done by the railways to facilitate the movement both of empty and of loaded cars. Early in January the line was blocked by snow, and the haulage of wheat practically stopped. As it became necessary for the Board to concentrate its whole energy in seeing that districts in the west, many of which were suffering from an acute shortage of coal, should be supplied with it at the earliest possible moment, considerable time was lost in connection with this matter. Weather conditions were very unfavorable, the extreme cold occasioning a scarcity of water along the whole line, and rendering it very difficult to get any proper service from locomotives. In addition to local difficulties, the situation was further complicated by embargoes, which largely obtained from time to time practically at all United States ports from which grain could be exported, and to a limited extent to movements to St. John, N.B. While in the West, Mr. Spencer took up with Mr. Warren, Assistant to the General Manager, C.N.R., the question of the amount of grain which the company had yet to handle. The figures given by Mr. Warden to Mr. Spencer applicable to the Goose Lake district, which includes not only the line from Saskatoon to Calgary, but also the Delisle-Elrose Branch, show that the company estimated that 13,000,000 bush. of wheat and 2,000,000 bush. of other grain remained still to be hauled from the district. Mr. Warren's estimate showed that the grand total of grain yet to be hauled by the Company amounted to 89,000,000 bush. In response to a wire as to the situation in this connection, General Manager MacLeod wired the Board on Feb. 15 that wheat shipments had been made since the estimate so as to reduce the amount of wheat still left in the district to 11,732,000 bush., and 1,945,000 bush. of other grain, or a total of 13,677,000 bush. of grain in the Goose Lake district requiring transportation.

I am of the opinion that the company did its best to move the crop during the past season. It gave the Goose Lake district every consideration that it could, bearing in mind the demands of other districts served by its system. It can do no better now, and it is doubtful if it can do as well. The company's estimate was confirmed by the Secretary of the Saskatoon Board of Trade, who, at the commencement of the movement, wrote drawing the Board's attention to the situation in the Goose Lake district, and who since advised that a conservative estimate of grain still to be hauled out of the district would amount to 60% of the crop. The Grain Commission's attitude is entirely to the same effect. Indeed its figures as to the grain available somewhat exceed the company's. The fact of congestion and danger of deterioration and loss of grain has also been endorsed by the Minister of Agriculture for Saskatchewan, and by a deputation of those interested in the district, headed by Mr. McColl, of Chinook, subsequently reinforced by the Minister of Agriculture for Alberta, and Mr. Buchanan, M.P.

No useful object can be served by an inquiry, resulting as it would in delays and defeating the object of the Bill. The company admits the situation. There can be, and is, no doubt as to it or its urgency.

An order should now go carrying into effect the recent legislation, and requiring the C.N.R. to forthwith place 1,200 grain cars in the Goose Lake district and 36 locomotives. These cars and locomotives must be retained in that district until further order, and be employed in carrying grain either to the terminal elevator at Saskatoon and there making deliveries, or to transfer tracks at Saskatoon, whereby connection is made between the Canadian Northern and Grand Trunk Pacific lines. The order will also require the Grand Trunk Pacific, which has idle cars and locomotives in the west, to use all available cars and locomotives in taking grain from the Saskatoon elevator to eastern points. In so far as deliveries are made by the Canadian Northern into the elevator, there is no difficulty whatever in the company keeping those cars in the districts and immediately returning them. In so far as deliveries are made to transfer tracks, the Grand Trunk Pacific must, in return for each car transferred, supply the Canadian Northern an empty box car in lieu thereof, so that at least 1,200 grain cars will be at all times engaged in the movement. As already intimated, the movement will continue until further order. This order will not go until such time as the Grain Commission advises that there is no longer danger of loss of unstored and unprotected grain in the district, or until such time as the Saskatoon elevator has been filled and the Grand Trunk Pacific is unable to remove from the transfer tracks grain carried by the Canadian Northern from the district. The companies are required to agree as to the proportionals of the rate, which must not be increased. The proportionals should be such as will give the Canadian Northern an increase over the ordinary rate per mile which a pro rata on the through movement would yield over the Canadian Northern mileage into Saskatoon. These proportions are to be agreed to within a week; and, in the absence of agreements arrived at between the parties by that time, will be then settled by the Board on such advice and submissions as either Railway Company desires in the meantime to submit.

The Board of Railway Commissioners passed the following order, 24,784, Mar. 9: Upon its appearing to the Board that the Canadian Northern Ry. is unable in the ordinary course to move the quantity of grain awaiting transportation in the Goose Lake district with reasonable dispatch, within such time as will enable a large quantity of unstored grain to be moved before serious deterioration, it is ordered that, until further order, the Canadian Northern be directed forthwith to place and retain in service on its Goose Lake lines not less than 1,200 grain cars and 36 locomotives, to be used in transporting grain from the said district between Saskatoon and Calgary, either to the terminal elevator at Saskatoon for delivery thereto, or to the transfer tracks at Saskatoon for delivery to the Grand Trunk Pacific Ry. for furtherance east, as the said grain may be consigned in either case; and that with respect to deliveries so made to the said transfer tracks, the Grand Trunk Pacific, in return for each loaded car so transferred, supply the Canadian Northern with an empty grain car in lieu thereof, so that at least 1,200 grain cars shall at all times be engaged in the said service of transporta-

tion to Saskatoon. That the Grand Trunk Pacific be directed, in so far as may be necessary, to use all its available cars and locomotives in the west for the purpose of moving the said grain from Saskatoon to eastern points. That the through rates for the joint carriage of the said grain, as herein prescribed, shall be the rates published and filed by the Canadian Northern Railway for the carriage of grain over its own rails, or jointly with its eastern connections as so published, east of Saskatoon, from the said points

of shipment to the same destinations; the allocation of the said joint rates between the carriers hereby made parties thereto to be arranged between themselves within one week from the date of the Board's judgment herein, viz., Mar. 4, and, failing such arrangement, to be settled by the Board, subject to such submissions in relation thereto as either railway company may desire to make, provided that the uninterrupted movement of the said grain be not impaired pending such settlement.

Bonaventure Station, Montreal, Destroyed by Fire.

Fire was discovered in a cupola at the front of the Grand Trunk Bonaventure Station, Montreal, at the front of the building, to the right of the centre, on Mar. 1, at 4.50 a.m., by one of the train dispatching staff, but it had gained such a hold on the inflammable material in the section of the building where records were stored, that when the fire engines arrived there was nothing to do but to keep it, as far as possible, from spreading to adjoining buildings. The isolated posi-

tional, were transferred at St. Henri. Temporary ticket offices for the Intercolonial were opened in G.T.R. ticket booths near Mountain St. The Canadian Express Co.'s shed was untouched. The platform roofs at the rear of the station were undamaged, and temporary buildings have been erected in the vicinity for the transaction of business.

The burned station was a brick building erected in 1886 at a cost of several hundred thousand dollars, and was in its

An investigation into the cause of the fire was concluded Mar. 16 by Fire Commissioner Ritchie, who decided that it was impossible to determine the cause of the fire other than that it was of accidental origin.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, for Western Lines, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,206,100	\$921,000	\$285,100	x\$14,100
Aug.	1,192,800	954,000	238,800	x5,000
Sept.	2,014,500	1,358,000	661,600	x1,000
	\$4,413,600	\$3,227,000	\$1,186,600	x\$79,300
Decr.	\$658,300	\$579,000	\$79,300	

Mileage in operation at Sept. 30, 1915, 4,965, against 4,670 at Sept. 30, 1914.

Commencing with October, the figures show the earnings of the entire system, both eastern and western lines.

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
Oct.	\$3,678,500	\$2,421,500	\$1,257,000	x\$1,000
Nov.	3,535,200	2,323,800	1,211,400	x18,000
Dec.	3,435,600	2,233,500	1,202,100	x50,000
Jau.	2,086,800	1,831,400	255,400	x88,000
	\$12,736,100	\$8,810,200	\$3,925,900	x\$1,000
Inc.	\$4,702,300	\$2,667,600	\$2,034,700	

Mileage under operation at Jan. 31, 7,899, against 6,899 at Jan. 31, 1915. Approximate earnings for February, \$2,089,200, against \$1,602,200 for Feb. 1915, and for three weeks ended Mar. 21, \$1,537,200, against \$1,261,500 for same period 1915.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$7,895,375.47	\$5,094,972.35	\$2,800,403.12	\$978,042.71
Aug.	8,801,451.52	5,359,136.80	3,442,314.72	79,157.02
Sept.	10,273,165.45	5,527,864.81	4,745,300.64	378,252.25
Oct.	11,111,206.88	6,801,700.00	4,309,506.88	9,078,007.79
Nov.	13,351,283.51	6,996,870.48	6,354,413.03	3,710,340.86
Dec.	12,705,673.45	7,003,351.97	5,702,321.48	3,502,797.67
	\$57,058,989.88	\$33,344,394.51	\$23,714,595.37	\$10,900,785.81
Inc.	\$2,479,799.10	\$1,529,624.17	\$950,174.93	

Approximate earnings for February, \$8,546,000, against \$6,503,000 for Feb. 1915, and for three weeks ended Mar. 21, \$6,737,000, against \$5,136,000 for same period 1915.

Grand Trunk Railway Earnings.

Following are the earnings and expenses for the G.T.R., Grand Trunk Pacific, Grand Trunk Western, G.T.W.R. and the D.G.H. & M.R., for January, compared with those for January, 1915.

	Grand Trunk Railway, 1916.	1915.
Earnings	2,783,000	2,431,800
Expenses	2,783,000	2,431,800

	Grand Trunk Pacific, 1916.	1915.
Earnings	558,650	588,900
Expenses	558,650	588,900

	Grand Trunk Western, 1916.	1915.
Earnings	\$130,650	\$29,400
Expenses	\$130,650	\$29,400

	Detroit, Grand Haven & Milwaukee Railway, 1916.	1915.
Earnings	1,082,245	301,103
Expenses	1,082,245	301,103

	TRAFFIC RECEIPTS OF THE SYSTEM, 1916.	1915.	Increase
Aggregate from Jan. 1 to Feb. 29, -			
G.T.R.	\$6,437,336	\$5,287,339	\$1,149,997
G.T.W.R.	1,383,708	1,082,245	301,463
D.G.H.&M.R.	474,761	370,874	103,887

	Grand Trunk Pacific, 1916.	1915.	Increase
Aggregate from Jan. 1 to Feb. 29, -			
G.T.P.	\$130,650	\$29,400	\$101,250
G.T.W.	1,082,245	301,103	781,142
D.G.H.&M.	474,761	370,874	103,887

Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section, 916 miles, for February, were \$277,619, against \$277,619 for Feb. 1915. Approximate earnings for three weeks ended Feb. 29, \$591,962, against \$422,224 for same period 1915.

Bonaventure Station, Montreal, Grand Trunk Railway.

tion of the fire, and although at one time the buildings on the north side of St. James St., facing the station, were in danger, the flames were confined to the station itself. The interior of the building, which was very largely of wood, was entirely destroyed, together with large quantities of records, etc. Only two people were actually sleeping in the building and were got out easily.

Notwithstanding the fire, there was no interruption of traffic, all trains arriving and departing as usual. Within an hour after the discovery of the extent of the fire new sets of railway tickets had been prepared, and the entire train dispatching system duplicated at St. Henri. Trains arrived at and departed from the station platform at Drummond St., and heated cars were provided as waiting rooms. Passengers arriving for transfer to the Intercolonial or the Delaware & Hudson, which use the G.T.R. ter-day considered a well planned and com-

modious structure, but it has long been out of date and insufficient for the company's purposes. The question of the erection of a new building has been under consideration for some time, and has been coupled with the elevation of the tracks from the station to St. Henri. Under an agreement entered into with the city in 1883, prior to the building of the burned station, the company agreed that the Bonaventure Station should be maintained in "good order for ever," and that in case of fire it should be reconstructed on the same site, and according to the same plan, unless agreed otherwise by the parties to the agreement.

The Montreal Board of Control on Mar. 9, granted the company a permit to erect a temporary station around the ruins. The intention is to roof in the concourse, and to clear out and utilize part of the burned out building. These alterations are for temporary accommodation pending the settlement of plans for a building.

Mainly About Railway People Throughout Canada.

D. Pottinger, I.S.O., ex-General Manager, Canadian Government Railway, and Mrs. Pottinger are staying in Toronto.

G. L. Pearsons has been appointed Secretary-Treasurer and Manager, Goderich Elevator & Transit Co., Ltd., Goderich, Ont., succeeding the late W. L. Horton.

W. L. Mugliston, of the Canadian Overseas Railway Construction Corps, and second son of W. L. Mugliston, late Superintendent of the Midland Ry., of England, died in Flanders, Jan. 30.

T. D. Gray, General Agent, Shedden Forwarding Co., London, Ont., for about 40 years, died there, Mar. 9. He had been connected with the company for over 50 years.

J. S. Pyeatt, who has been elected President, New Orleans, Texas & Mexico Rd., Houston, Tex., was at one time Superintendent, Canadian Division, Pere Marquette Rd., St. Thomas, Ont.

G. A. North, Travelling Passenger Agent, Canadian Northern Ry., Winnipeg, was presented with a wrist watch recently by the department's staff, an enlisting in the 61st Battalion, C.E.F.

F. C. Salter, European Traffic Manager, G.T.R. and Canadian Ex. Co., London, England, is reported to be progressing satisfactorily after a second operation for abdominal trouble.

L. R. Silcox, heretofore chief draughtsman, Mechanical Department, Canadian Northern Ry., Toronto, has been appointed Mechanical Engineer, Illinois Central Rd. Office, Chicago, Ill.

L. B. Howland, of Toronto, formerly President & General Manager, Irondale Bancroft and Ottawa Railway, has been elected President of the Ontario Motor League and of the Canadian Automobile Association.

Lt.-Col. F. S. Meighen, of the 87th Battalion, Canadian Grenadier Guards, now in barracks at St. Johns, Que., who is a C.P.R. director, has been ordered to England to take command of a brigade as Brigadier General.

W. H. Olmstead, yard foreman, G.T.R., died in St. Luke's Hospital there Mar. 19, as the result of injuries received in the yard, Mar. 17, when a box car jumped the track and crushed him between the car and a telegraph post.

G. W. Verral, who for many years conducted the Verral Transfer Co., in Toronto, and has latterly carried on an electric car and cab delivery and the Verral Storage Co., has assigned for his creditors' benefit.

Grain Inspection at Western Points.

The following figures issued by the Department of Trade and Commerce, show the number of cars of grain inspected at Winnipeg and other points on the Western Division for railways, for February, and for six months ended Feb. 29, with a comparison of the number of cars inspected for six months ended Feb. 28, 1915.

	Feb.	Six months to Feb. 29, 1916	Six months to Feb. 28, 1915
C.P.R.	6,230	114,070	44,425
C.P.R. Calgary	448	3,285	3,682
C.N.R.	4,063	59,695	28,652
G.N.R. Duluth	439	3,116	1,212
G.T.P.R.	2,059	29,471	11,509
Totals	13,239	209,637	89,480

Consolidation of Railway Act.—Replying to a question in the House of Commons, Mar. 1, the acting Minister of Railways said the work of consolidating the Railway Act was in progress. Besides the work usually incidental to consolidation, thorough enquiries and investigations have been made, involving conferences with the Board of Railway Commissioners and other bodies, into the working out of different sections of the act, with particular regard to those in respect of which amendments have been offered in recent years. Seven thousand dollars has been paid in respect of this work to S. Price, K.C.

Timiskaming and Northern Ontario Ry. and Grand Trunk Pacific Ry. Running Rights.—Questions were asked in the Ontario Legislature, Mar. 15, as to the refusal of the Grand Trunk Pacific Ry. to live up to its agreement regarding running rights over the Timiskaming and Northern Ontario Ry., and as to the failure of the Ontario Government to take legal action in the matter. The Provincial Treasurer said that the agreement did not give the Government power to bring action until the construction of the G.T.P.R. was completed and trains running over the system.

G.T.R. Conductor Convicted.—E. E. Sinclair, who is said to have been a G.T.R. conductor for about 30 years, was fined \$100 and costs, or 30 days imprisonment, in Toronto police court Mar. 17, for stealing \$5 from the company. A detective who boarded a train at Stratford for Toronto, with two of the company's office men, swore that he gave the conductor \$5 and that he and his two companions were given hat checks and permitted to travel to Toronto.

Lumber Freight Rates Advanced.—Washington, D.C., press dispatch, Mar. 26:—"Increase to 12c per 100 lbs., making net increases of from 1 to 2c on lumber and lumber products from St. Paul, Minneapolis, Duluth, Minnesota Transfer, Stillwater, Minn., Ashland, Wis., and points taking the same rates to Chicago, and Chicago rate points has been approved by the Interstate Commerce Commission."

The Algoma Steel Corporation has, it is said, arranged to make shells and other munitions at Sault Ste. Marie, Ont., and will erect a building 350 x 120 ft. for the purpose.

Transportation Appointments Throughout Canada.

Government Employees and the War.—The acting Minister of Railways and Canals, stated in the House of Commons, Mar. 9, that 573 employees of the Department and Canadian Government Railways, had been granted leave of absence to enlist for overseas service under the various orders in council dealing with the enlisting of Government employees. The Intercolonial Ry. heads the list with 455 enlisted employees. Of the total number, 8 have been killed in action, 2 have died since enlisting and a number are included in the list of wounded and missing. Officials and employees of the Government railways had made two contributions of one day's pay to the Canadian Patriotic Fund, totalling \$37,973.64.

Scrap Material sold by the Pennsylvania Rd. during 1914 brought \$2,157,241.24, which is \$1,000,000 less than was obtained by the same means in 1913. Some of the items and amounts were as follows: Old wheels, metals and wrought iron, \$780,000; locomotives and wooden passenger cars, \$114,326; waste paper, \$19,211; oil barrels, \$22,439; old rubber, \$15,222.

Canadian Northern Railway Construction, Betterments, Etc.

James Bay & Eastern Ry.—A trust deed dated Sept. 1, 1915, made between the company and the Guardian Trust Co., securing an issue of 30 year 5% debenture stock or bonds has been filed with the Secretary of State at Ottawa. It is reported that some further construction is likely to be gone on with at an early date. J. P. Mullarkey has a contract for grading westerly from Roberval towards James Bay, and some part of the work has been done.

Canadian Northern Ontario Ry.—The Minister of Lands informed the Ontario Legislature, Mar. 7, that the company had made application to designate the lands to be granted it under the statute, but that no lands had as yet been assigned by the Minister as subsidy lands.

Canadian Northern Ry.—M. H. MacLeod, General Manager and Chief Engineer, is reported to have said in an interview at Saskatoon, Mar. 4, that a considerable mileage of steel will be laid on already completed grading in Saskatchewan and Alberta during this year, at the points most urgently required; the mileage will depend upon the quantity of steel that can be obtained.

The Dominion Parliament has extended the time for the building of a line from near Grosse Isle, on the Oak Point Branch, northerly and westerly to Grand Rapids, near the head of Lake Winnipeg, with a branch to Sturgeon Bay, on the same lake.

The Regina Board of Trade passed a resolution, Mar. 3, asking the company to undertake as early as possible this year the completion of the Regina-Avonlea line, for the construction of which the company's bonds have been guaranteed by the Saskatchewan Legislature.

The Premier of Alberta in a statement regarding railway construction in the province, is reported to have said, on Mar. 4, that the rails for the St. Paul de Metis line had been shipped from eastern points, that track laying will be started as soon as the rails arrive, and that it is expected to have track laid on the 85 miles of completed grading by the end of June. The line is being built under the C. N. Western Ry.'s Alberta charter and leaves the C.N.R. main line at Oliver, and its construction for 100 miles is provided for by a provincially guaranteed bond issue. The report of the Minister of Railways for the year ended Dec. 31, 1915, states that 86.2 miles of grading have been completed.

Grading was completed on the company's line south of Calgary to Lethbridge, up to the end of 1915, for 56.49 miles. The distance between these two points is 105 miles, and the provincial guarantees also cover the building of a line from where the Calgary-Lethbridge line crosses the Little Bow River, via Macleod to the International Boundary, 110 miles.

Canadian Northern Pacific Ry.—We are officially advised that the building of the line into New Westminster, B.C., is under discussion, but the details will not be settled for some time.

Vancouver Terminals.—Sir W. MacKenzie, President, C.N.R., was in Vancouver Feb. 26, and met a number of members of the city council and talked over matters connected with the development of the False Creek flats and the proposal to build a union station with the Great Northern Ry. This latter is a definite

C.N.R. proposal, and plans for such a station were sent to the G.N.R. offices in St. Paul, Minn., after having been laid before the city council by M. H. MacLeod, Feb. 15. Mr. MacLeod subsequently went to St. Paul, and on Mar. 9 informed the Mayor of Vancouver by telegram that he had been unable to come to terms with the G.N.R. respecting the building of a union station. The C.N.R. will therefore proceed with the erection of its own station at an estimated cost of \$1,000,000, the plans for which will be submitted for approval on an early date. The city council passed a resolution, Mar. 15, calling on the company to proceed with the laying out of the terminals and building the station at False Creek in accordance with the terms of the agreement. The company agreed to do all the work within five years, two years of which are unexpired.

The specifications for the temporary car ferry slip at Port Mann, call for a structure capable of accommodating a ferry 335 ft. long. Tenders for this work are being invited.

Lines on Vancouver Island.—A press report dated Mar. 18 states that track laying has been started on the Victoria-Patricia Bay line. (Mar., pg. 94.)

It was reported Feb. 15 that a contract had been let to W. S. Doe, Victoria, for the building of a bridge across Selkirk water, as the approach to the company's proposed terminals on the Songhees reserve property.

Grand Trunk Ry. Statement for 1915.

Subject to audit, the accounts for the year to Dec. 31, 1915, show the following results:—

Gross revenue	\$1,154,650
Working expenses	1,000,000
Net revenue	154,650
Income tax, interest, and car mileage balances	1,000,000
Total net revenue	\$2,154,650
Net revenue charges for the year, less	
Deduct Grand Trunk Western deficiency for year ended June 30, 1915	\$122,200
Detroit, Grand Haven & Milwaukee deficiency for year ended Dec. 31, 1915	1,850
Surplus	\$210,700
Less interim dividend paid on 4 per cent. guaranteed stock	

This balance of \$210,700 added to the amount of \$4,300 from Dec. 1914, makes a total amount of \$215,000, which will admit of a further payment for the year of 2½% on the 4% guaranteed stock, making the full dividend for the year, and leaves a balance of about \$15,000 to be carried forward.

The accounts of the Grand Trunk Western Ry. for the half year ended Dec. 31, 1915, after providing for net revenue charges, show a surplus of \$108,500, which amount is carried forward to the current half year.

Freight on Hides to Boston.—In the case of Swift & Co. vs. Minneapolis, St. Paul & Sault Ste. Marie Ry., the Interstate Commerce Commission decided at Washington, D.C., Feb. 29, that proposed increased carload rate for transportation of green salted hides from St. Paul, Minneapolis, and Minnesota Transfer, Minn., to Boston, Mass., and Boston rate points, via Sault Ste. Marie, Mich., was not justified, and required to be cancelled.

Traffic Orders by Board of Railway Commissioners.

Rates on Tank and Still Structural Material from Sarnia to Regina.

24727. Feb. 16. Re Canadian Northern Ry.'s Special Proportionate Freight Tariff, C.R.C. E732, applicable on tank and still structural material in carloads, ex Sarnia, Ont., from Toronto to Regina, Sask.: Upon hearing the matter at Ottawa Feb. 9, in the presence of counsel for Canadian Northern, Canadian Pacific and Grand Trunk Railways, the Pere Marquette Rd. being also represented, it is ordered that the said tariff be disallowed.

24750. Feb. 19. Re application of Imperial Oil Company, Ltd., under sec. 334 of the Railway Act, for an order requiring the Pere Marquette Rd. Company, the Canadian Pacific, Canadian Northern and Grand Trunk Railway companies, to agree upon and file a joint tariff on tank and still structural material, in carloads at 75c per 100 pounds from Sarnia, Ont., to Regina, Sask. Upon hearing the matter at Ottawa, Feb. 9, in the presence of counsel for the applicant company, the Canadian Northern, Canadian Pacific and Grand Trunk Railways, and Pere Marquette Rd. being also represented at the hearing, it is ordered that the application be dismissed.

Freight Rates on Whole Peas.

24788. Mar. 9. Re applications of Boards of Trade of Montreal and Toronto for an order disallowing the proposed increase in rates on peas (whole) from stations in Canada to eastern United States points, as published by Canadian Pacific and Grand Trunk Railways: Upon hearing the application at Ottawa, March 7, the Montreal and Toronto Boards of Trade and the Grand Trunk and Canadian Pacific Railways being represented, it is ordered that the elimination of peas (whole) from the list of articles taking grain rates from stations in Canada to points in the eastern United States, as provided in following schedules, issued to become effective March 20 and 21, be suspended until further order, viz., Canadian Pacific, Supplement 1 to Tariff C.R.C. no. E-2935; Grand Trunk, Supplement 20 to Tariff C.R.C. no. E-1860, Supplement 21 to Tariff C.R.C. no. E-1861, Supplement 13 to Tariff C.R.C. no. E-1872; Windsor, Essex & Lake Shore Rapid Ry., Supplement 1 to Tariff C.R.C. no. 158; Chatham, Wallaceburg & Lake Erie, Supplement 1 to Tariff C.R.C. no. 357; Essex Terminal, Supplement 1 to Tariff C.R.C. no. 256. And it is further ordered that provision be forthwith made for continuing until further order the rates on peas (whole) in the following schedules, issued to become effective April 1, viz., Michigan Central, Tariff C.R.C. no. 2507; Chatham, Wallaceburg & Lake Erie Ry. Tariff C.R.C. no. 394; Canadian Northern Ry., Tariff C.R.C. no. E-743; Essex Terminal, Tariff C.R.C. no. 300.

C.P.R. Release Form, Etc.

24789. Mar. 6. Re the application of C.P.R., under sec. 340 of the Railway Act, for approval of form 1735, being a release and power of attorney to be signed by persons who desire, for special reasons, to travel in cars which are not intended to carry passengers. Upon reading the report of the Chief Traffic Officer of the Board, and what is filed in support of the application, it is ordered that the form of 1735, on file with the Board, be approved.

Notices of Embargoes.

General order 160. Feb. 24. Re general order 95, Nov. 2, 1912, requiring rail-

way companies to file copies of any embargo issued against any traffic; and re the application of the Canadian Northern Ry. for a ruling as to whether embargo notices given to shippers on its lines as a result of an embargo placed on joint traffic by a connecting carrier should be reported to the Board: Upon reading what is filed, and the report of the Chief Operating Officer of the Board, it is ordered that railway companies be directed to report to the Board embargoes of any kind, within the time and as provided by general order 95, whether such embargoes are placed by companies subject to the Board's jurisdiction or by any carrier having connections with them. And it is further ordered that every such railway company report to the Board by telegram, with all possible dispatch, all accidents, failures, and obstructions on or to the railway, or to engines or rolling stock or other facilities, as a result of which the usual railway operations in any district or at any point will be delayed or impeded for a longer period than 24 hours; the nature of the occurrence creating such a situation; the steps taken to remedy it, and the time necessary to restore the railway sufficient for the requirements of ordinary and regular traffic.

C.P.R. Colonization Plans.

The C.P.R., according to a press interview with Baron Shaughnessy, has decided on a comprehensive plan of colonization. The details are being worked out and involve the preparation of about 1,000 farms for occupation in the spring. One of the most serious problems to be faced in Canada will be, said Baron Shaughnessy, the handling of the thousands of returned Canadian soldiers and the immigration of the returned soldiers from Great Britain. Provision must be made for them, as large numbers will be so unsettled as to be unfit to return to their former occupations. He also said: "Realizing that the situation must be met, and willing to take its share of the burden, of trying to solve this problem and assist the men who have fought the battles of the empire, the C.P.R. has decided to establish in Western Canada, colonies, which for the moment we are calling returned veterans' colonies, where men who wish to go in for farming can obtain improved farms, on terms which will, in time, enable them to become land owners and to create homes for themselves and their families. These colonies will be given distinctive names, probably with military associations, and will contain a sufficient number of families in each to ensure social, school and church facilities and in each case, will include a central instructive farm under a competent agriculturist so that advice and instruction may be available for the colonist."

The Delaware, Lackawanna & Western Rd. Co. has been licensed by the Ontario Government to maintain passenger and freight offices and to maintain a bank account, and do ordinary matters pertaining to railway business other than actual construction or operation of a railway within the province, but not to use any larger amount of capital than \$40,000. Allen Leadlay, Freight and Passenger Agent, Toronto, has been appointed attorney.

Weighing and Reweighing Car Load Freight at Detroit.

In the case of the Detroit Coal Exchange and Builders and Traders Exchange of Detroit, vs Michigan Central Rd., Detroit and Charlevoix Rd., Grand Trunk Western Ry. and Grand Trunk Ry., the complaint being that the rules and charges governing the weighing and reweighing of car load freight in Detroit, Mich., were unreasonable and unduly preferential, the Interstate Commerce Commission has decided: That the Commission has jurisdiction of the weighing service, when the freight is moved in interstate commerce. That it is the duty of the delivering carrier, upon reasonable request, to reweigh carload freight which has been transported in interstate commerce. That the present charges for this service in Detroit, Mich., are unjust and unreasonable. Just and reasonable charges prescribed for the future. That the inability of carriers participating in the interstate transportation of a car to agree upon their respective assumptions of costs for reweighing when such reweighing develops a shortage in excess of the limit of tolerance, cannot be used to increase charges against the shipper.

Alberta Government Aided Railway Construction.—The Alberta Railways Department annual report for the year ended Dec. 31, 1915, shows that 326 miles of new railways were completed, though not all placed in operation during the year, of which 304 miles were built of the railways, the bonds of which are guaranteed by the province. Altogether the province has authorized the guarantee of bonds for 3,471.87 miles of railways, and the guarantee has been executed for 2,535.97 miles. Of this mileage there has been completed 1,595 miles, upon the following companies' lines:—Canadian Northern Ry., 776 miles; Grand Trunk Pacific Ry., 259 miles; Edmonton, Dunvegan & British Columbia, 337 miles; Alberta & Great Waterways, 175 miles; Central Canada, 48 miles. In addition to the completed mileage, 400.59 miles of grading was done on the following lines: Canadian Northern, 233.57 miles; Edmonton, Dunvegan & British Columbia, 13 miles; Alberta & Great Waterways, 116 miles; Central Canada, one mile; Lacombe & Blindman Valley, 37 miles. The mileage completed and graded represents 70% of the lines for which the provincial guarantees have been executed.

Shipments of Explosives on Canadian Northern Ry.—In reference to the Board of Railway Commissioners' decision refusing to make an order directing the C.P.R. and G.T.R. to receive shipments of explosives from the Canadian Northern until that company satisfied the Board that it had appointed a competent inspector and made proper arrangements for the inspection of shipments of explosives originating on its line, and which is given in full on pg. 134, we are officially advised by the Canadian Northern operating management that it is observing all the rules and instructions in regard to handling explosives and other dangerous articles as issued by the Bureau of Explosives, that the inspection of shipments originating on its line is made by its agents' staff at the points where shipments are received, and that it is practically covering the matter as fully as though the Bureau's inspectors were doing the work. The Board, however, has not signed the order applied for and the matter is in statu quo.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Express, Telegraph, and Railway and Canal
Contractors' Interests.
Official Organ of various Canadian Transportation
Associations.

Published on the first of each month.

The Winnipeg Traffic Club held its first
annual supper at the union station
restaurant, Mar. 17, A. Syme being in
the chair. The feature of the evening
was an address on the railway ticket
business by A. Calder, who was referred
to as Winnipeg's pioneer ticket agent.

Rate Increases in Western Classi- fication Territory.

The Interstate Commerce Commission
gave a decision at Washington, D.C., Feb.
8, which is summarized as follows: Pro-
posed increase from 30,000 to 40,000 lbs.
in the minimum carload weight on grain
products and from 40,000 to 50,000 lbs.
in the minimum carload weights on wheat
and rye found justified. Following 1915
Western Rate Advance Case, 35 I. C. C.,
497, 603-611, proposed increased rates on
bituminous coal from Illinois mines and
other points to points west of the Missis-
sippi River found justified. Cancellation
of present interstate commodity rate on
gas coke in carloads from St. Charles,
Mo., to St. Louis, Mo., found justified.
Proposed increased rates on broom corn
from points in Kansas and Oklahoma to
points in Colorado and New Mexico not
justified. Proposed increased rates on
wheat and corn between Arkansas sta-
tions on the St. Louis & San Francisco
Rd. and Memphis, Tenn., justified.

War Purchasing Staff.—In addition
to E. Fitzgerald, Assistant General Pur-
chasing Agent, C.P.R., who is Purchasing
Agent for the British War Office and the
Imperial Munitions Board, with office in
Union Bank Building, Ottawa, W. H.
Stewart, until recently Assistant Super-
intendent, C.P.R., Farnham, Que., has
been "loaned" to the Imperial Munitions
Board and is assisting Mr. Fitzgerald. L.
C. Thomson, General Storekeeper, Cana-
dian Northern Ry., Toronto, has also
been "loaned" to the board and has been
appointed its Superintendent of Trans-
portation, attending to all products
handled by it. The British War Office
Purchasing Department, known as the
War Office Service, which was established
at 114 Windsor St., Montreal, under Mr.
Fitzgerald, in May 1915, and moved to
Ottawa a few months ago, has been re-
moved back to its former location in
Montreal where it is in charge of K. K.
Donnelly, of the General Purchasing
Department, C.P.R., representing Mr.
Fitzgerald.

Special Rates for Farm Laborers.—A
press dispatch says that Canadian rail-
ways have granted the Dominion Govern-
ment's request for a passenger rate of 1c
a mile in Canada for United States farm
laborers, who are expected to come over
in considerable numbers as a result of the
Interior Department's campaign being
carried in the U.S. We are officially
advised that the Eastern Canadian Pas-
senger Association considered the condi-
tions so urgent that they acceded to the
Government's request and will issue tick-
ets practically on the basis of 1c a mile
to farm laborers. Tickets will be sold to
points in Ontario from Niagara Falls,
Bridgeburg, Windsor and Sarnia from
Mar. 21 to May 21 inclusive.

Cost of National Transcontinental Ry.
—The commissioners' 11th annual report,
just issued, covers the year ended Mar.
31, 1915, and is signed by Hon. F. Coch-
rane, Minister of Railways and Canals,
as commissioner. The total expenditure
during the fiscal year was \$9,834,746.75,
which brought up the total expenditure,
from the organization of the commission
in 1904 to Mar. 31, 1915, to \$152,802,745.
77. Up to that date there had been laid
2,352.58 miles of track, distributed as fol-
lows: Main line, 1,803.44 miles; double
track and line from bridge to Quebec,
19.61 miles; sidings, yards, pit spurs, etc.,
529.53 miles.

Telegraph Efficiency on the C.P.R.

George Bury, Vice President, C.P.R.,
has issued a circular to the company's
various telegraph offices, reading as fol-
lows: "The company having undertaken
the transmission of telegrams for the
public over its wires, it is of the highest
importance that this service be per-
formed in a thoroughly efficient manner,
and the most careful attention to this
business is enjoined upon every one con-
nected with the telegraph service.
Celerity in transmission and delivery,
accuracy and privacy, are of the first
importance and no shortcomings in these
particulars will be tolerated. It must be
remembered that no person, not except-
ing the highest officer of the company,
has the right to know the contents of any
private telegrams entrusted to the com-
pany for transmission, except that tel-
egraph superintendents, inspectors and
others designated by the proper author-
ity in the Telegraph Department have
the right to examine the telegraph bus-
iness to check up transmission and de-
livery, or other defects in service. The
greatest care must be taken to prevent
private telegrams from being seen by
persons for whom they are not intended
and any employee of the company divul-
ging the contents of such a telegram will
be punished by immediate dismissal. Gen-
eral superintendents are requested to co-
operate with the Manager of the Com-
pany's Telegraph every possible way to
secure the desired efficiency, and to see
that all persons connected with the
telegraph service on their respective div-
isions fully carry out his instructions
concerning commercial telegraph bus-
iness."

**National Transcontinental Ry. Grain
Shipments.**—Replying to questions in the
House of Commons Mar. 1, Hon. J. D.
Reid, acting Minister of Railways, said
20 cars of wheat had been shipped on the
6c per bushel rate on the N.T.R. from
Armstrong to Montreal, and 80 cars had
been shipped at the same rate from Arm-
strong to Quebec. The rate for grain
from Armstrong to St. John, Halifax, and
Portland, Me., was 14.22c a bushel, for
export. The rate from Armstrong to
Montreal for domestic consumption was
12c a bushel, and from Armstrong to Que-
bec, for domestic consumption, 15c a
bushel.

The Vancouver Transportation Club
was organized in Vancouver, B.C., Mar.
10, with an initial membership of over
100 and the following officers: President,
J. W. Faulds of D. E. Brown, Hope and
Macauley; First Vice President, E. J.
Burns, Great Northern Ry.; Second Vice
President, C. E. Laing, C.P.R.; Secretary-
Treasurer, H. W. Schofield, C.P.R.; other
directors: C. E. Jenney, G.T. Pacific Ry.;
A. A. Whitnall, Great Northern Ry.; J.
W. Nott, Allan Line Steamships; J. E.
Archer, Great Northern Express Co.; C.
A. Whitlock, Donaldson Steamship Line.
The club has been formed for local
purposes.

Railway Lands Patented. Letter pat-
ent were issued during February, cover-
ing Dominion railway lands in Manitoba,
Saskatchewan, Alberta and British Col-
umbia, as follows:

Alberta Central Ry.	95
Alberta & Great Waterways Ry.	68
Calgary & Edmonton Ry.	3,037.00
Canadian Northern Ry.	640.00
Grand Trunk Pacific Branch Lines Co.	14.43
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.	6,566.43
Total	10,259.49

Freight and Passenger Traffic Notes.

The C.P.R. resumed service over the Outlook branch, Sask., Mar. 15.

The C.P.R. announced in Winnipeg, Mar. 15, that the entire system had been cleared from the effects of the Jan.-Feb. snowstorms.

The Canadian Northern Pacific Ry. was finally cleared for through traffic, Feb. 29, after the effects of the Jan.-Feb. snowstorms.

The Canadian Northern Ry. expect to inaugurate a daily train service between Toronto and Winnipeg, in connection with its transcontinental traffic, June 1.

The G.T.R. started, Mar. 15, running the 6.45 a.m. train from Rouse's Point, N.Y., to Montreal, and the 5.30 train from Montreal to Rouse's Point, via Ithaca, Que.

The C.P.R. resumed its steamship service on Okanagan Lake, Mar. 13, which had been stopped on account of the severe weather at the end of January and early in February.

The C.P.R. upper lake steamships will, it is said, arrive at Port Arthur, Ont., during the coming navigation season, at 8 a.m., except the s.s. Manitoba, which will arrive Fridays at 3 p.m.

The Edmonton, Dunvegan & British Columbia Ry. announced Mar. 16 that it would give the same freight rates as the other companies from its territory for the spring horse show, April 4 to 8.

The Grand Trunk Pacific Ry. announces that its steamship, Prince John, will leave Prince Rupert for Skagway every Thursday at noon, returning therefrom every Sunday at 1 p.m., from Mar. 30 to June 8.

The Intercolonial Ry. has discontinued temporarily, the Ocean Limited train between Halifax and Montreal. The last trip eastward from Montreal was on Mar. 7, and the last trip westward from Halifax was Mar. 8.

Petrograd, Russia, press dispatch, Mar. 10: "The Minister of Ways and Communications has announced plans for promoting direct freight trade facilities between Russia and Canada by way of Vladivostok, Siberia, and Victoria, B.C."

The Canadian Northern Ry., according to a Port Arthur press report, is arranging to open up the Lake Nipigon district for tourist purposes. It is proposed to erect a fishermen's lodge on the lake, to accommodate parties up to 20, for which camp equipment will be supplied from the Port Arthur Hotel.

In addition to the regular standard, tourist and observation car service, the C.P.R. inaugurated on Mar. 22 a new tourist car service between Winnipeg, Saskatoon and Edmonton, for the benefit of homeseekers leaving Winnipeg, Thursdays and returning Tuesdays. It will be continued until Oct. 31.

It was reported in Vancouver, Mar. 17, that the Pacific Great Eastern Ry. had been opened for traffic from Squamish to Cheakamus Canyon, B.C., 19 miles, and that the clearing of the track thence to Clinton, mileage 146 from Squamish, was being proceeded with. The railway became blocked in the first snowstorm at the end of January.

To make freight rates east of Levis, Que., uniform with those in effect west thereof and on the National Transcontinental Ry. west of Moncton, the mileage tariff rate on the Intercolonial east of Levis on certain forest products for local consumption, short haul has been raised,

as follows: Distance over 5 to 80 miles, $\frac{1}{2}$ cent per 100 lbs.; over 80 to 90 miles, $\frac{3}{4}$ cent per 100 lbs.; over 90 to 100 miles, $\frac{1}{2}$ cent per 100 lbs.

The Intercolonial Ry., the Prince Edward Island Ry., the New Brunswick & Prince Edward Island Ry., the International Ry. of New Brunswick, the St. John & Quebec Ry., and the National Transcontinental Ry. being Canadian Government railways, only one coupon is required in ticketing to any point thereon, except in the case of the P.E.I. Ry., where a separate coupon is required for the steamship

connection from Point du Chene to Summerside or from Pictou to Charlottetown.

An arrangement has been made by which farm laborers can travel on Canadian lines between Winnipeg and Kingsgate, B.C., at a 1c a mile rate. The special rate came into effect Mar. 20 and will be continued to May 15. No tickets will be sold for less than \$2. This arrangement was made, it was stated in the House of Commons, Mar. 20, in connection with a campaign inaugurated by the Interior Department to secure farm laborers from the United States.

Grain in Store at Terminal Elevators, Interior Terminal Elevators and at Public Elevators in the East.

Week ending Mar. 10, 1916.	Wheat. bushels.	Oats. bushels.	Barley. bushels.	Flax bushels.	Totals. bushels.
Port William—

Military Railway Construction.—London, Eng., cablegram, Mar. 1: "A letter signed 'British Railwayman,' given prominence by the Times says that the lack of light railways at the front is hampering military operations. The writer thinks the the probable obstacle to the remedying of this condition is the shortage of rails and rolling stock, but suggests that the Canadians might help." His assertion that numerous plants for railway construction in Canada are lying idle is denied by Canadian railway officials. The latter also say that the British Government has constructed several lines in which the Canadian Overseas Railway Corps has helped.

G.T.R. employees in military service.—At the commencement of the war, the G.T.R. allowed six months full pay to its employees volunteering. To Dec. 31, 1915, the amount thus paid totalled, for the G.T.R. and G.T.P.R., \$680,000, and the present monthly payroll for the same purpose is \$62,500. It has since been decided to discontinue this method and to contribute \$10,000 monthly to the Canadian Patriotic Fund.

Charges Against C.P.R. Conductors.—Six conductors and three outside men were committed for trial at Ottawa, Ont., Mar. 12, on charges of theft and conspiracy to defraud the C.P.R. The men charged are S. Alexander, C. A. Merriam, M. Baker, R. T. Carter, H. Dunham, C. A. Dunham and F. Nelson, conductors, and C. Borts, H. Merson and A. Pinero. It is alleged that tickets collected from passengers were resold to other parties at reduced rates, the transactions taking place at Ottawa and on the run between Ottawa and Montreal. All the men charged have since been found not guilty and acquitted.

G.T.R. conductor committed.—Wm. Neil, Niagara Falls, Ont., a G.T.R. conductor, who was on the Niagara Falls-Sarnia run, was committed for trial at Hamilton, Ont., Mar. 20, on the charge of stealing \$9 from the company. A detective testified that he gave the conductor \$9 for fare for himself and two companions, and an official swore that the conductor had not made a return of the money on the day in question. Defence was reserved for the higher court.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates of orders, immediately following the numbers, are those on which they were drawn.

General order 159. Feb. 18.—Ordering that following be added to rule 93 of train rules designated the Uniform Code for Canadian Railways, approved by order 7563, July 12, 1919, namely:—"By night or in foggy or stormy weather, proper lights must be placed on cars or engines obstructing main tracks within yard limits."

General order 160. Feb. 24.—Ordering that railway companies report to board embargoes of any kind, within time and as provided by general order 95, whether such embargoes are placed by companies subject to Board's jurisdiction, or by any carrier having connections with them; every such railway to report to Board by telegram, with all possible dispatch, all accidents, etc., on or to railway or to locomotives or rolling stock or other facilities, as a result of which usual railway operations in any district or at any point will be delayed or impeded for longer than 24 hours; also the nature of occurrence creating such situations and steps taken to remedy it, etc.

General order 161. Feb. 23. Prescribing regulations for uniform maintenance of way flagging rules for impassable track, to become effective Mar. 1, for the observance of every railway company within the legislative authority of the Parliament of Canada.

24740. Feb. 15.—Ordering C.P.R. to remove track sufficient to provide required clearance between Canmore Coal & Navigation Co.'s spur at Canmore, Alta., and certain buildings; clearance at tipple 1 and boiler house 2 to be approved until any reconstruction work is done, provided employees are kept off sides and tops of cars where restricted clearance is known.

24741. Feb. 21.—Approving Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) detail plans of station to be built in Vancouver, B.C.

24742. Feb. 21.—Authorizing C.P.R. to build spur for G. McAllister, Guelph, Ont.

24743. Feb. 19.—Approving C.P.R. drawing 55, showing falseworks over tracks at Toronto, where Bloor St. viaduct crosses.

24744. Feb. 21.—Authorizing G.T.R. to rebuild bridge carrying public road over its tracks at milepost 39.99 near Rockwood, Ont.

24745. Feb. 18.—Authorizing Essex Terminal Ry. to build spur for Canadian Postum Cereal Co., Windsor, Ont., connecting with M.C.R.

24746. Feb. 21.—Approving agreement between Bell Telephone Co. and Beatrice Telephone Association, Feb. 10.

24747. Feb. 21.—Authorizing C.P.R. to rebuild pile trestle bridge at 9th Ave., Broadview, Sask.

24748. Feb. 21.—Relieving C.P.R. from providing further protection at highway 1,700 ft. east of milepost 32, Teeswater Subdivision, Ont.

24749. Feb. 21.—Authorizing City of Toronto to build bridge over G.T.R. (old Belt Line), on extension of Mount Pleasant Road, through Mount Pleasant Cemetery.

24750. Feb. 19.—Dismissing Imperial Oil Co.'s application for order requiring Pere Marquette Rd., C.P.R. and Canadian Northern Ry., also G.T.R. and Canadian Northern Ry., to agree upon and file joint tariff on tank and steel structural material, in car loads, at 75c per 100 lbs., from Sarnia, Ont., to Regina, Sask.

24751. Feb. 22.—Amending order 13970, June 19, 1911, re filing and issuing C.P.R. freight tariffs.

24752. Feb. 23.—Authorizing C.P.R. to divert portions of road allowance at mileage 52.20, Winnipeg Beach Subdivision, Man.

24753. Feb. 22.—Ordering C.P.R. to rearrange its time table to provide that train leaving Eastray Jct. for Windsor Mills at 4.45 p.m., shall make connection with train leaving Montreal at 4.10 p.m. and arriving at Eastray Jct. at 6.38 p.m.

24754. Feb. 23.—Ordering G.T.R. to install improved type of automatic bell at crossing of road in Lot 25, Con. 2, Etobicoke Tp., Ont., 20 per cent. of cost to be paid out of railway grade crossing fund; bell to be installed by June 1.

24755. Feb. 23.—Ordering G.T.R., by June 1, to install bell at Ontario St., Burlington, Ont., 20 per cent. of cost to be paid out of railway grade crossing fund.

24756. Feb. 23.—Approving agreement between Bell Telephone Co. and McNab Telephone Co. Feb. 16.

24757. Feb. 23.—Ordering Bell Telephone Co. to install telephone in Mrs. E. J. Wheeler's house, Toronto, and provide all proper facilities for its use.

24758. Feb. 24.—Authorizing McKim Tp., Ont., to build highway crossing over C.P.R. Stobie Branch to continue Wilma St., from Notre Dame St. easterly.

24759. Feb. 23.—Authorizing G.T.R. to build siding for William Kennedy & Sons in Nottawasaga Tp., Ont.

24760. Feb. 24.—Ordering G.T.R. to stop trains 41 and 44 on flag at Martin's siding; neighboring residents to provide necessary shelter or platform.

24761. Feb. 24.—Dismissing applications of City of Hamilton, Ont., and Toronto, Hamilton & Buffalo Ry., to have Hamilton St. Ry. pay portion of cost of building new bridge carrying King St. over T. H. & B. Ry., and ordering that detail plans of bridge to be built under order 24614 be filed by T. H. & B. Ry. within three weeks from date for approval of Board's engineer.

24762. Feb. 24.—Ordering Toronto, Hamilton & Buffalo Ry. to cut off hedge and slope back embankments at crossing of Ancaster Road, to provide view of 1,320 ft. from west; 20 per cent. of cost to be paid out of railway grade crossing fund; work to be completed by July 1; and relieving T. H. & B. Ry. from maintaining watchmen there on Sundays, provided train movements over crossing be flagged.

24763. Feb. 24.—Dismissing application of Ontario Public Works Department, Colonization Roads Branch, for order authorizing grade crossing over G.T.R. near Whitney station.

24764. Feb. 25.—Ordering City of Berlin, Ont., to trim and keep trimmed from time to time trees obstructing view at crossing of King St., by G.T.R., so there shall always be clear and unobstructed view of all approaching trains.

24765. Feb. 17.—Authorizing Lachine, Jacques Cartier & Maisonneuve Ry. (G.T.R.) to divert and cross certain streets and lanes between Park Ave. No. 2 and St. Lawrence Boulevard, Montreal, and to build subway at St. Famille St., between St. Urbain and St. George Sts., with 12 ft. headroom, work to be done by Dec. 31, 1917, or order becomes inoperative.

24766. Feb. 25.—Approving agreement between Bell Telephone Co. and Rockwood & Oustic Telephone Co., Feb. 16.

24767. Feb. 26. Authorizing Canadian Northern Ry. and Grand Trunk Pacific Ry. jointly to build spur to Dominion Government elevator at Saskatoon, Sask., with connection between their respective lines; to cross certain streets and road allowance and rescinding order 23283, Feb. 11.

24768. Feb. 28. Ordering Grand Trunk Pacific Ry. pending installation of bell at crossing of Ottawa Ave., Edmonton, Alta., to protect crossing by day and night watchmen.

24769. Feb. 18. Authorizing Canadian Northern Ry. to connect with C.P.R. at Arthur St., Port Arthur, and near Current River, and rescinding order 24438, Nov. 9, 1915.

24770. Feb. 18. Relieving C.P.R., Canadian Northern Ry. and Canadian Northern Ontario Ry. from complying with provisions of Railway Act requiring consent of shareholders; and recommending to Governor in Council for sanction agreement between these companies dated Oct. 1, 1915.

24771. Feb. 26. Authorizing C.P.R. to build siding for Canadian Consolidated Rubber Co., Montreal.

24772. Feb. 29. Authorizing Canadian Northern Saskatchewan Ry. and C.P.R. to operate over crossing in s.w. 1/4 Sec. 9-26-4, w. 2m. without stopping, and relieving them from maintaining night signalman to operate interlocking plant; home signals and derails to be set clear for C.P.R. and key of tower to be left with C.P.R.

24773. Feb. 28. Ordering G.T.R., when required by traffic conditions, to provide a grade of 10 per cent. on approach to Concession Road, Oro Tp., Ont., to widen Ridge Road to 50 ft., and remove trees obstructing view of track; 20 per cent. of cost, not exceeding \$200, to be paid by Oro Tp., and rescinding order 24217, Sept. 25, 1915.

24774. Feb. 24. Authorizing Canadian Northern Ontario Ry. to build spur across Fourth St., Deseronto.

24775. Feb. 29. Authorizing Canadian Northern Saskatchewan Ry. and Grand Trunk Pacific Ry. to operate over crossing at Yorkton, Sask., without first stopping trains, and relieving them from maintaining night signalman to operate interlocking plant; home signals and derails to be set clear for G.T.P.R. and key of tower left with G.T.P.R.

24776. Feb. 28. Ordering that Bell Telephone Co. poles on Main St., Chesley, Ont., be moved from west to east side of street by Hydro Electric Power Commission of Ontario, at cost of town, less salvage value of present plant and added value of reconstructed plant to B.T. Co.

24777. Feb. 29. Authorizing Essex Terminal Ry. to build siding across Shepard Ave., Windsor, Ont.

24778. Mar. 1. Authorizing G.T.R. to build siding for W. Ellis, St. Clair Ave., Toronto.

24779. Mar. 2. Authorizing C.P.R. to build spur for D. Ackland & Son, Ltd., Calgary, Alta.

24780. Mar. 1. Authorizing Quinlan & Robertson, Ltd., to erect structure for track protection over G.T.R. and Canadian Northern Ry. at site of Bloor St. viaduct, Toronto, to be used only for transporting material or equipment required in the viaduct construction.

24781. Mar. 3. Authorizing Grand Trunk Pacific Branch Lines Co. to build spurs for Im-

perial Oil Co. from its Melville-Regina Branch in w. 1/2 Sec. 32-17-19, w. 2.

24782. Mar. 6. Authorizing Canadian Northern Ontario Ry. and Timiskaming & Northern Ontario Ry. to operate over crossing at North Bay, Ont., without stopping trains.

24783. Mar. 6. Authorizing C.P.R. to build extension to Gold Medal Lumber Co.'s siding for Maples, Ltd., Toronto.

24784. Mar. 9. Re Canadian Northern Ry. service on its Goose Lake line, Saskatchewan. This order is given fully on another page.

24785. Mar. 7. Ordering Grand Trunk Pacific Ry. to build present level crossing, about 336 ft. west of station at Kitwanger, B.C., to be completed by April 1.

24786. Mar. 7. Approving agreement between Bell Telephone and Derby Telephone Association.

24787. Mar. 7. Amending order 24776, Feb. 28, re G.T.R. grade approach to Concession Road, Oro Tp., Ont.

24788. Mar. 9. Suspending certain schedules, effective March 20 and 21, and eliminating whole peas from articles taking grain rates from stations in Canada to points in eastern United States. This order is given in full on another page.

24789. Mar. 6. Approving C.P.R. Form of Release and Power of Attorney, 1735, to be signed by persons who desire, for special reasons, to travel in cars which are not intended to carry passengers.

24790. Mar. 9. Authorizing City of Winnipeg to connect its tramway line with C.P.R. at Lac du Bonnet, Man., provided rights of C.P.R. at any time to extend said branch at Lac du Bonnet be reserved.

24791. Mar. 9. Authorizing Toronto Suburban Ry. and C.P.R. to operate over crossing near Guelph, Ont., without first stopping.

24792. Mar. 9. Authorizing Canadian Northern Ry. to divert highway between Secs. 26 and 27-39-19, w. 4 m., Alta.

24793. Mar. 9. Authorizing City of Toronto to rebuild bridge over C.P.R. at York St., by reinforcing span 16.

24794. Mar. 13. Ordering Great North Western Telegraph Co. forthwith to install telegraph apparatus in Michigan Central Rd. station in Hagersville, Ont., and appoint necessary operator.

24795. Mar. 14. Authorizing Canadian Northern Quebec Ry. to build three spurs at mileage 169.71 and 169.83 from Quebec, in Pointe aux Trembles parish, and to cross Montreal Terminal Ry.

24796. Mar. 14. Authorizing C.P.R. to build road diversion at mileage 93.4, Portal Subdivision, Sask., in lieu of existing road allowance between n. e. 1/4, Sec. 21-7-13, and s. e. 1/4, Sec. 28-7-13, w. 2 m.

24797. Mar. 16. Ordering Grand Trunk Pacific Branch Lines Co. to build interchange between its Government elevator spur and C.P.R. Outlook Branch, at Moose Jaw, Sask.

24798. Mar. 16. Ordering that demurrage toll of \$7 collected by C.P.R. from G. Husband, Dec. 12, 1914, on oats from Glen Ewen to East End, Sask., was not properly chargeable and therefore wrongfully collected; and authorizing C.P.R. to refund the amount.

24799. Mar. 14. Authorizing C.P.R. to divert road allowances between Secs. 3 and 4 and Secs. 7 and 8-8-21, w. 2 m., through s.e. 1/4 Sec. 4, to common crossin gat mileage 45.54, Weyburn-Lethbridge Branch, Sask.

24800. Mar. 15. Rescinding order 24652, Jan. 11, re Canadian Northern Ry. crossing at Sec. 27-46-23, w. 2 m., Sask.

24801. Mar. 14. Authorizing G.T.R. to build siding for International Harvester Co. of Canada, Ltd., Hamilton, Ont.

24802. Mar. 16. Authorizing C.P.R. to build road diversion at Sutherland Branch across road allowance at mileage 79.94, road diversion as approved by order 19620, to be closed.

24803. Mar. 16. Extending for five years, instead of three, as required under order 14115, time within which flues of boilers in service on White Pass & Yukon Ry. shall be removed and a thorough investigation made of the entire interior of the boiler.

24804. Mar. 16. Authorizing C.P.R. to build spur for Rignaud Granite Co., Rignaud, Que.

24805, 24806. Mar. 16. Authorizing C.P.R. to build road diversion at mileage 29, from Golden, B.C.

24807. Mar. 16. Authorizing Bell Telephone Co. to erect its telephone lines on north side of St. George's Crescent, between Wellington and Bruce Sts., Goderich, Ont.

24808. Mar. 18. Dismissing complaint of Nanaimo, B.C., Board of Trade against C.P.R. proposed new tariff, eliminating Nanaimo as a terminal freight point.

24809 to 24812. Mar. 16. Authorizing C.P.R. to build road diversions at mileage 24.25, 15.61, 22.62, and 30, from Golden, B.C.

24813. Mar. 17. Authorizing C.P.R. to build Kootenay Central Ry. at grade across highway at mileage 76.9 from Colvalli, B.C.

Electric Railway Department

Recent Developments in Electric Railway Car Equipment.

By W. G. Gordon, Transportation Engineer, Canadian General Electric Co., Ltd.

The Railways and Canals Department's statistics show that the electric railway systems of Canada for the year ended June 30, 1914, totalled 98,917,808 car miles, with a total operating expenditure of \$19,107,807, of which \$513,016 was for the maintenance of the electric equipment of cars. Putting this on a car mile basis, we find a total operating cost of 19.3c. per car mile, of which amount 0.52c. represents the cost of maintenance of the electric equipment of cars, or 2.7% of the total operating cost. A comparison with the figures for the previous year, ended June 30, 1913, is of decided interest. In that year there were 89,005,216 car miles run, with a total operating cost of \$17,765,372, of which \$614,167 was for the maintenance of the electric equipment of cars. On a car mile basis we find a total operating cost of 20c. a car mile, of which amount 0.69c. represents the cost of maintenance of the electrical equipment of cars, or 3.45% of the total operating cost. For the year ended June 30, 1912, the cost of maintenance of the electric equipment of cars was 0.768c. a car mile, or 4.4% of the total operating cost. It will thus be seen that the cost of maintenance of the electrical equipment of cars has been steadily coming down and forming a smaller percentage of the total operating cost. It appears obvious that this reduction has been effected as a result of the greater consideration that the electric railway companies are giving this subject. It must also be borne in mind that in the effort to keep down maintenance costs the railway companies have the earnest co-operation of the electrical manufacturers, who are keeping this phase constantly in mind in the design of new equipment and in the re-design of existing equipment. In this connection we may consider recent advances made in the design of the various items of electric equipment for cars, operating under city, suburban and interurban conditions.

Motors.—The ventilation which the modern motor receives has enabled the designers to secure 15% to 25% higher current carrying capacity for the same total weight of motor, with the fully ventilated type, over that possessed, for the same heating values, by the non ventilated type of motor. The method of ventilation further insures all parts of the motor being equally cooled, and eliminates the "hot spots" which exist in the closed motor. Our method of ventilation is by means of a fan which is an integral part of the armature core head, in conjunction with longitudinal ducts through the interior of the commutator and armature. The pinion end frame head with this type of ventilation is provided with a ring which diverts the air from the fan through openings in the head, the incoming air being drawn through a screened intake at the pinion end. Another method is to draw in cool air at the commutator end. This air travels in parallel paths to the pinion end, one path being under the commutator and through ducts in the armature punchings, the other through spaces between the field coils and over the surface of the armature. A fan at the pinion end forces the air out of the frame. In the first case, the air drawn

in at the pinion end first travels over the armature and between the field coils, and then through the armature and out at the pinion end; whereas, in the second case, these two paths are in parallel. If special conditions require that the motor be operated entirely closed, the first method of ventilation is used, the ring being left out. This permits of the air being circulated internally; and, even under these conditions, the motors are capable of increased service capacity over the non ventilated type. The ability of the ventilated motor to dissipate heat depends in a great measure on the amount of cooling air drawn in by the fan as influenced by the armature speed. The advantages gained by ventilation depend, therefore, on the character of service. In city service, with frequent stops and a consequent low average ampere speed, the advantages of the ventilated motor are less than any used for interurban service, having infrequent stops and a high average armature speed. Generally speaking, in city service having frequent stops and schedule speeds of from 8 to 10 miles an hour, the ventilated motor can handle from 10 to 15% heavier loads than the closed motor of the same horse power rating. For interurban service having infrequent stops and schedule speeds of 18 miles an hour or more, the ventilated motor will handle from 25 to 30% heavier loads than the closed motor with the same horse power rating.

Any saving in weight effected in the motors for any given service means a saving in the weight of the total car equipment; and the reduced power consumption is in direct ratio to this saving; it also means a saving in maintenance costs on account of reduced wear on trucks and track. Five cents a pound is the figure generally used in estimating the yearly saving for weight reduction, the limits being from 3 to 8c.

The use of commutating poles, and cutting down the mica between commutator segments, has largely decreased the maintenance costs on commutators, brushes, and brush holders, through greatly reducing brush and commutator wear; and, through improved commutation, eliminating flash overs. With commutating poles there are lower magnetic densities, and commutator and core losses are reduced, resulting in an increase in capacity and efficiency. The use of commutating poles has also made field control practicable for special cases where conditions warrant its use. The use of the shunted field necessarily means some additional complication of the control. With the tapped field it is sometimes possible to use a rather lower speed gearing than would otherwise be the case, thereby reducing accelerating current and resistance losses and giving a lower power consumption. The reduction of the heating effect on the motors and the use of a lower gear speed may possibly permit the use in some cases of smaller motors. Many equipments operating in cities on schedules having a large number of stops per mile are used for interurban running on schedules where the number of stops is very much less. Under these conditions field control affords a saving of from approx-

imately 5 to 8%. For strictly interurban work, however, it is generally considered that saving in energy effected by the tapped field is not sufficient to warrant the increase expenditure and complications.

A very large percentage of the railway motors in use throughout Canada are of the split frame type. The box frame type has numerous advantages over the former and we can safely predict a steady increase in the number of box frame motors used, especially in the larger sizes for the heavier classes of service, although one of our roads has already adopted this type in 40/50 h.p. rating. Eighty to ninety per cent. of the railway motors building at present by one of the large electrical manufacturing firms in the United States are of the box frame type, and of the percentage of split frame motors, 19 out of 20 are under 40 h.p. rating. Many of our railway companies doubtless prefer the split frame type of motor, as their shop facilities are unsuited to readily lifting car bodies and motors from the trucks; however, the matter is worthy of serious consideration in view of the advantages possessed by the box frame type over the split frame type. These principal points of superiority are: For any given capacity the box frame motor can be made lighter in weight, smaller in overall dimensions, and of more rugged and durable construction. The box frame overcomes trouble occasioned in the magnetic circuit by dirt and oil getting between the halves of the split frame, trouble with field coil jumpers, and with oil working into the frame from the axle caps. The box frame also has the advantage over the split frame in a number of mechanical points.

The gear and pinion being integral parts of the motor, it is interesting to note that maintenance on these, as well as the labor in breaking down and assembling when changing, has been very considerably reduced by the use of tool steel, oil tempered forged, heat treated, and armored gears and pinions. With regard to the gear ratio to be selected for a given service, the possibilities of securing a saving in power consumption by exercising care in the proper selection of ratio are much greater than is ordinarily appreciated.

With many of the older types of motors, before grooving of the commutator segments was adopted, the commutators had to be frequently sandpapered or turned. The wear was so rapid that it was considered good practice to make the segments very deep, a wearing depth of 1¼ in. not being considered excessive. With the modern commutating pole motor the wear on the commutators is usually so slight that after a year's run it can hardly be detected. Ten mils wear in a year is not an exceptionally low figure, at which rate a ½ in. wearing depth of copper will last for 50 years.

Reduction in brush wear has kept pace with reduction in commutator wear. I have inspected some equipments that averaged over 250,000 miles a car. The original motor brushes were still in use and showed about one quarter of an inch wear. The original compressor brushes were also running. These cars had not

received special treatment in any way, the practice of the road being to thoroughly clean and inspect the equipments on a 1,500 mile basis, and to give them a general overhauling on a 45,000 mile basis.

In the modern railway motor the armature and axle liners are liberally designed; and a direct result of this, combined with modern methods of waste lubrication, is the increased life of, and the decreased attention required by, the liners. In the earlier motors it was the practice to lubricate bearings every night, and from 10,000 to 20,000 miles life of armature liners was considered normal. Modern motors are lubricated once in 10 days to 3 weeks, and the life of the liners has increased in many cases to 200,000 miles. Improvements in material and manufacture, as well as in design, have contributed to these results. It has been found good practice to set the maximum allowable wear of armature liners at 1/16 in. and axle liners at 1/8 in.

Every detail in the design of the modern railway motor is a case of the survival of the fittest. Only through repeated trials of various designs has it been possible to select the best types for this exacting service; and as a result motors which a few years ago represented a high standard of design have been superseded by others able to perform their work with greater economy and lower maintenance costs.

With reference to motors designed for operating on line voltage higher than 600 volts. Two roads in Canada are now operating on 1,500 volts d.c.—the London & Port Stanley Ry. and the Lake Erie & Northern Ry., and the Toronto Suburban Ry. will shortly be added to the list. The Canadian Northern Ry.'s Montreal tunnel zone will operate both locomotives and car equipments on 2,400 volts d.c. The operation and maintenance of the higher voltage motors have proved to be quite as satisfactory as in the case of the modern railway motor operating at 600 volts. For operation on a 1,500 volt line the motors are wound for 750 volts each and insulated for 1,500. This arrangement permits operation on 600 volt connecting lines. For 2,400 volt operation the motors are wound for 1,200 and insulated for 2,400 volts. In all cases where designed for operation on these higher voltages, the motors conform mechanically and electrically to the best modern practice.

(To be concluded in next issue.)

Toronto Civic Railway Earnings, Etc.

Following is a comparison of the earnings and mileage for the years 1915 and 1914:

	1915.	1914.
Passenger revenue.....	\$198,320.87	\$166,994.88
Advertising.....	968.03	
	\$199,288.90	\$166,994.88
Mileage.....	1,219,984.4	1,097,088
Passengers.....	11,712,390	9,829,766

The Bloor St. line did not start operation until Feb. 23, 1915.

Toronto & York Radial Ry. Appeal.—The T.&Y.R.R.Co. has decided to appeal to the Imperial Privy Council against the Ontario Appellate Court's decision refusing the company's Metropolitan Division the right to cross Yonge St., at Farnham Ave., Toronto, to the proposed new terminals there. The Ontario Railway & Municipal Board decided that the company might make the crossing, but the Appellate Court reversed this.

Proposed Hydro Electric Radial Railways in Western Ontario.

It was announced in Toronto, Mar. 8, that the Hydro Electric Power Commission of Ontario had completed surveys and estimates of the cost of construction, with traffic data, for a number of proposed electric railway lines in western Ontario. These figures relate to the following districts: Toronto, Port Credit and Oakville to Hamilton; Hamilton, Grimsby and St. Catharines to Niagara Falls; St. Catharines, Welland and Port Colborne; Dunnville, Port Colborne, Fort Erie, Bridgeburg and Niagara Falls; Elmira, Waterloo, Berlin, Preston, Galt and Hamilton; Owen Sound, Chesley, Brussels, Seaforth, Woodham and Kirkton, connecting with the St. Marys-Stratford-Toronto line. When the figures are got into proper shape they will be submitted to the various municipalities concerned, with copies of the bylaw as voted on in other localities, for further action. A portion of the foregoing, viz., that between Toronto and Port Credit, is covered by the Toronto-London line already voted on, and as a matter of fact, is a part of the Toronto & York Radial Ry., which, it is said, the Commission proposes to purchase, together with the Toronto Suburban Ry. extension from Lambton to Guelph.

The bylaw relating to the Toronto-London line was re-submitted to a vote of the ratepayers, in Blanshard Tp., Mar. 13, the voting being 165 for, and 142 against. When it was voted on Jan. 3, the voting was 102 for and 158 against.

●Lethbridge Municipal Railway Operating Results.

Following is the statement of the Lethbridge, Alta., Municipal Ry. for the calendar year 1915:—

EARNINGS	\$41,740.51
EXPENDITURE—	
Motormen's wages	\$10,996.75
Salaries	1,683.75
Power	14,864.80
Auditors	245.40
Employees' insurance	144.21
Uniforms	340.21
Car barn foreman	1,320.00
Car barn wages	2,784.50
Track cleaning	1,516.94
Car barn expense	572.79
Car heating	206.00
Damages	156.32
Repairs overhead	220.11
Stores	1,398.55
Repairs track	1,080.65
Advertising	92.91
General expense	163.03
Amusements	33.29
Printing and stationery	158.09
Office expense	84.57
Surplus from operation	\$38,062.87
	3,677.64
	\$41,740.51

OVERHEAD CHARGES

Debenture interest	\$18,801.50
Sinking Fund	8,756.28
Taxes	5,143.19
Insurance	682.40

Income from operation	\$33,383.37
Income from other sources	29,705.73

Saskatoon Municipal Ry.—The receipts for the first 51 days of the current year, were \$27,391.45, against \$17,970.30 for same period 1915.

The cost of operating the special market cars on the Calgary, Alta., Municipal Ry., is \$70 for the two days a week on which they are run, and this was on Mar. 4, transferred to the market account from the street railway account on Commissioner Graves' recommendation.

Additional Car for Toronto Civic Railway.

The Toronto Works Department received tenders to Mar. 14, for the supply of one single truck, double end city car, completely equipped and ready for operation for the Bloor St. division of the Toronto Civic Ry. We have been advised that the contract will be awarded early in April. The specification provided for a car with single arch roof with platform arranged for separate entering and leaving of passengers and to permit of fare collection as passengers enter the car. The bottom framing is to be of steel, the side members to be of steel plate reinforced at bottom by steel angle and rivetted to side sill plate. The sill is to be of steel plate reinforced at bottom edge by steel angle, the platforms with steel knees sheared to shape and reinforced top and bottom by angles. bumper of 6 in. channel from knee to knee and conforming to the shape of the vestibule, with anti-climber section, 3½ ft. long placed on face of each bumper. Steps 11 in. wide, to fold and work in unison with the doors, step to be entirely down when door is open sufficiently wide for passengers to alight, the mechanism to be of the same type as now in use on civic railway cars. There are to be no bulkheads in ends of the car. The interior finish is to be of quartered oak throughout, dull finish. Three automatic ventilators to be provided on each side of the roof, with openings 5¼ by 7¼ ins. with rounded tops on the roof. Eight windows on each side of car at 30¼ in. centres, the lower sash to drop into a well and the upper sash to remain stationary. The seating accommodation to consist of eight transverse seats of the walkover type, and four longitudinal seats, the latter to be closed underneath. The following specialties are also specified, Headlight, Crouse-Hinds type; electric bell circuit and heating; Consolidated Car Heating Co.; fare boxes, Coleman Farebox Co's type 4, as now used on the civic cars. The motors to be of the Westinghouse 533-T-4 fully ventilated interpole type. The trucks to be 8 ft. wheel base, journals 4¼ by 8 ins., car wheels, chilled cast iron, open spokes, 33 ins. diam. The dimensions of the body are as follows:

Length	34 ft. 8½ ins.
Length of vestibule.....	6 ft. 4¼ ins.
Length of car over all.....	34 ft. 8½ ins.
Width of car over sheathing.....	8 ft. 5½ ins.
Height from rail to top of roof.....	10 ft. 9½ ins.
Height from rail to top of vestibule step.....	13 ins.
Height from top of step to floor of vestibule.....	12 ins.
Height from floor of vestibule to floor of car.....	11 ins.
Weight of car body not to exceed.....	13,500 lbs.

Regina Municipal Railway Earnings, Etc.

Following are earnings, expenses and other statistics for January, compared with Jan. 1915:

	1916.	1915.
Total revenue	\$16,746.87	\$15,093.51
Operating expenses.....	19,281.31	17,965.87
Operating deficit	11,001.05	12,009.90
without power.....	21.35c.	17.15c.
with power.....	28.80c.	22.41c.
Platform wages per car hour.....	75.71c.	78.36c.
Passengers carried.....	360,263	323,184
charges, percentage....	115.13	
Expenses, with capital charges, percentage....	165.69	

Calgary Municipal Ry. Finances.

The financial condition of the Calgary, Alta., Municipal Ry. is again attracting attention, and the Calgary Herald of Mar. 6 said editorially:—

"The deficit for January was very much larger than appears to be healthy, and at the same time there seems to be no remedy in sight. The internal management of the system, as far as the Herald can see, has always been excellent. Mr. McCauley has proved an efficient as well as an economical superintendent, and his reports show that he is keeping his expenses down to the lowest possible figure. The whole trouble is that the railway has been loaded up with outside extensions, due to the rapid spreading out of the city in more prosperous times. Many of these extensions are such as a private company, if it had a franchise in Calgary, would most certainly have refused to build. It is true that they are a great convenience to those citizens who live in the outlying sections, but it is equally true that when they were built they brought little or no additional revenue to the system. But having built these extensions, the city is now morally bound to continue to operate them, even if there is a loss in doing so. . . . The commissioners are now faced with the problem of either doing away with the working men's tickets during the early morning and the evening hours or of reducing the amount annually charged to depreciation, so as to swallow up these constantly recurring deficits. . . . It is quite a serious problem which the commissioners and the city council have to deal with and one that will require a good deal of consideration before a decision is reached."

Jitney Traffic Notes.

The Sargeant Jitney Association of Winnipeg put in force Mar. 1, a rate of 6 rides for 25c, good on any of its 28 cars, in place of the former straight 5c fare.

The municipality of Oak Bay, near Victoria, B.C., proposes to regulate motor and jitney traffic and on Mar. 1 took up the consideration of a bylaw framed on similar lines to that in force in Victoria. The amount of the bond which each licensed driven will have to put up is \$5,000. The Victoria Jitney Association is assisting the jitney men of Oak Bay in an endeavor to have the bylaw modified in a number of its details.

Rates for Special Cars.—Responding to questions in the American Electric Railway Association's question box, G. Gordon Gale, General Manager, Hull Electric Co., Hull, Que., states that his company has only one rate for special or private cars. It is based on the seating capacity and no standing passengers are allowed, and for the first fare zones of four miles, is \$5 one way, \$8 return; for the second fare zone, \$6 one way, \$10 return; for half an hour, \$1 per hour or portion thereof, and for a directors', or so called parlor car, the charge is \$2 a trip additional. In all cases there is a fixed limit as to the number of passengers allowed.

Toronto Civic Ry. Deficit.—A Toronto alderman has given notice that in order to reduce the present large annual deficit in operation he will move that the fares be as follows: Cash fares—Adults, 3c. each; children, 2c. each; infants in arms, free. Tickets good every day in the year. Adults, 10 for 25c.; children's, 6 for 10c.

Work Car, Snow Plough and Sweeper, Port Arthur Civic Railway.

The accompanying illustration shows a combined work car, snow plough and sweeper designed by the Master Mechanic, F. Philp, and built in the Port Arthur, Ont., Civic Ry. shops. It is 45 ft. long over all, and 31 ft. with plough and sweeper removed. It is mounted on no. 27 G-i-e-trucks, equipped with 4 Westinghouse 101 B2 500 volt motors, Westinghouse air brake equipment and hand brake.

The plough is lowered and raised by means of a hand brake, its own weight holding it in position when lowered. The wing is operated by a 3½ h.p., 500 volt motor, and when out to its fullest extent cleans off a strip 14 ft. outside of track. The wing can also be raised to a height of 8 ft. of the extreme end, which has a great advantage in cleaning down heavy snow drifts. The broom is operated by a Westinghouse 12a-500 volt motor. Both broom and motor are on a special platform, which can be removed when not in use. All the appliances are operated from the cab, which is mounted

Work Car, Snow Plough and Sweeper, Port Arthur Civic Railway.

on the front end of the car, and the running of the machine and equipment can be controlled by two men.

Toronto Civic Railway's Deficit.

The Toronto Daily Star says: "Toronto's Civic Ry. went into the hole to the extent of \$380,000 last year despite the fact that the revenue rose from \$166,990 to \$199,300, an increase of 19.3%. The new Toronto transporting commission will have to face the problem of civic car fares as one of its most important duties. With civic revenues failing on all hands, and expenditures going up by leaps and bounds—largely due to Toronto's solicitude for her sons who enlist and those who are quartered within her gates—it is agreed that the time has come when every revenue-producing service should be made to stand on its own feet."

"The T.C.R. is already becoming known as the Toronto Charity Railway. The fare fixed upon by the city council, when the civic car line commenced operation, was 2c. cash, or 6 tickets for 10c. A glance at the average fare collected in 1913, 1914, and 1915, shows that very few passengers pay for their ride in cash. If everyone used the little green ticket, the average fare would work out at 1.66c. In 1913, the average fare was 1.71c.; in 1914, it was 1.69c., while last year it was 1.70c. The annual deficit has more than doubled in three years of operation. At the end of 1913, it totalled \$154,317.

"Works Commissioner Harris has always stood for a 3c. fare on civic cars, declaring that such a fare, while not returning a profit, would carry the system. The council, however, whenever it has been asked to vote on the question, has been overwhelmingly opposed to the increase. At this time last year when civic financing was causing some anxiety, the works committee, by a vote of 6 to 5, carried the Commissioners' recommendation. At the next meeting of council, however, the vote was so overwhelmingly opposed that it was impossible to record it."

"The patronage of the civic cars has increased by leaps and bounds. Last year nearly 2,000,000 more passengers were carried than in 1914. While the number of passengers carried by the Toronto Railway Company showed a marked decline, there was an increase of 19.1% on the civic cars."

Electric Railway Notes.

The Toronto Suburban Ry. is going to erect an office building on Keele St., West Toronto.

The Sandwich, Windsor & Amherstburg Ry. is in the market for two cars, duplicates of the last ordered.

Over 500 Winnipeg Electric Ry. employees were reported, Mar. 31, to have enlisted with the Canadian Expeditionary Forces.

Express and freight services were established on the Lake Erie and Northern Ry., between Brantford and Galt, Ont., Mar. 1.

At the recent examinations of the British Columbia Electric Ry. first aid class the St. John Ambulance Association, 11 certificates were granted.

A London, Ont. Street Railway motor-man was fined \$5 and costs, Mar. 14, for running his car into the rear of the 142nd Battalion while it was on a route march.

The Winnipeg Electric Ry. expects to start running cars over Arlington Bridge, Winnipeg, early in April, under terms approved by the Manitoba Public Utilities Commission.

The city of Winnipeg, Man., is considering the question of abolishing the position of Traffic Superintendent. This officer looked after traffic on the Winnipeg Electric Ry. for the city council.

The Toronto Suburban Ry. is having two cars built for service between Toronto and Cooksville similar to those which were built there a short time ago for service between West Toronto and Woodbridge.

The Montreal city council is considering the construction of a subway under

the Lachine Canal on Wellington St., at a cost of \$1,200,000 towards which the Montreal Tramways Co. is to be asked to contribute.

Owing to heavy snow fall in the early part of March, the Port Credit Division of the Toronto & York Radial Ry. was snowbound for two days. The portion of the line between Long Branch and Port Credit is somewhat exposed and consequently suffered from drifts.

The Hamilton St. Ry. employees, whose wage agreement expires Apr. 1, are asking for an increase in pay of 7c. an hour, to make the rate 35c., instead of 28c. They are also asking for an eight hour day instead of ten hours, and for the elimination of special early morning cars.

The Brantford, Ont., Municipal Ry. Commission has declined to grant passes to the aldermen and civic employees. When the matter was discussed at a meeting of the council recently, it was stated that in Guelph, the commissioners managing the Guelph Radial Ry. pay their fares on it.

A Mexico dispatch, Mar. 16, says the Mexico City Electric Tramway system, which was taken over and operated by the Constitutional Government over a year ago has been returned to the company, the directorate of which includes: Z. A. Lash, K.C., M. Lash, R. C. Brown, E. R. Wood, J. S. Lovell, Toronto.

The Toronto Ry. is giving preference, in connection with applicants for positions as motormen and conductors, to soldiers who have returned from the front, to men who have applied for enlistment but have been unable to pass the military physical test, and to men past the age for military service, in the order named.

The city solicitor of Hamilton, Ont., has been authorized to prepare the city's case against the Hamilton St. Ry., as to overcrowding, etc., for submission to the Ontario Railway and Municipal Board, and the Mayor stated Mar. 11, that the Street Railway Committee was about to make a revision of the street car service bylaw, so as to make overcrowding impossible.

The members of the public utilities committees of Fort William and Port Arthur, Ont., held a joint meeting in Port Arthur, Mar. 8, to discuss street railway rates between the two cities. Propositions were submitted for 6 tickets for 25c and for a 10c fare, while other members advocated the retention of the present 5c rate. It was arranged to hold another joint meeting about the end of the month to consider reports of travel that crosses the boundaries.

Employees of Brantford, Ont., Municipal Ry. are asking for an increase of pay over the 15c and 20c an hour they now receive, and for a reduction of hours, and the motormen in addition ask to be provided with stools in the vestibules. At a conference Mar. 9, the question of shorter hours was withdrawn, and the commissioners promised to give an answer as to increase of wages April 1. The men promised to submit a sample stool for motormen which it was thought would meet the objection of the Board of Railway Commissioners' inspector that their use was liable to cause accidents.

The Lethbridge, Alta., Municipal Ry. issued a notice Mar. 7, putting in force a new schedule to come into effect Mar. 8. It read: "Commissioner Freeman finds that the new car schedule is not working out satisfactorily. While the receipts

from the red line have increased, due to change of conditions, the blue line receipts have fallen off in greater proportion, and at the same time the operating expenses are higher. The returns from the extra car on the red line do not warrant its operation during the morning hours, and it is not found desirable to run through schedule from loop to loop for the reason that when anything happens to put one car out of time or service, the whole service is disorganized." The schedule put into effect Mar. 8, gives the following service: The blue North Lethbridge line operates from corner of 3rd Ave. and 5th St. to the North Lethbridge loop and return on a 12 minute schedule; the white line runs as heretofore; the red Park line has one car only up to noon on a 32 minute service, and two cars for the balance of the day, on a 16 minute service.

Opposition to Extension of Railway Charters in Niagara Peninsula.

The proceedings before the Railway Committee of the House of Commons in regard to the Toronto, Niagara & Western Ry., and the Niagara, St. Catharines & Toronto Ry. applications for extension of time for the building of their lines, which are being considered together, had not been terminated at the time of writing, Mar. 25, both bills being down for further consideration on Mar. 28.

The charters of both these companies are held by Canadian Northern interests. There are two points to which opposition to the extensions of time is directed, in the first of which the City of Toronto is concerned, and which has to do with the power which both companies possess to build a line into Toronto. The second point is the building of electric railways from Toronto to Windsor, via Hamilton, Brantford and London, and from Hamilton to St. Catharines, in the case of the Toronto, Niagara & Western Ry., and from Port Colborne to Fort Erie and on to Niagara Falls, from Welland to Brantford, and from the old Niagara Central Ry. to Fort Erie, in the case of the Niagara, St. Catharines & Toronto Ry. The opposition comes from the Ontario Government, the Hydro Electric Power Commission of Ontario, the Hydro Electric Railway Association of Ontario, the City of Toronto, and some other municipalities through which the proposed lines would pass. It was arranged in the course of the discussion that the section giving the Niagara, St. Catharines & Toronto Ry. power to build from St. Catharines to Toronto via Hamilton be withdrawn, and a promise was given that running powers over the Toronto, Niagara & Western Ry. would be granted to the hydro electric lines.

On behalf of the Hydro Electric Power Commission of Ontario, Sir Adam Beck stated that the commission had bought the greater part of a right of way between Port Colborne and Fort Erie, and that there is only room for one line there, and he claimed that this line is vital to the hydro electric railway system. He also offered to haul the company's cars over that section.

The following statement was made by D. B. Hanna, Third Vice President, C.N.R., Mar. 17: "The Toronto, Niagara & Western Ry. is designed for a fast main line service connecting up our service with the frontier. It is proposed that this line will come into Toronto over the location already approved for the C.N.O. Ry. That means, therefore, that there will be but

one line into Toronto from the west, so far as the C.N.R. is concerned. There was no discussion with the civic officials as to the elimination of the right to operate electrically. All we told the city's representatives was that we were converting this electric charter into a steam charter by removing the statutory prohibition on the use of steam. All railways in Canada, including the C.P.R., G.T.R., and ourselves, have the right under the Railway Act to operate electrically, and the modern tendency is toward electrical operation of even through lines such as we propose to construct under this charter. It never was our intention to build two main lines between Toronto and Hamilton, nor to have two entrances into Toronto. Our purpose in renewing our Toronto, Niagara & Western charter was simply to facilitate construction. The C.N.O.R. location as at present approved runs from the vicinity of the new North Toronto Union Station westerly, paralleling the C.P.R. to about Dovercourt Road, and from there runs directly toward the new Toronto Suburban Ry. bridge over the Humber near Lambton, which will be used jointly by the Toronto Suburban and Toronto, Niagara & Western. The necessity of connecting the system with the U.S. border has been for years of paramount importance, and at present it would seem that the company's plans are capable of being carried into effect promptly."

In the course of the hearing, Mar. 23, Mr. Hanna stated that the controlling interests had built 76 miles of line, feeding over 100 industries, and tributary to the Canadian Northern system, and that running rights over the hydro electric lines would not be satisfactory, as he claimed the resulting traffic for his company, which naturally desired to earn all the revenue.

On Mar. 28, both bills passed the railway committee, with some amendments. Clauses giving the companies the right to sell power were deleted, the undertaking of the Toronto, Niagara & Western Ry. relating to the entrance to Toronto over the Canadian Northern Ontario Ry. was incorporated in the bill, and a clause was added making the line a constituent part of the security given for loans by the Dominion. In the Niagara, St. Catharines & Toronto Ry. bill, the portion relating to the proposed construction between Port Colborne and Fort Erie was struck out.

Winnipeg Electric Ry. Co. Dividends.—The following official statement has been issued:—"At a meeting of the board it was decided that owing to the financial situation the practice of declaring a quarterly dividend has been discontinued for the present. In this connection I would say that the business of the company is showing an improvement, and for the current quarter the net earnings have been sufficient to provide for all accrued fixed charges and also a sum that would have been sufficient to enable the company to declare a moderate dividend for this quarter. Directors feel that at this time, in order to conserve the company's interests, a dividend should not be declared payable for the present quarter and that the matter of further dividends for the year will be considered and dealt with at a later date."

Design of Passenger Terminals.—J. J. Busfield, Assistant Engineer, Mackenzie, Mann & Co., Mount Royal tunnel construction, has written a paper on this subject to be read before the Canadian Society of Civil Engineers.

Brantford Municipal Railway and Grand Valley Railway.

It, passing through the House of Commons, the City of Brantford's bill, respecting the Grand Valley Ry., was amended by having its title altered so as to make it read,—An act to enable the City of Brantford to operate the Grand Valley Ry. The act provides that the city may operate the railway between Brantford and Galt, and may extend it to Cainsville in Brantford Tp., under the name of the Brantford Municipal Railway. The railway is to be liable to pay taxes in any municipality through which it passes as if it was owned by a private company. The railway is to be managed by a commission, a bylaw of Nov. 28, 1915, appointing the same being confirmed. The commission has power to act under the bylaw. Any member of the commission removing from Brantford shall be deemed to have resigned and the city council shall at once fill the vacancy. The city may make agreements with other railways for the sale of the line or any part thereof and for other purposes as authorized by the Railway Act. The city council may pass a bylaw to merge the railway management with the duties of any other committee managing a public utility. The Railway Act is made generally applicable. The powers conferred by sections 136 to 139, both inclusive, of the Railway Act may be exercised by the corporation and not by the commission. The city council may issue bonds and mortgages and borrow money. A schedule attached to the act contains the bylaw providing for the Brantford Municipal Railway Commission of three members to be elected by the ratepayers at the municipal election in January of each year.

The Brantford City Council had before it on Mar. 6, a report of the finance committee as to the terms of settlement of all outstanding matters between the city and the commission. The terms of settlement had been agreed to and were adopted by the council. It is provided that the \$30,000 to be paid by the Lake Erie and Northern Ry., for the Grand Valley Ry's, Galt-Paris section, shall be used by the city in liquidation of the \$28,584.28 due the city for arrears of taxes, etc., and that any balance be held for further capital requirements of the railway, the surplus revenue for 1915 over and above the \$9,000 already paid to the city treasurer, which the annual report shows to be \$4,799.44, is to be paid to the city treasurer and applied towards the payment of interest and sinking fund indebtedness for 1915, amounting to \$10,579.99; the commission is hereafter to pay to the city treasurer the revenues of the railway, after deducting disbursements, on Jan. 15, April 15, July 15, and Oct. 15, and in each year, which revenue is to be used by the city treasurer to pay interest on the \$125,000 bond issue, sinking fund on city debentures, and paying tax instalments, and any balance over is to be applied to any balance remaining on the \$10,579.99 liability mentioned above. After the various charges against revenue have been met balances are to be at the disposal of the commissioners for replacements and betterments. When extensions of the system are found to be necessary bylaws will be passed by the council to provide the funds; no taxes for general purposes shall be levied against the railway except the pavement tax, or other local improvement taxes; the cost of

further pavement improvement to be a matter of arrangement between the city council and the commission.

The question of the projected extension to Cainsville was mentioned, and A. K. Bunnell, City Treasurer and ex-commissioner, explained that when the city acquired Mohawk Park, it secured a right-of-way along the canal bank. In the course of time the city might want to extend the line on this right-of-way to the Glue Co. road and back again to the city by way of Eagle Place. Cainsville was simply mentioned so as to have the power, and the commissioners have intentions of building immediately.

The question of the extension of the line to Terrace Hill is under consideration. (Mar. pg. 115.)

Toronto Advisory Transportation Commission.

The Toronto City Council has appointed an advisory commission to deal with the city's transportation methods and systems. The commission consists of the Mayor, one member of the city council, the Commissioner of Works, the Corporation Counsel, or in his absence, the City Solicitor, the City Engineer, the Chief Engineer of the Toronto Harbor Commission, and the General Manager of the Toronto Hydro Electric System. The duties are defined as follows: To advise the city council as to the proper steps to be taken, and to prepare the way for the taking over of the Toronto Ry. in 1921, and for the termination of the Toronto Electric Light Co's franchise in 1919; to advise as to radial railway problems within the city and as to general transportation problems, improvements in transportation facilities, necessary expenditures in connection with the foregoing, as to the administration and control of the civic railway system, the exercising of authority over the regulation of transportation matters in the city and any other matters which might be referred to the commission by the council from time to time.

The duties of the commission are purely advisory, and the term of office proposed is until the taking over of the Toronto Ry., which is scheduled to take place in 1921, when the franchise expires.

The St. John Railway's Franchise and Rights.

An agreement has been reached between the St. John Ry. and the City of St. John, N.B., clearing up all matters in dispute between them as to the company's rights under its franchise. The chief dispute centered round the matter of track reconstruction, the type of foundation to be provided, the use of T rail or grooved rail, and the question of grades. These matters have been argued and discussed for some time, and culminated last autumn in a suit by the railway company against the city for damages for an interruption of its service, for a declaration of rights, and for an injunction restraining the city from interfering with the company. When the case came up, it was agreed between the parties concerned that four questions should be submitted for judgment, these questions covering the points at issue. Of three of the questions upon which judgment was given, the verdicts were unquestionably in favor of the company, while on the fourth question, which dealt with the city requiring the company to

restore its tracks from time to time to grades as established by the city, it was held that the city had the right to alter the grades of the streets, and the company must restore its tracks to the levels of the new grades.

The agreement now reached provides for the withdrawal of all legal processes, the company to pay the city at the rate of \$5,000 a mile for concrete work under the tracks, which will be carried out by city labor. The company is relieved of having to relay its track to a grade about which there might be two opinions from an engineering point of view, and agrees to an extension of the term during which the company pays for the removal of snow from its tracks, from Apr. 1, 1918 to Apr. 1, 1923. The company releases the city from any costs or damages in cases heard, and consents to a dissolution of the existing injunction.

Sale of Peterborough Radial Ry. and Allied Power Properties.

It was announced in Toronto, Mar. 10, that an agreement had been completed between the Ontario Government and the Electrical Power Co. Ltd., for the purchase of the latter's entire business and assets for \$8,350,000, payable in 4% government bonds. Twenty-two properties are included in the purchase among which is the Peterborough Radial Ry Co., and it is stated that the amount mentioned as the purchase price represents the amount of cash invested in the enterprises. In making the official announcement in the Ontario Legislature, the Minister of Lands and Forests, said that the Government had for a long time proposed to serve central and eastern Ontario with power, but the question had arisen as to the water powers on the Trent River, and to secure control of these negotiations were opened with the Electrical Power Co., to acquire its holdings. The Hydro Electric Power Commission of Ontario intends to make the whole power of the Trent River available to the public on the same basis as obtains in western Ontario with Niagara power supplied through the commission. There are certain undeveloped power projects on the Trent River, for which the Dominion Government has been negotiating, and it expected that these will be obtained from the Dominion by the Province and incorporated under the one system. The companies included in the purchase are, Auburn Power Co.; Central Ontario Power Co.; City Gas Co.; Oshawa; Cobourg Utilities Corporation; Cobourg Water and Electric Co.; Cobourg Gas, Light and Water Co.; Eastern Power Co.; Light, Heat and Power Co.; Lindsay; Napanee Gas Co.; Napanee Water and Electric Co.; Nipissing Power Co.; Northumberland Pulp Co.; Oshawa Electric Light Co.; Otonabee Power Co.; North Bay Light, Heat and Power Co.; Peterborough Light, Heat and Power Co.; Peterborough Radial Ry.; Port Hope Electric Light and Power Co.; Seymour Power and Electric Co.; Trenton Electric and Water Co.; and Tweed Electric Light and Power Co.

The Peterborough Radial Ry. Co., was incorporated under the Ontario Companies Act, Mar. 17, 1902, to build and operate by electricity or other motive power except steam, a railway in Peterborough and Ashburnham and from either place through Lakefield and Douro or Smith Tps. to Clear Lake, and from Peterborough through Smith Tps. to Chemong Lake, and through Monaghan

Tp. to Otonabee River, and from either of the first named starting points to Rice Lake. The capital stock was fixed at \$500,000, and the head office at Peterborough. Further power was granted in 1906, to extend the line from Clear Lake through Douro and Dummer Tps., or Smith Tp., to Stony Lake, and in 1914, the company was empowered to issue bonds or other securities to the extent of \$35,000 a mile for each mile of single track, instead of \$20,000 as formerly authorized. The track actually built is all within the city limits of Peterborough and consists of 6.04 miles of main line. The last statistics available are for the year ended June 30, 1914, and show that the gross earnings from operation were \$47,615, operating expenses \$29,566; taxes, funded debt, etc., \$6,690; net income \$11,034; total car mileage 280,092; fare passengers carried 1,060,499.

Compensation for Injuries in the Queenston Accident.

The International Ry. of Buffalo, N.Y., which operates the Niagara Falls Park and River Ry. in Canada, is said to have paid upwards of \$30,000 for damages, for injuries to children alone as a result of the Toronto church picnic excursion wreck at Queenston Heights, Ont., July 7, 1915. It is said that other sums have been paid in settlements which were not taken into court. In 22 cases have settlements for various sums been ratified by the courts. They are as follows: Beatrice Goodman, \$250 and medical expenses; Elizabeth Harris, \$400 and medical expenses; Annie Hall, \$100; Emily Hall, \$425; Beatrice Hall, \$125; J. R. Hall, \$100; Geo. L. Walters, \$1,500; Calvin de Witta, \$300 and \$180 for medical expenses; Wm. Mitchell, \$350; Norman A. Bent, \$325 and \$205 for medical expenses; Louise Symonds, \$325; Hazel Deverning, \$405; Bessie B. Yule, \$350; Sarah Grelman, \$650 and \$425 for medical expenses; Earl A. Russell, \$700; Harold F. Hargraves, \$400; Wm. C. Keates, \$3,000; Gordon Dowling, \$700; Ralph, Rayner, \$500; Fred Draper, \$800; Calvin J. Sloan, \$1,800; Hannah Crombie, \$1,500; J. E. Hall, \$120; Katie Grant, \$8,855; Janet Rayner, \$2,500; Gladys Newton, \$1,500; Costs, etc., are said to have brought the total up to \$30,790.

Increased Service on British Columbia Electric Ry.—A circular issued by W. G. Murrin, General and Mechanical Superintendent, on Mar. 10, gave details of alterations and improvements in the services on the company's lines in Vancouver, New Westminster and other mainland points, which were put into effect Mar. 15. The circular said: "At a heavy cost the experiment of increased service is being carried out, and if it is found that increased travel can at all justify this experiment it will be maintained. The cost of operating cars is a subject to which the general public naturally does not give much attention, but perhaps it will indicate the fact that improvements in service mean additional expense to the company when I state that these changes represent, as additional out of pocket expenditure, without allowing any cost for power consumed at all, of upwards of \$40,000 a year, compared with the service in operation prior to Mar. 15. It is not, therefore, unreasonable to expect that additional travel should result from these improved services which will make it possible to continue and perhaps still further improve in certain directions."

Hydro Electric Power Projects at Edmonton.

The Edmonton, Alta., City Council has passed a bylaw repealing the bylaw previously passed, after having been approved by the ratepayers, agreeing to grant a franchise to the Edmonton Power Co. for the delivery in the city of electric energy. The passing of the original bylaw was secured after considerable opposition, and since it was passed there have been some negotiations in the way of concessions being granted by the company, these negotiations taking a more definite form after the proposition of the Alliance Trust Co. to supply power developed by natural gas. A letter from G. W. Farrell, Montreal, representing the Edmonton Power Co., and dated Feb. 13, outlined several modifications of the agreement, and some counter propositions were made by the city power committee. No agreement was reached and the bylaw repealing the original bylaw was passed, only two aldermen voting in its favor. The City Clerk subsequently notified the Clerk of the Provincial Legislature of the action of the council, in view of the fact that the E. P. Co. is applying to the Legislature for confirmation of the agreement.

The Dominion Parliament is being asked to incorporate the Edmonton & Southwestern Ry. Co., to build a standard gauge railway from Edmonton southwesterly to the Saskatchewan River at Blue Rapids, 70 miles. The consent of municipalities must be obtained for the construction of the railway on any highway, street or public place within their jurisdiction. The company also desires to have power to operate steam and other vessels, to build wharves, docks, elevators, warehouses, etc., and may acquire, but not by expropriation, water powers for the development of electricity, and may transmit and distribute electric power, or it may grant an easement on its right of way for a power transmission line. The provisional directors are: H. A. O'Meara, G. W. Farrall, Montreal; T. A. Burgess, L. Cote, R. H. Pringle, Ottawa. This is the railway proposed to be built by the Edmonton Power Co. interests in connection with a hydro electric power plant at Blue Rapids.

The Alberta Legislature is being asked to confirm an agreement between the Edmonton City Council and the Northern Alberta Natural Gas Development Co. for the supply of natural gas for lighting and power within the city. This is said to be the company in which the Alliance Trust Co. is interested and for which larger proposals are being made to the city council in opposition to the Edmonton Power Co.'s proposals.

Hamilton Street Railway Wages.

Negotiations between the Hamilton St. Ry. and its conductors and motormen have resulted in a new agreement being entered into for two years from April 1. The following table shows the rate paid up to Mar. 31, the rate asked by the men, and the new rate agreed to.

	Old Rate	Rate Asked	New Rate
1st. year.....	20c	25c	22c
2nd. year.....	22c	28c	24c
3rd. year.....	25c	30c	28c

Overtime and Sunday work will be paid 2c an hour extra, 25c being the minimum amount for any one run. Extra conductors and motormen who report at car barns, and relief changes, are guaranteed minimum wages of \$6 a week unless they fail to report at any time during the week.

The Toronto Railway and the Toronto City Council.

At a meeting of the Toronto Board of Control early in March, it was decided to proceed with the preparation of an indictment against the Toronto Ry. for maintaining a nuisance by allowing overcrowding on its cars. The company has already been indicted on two occasions, and a conviction stands against it for overcrowding, but this is under appeal. In the meantime, the company is acting under orders from the Ontario Railway and Municipal Board in providing increased accommodation, and the time allowed under this order has not yet expired. The getting together of evidence on which to apply for an indictment was urgently pressed by the Mayor, notwithstanding the advice tendered by the legal department as to the standing of the matter under the previous proceedings and the Ontario Railway and Municipal Board's order. A conference took place between the General Manager, Toronto Ry., and the Board of Control, Mar. 13, to see if some arrangement could not be made whereby matters in dispute between the company and the city could not be settled without recourse to litigation. After some consultation, the Board of Control decided not to proceed with the application for an indictment for overcrowding, also to withdraw the application for legislation to compel the company to allow soldiers to ride free. Other matters of a very minor nature, of which some complaints had been made, are to be submitted to the city's advisory transportation commission for adjustment. The General Manager of the Toronto Ry. is reported to have stated that a bylaw was being prepared having for its object the reservation of a space on the rear platform of the cars for easy access to and exit from the cars, and to prevent overcrowding on the back platform. The General Manager also stated that for the first time in the company's history, it had been compelled to advertise for men. During the first 11 days of March, 67 employees enlisted. During February, 175 new men were engaged, but only 43 completed their course. Of the 50 additional cars ordered to be placed in service, by the Ontario Railway and Municipal Board, 25 were already running on the streets, and the material was in hand for the balance.

The City of Toronto is promoting a bill in the Ontario Legislature to compel the Toronto Ry. to build and operate 200 additional cars, and in default to pay to the city a penalty of \$500 a day after a lapse of three months from the passing of the Act. In an interview respecting the suggestion that the company be compelled to carry soldiers free on its cars, the Mayor is reported to have said, Mar. 23, that the city's bill containing such a provision was before the Legislature, and in addition the matter was to be taken up by the Advisory Transportation Commission recently appointed. As a matter of fact, the clause calling upon the company to carry soldiers free, was withdrawn from the bill following the conference between the Board of Control and the company's General Manager, as mentioned above.

The St. John River Hydro Electric Co. is asking the New Brunswick Legislature to revive and amend its act of incorporation authorizing the development of a water power on the St. John River at Pokiok, N.B., and to transmit electric power. R. W. McCarty is Secretary.

Electric Railway Projects, Construction, Betterments Etc.

British Columbia Electric Ry.—A New Westminster press report says track laying was started Mar. 10. on the spur track from the Fraser Valley Branch over the C.P.R. to the western end of the company's waterfrontage adjacent to the C.P.R. wharves. The work of removing the freight sheds from the present location to the outer edge of the harbor front, will, it is expected, be undertaken immediately. (Jan., pg. 30.)

Buffalo, Fort Erie Ferry & Rd. Co.—The Ontario Legislature is being asked to incorporate a company with this title, with F. V. E. Bardoe, A. Fasken, D. McArthur, J. O. Buckley and G. H. Sedgewick as provisional directors, with a capital of \$500,000, and office at Fort Erie, Ont., to take over the railway property of the Buffalo & Fort Erie Ferry & Ry. Co.'s assets. It is declared that the railway extends from the western boundary of the Garrison Reserve, in Bertie Township, to Fort Erie, and the company desires to have power to extend it from the present westerly terminus in Bertie Township to Port Colborne, and from its present terminus in Fort Erie via Bridgeburg to Chippewa, with a branch line to Crystal Beach; and from Fort Erie to any part of Point Albino. The company also desires power to erect wharves at any point where the railway touches navigable waters and to operate steam or other vessels to run between Ontario and the United States. With the consent of the municipalities, the company may lay tracks on streets and highways. It may operate its cars by steam, gasoline or electric power, and may issue bonds for \$10,000 a mile. (Feb., pg. 23.)

Edmonton Interurban Ry.—The agreement to lease the company's tracks from 124th St. and 118th Ave., to the G. T. Pacific Ry. tracks on 127th St., to the Edmonton Radial Ry., which is owned by the city, has been approved by the Edmonton, Alta., City Council. Under the agreement, the Edmonton Radial is to bond the rails and to erect all overhead work, to maintain the track, and at the termination of the agreement, to hand it over to the Edmonton Interurban in good condition. The line is to be put in operation within four months of the signing of the agreement, and the Edmonton Radial is to furnish monthly reports of the earnings and the cost of operation. The rental to be paid is to be the surplus of earnings over operating expenses, but the total for the year is not to exceed 8% of the initial cost of the line to the Edmonton Interurban. The latter must be notified within 60 days after any capital expenditure has been made, of its amount. The agreement is to run for one year from April 1, but may be terminated on three months notice on either side; and on giving similar notice, either company can purchase the rights and interest of the other in the line. (Feb., pg. 23.)

Halifax Electric Tramway Co.—Plans have been deposited with the Minister of Public Works, at Ottawa, showing site and location of a submarine electric cable under the harbor, at the foot of Hanover St., Halifax, N.S.

Hull Electric Co.—The Hull, Que., Board of Trade passed a resolution Mar. 10, asking the city council to grant the company's request to construct a Y on the Chelsea Road, to give a better service to Wrightville. (Mar., 1915, pg. 108.)

Lacombe & Blindman Valley Electric Ry.—The Alberta Government is being asked to press for the completion of this railway, the grading of which has been completed from Lacombe to Rimbey, 39 miles. (Jan., pg. 30.)

Lake Erie and Northern Ry.—We are officially advised that the connection with the Brantford and Hamilton Ry. in Brantford, Ont., and the building of a union station is under consideration, but no definite arrangements have been made. The distance between the lines of the two companies is approximately 2,000 ft.

London & Port Stanley Ry.—The Board of Railway Commissioners has authorized the building of a siding in London, to the Hunt Milling Co. and the City Gas Co.'s premises, and has given the L. & P.S. Ry. the right to use the G.T.R. station in London, where a platform is to be built, from Richmond to Clarence St., for its use. (Feb., pg. 73.)

Montreal & Southern Counties Ry.—We are officially advised that it is not expected that the recently completed extension from St. Cesaire to Abbotsford, Que., will be opened for traffic before May 1. (Jan., pg. 30.)

Mount McKay & Kakabeka Falls Ry.—The Ontario Legislature is being asked to authorize the company to use steam as an alternative motive power on its proposed railway, and to extend the time for the construction of the remaining portions of the line. The existing line has been operated by electricity, and the company desires to have power to use steam, if it is found expedient to do so. (Mar., pg. 115.)

Three Rivers Traction Co.—The Quebec Legislature has authorized the company to extend its line from Wayagamack into the parish of Cap de la Madeleine, notwithstanding the fact that the municipality declined to grant a franchise. The municipality granted a franchise after the company's application came before the Legislature. (Mar., pg. 115.)

Sudbury Copper Cliff Suburban Electric Ry.—The town council of Sudbury, is asking the Ontario Legislature to confirm and agreement dated Sept. 15, 1915, made under the terms of a bylaw, providing for the guarantee by the town of the company's bonds for \$75,000. A mortgage dated Jan. 10, 1916, of the company's railway has been made as security for the guarantee, the town council being made trustee. One of the conditions of the mortgage is that the town council may take possession of the line and operate it, and that in the event of its paying any money on account of principal and interest the town council is placed in the position of a bondholder; the town may also borrow to make good the guarantee, and in the event of foreclosure the town may acquire and purchase the company's property, subject to the ratepayers' approval.

St. John Ry.—The New Brunswick Legislature is being asked to extend the company's powers in respect of the building of extensions of line into Simonds Parish. (Feb. pg. 73.)

Toronto Suburban Ry.—The city of Toronto is asking the Ontario Legislature to pass a bill, which includes the following section relative to the T. S. R.: "All the rights and privileges of the Toronto Suburban Ry. to operate rail-

ways or to exercise any other franchise rights within that part of Ward 7 south of Dundas St., in the city of Toronto, are hereby declared to be forfeited and cancelled." The rights referred to cover the right to operate cars on the branch line running south of Dundas St., or to build lines on the streets in any other part of the municipality lying to the south of that line, and would leave the company, in the city, only its line on Dundas St., the line on the Weston road and that on Davenport road; these lines have their present termini in Lambton Park, at Woodbridge, and at the head of Bathurst St., respectively.

Vercheres, Chambly & La Prairie Tramways Co.—The provisional directors named in the act for the incorporation of a company with this title, passed by the Quebec Legislature, are J. W. Domville, Rosemere, Que.; A. Colas, Longueuil, Que.; D. W. Ogilvie, E. Pitt, and E. Ducharme, Montreal. The company is to have a capital of \$500,000 and office at Montreal. The route of the projected line is in the streets of Longueuil, St. Lambert, Montreal South, Greenfield Park, La Prairie; from Longueuil north-easterly through St. Antoine de Longueuil, Boucherville, Varennes, Vercheres, Contrecoeur and St. Riche, then easterly towards the northern shore of Richelieu River, through the parishes of St. Roch, St. Antoine de Richelieu, St. Theodoise, Ste. Marie, Beaulieu, Ste. Julie, St. Basile, Chambly, Chambly Basin, Chambly Canton, thence westerly across the parishes and villages of Chambly, St. Basile, and St. Robert to Longueuil, and from several points on the latter line to Montreal South, Greenfield Park, St. Lambert, La Prairie; from La Prairie southwesterly to Caughnawaga, to Chateaugay, with the right to cross the St. Lawrence River and enter the island and city of Montreal. Steam may be used on the lines during construction, but not as a permanent motive power. In passing through the Legislature amendments were introduced providing that while the company may enter the Island of Montreal, it shall not be allowed to operate on it, and that in the event of any municipality refusing consent to the operation of the company's lines within their territory, the company can appeal to the Public Utilities Commission. (Feb., pg. 73.)

Winnipeg Electric Ry.—The Winnipeg City Council is considering the desirability of asking the company to lay new lines paralleling Main St. and Portage Ave., and another line between McGregor and Main Sts., North Winnipeg.

The company is reported to be giving favorable consideration to the city's suggestion that the Marion St. car line be extended from its present terminus at the railway tracks to the stockyards.

Sault Ste Marie Electric Railway.—A Sault Ste Marie, Ont., press dispatch of Mar. 21, says that the Great Lakes Power Co., a newly organized corporation composed of United States people and represented by James Heyworth of Chicago, has bought the Algoma Steel Corporation's power plant at Sault Ste Marie and also the street railway system and the ferry running between Sault Ste Marie, Ont. and Sault Ste Marie, Mich. The International Transit Co. operates 4.32 miles of electric railway in Sault Ste Marie, Ont. and to Stelton, Ont. and also operates the International Ferry. The Trans-St. Mary's Traction Co. has 7.52 miles of electric railway in Sault Ste Marie, Mich. and connects that place with Algonquin, Mich.

Mainly About Electric Railway People.

J. W. Buchanan, heretofore Assistant Accountant, Winnipeg Electric Ry., has been appointed Accountant.

Lawrence Palk, Claims Agent, Winnipeg, Electric Ry., has also been appointed Assistant to the Manager.

J. E. Hutcheson, General Manager, Montreal Tramways Co., left Montreal Mar. 5 to have a few weeks rest and change in Florida.

William Norris, General Superintendent, Chatham, Wallaceburg & Lake Erie Ry., died in London, Ont., Mar. 6, from pneumonia after three weeks illness.

Thos. Ahearn, President, Ottawa Electric Ry., left Ottawa March 10 for Florida accompanied by R. Quain, another director, intending to return early in April.

Commissioner C. J. Yorath, of Saskatoon, Sask., gave an address on civic government at a Sunday afternoon gathering of the People's Forum there, Mar. 5.

C. S. Lockwood, Office Manager, Niagara, Welland & Lake Erie Ry., has been appointed acting Superintendent, in consequence of the death of F. J. Boyd, Superintendent.

A. Gaboury, Superintendent, Montreal Tramways Co., should have been mentioned in the "Birthdays of Transportation Men in April" on page 133 of this issue. He was born at Montreal April 6, 1875.

R. M. Paine, local dispatcher, British Columbia Electric Ry., Vancouver, was presented with a silver spirit flask, by the staff, Mar. 15, on leaving for Kingston, Ont., to join Queen's University Artillery.

Jas. Hilton was presented with a gold watch, by the motormen and conductors of the Vancouver city lines of the British Columbia Electric Ry., Mar. 16, on retiring from the position of Traffic Superintendent.

G. A. Henson, heretofore Chief Accountant, Winnipeg Electric Ry., has been appointed Assistant Treasurer, and is in charge of the accounting department of the general office under the Secretary-Treasurer, F. Morton Morse.

G. H. Rapsey, one of the Public Utilities Commissioners of Port Arthur, who operate the Port Arthur Civic Ry., is acting as Secretary, as V. Shipway, heretofore Secretary, has enlisted in the Canadian Expeditionary Forces.

W. J. Curle, heretofore Assistant Superintendent, Toronto District, Ontario Division, Canadian Northern Ry., Toronto, has been appointed General Superintendent, Chatham, Wallaceburg & Lake Erie Ry., vice W. Norris, deceased. Office, Chatham, Ont.

R. J. Clark, who resigned as Assistant Comptroller, Toronto Ry., in 1910, on his appointment as Comptroller, Kansas City Ry. & Light Co., Kansas City, Mo., has been appointed Secretary and Treasurer of the reorganized company, his former title having been abolished.

Duncan McDonald, ex-General Manager, Montreal Tramways Co., who was a member of the Montreal Board of Control, during the last financial year, is a candidate for the mayoralty for 1916-17, and is making the Montreal Tramways Co's franchise an issue.

U. H. Holmes, formerly a conductor on the Saskatoon, Sask., Municipal Ry., has been appointed to the command of the 13th C.M.R., Kingston, Ont. He entered

the Canadian Militia in 1883, and was placed on the reserve list of officers in 1910, with the rank of Lieut.-Colonel.

G. J. Meyer, heretofore Chief Engineer, Montreal & Southern Counties Ry., has been appointed Chief Engineer and General Superintendent. Office, St. Lambert, Que. **W. O. LeBer**, heretofore acting Superintendent of Transportation, Montreal, has been appointed Trainmaster at St. Lambert.

F. S. Woodcock, heretofore Traffic Manager, Saskatoon Municipal Ry., having left for active military service, the position has been abolished and J. P. McKenzie, formerly Master Mechanic, has been appointed Assistant Superintendent, a new position. The Superintendent is G. D. Archibald, who is also City Engineer. **L. V. Clare** has been appointed Secretary.

G. W. Lang
Claims Agent, Ottawa Electric Railway.

M. M. Inglis, has been appointed Manager of the Port Arthur, Ont. Civic Ry., succeeding M. O. Robinson. It is said that he will be given the management of the other public utilities of the city by the Public Utilities Commission at an early date. He was born in Scotland, came to Canada in 1911, and acted as Electrical Engineer for the town of Yorkton, Sask. until the end of 1915.

Lt.-Col. A. T. Thompson, of Ottawa, who has been on the reserve of officers for the last few years, his late corps being the 5th Infantry Brigade, and who is ex M.P. for Haldimand, Ont., and is the British Columbia Electric Ry.'s Ottawa solicitor, has been appointed to the command of the 114th Battalion (Haldimand County and Six Nations Indian Reserve) Canadian Expeditionary Force.

Richard Dawson, who was appointed night superintendent, Detroit United Ry., Detroit, Mich., recently, was born in Seaford, Ont., Dec. 9, 1880. He became connected with the D.U.R. in 1898 as an employe in the Warren Ave. car house. He

went on the line as a conductor shortly after and remained in that capacity for seven years. He was then appointed car house foreman of the Warren Ave. car house and served five years. Subsequently he was appointed Assistant Division Superintendent.

W. W. Chisholm, Electrical Engineer, Windsor, Essex & Lake Shore Rapid Ry., was accidentally electrocuted, Mar. 23, while coupling some cars in the Kingsville yard. He was born at Caradoc, Ont., Oct. 17, 1876, and entered railway service in June, 1896, since when he was, to Apr., 1897, switchman, Michigan Central Rd., St. Thomas, Ont.; Apr. 1897 to Mar. 1898, yard conductor and Assistant Yardmaster, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont.; Mar. 1898 to June 1903, brakeman, Michigan Central Rd., St. Thomas, Ont.; May 1905 to Nov. 1907, Assistant Chief Engineer, City Pumping Station, St. Thomas, Ont.; Nov. 1907 to Jan. 1, 1915, Chief Engineer, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., on which latter date he was appointed Electrical Engineer of the company, following a change of staff consequent on the accidental death of A. W. Westman, Superintendent, under somewhat similar circumstances at Kingsville in Dec. 1914.

Electric Railway Finance, Meetings, Etc.

Brantford Municipal Ry.—Total earnings from Jan. 1 to Feb. 28, \$6,169.41 against \$5,640.70 for same period 1915.

British Columbia Electric Ry.—The traffic returns for the Vancouver city and suburban lines for February, show increases over those for Feb. 1915. The percentage paid to the city in respect of the city lines, for February, was \$1,654.20 against \$1,414.50.

Cape Breton Electric Co.—

Gross earnings	\$34,120.37	\$28,051.06
Operating expenses	19,189.56	17,782.38
Net earnings	14,930.81	11,271.68

Nippissing Central Ry.—The Treasurer of Ontario informed the Legislature recently, that the net amount of the railway for the last financial year was \$25,000.

Saskatoon Municipal Ry.—Total revenue for Jan., \$16,468.62; operating expenses \$11,648.08; net operating revenue \$4,820.54; capital charges \$4,575; net profit \$245.54; total miles run 59,162; passengers carried 321,539; receipts per car mile 27.836c.; operating expenses per car mile 19.688c.; capital charges per car mile 7.733c.; total kilowatt hours 188,370; kilowatt hours per car mile 3.182; passengers per car mile 5.434.

Saskatoon Municipal Ry.—Net earnings for February, \$1,300, against a deficit of \$4,839 for Feb. 1915. Net operating result for two months ended Feb. 29, \$1,545, against a deficit of \$9,523 for same period in 1915.

Toronto Ry.—

	1916	City percentage	1915	City percentage
Jan.	\$17,784	868.847	\$17,126	778.186
Feb.	470,764	70.614	440,313	66.047
	\$944,548	\$1,299.461	\$911,439	\$1,100

Toronto Civic Ry.—The cost of operating in 1915 was \$214,969 and for this year it is estimated at \$241,270. The receipts for this year are estimated at \$200,000. The Works Commissioner has asked for \$55,682 for the operation of the portions of the Toronto & York Radial Ry.'s Mimico and Scarborough divisions which have passed into the city's hands.

Marine Department

Coast, Lake and River Steamship Officers for 1916.

The following appointments, made by navigation companies, engaged in Canadian navigation, for their various steamships and tugs, have been reported to Canadian Railway and Marine World. The first column gives the names of the vessels, the second, those of the captains, and the third, those of the chief engineers.

Shipping Companies and Longshoremen at St. John.

The decision of the conciliation board appointed to deal with the dispute between the shipping companies and the longshoremen at St. John, N.B., has already been given in Canadian Railway and Marine World. The details of the agreement made cover the following main points: Ten hours shall constitute a day's work, or a night's work, from Nov. 15 to Apr. 20 inclusive, and nine hours from May 1 to Nov. 15. The same men are not to be ordered back to work either day or night when other men are available, except when a vessel is within reasonable time of finishing, or shifting from berth to berth. If any gang be required to work through any meal hour, double time at the prevailing rate to be paid for such meal hour and for such time thereafter until relieved. Prevailing rate of wages to be paid for rigging and unrigging gear, hauling, staging and handling hatches, etc. Half the prevailing rate to be paid for men waiting when ordered out at 7 p.m. until 12 p.m., and when men are ordered out again at 1 a.m., full rate must be paid from that time until regular knocking off time in the morning, or when ordered out to work during meal hours. Double the prevailing rate to be paid for work on Sundays, Dominion Day, New Year Day, Good Friday and Christmas Day, and should any of these holidays fall on a Sunday and the following day be declared a holiday, such Monday shall be considered a holiday for which double the rate shall be paid. No work is to be performed on Labor Day. For handling sulphur or salt in bulk, 5c. an hour extra, Sundays and holidays pro rata.

Any vessel taking nothing but deals after discharge of cargo shall be termed a deal boat, and any taking a general cargo and deals shall be termed a cargo boat. A gang for loading and discharging a cargo boat is to consist of 15 men, except in case of bulk coal, salt, sulphur or maize, over side into scows or cars when 13 shall constitute a gang, the other two men to be employed otherwise, and in the case of deal boats, a gang shall not be less than 10 men. No man shall stay in the hold of a vessel when grain is running. All orders to men shall be issued through their respective foremen. All freight when trucked outside between sheds must have two men to truck. The rate of wages shall be 35c. an hour by day or night during the winter, and 40c. an hour during the summer; 12½c. an hour extra to be paid for handling bulk grain on weekdays, 25c. an hour extra on Sundays and holidays, until Apr. 30, 1917 inclusive, and thereafter the rate of wages shall be 40c. an hour day or night, summer or winter, and 50c. an hour for handling bulk grain on weekdays, and \$1 an hour for Sundays and holidays. Should work on any vessel begin during the summer or winter months, and continue into the winter or summer months, the schedule of wages for such vessel shall continue the same

until completion, as at the beginning of the work. The agreement is to continue in force until Dec. 1, 1919, and thereafter from year to year unless either party serve notice to the other at least 30 days prior to Dec. 1 in any year.

The board also recommended that the shipping companies enter into an agreement with the Longshoremen's Association, to give preference in employment to members of that association when available; and that a permanent local board be appointed to deal with any matters which may arise for settlement under this agreement. Further protective measures during loading and unloading at St. John, and the provision of suitable shelters at the sheds at West St. John, were also recommended. The board consisted of W. E. Foster, President and General Manager, St. Martins Ry., St. John, Chairman; J. Herbert Lauer, General Manager, Marconi Wireless Telegraph Co. of Canada, Montreal, representing the shipowners, and J. E. Tighe, St. John, on behalf of the men.

The schedule of working conditions for the handling of cargo at the port of St. John, covered by the agreement, is as follows: Pine and spruce deals per sling, 14 pieces 3 in.; 16 pieces 2 in., and where spruce and pine scantlings or deals shall be slung together, not less than the equivalent of 14 of 3 in. deals. Pine and spruce 1 in. 31 pieces per sling, pine and spruce scantling, 20 pieces per sling, and pine and spruce deal ends, 30 pieces per sling. Sawn birch per sling, 8 pieces 4 in.; 10 pieces 3 in.; 15 pieces 2 in.; 20 pieces 1 in.; laths, 20 bundles per sling. Not less than 12 men in a gang. Flour, 140 lb. sacks, 10 per sling, 5 per truck; 280 lb. sacks, 5 per sling, 2 per truck; 98 lb. bags, 15 per sling, 5 per truck. Pig iron, large, 10 pieces per sling, 10 pieces per truck; small, 15 pieces per sling and per truck. Salt in sacks, 5 sacks per sling and per truck; when stacked in shed or when stacked outside of shed, 2 men per truck; when discharged and stowed into decked vessels, 7 bags per sling, and when discharged into open scows, 9 sacks per sling, and not less than 6 men in steamer hold to sling same. Oil cake, 6 bags per sling and per truck; in bales, 6 bales per sling and 2 per truck. Axles, large, 1 per sling and per truck; small, 2 per sling and per truck. Car rims, one shall constitute a sling, large or small. Apples in barrels, 6 per sling, 3 per truck. Potatoes in barrels, 5 per sling, 3 per truck. Sugar, large, 5 bags per sling; small, 15 bags per sling. Hay, 6 bales per sling.

The Dominion Government s.s. Hoche-laga, which was purchased by the Government July 31, 1915, cost \$70,000 and \$22,642.18 additional was spent on overhauling and fitting out. She was in service during the autumn of 1915, and not being required during the winter, was laid up at Halifax, N.S., Dec. 20.

Canada Steamship Lines, Ltd. Annual Report and Meeting.

Following are extracts from the report for the calendar year 1915, presented at the annual meeting in Montreal, Mar. 15:

Your directors are pleased to be able to record a substantial improvement in the company's affairs owing partly to the higher freight rates, partly to their ventures on the Atlantic Ocean, and partly to the vigorous application of economy throughout the system by the management. The scarcity of tonnage all over the world caused by the war, the bountiful crops of Canada, and the return to more prosperous conditions by our industries, are the principal factors in expanding the operations of your fleet. Your directors wish to point out that the improved conditions referred to only began to show tangible results in the closing months of 1915, the spring and summer business having been below normal. As far as the future is concerned, your directors are of the opinion that the outlook for 1916 is promising and warrants the fullest confidence in the success of your undertaking.

You will be asked to approve appropriations covering directors' fee, the payment in part of salaries of employees who have enlisted for active service at the front, and also contributions to the patriotic and other funds occasioned by the war.

Several losses have occurred during the year to the fleet as a result of the dangers of navigation and the King's enemies, all of which, however, were covered by insurance. We regret, however, the loss of the crews who went down with the tug Frank C. Barnes on Lake Ontario, and the steamer Dunelm on the Atlantic. We can replace our steamships but these good men are gone forever. Your directors may state that in order to maintain the earning power of the company they are negotiating for replacement of some of the vessels lost.

Your vessels, docks, and other properties have all been well maintained and in many cases materially improved by additions and betterments.

As a result of the improved condition of affairs, your directors have decided to pay on May 1, part of the cumulative dividend due on the preference shares, viz., 1¼%. This payment will be made to shareholders of record at the close of business April 1.

OPERATING ACCOUNT.

Jas. Carruthers, President, in moving the adoption of the report at the annual meeting, said: "When we met here this time last year I do not think the most optimistic would have expected an increase in net earnings of about \$800,000 over the previous year. Your directors certainly did not, yet in the report now before you the net earnings are shown as over \$1,700,000. The management entered a field of operations quite foreign to anything heretofore attempted by the company or any of its subsidiaries, viz.: the Trans-Atlantic trade. There were many difficulties in the way which, however, were overcome, and owing to the scarcity of tonnage and the consequent high rates prevailing, the venture has been highly satisfactory. Many of the cargoes carried were war supplies and munitions for Great Britain and her allies."

He dealt at some length with the big crops last year and their relation to the company as concerned in the transportation problem and proceeded: "Only part of this great crop has been moved as yet. All the terminal elevators at Port Arthur and Fort William are full of grain; the elevators in the interior also have vast quantities stored and it is estimated that over 50,000,000 of wheat alone are in the farmers' hands unmarketed, besides even larger quantities of oats. The railways cannot hope to cope with the situation, their efforts during the winter have hardly made an impression on the quantity to be moved. In fact, it will probably take all the rail and water facilities of the country combined to get this great crop away to the seaboard before the next crop begins to move. The rates being offered today for grain cargoes for spring and early summer movement and the large fleet your company has at its disposal for handling this traffic assures a sound business situation on the Great Lakes and St. Lawrence so far as we are concerned. We must not, however, overlook the fact, that last year's crop was a phenomenal one and we cannot expect as large a one in 1916, or, in fact, until the population of our Northwest increases. When our country can raise 750,000,000 bush. of grain in one crop with our present small population, what may we not expect when the population is doubled or trebled? Is it any wonder that we Canadians are optimistic as to the future? I am strongly convinced that after the war there will be a great flood of emigration from Europe and that it will be chiefly directed towards Canada, where the opportunities are greater than anywhere else in the world. I am also sure that the exodus of high class farmers from the United States to Canada will continue. Let us hope that our Government will make every effort to secure to us that proportion of new settlers that is undoubtedly our due."

After referring to the other features of the company's service he said. "On the whole, therefore, our prospects for 1916 may be considered promising, with every prospect of the promise being fulfilled."

"On the statement as presented, your directors would not be justified in declaring any dividend, however small. But your company in Jan. and Feb., 1916, earned from the operations of its boats on the Atlantic very satisfactory returns, as you will hear from our Vice President. From these earnings and entirely independent of the results of 1915 your directors decided to distribute on account of cumulative preferred dividends now owing to their shareholders, a part payment to the extent of 1¼%. These deferred dividends will continue to be paid in instalments, from time to time as circumstances may warrant. From present prospects it would be reasonable to expect a further additional payment in the near future."

"The majority of our preferred shareholders were once shareholders of Richelieu and Ontario Navigation Co., and I among other of the then directors of that company was more or less criticized in certain quarters for advocating the transfer to the Canada Steamship Lines, but as the results of the last two years have shown, the earning power of this company is largely in its freight boats, and the passenger boats, of which the R. and O. fleet was principally composed, have had two very disappointing years. If you are getting back dividends today it is the freight boats that are earning them for you. I feel, therefore, that the policy advocated by the directors and myself, namely, that it would be in the interest of the R.&O.N. Co. to enter into the arrangement, has been amply confirmed."

J. W. Norcross, Vice President and Managing Director, said: "Until the last of Aug., 1915, water transportation was almost a dead letter. This was due in freight transportation to the abnormally small crop of the year previous, and the fact that a large portion of this had been moved in the autumn of that year, therefore, leaving very small quantities of wheat and other grains for movement in the spring of 1915. The latter part of the year, however, was exceptionally good, and enabled us to recover a considerable portion of the losses which occurred earlier in the year. We sent seven of our lake ships to sea during the early part of this year, but as we had spent considerable money in getting them ready for this service, they did not begin to show results until near the end of the season, and the other vessels which were put in the ocean trade later in the year did not begin to show results until November. These latter vessels did not require as much expense in alterations. The 15 ships which we now have at sea, including the Quebec Steamship Co., are all making splendid returns. The passenger business, which before the opening of the season looked promising, did not fulfil our early impressions, due to a combination of circumstances, such as the continued reports that it was necessary to have passports."

"Prospects for the coming season, are very encouraging, the company on its freight vessels alone having earned approximately \$500,000 net to the end of Feb. This is very gratifying, as last year, up to April 15, we were minus in the neighborhood of \$370,000, comprising fitting out expenses, overhead expenses, etc. We have recently re-chartered a number of ships which are coming off time charter, at a greatly increased price

per month. We have booked a very large quantity of grain for movement in spring and summer, at a high rate, and there will be no scarcity of grain freights this year. Some of our assets have increased under present conditions from 50 to 70%, and in some cases over 100%, principally in freight tonnage. The passenger outlook is also very good. We have booked more party business up to the present time than in 1913, which was a very good year. Notwithstanding the exceptional expenses which we have been put to, and the higher cost of operating on the ocean at present, we reduced our operating expenses from 85.98% in 1914 to 77.74% in 1915."

The directors for the current year, who were re-elected, are: Commander Sir Trevor Dawson, R.N., Honorary President; Jas. Carruthers, President; J. W. Norcross, Vice President and Managing Director; Sir H. Montagu Allan, C. A. Barnard, J. R. Binning, J. C. Newman, H. B. Smith, E. Bristol, M.P., M. J. Haney, Hon. J. P. B. Casgrain, J. E. Dalrymple, G. H. Smithers, D. B. Hanna, Aemilius Jarvis, J. P. Stedman. The London advisory committee are: Sir Trevor Dawson, Chairman; Sir Vincent Caillard, F. W. Lewis, W. G. Morden, Lord Furness, Albert Vickers, C. G. Bryan.

Richelieu & Ontario Navigation Co.

The annual report of the directors of this subsidiary company says: "The shareholders of the company who have not yet exchanged their shares are now bearing the annual expenses of the company. The company has still to make Government tax and other returns, and in other ways incur occasional expenses, which, when all the shares of the company have been exchanged, will be paid by Canada Steamship Lines, Limited, but in the meanwhile can only be paid out of the dividends of Canada Steamship Lines, Limited when any are received, and when no such dividends are received, as during the past year, by means of advances obtained from Canada Steamship Lines, Limited."

Passengers on Great Lakes Freight Steamships.—The United States Department of Commerce has issued an order that boats carrying passengers must conform to certain requirements in their construction, and instructions have been issued to the inspectors to see that the rules are strictly observed. It is anticipated that this rule will put an end to the practice of carrying passengers on the average freight steamship, which, it is stated has grown to a considerable extent. The rule is interpreted as precluding masters of freight vessels from taking their wives on trips, but it is stated that vessel owners will leave that matter to the masters to decide, and protests are expected from the Shipmasters' Association as to such an interpretation being placed on the rule.

Henry Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with \$250,000 authorized capital stock, and office at Vancouver, B.C., to build, own and operate steam and other vessels, wharves, docks, piers, etc., and to carry on a general transportation business by land and water.

By-Water Magazine.—Canada Steamship Lines, Ltd., has commenced the publication of a monthly under this title, its particular aim being to advance the employees' welfare and to furnish information about the company's services, etc.

Shipping Letter from the Head of the Great Lakes.

F. & W. Jones, lake transportation brokers in Fort William, Ont., wrote on Mar. 11: Coal stocks at the Canadian head of the lakes are all pretty well depleted. Commercial coal has been drawn on almost to the vanishing point and there is still a big demand all through the western provinces. There is still a fair quantity of railway coal, but it is considered only sufficient for prospective requirements. By the time navigation opens coal piles are expected to be cleaned up and there will be ample space for all the coal that can be shipped up here. Dispatch in coal unloading will, without doubt, be on a record basis for a long time and every ton of coal will be required for quick shipment west. Our forecast at the close of navigation "that the amount of receipts were not at all adequate for the demand" has been fully verified.

Ice conditions are in every way favorable for an early opening. The large quantity of snow which has fallen has had the effect of preventing the making of over much ice. It would probably not measure more than 2 ft. thick in any of the passages and, at that, is brittle and easily broken up. Arrangements have been made for the ice breaking tugs to be ready for commission as soon after Mar. 15 as is found necessary and, under present conditions and prospects, movement in and out of the harbor should be active by April 1. There are 17 vessels (12 Canadian, 5 United States), all loaded with grain and ready for fitting out. These are expected to clear at any time after April 15. The s.s. Rosedale is still in dry dock light.

Terminal elevator grain stock at the Canadian head of the lakes stand, at the time of writing, at 35,000,000 bush. of all grains. They have been steadily piling up since the close of navigation. For many weeks the car arrivals from the west have been between 1,500,000 and 2,000,000 bush. a week, while the east bound rail shipments have not exceeded 750,000 to 1,000,000 per week. The total possible storage at these ports is 45,000,000 bush. It will thus be seen that there is ample space to take care of all arrivals pending opening of navigation, although it is anticipated that elevators will be blocked by then.

The all rail movements since the close of 1915 navigation have been disappointing, the total amount shipped scarcely reaching the 20,000,000 mark. Probably this will be increased by an additional 5,000,000 before the opening, making a possible total of 25,000,000 bush. shipped east. Arrivals from the west, up to time of writing have been slightly in advance of 45,000,000. If the stocks on hand at the close of 1915 are added (approximately 10,500,000), we have a total of 55,500,000 bush. handled during winter months at these terminals. Of this amount, 35,000,000 is still in store, with a possibility of reaching 40,000,000 to 42,000,000 by the opening of navigation. This small movement, while unavoidable on account of lack of railway facilities, is very disappointing as it leaves a large volume of grain yet to be moved and for which millers have been in urgent need.

Our earlier forecast of the total Canadian crop as 720,000,000 still stands as approximately correct, and is made up as follows: Wheat, 342,000,000; oats, 333,000,000; barley, 35,000,000; flax, 10,000,000. Of this there had gone forward at

the close of navigation by lake movement 171,000,000. All rail winter movement will account for about 25,000,000, as previously explained. 250,000,000 can be accounted for for domestic use, thus leaving a balance of 274,000,000 to be accounted for as available for shipment. The disposition of this balance would appear to be as follows: In store, terminals, 40,000,000 (at next opening); in store, Duluth, 5,000,000; in store, line elevators, 55,000,000; afloat, Fort William, 3,500,000; balance, 170,000,000. From these figures it will be seen that there is some 170,500,000 in various granaries, barns, farms and the land generally. Several million bushels are computed as still awaiting threshing and are considered in a precarious position. Reliable authorities calculate that it will be well into August before the whole of the 1915 crop has gone forward. The same authorities state that only approximately one third of the total crop has been moved. A steady good demand for vessel space must therefore be looked for right along and overlapping the new crop of 1916. With the large stocks of grain available and the assistance which the Board of Grain Commissioners will undoubtedly give, the dispatch in grain loading will probably be on a record basis.

The Lighthouse Board of Canada.

The Minister of Marine, in response to various questions in the House of Commons, recently, gave the following information respecting the Lighthouse Board of Canada. The board was constituted by order in council, Feb. 26, 1904. The Deputy Minister of Marine was appointed Chairman, June 8, 1910; the Chief Engineer, Marine Department, was appointed to the board, Feb. 26, 1904; the Commissioner of Lights, July, 1, 1908; Superintending Engineer of the St. Lawrence Ship Channel, Sept. 19, 1912; the President of the Shipping Federation of Canada, as representative of the shipping interests in the Atlantic division, Jan. 20, 1911; the President of the Dominion Marine Association, as representative of the shipping interests of the Inland division, Feb. 3, 1916; Capt. J. W. Troup, Victoria, B.C., as representative of the shipping interests in the Pacific division, June 6, 1906. The duties of the board are to enquire into and report to the Minister of Marine, to whom the board is responsible, upon all matters assigned to the Minister under section 833 of the Canada Shipping Act. The members of the board who are not officials of the Marine Department are allowed their travelling expenses for attending the board's meetings, and an honorarium of \$5 a day each, while attending such meetings. Since the dates of their appointment, A. A. Allan, President, Shipping Federation of Canada, has received \$576.30, and Capt. J. W. Troup, \$768.65. The Minister also stated that the Department had no knowledge of the connection of members of the board with transportation or steamship companies, except in the cases of Capt. J. W. Troup, who is Manager of the British Columbia Coast Service, C.P.R., and of W. E. Burke, President, Dominion Marine Association, who is Assistant Manager, Canada Steamship Lines Ltd.

Welland Ship Canal Construction.

The acting Minister of Railways and Canals, in speaking of the Welland Ship Canal, in the House of Commons recently said, "We are continuing the construction of the Welland Ship Canal, which we commenced in 1913, and the work under contract consist of sections 1, 2, 3, 4a and 5, no additional sections having been placed under contract during 1915. Section 1, which is under contract to the Dominion Dredging Co., consists of the construction principally of the new harbor at the Lake Ontario entrance to the canal, which covers $1\frac{1}{2}$ miles of dredging in the lake, and considerable pier work, $1\frac{1}{2}$ miles of canal excavation inland and the construction of lock 1, with its weirs and entrance walls. This contract is progressing satisfactorily and a very good showing has been made during the past year on the various works comprised in the contract. The estimated cost of section 1, based on schedule rates, is \$3,487,725, and \$1,529,120 has been paid to date.

"Section 2, which is under contract to Baldry, Yerburch and Hutcheson, includes in addition to the excavation of the canal prism, the construction of locks 2 and 3 with their regulating and waste weirs, the substructure of four bridges, in addition to the one over the head of lock 2, and a large amount of watertight embankments, and the contractors have been prosecuting the work vigorously during the past season. Their operations in the main have consisted of prism excavation, building watertight embankments, and the construction of the breast wall and upper entrance wall of lock 2. The estimated cost of section 2, based on schedule rates, is \$5,377,185.75, and the amount paid to date is \$2,351,970.

"The work on section 3 is under contract to O'Brien & Doherty, and Quinlan & Robertson, and comprises a very large amount of work, aggregating about \$10,000,000 in value, and consisting principally of the excavation of 2,700,000 cub. yds. of rock and 3,400,000 cub. yds. of earth, the diversion of the G.T.R., rendered necessary to obtain satisfactory location for the canal, the building of a large earth dam with concrete core walls, the building of twin locks 4, 5 and 6 in flight, and single lock 7, which together with their entrance walls, etc., will contain about 1,200,000 cub. yds. of concrete. The contract also comprises the crushing and furnishing of 1,250,000 tons of stone for concrete for sections 1 and 2. On this contract, \$2,249,290 has been paid.

"Section 4a is a small contract for certain portions of work which were to have been included in section 4, which could not be deferred when it was decided to postpone the letting of the larger contract. This has been completed by the contractors, Maguire and Cameron. The work was estimated to cost about \$80,000, and actually cost \$72,731.31. It consisted of the construction of a new supply weir opposite lock 25 on the present canal, to supply water to the old canal instead of the one at Allanburg which is being discontinued, as the old canal between Allanburg and the new weir is being filled in with excavated material from section 5, also the construction of two reinforced concrete culverts to take the place of open ditches across the area between the present and old canals, which is also being used as a dumping ground for excavated material from section 5.

"Section 5 is under contract to the Canadian Dredging Co., and consists of the deepening and widening of the deep

cut in the present canal between Allanburg and Port Robinson, to the new dimensions. Dry excavations above the water line have progressed continually during the past year, with the exception of a short interval last winter. Four or five steam shovels are operating day and night, the material mostly being disposed of on the dumping ground on section 4 between the present and the old canals. A long embankment dumped from a trestle has been formed, which, with the present canal tow path, encloses a large area of low ground which has to be filled to canal tow path level by the hydraulic suction dredge, thus reclaiming and making it valuable. On schedule prices this contract should cost about \$1,945,788, and \$903,720 has been paid on account."

Grain Clearance Association.

Montreal press dispatch, Mar. 23:—"A grain clearance association to adjust the differences arising between loading and unloading elevators and the shortages and overages of cargoes was formed at a special meeting this morning of the Dominion Grain Commission. It will be organized by A. A. Wright, Toronto; F. H. Piper, or D. Horn, representing the lake head elevators; D. Seath, representing the Montreal Harbor Commission elevators, and W. T. Stead, Port Colborne. Until the association is ready for business last year's arrangement whereby a fixed allowance for ultimate shortages and overages was agreed upon will remain in force. In view of the decision to form the clearance association the commission resolved not to make any further move toward securing Government weighing officials at the elevators."

In reference to the foregoing press dispatch we are advised that it goes too far in emphasizing the formation of a clearance association. The regulations for last year have been renewed for this year with practical unanimity in the trade, and the persons named in the press dispatch were appointed a committee to consider the formation of some general scheme to take care of all discrepancies in out turn in future years. The committee has no definite instructions and may consider any plan suggested, as that of the Buffalo Clearance Corporation, or a plan to pool shortages or overages under government supervision. The committee will report later on and any proposals must be confirmed by all parties. The meeting in Montreal was very satisfactory. All elevators from the head of the lakes to Montreal were represented and the Grain Commissioner was complimented upon the way in which the regulations are working out. The steamship owners were represented by W. E. Burke, Assistant Manager, Canada Steamship Lines Ltd., and President, Dominion Marine Association; A. A. Wright, Managing Director, St. Lawrence and Chicago Navigation Co.; L. L. Henderson, Managing Director, Montreal Transportation Co.; and F. King, Counsel, Dominion Marine Association.

Certificated Officers on Motor Boats.—

The Minister of Marine has given notice of the introduction of a bill into the House of Commons, amending the Canada Shipping Act, and providing that there need be only one certificated officer on a motor boat of over 5 tons and up to a maximum length of 65 feet, instead of two as at present. The amendment is desired by owners of sea going motor boats used in the fishing fleets, chiefly on the Pacific coast.

Canada Steamship Lines Ltd. Internal Organization.

The Canada Steamship Lines management has appointed a number of committees from among its officials, almost all the committees having, besides the head of the department immediately concerned, the assistance and advice of others who have close departmental intercourse with them. One of the effects of this arrangement is that all those who are affected by the questions arising have an outlet for ideas, criticism and suggestions on matters which, although not particularly concerning their own department, have an intimate relation to it. The committees are composed as follows:

General: W. E. Burke, F. S. Isard, H. W. Cowan, H. H. Gildersleeve, P. Paton, T. Henry, F. P. Smith, L. A. W. Doherty, G. Johnston, R. Duguid, J. F. Pierce, M. Cussen.

Pursers and Ticket Collectors: W. E. Burke, F. S. Isard, H. H. Gildersleeve, T. Henry, L. A. W. Doherty.

Appointment of Agents: W. E. Burke, F. S. Isard.

Captains and Engineers: W. E. Burke, H. W. Cowan, H. H. Gildersleeve, R. Duguid, G. Johnston.

Stewards: C. E. Croft, W. E. Burke, F. S. Isard, H. W. Cowan, H. H. Gildersleeve, T. Henry.

Purchasing: P. Paton, F. S. Isard, H. W. Cowan, H. H. Gildersleeve, R. Duguid, G. Johnston.

Terminal: W. E. Burke, H. W. Cowan, H. H. Gildersleeve, L. A. W. Doherty, T. Henry, R. Duguid.

The Treasurer, J. I. Hobson, is chairman of all the committees.

Trent Canal Progress.—The acting Minister of Railways and Canals, stated in the House of Commons, Mar. 9, that the Government engineers hope to have the Ontario-Rice Lake Division of the Trent Canal, lying between Peterborough and Lake Ontario, completed and open to navigation by the spring of 1917. The work still to be done consists of dredging river channels. All structures have been completed except the G.T.R. bridge at Campbellford, a few sluices in the dam at lock 10, and the hanging of the lock gates between Glen Ross and Healey Falls. When completed, vessels with a draught of 8 ft. will have access to Peterborough from Lake Ontario. The total estimated cost of this division is \$7,660,000, and about \$750,000 is still to be expended. On the Georgian Bay end of the Severn Division, the Port Severn lock and approaches have been completed, giving access to Gloucester pool from Georgian Bay. Good progress has been made on sections 2 and 3, which provide for the canalization of the upper reaches of the river. Owing to the war, the letting of the contract for section 1 has been deferred, and the completion of this will be necessary for through navigation. The total estimated cost of the Severn Division is \$3,575,000, and work to the value of \$1,250,000 has been done.

The Dominion Salvage and Wrecking Co. Ltd., has been incorporated under the Ontario Companies Act, with \$25,000 authorized capital and office at Toronto, to carry on a general salvage and shipping business.

The Panama Canal, which has been closed to navigation since Sept. 18, 1915, owing to landslides, will be reopened for vessels of deep draught, Apr. 15, according to an announcement by the acting Governor of the Canal Zone.

Atlantic and Pacific Ocean Marine.

A. Calder and Sons have been appointed agents for the Holland American Steamship Line, in Winnipeg.

From reports as to ice conditions in the St. Lawrence during March, it is anticipated that navigation will be opened between Apr. 20 and 27.

The Allan Line Steamship Co., and the American-Hawaiian Steamship Co., have each entered an action against the other, claiming \$82,000 for damages sustained by their respective steamships, Pretorian and Kansan, in a collision off the White Point light, in the St. Lawrence River, Sept. 15, 1915.

The Cunard Co. is reported to have purchased the steamships Anglo Bolivian, Anglo Californian, Den of Airlie, Den of Ogil and Luceric, renaming them, Vinovia, Vandalia, Valeria, Valodia and Valacia, respectively. They are all comparatively new vessels and have been engaged in trans-Atlantic trade for some time.

Maritime Provinces and Newfoundland.

The Eastern Car Co., Ltd., has deposited with the Public Works Department, plans and description of a wharf to be built, and a turning basin to be dredged in the East River, at Stonehouse Point, Pictou, N.S.

Meetings of shareholders in the Thetis Steamship Co., and the Nascopie Steamship Co., were called to be held at St. John's, Nfld., recently, to receive the accounts and reports of the winding up of these companies.

The old immigration building situated on pier 2 at Halifax, was destroyed by fire, Mar. 14. In addition to this building, the Intercolonial Ry. building was also destroyed, together with records, as was the pier. The damage is estimated at \$100,000.

The Dartmouth Ferry Commission reports the earnings for two months ended Feb. 29, as \$11,866, against \$10,783 for the same period 1915. The expenditures for the same periods were \$8,543 and \$8,194 respectively. Respecting the carrying of soldiers free on the ferries, it was stated that the orders referred only to soldiers on military duty, and not to those travelling for pleasure.

With reference to the recent report that the Nova Scotia Steel and Coal Co. was to undertake the building of steel vessels, we are officially advised that it is not at all unlikely that the company will, during the coming summer, build a steel coasting steamship of about 2,000 tons deadweight capacity, at its New Glasgow, N.S., works. Such a vessel will be specially designed for the company's coasting trade.

The port of St. John, N.B., is having a record season. Up to the end of February the arrival of ocean steamers for the winter season numbered 125, against 94 for the same period last year. The C.P.R. has delivered nearly 500,000 tons of freight this season, against 300,000 last winter. The pay roll to longshore men this winter is estimated at from \$250,000 to \$300,000. During one week recently the C.P.R. paid out \$37,000 for labor on its steamships alone.

Agents representing fishing companies in Newfoundland are visiting shipping centres in Canada and the United States, for the purpose of buying up any avail-

able sailing vessels for the fishing industry. Most of the steamships usually engaged in the Newfoundland trade have been otherwise employed during the war, and as elsewhere, there is a shortage of tramp steamers, so that sailing vessels will have to be employed to carry salt fish to Mediterranean ports.

Province of Quebec Marine.

The Quebec and Levis Ferry Co's s.s. Queen, which has replaced the same company's s.s. Pilot on the Murray Bay-Tadousac route, made her first trip Mar. 15.

The Quebec Board of Trade has started a campaign amongst local members of the Dominion Government, to obtain a share in the overseas shipment of Government war supplies, etc., equal to Montreal.

The Quebec Harbor Commissioners' new grain elevator with capacity for 1,000,000 bush. is complete with the exception of conveyors for steamship delivery. Some local grain has already been handled there, and western grain is now being stored. Considerable progress was also made during the past year with the new steamship frontage on the north side of the Louise dock, and when completed there will be accommodation for four additional steamships.

Ontario and the Great Lakes.

Work on the construction of the new wharf at Sarnia, for the Northern Navigation Co., was started Mar. 18, by the G.T.R.

Work is reported to have commenced on the construction of two large steel steamships for the lake trade, at the ship-building plant at Port Arthur.

The G.T.R. is reported to have decided to build a freight shed, 1,200 ft. long, at Point Edward this year, and it is also reported that a large grain elevator will be built there.

The Public Works Department commenced taking soundings in Kingston harbor early in March, in preparation, it is said, for extensive improvements to be made in connection with a deep waterways scheme.

It is reported that the Northern Navigation Co., in arranging its summer schedule, has decided to eliminate Mackinac Island as a calling port, owing to the tourist trade having fallen off considerably during the past few years.

The Geo. Hall Coal Co's s.s. George L. Eaton was launched at Wyandotte, Mich., Mar. 11. She is 244 ft. long, 43 ft. beam and 20 ft. deep, with carrying capacity of 3,000 tons. On completion she will enter the coal trade on the lakes and St. Lawrence River.

The Northern Navigation Co's s.s. Saronic, which was damaged by fire recently, when the same company's s.s. Majestic was destroyed, is being repaired at Sarnia, and it is expected will be ready for the reopening of navigation. It is reported that the repairs will cost about \$25,000.

The s.s. Quinte Queen was announced to be offered for sale by public auction, at Ottawa, Mar. 28. She was built at Kingston in 1902, and was formerly known as Salaberry. Her dimensions are, length 99.5 ft., breadth 20.9 ft., depth 4.7 ft.; tonnage, 203 gross, 143 register. She is equipped with fore and aft compound

condensing engine, with cylinders 9 and 18 ins. diam., by 12 ins. stroke, electric light, etc.

Canada Steamship Lines, Ltd., has decided to establish a wharf at Port Metcalfe, at the foot of Wolfe Island, St. Lawrence River, and it is said that the transfer of passengers from the steamships Toronto and Kingston for Clayton and other Thousand Island points in the United States will probably be made there instead of at Clayton.

The Dominion Privy Council has concurred in the recommendation of the Ministers of Marine and Public Works, regarding the establishment of a permanent harbor head line at Toronto, from Bathurst St. to a point opposite Yonge St., beyond which line, wharves, piers, breakwaters and other similar structures shall not in future be built.

The C.P.R. steamships Assiniboia and Keewatin, which are about completing their winter overhaul at Owen Sound, will when ready for the reopening of navigation, present a somewhat different appearance than heretofore. The upper works at the stern are being extended for the full length of the main deck, providing additional cabin and other passenger accommodation.

The Rainy River Navigation Co's steamships Agwinde and Keenora, were offered for sale by auction at Toronto, Mar. 27, by order of the Exchequer Court of Canada, Toronto Admiralty District, as the result of a suit by the Imperial Bank. The s.s. Agwinde was built at Kenora, Ont., in 1900, her dimensions being, length 105 ft., breadth 22.5 ft., depth 4 ft., tonnage, 307 gross, 143 register. The s.s. Keenora was built at Kenora in 1897, her dimensions being, length 119.9 ft., breadth 28 ft., depth 8.3 ft., tonnage, 486 gross, 269 register.

The Northern Navigation Co's s.s. City of Midland was burned to the water's edge, at Collingwood, Mar. 17. She was undergoing a general overhaul and repair, and it is assumed that the fire was due to carelessness on the part of some of the workmen. She was built at Owen Sound in 1890 and was originally owned by the North Shore Navigation Co., the forerunner of the Northern Navigation Co., which is now subsidiary to Canada Steamship Lines Ltd. The hull was of oak, and she was equipped with fore and aft compound engines with cylinders 20 and 40 ins. diam. by 32 ins. stroke, 380 i.h.p. at 85 r.p.m., and supplied with steam by a single Scotch boiler 12 by 11¾ ft. at 127 lbs. Her dimensions were: length 176 ft. 4 ins., breadth 28 ft. 3 ins., depth 10 ft. 7 ins.; tonnage, 974 gross, 662 register.

The s.s. Sarnor, owned by H. M. Norris, Montreal, is announced to be offered for sale Apr. 1. She has been laid up at Port Colborne for about a year, with claims of about \$20,000 against her. She was built at West Bay City, Mich., in 1888, and rebuilt in 1901, and was formerly known as Britannic. The hull is of oak with diagonal strapping on the frames, and with the bow sheathed for ice, steel arches and steel boiler house. The propelling machinery consists of fore and aft compound engines with cylinders 24 and 48 ins. diam. by 40 ins. stroke, 495 i.h.p. at 82 r.p.m., and is supplied with steam by a boiler of the fire-box type, 10½ by 15½ ft. at 115 lbs. Her dimensions are: length 219 ft., breadth 36 ft., depth 20 ft.; tonnage 1,319 gross, 1,152 register. She was used in the coal trade between Lake Erie ports and Montreal.

Manitoba, Saskatchewan and Alberta.

The Peace River Tramway and Navigation Co's s.s. D. A. Thomas, at present under construction at Peace River Crossing, Alta., is expected to be ready for service by May. She will be 175 ft. long by 40 ft. beam, and will have a speed of 16 knots an hour in still water. The Peace River has a current of about 4 miles. She will be placed on the run from Vermilion Chutes, Alta., to Hudsons Hope, B.C., about 570 miles, and will handle a cargo of about 2,000 tons, of which 500 will be on her decks, and the balance in scows. She is being equipped with every modern convenience, including electric light, hot and cold water supply, etc. Oil storage tanks are also being installed, but until the oil supplies are developed, cordwood will be burned. All the timbers for the hull were shipped from Vancouver via Calgary and Edmonton, and thence by the Edmonton, Dunvegan and British Columbia Ry. to the end of rail, from whence they were teamed for the remainder of the distance, 35 miles, to Peace River Crossing. She is being equipped with two boilers, supplied by Polson Iron Works, Ltd., Toronto.

British Columbia and Pacific Coast.

The Union Steamship Co's s.s. Camosun, grounded near Lima Point, at the entrance to Prince Rupert harbor, Mar. 1.

The C.P.R. s.s. Princess Maquinna, which was beached at Menzies Bay, after striking on Maud Island, Feb. 1, has been overhauled and repaired at North Vancouver and resumed service. The work included the fixing of a number of plates and repairs to the engine room.

The C.P.R. s.s. Otter, which was wrecked on Sidney Island, Oct. 9, 1915, when going to assist the wrecked s.s. Mariposa, which had run ashore on Napier Point, Campbell Island, the previous day, has been salvaged, and was taken to Victoria for overhaul and repairs at the end of February.

The Grank Trunk Pacific Coast Steamship Co's s.s. Prince Albert commenced a fortnightly service, Mar. 15, from Vancouver, calling at way ports to Prince Rupert and Stewart, returning to Prince Rupert and thence to Queen Charlotte Islands, returning again to Prince Rupert and thence to Vancouver.

M. H. MacLeod, General Manager, Canadian Northern Ry., is reported to have stated, while in Vancouver recently, that two steam tugs had been purchased in Victoria, for the company's ferry service between the mainland and Vancouver Island, and that tenders for the construction of barges for transferring cars would be called for shortly.

The Grand Trunk Pacific Coast Steamship Co. has sold its s.s. Henriette to the Coastwise Steamship & Barge Co., Vancouver. The Henriette, which was formerly a sailing vessel, was acquired by the G.T.P.C.S. Co. in 1910, and is equipped with engine of 32 n.h.p. driving a screw. Her dimensions are: length 160 ft., breadth 30 ft., depth 18.9 ft.; tonnage, 762 gross, 518 register.

The Dominion Government s.s. Quadra, which was sunk off Nanaimo harbor, Feb. 26, as the result of a collision with the C.P.R. s.s. Charmer, is to be sold as she

lies under water, just visible at low tide, near the entrance light of the harbor. She was built at Paisley, Scotland in 1891, and was screw driven by engine of 120 n.h.p. Her dimensions were, length 174.5 ft., breadth 31.1 ft., depth 13.6 ft.; tonnage, 573 gross, 265 register. She was valued at about \$80,000, and was utilized in the lighthouse and buoy service along the Pacific coast. An official enquiry was opened early in March at Nanaimo, by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia.

A bill has been introduced in the House of Commons granting additional powers to the Vancouver Harbor Commissioners to charge certain fees within the territory of their jurisdiction. The Shipowners' Association of British Columbia, on Mar. 10, telegraphed a protest to the Minister of Marine, intimating that a press report that the bill had been introduced was the first knowledge that the Association had of the matter, and asking that shipping and lumber interests should be given an opportunity of expressing their views. The Minister replied that the bill merely gave authority to the Commissioners to enforce fees subject to the approval of the Governor in Council, and that no fees would be imposed without due consideration.

Steamship Line between America and Russia.—R. Martens and Co. Inc., has been incorporated in Delaware, with the object of establishing a steamship line between United States and Russian ports. Lord Rhondda, who is associated with several transportation projects in Canada, is President of the company, R. C. Martens of Petrograd is Vice President, and J. H. Torney, until recently Assistant Manager, Atlantic Steamship Lines, Southern Pacific Co., has been appointed Manager. For the present, it is stated that a service will be given between New York and Archangel, and on the conclusion of peace, a direct service between New York and Black Sea ports will be provided. The company has leased the new municipal pier at Stapleton, Staten Island for 20 or 30 years, at an average rental of \$50,000 a year. While visiting in Canada recently, Mr. Martens is reported to have stated that should the Canadian traffic offering justify it, some of the vessels would call at Canadian ports, and as such trade grew, vessels would sail direct to Montreal or Halifax.

Closing of Lights in the Gulf of St. Lawrence.—The statement in the preface to the Marine Department's list of lights and fog signals on the Atlantic coast, to the effect that the lights are maintained in operation whenever navigation in the vicinity is open, is qualified by the announcement that experience has shown that the average date for placing lightships in the spring, is Apr. 20, and for their removal, Nov. 28. As it is impossible to communicate with many isolated stations in the Gulf late in the autumn, navigation in the river and Gulf will be declared closed on Dec. 23, and the lights will be extinguished after the night of Dec. 22. If for any exceptional reason it is found desirable to extend the date, arrangements can be made through the Quebec agency for notifying such stations as can be reached by telegraph or telephone, but the most remote stations and some island stations cannot be reached. The lights at Cape Ray and Cape Anguille, Nfld., are kept in operation until Jan. 31.

Mainly About Marine People.

H. A. Calvin, of the Calvin Co., Kingston, Ont., has been elected President of the Kingston Canadian Club.

Francis King, M.A., Counsel, Dominion Marine Association, has been elected President of the Kingston, Ont., Board of Trade.

A. S. Maynard, heretofore Chief Commissary Agent, C.P.R., Montreal, has been appointed Purchasing Agent, Canadian Pacific Ocean Services, Ltd., Montreal.

Capt. Isaac Watt, a local shipmaster, has been appointed wharfinger of the Government dock at Windsor, vice Jas. Reid, who has resigned on account of ill health and pressure of other duties.

G. P. Browne, Managing Director, Montreal and St. Lawrence Ports Stevedore Co., died at the Royal Victoria Hospital, Montreal, Mar. 7, aged 65, from blood poisoning, the result of an accident over a year ago.

J. J. Nelligan, District Freight Agent, and Geo. Hearn, Soliciting Freight Agent, Canada Steamship Lines, Montreal, have qualified as officers at Halifax, N.S., and will go to the front in the 199th Battalion, Irish Rangers, C.E.F.

Lady Montagu Allan, of Montreal, who is living at Folkestone, Eng., for the present, is devoting much attention to wounded soldiers in the local hospitals, and frequently takes parties of them for drives or to moving picture shows.

Shortage of Ships on Atlantic Coast.—In the House of Commons, Mar. 21, Hon. W. Pugsley asked whether the Canadian Government was consulted in connection with the requisitioning of Canadian vessels engaged in the coastwise trade. A coal famine was threatened in St. John, N.B., as the result of the taking away by the British authorities of many vessels so engaged. Sir Robert Borden replied that the whole situation was a very difficult one, not only so far as Great Britain was concerned, but all the other allied countries which needed tonnage. With regard to the requisitioning of Canadian coasting vessels, he agreed that the Canadian Government should be consulted. Sometimes it had, but not always. The needs of the war might be so great that Canada could not object. In any case, he hoped the St. John situation would be satisfactorily alleviated.

The s.s. Port Dalhousie, owned by Forwarders Limited, Kingston, which has been engaged in ocean service in Europe for some time, was sunk at sea, Mar. 19, presumably by a German torpedo, while bound from South Wales to France with grain. She was built at Middlesbrough, Eng., in 1913, and was of steel with 3 watertight and 2 nonwatertight bulkheads, steel boiler house, and equipped with triple expansion engines with cylinders 14½, 24½ and 40 ins. diam. by 30 ins. stroke, 650 i.h.p. at 85 r.p.m., supplied with steam by a Scotch boiler 14 by 11½ ft. at 180 lbs. Her dimensions were, length 250 ft., breadth 42½ ft., depth 19 ft.; tonnage, 1,744 gross, 1,129 register.

Tonnage of Canadian Registered Vessels.—The Minister of Marine stated in the House of Commons recently, that the aggregate net tonnage of all steam vessels on the Canadian register for 1910, was 337,721, and the aggregate annual increases were, 1911, 17,864 tons; 1912, 34,149 tons; 1913, 39,562 tons; 1914, 25,772 tons; 1915, 7,387 tons.

Economic and Strategic Aspects of Enlargement of Welland Canal and of Construction of Georgian Bay Ship Canal.

By R. W. Leonard, M.Can.Soc.C.E., St. Catharines, Ont.

This is a most important subject for debate by the Canadian Society of Civil Engineers, because it involves vitally the probability of continued existence of our international boundary, as well as the question of the economic expenditure of vast sums of money, and because it is a question that should be solved by civil engineers. Internationally, the question involves the use of constricted waterways at Sault Ste. Marie, St. Clair River, Detroit River, Welland Canal and St. Lawrence River by both peoples, some of which waterways are on one side of the boundary and some on the other, and the effect of such a condition in case of friction unhappily arising between Canada and the United States. Commercially, the economics of the projects can be compared with transportation by rail and with one another. The expenditure involved and where it is spent, and the effect of the expenditure upon the country as a whole, are most important. Civil engineers alone can make the surveys and determine the physical possibilities of construction, the cost of construction, and the relative engineering advantages or disadvantages in the construction, maintenance and operation, as compared with railway transportation on the one hand, and the one canal project with the other on the other hand. This question is apparently of such wide scope, and involves technical detailed knowledge of so great variety that the writer submits it affords ground for much valuable discussion, which it is to be hoped will be elicited by this admittedly imperfect and faulty paper, contributed with diffidence, but in good faith, by the writer as his view.

The present canal system of commercial importance consists of:—

Sault Ste. Marie Locks:—

- 1—on Canadian side 900 x 60 x 19 ft. draft being operated.
- 1—on United States side 600 x 100 x 14 ft. draft being operated.
- 1—on United States side, 800 x 100 x 19 ft. draft being operated.
- 1—on United States side 1,250 x 80 x 24½ ft. draft, opened Oct. 21, 1914.
- 1—on United States side expected to be ready in two or three years.
- Channels in United States territory below locks at Sault.
- Channels in Canada and United States in St. Clair River.
- Channels in Canada and United States in Detroit River.
- Welland Canal, including 24 locks, 270 x 45 x 14 ft. draft.
- St. Lawrence canal system, 26 locks, 270 x 45 x 14 ft. draft.

After the war of 1812 the British Government, recognizing the necessity of having a line of communication for military purposes away from the boundary, canalized the Ottawa River from Montreal to Ottawa, and the Rideau and Cataraqui Rivers from Ottawa to Kingston for barges drawing 5 ft. of water, at a cost of \$3,911,700, which system they subsequently gave to Canada free of cost. These last two systems, however, interesting to the summer tourist as canoe and yachting routes, are not of great economic or strategic importance under modern conditions. The cost, maintenance, operation and repairs for the year 1913 was \$309,822.65, and the tonnage passing through (mainly pleasure boats, cordwood, lumber and sand) amounted to 227,023 tons.

About 1904 the Dominion Govern-

ment's Public Work Department started a survey of the Ottawa-French River route for the purpose of arriving at the cost of a 22 ft. ship canal. The result is embodied in a very voluminous report, dated 1908, including estimates as follows:—

Total length of canal.....	440 miles, including:—
Free navigation.....	346 miles
Improved channels.....	66 miles
Excavated canal.....	28 miles
Total	440 miles, 22 ft. deep.
Costing	\$100,000,000.00

The system is estimated to be capable of developing 1,000,000 h.p. on the direct canal route, and this estimate might probably be doubled by figuring the power developed in regulating the tributary streams.

It is significant that about the same time the Department of Railways and Canals commenced to make surveys to determine the possibility of enlarging the Welland Canal from the present 14 ft. draft to 30 ft. These surveys were completed in 1913 and the parliamentary estimate for that year included \$2,000,000 for the enlargement of the Welland Canal and \$5,000,000 for canalizing the French River from Georgian Bay to Lake Nipissing. The total estimate of the cost of enlarging the Welland Canal, 26 miles, is reported to be \$50,000,000, probably two-thirds of which will be expended in the United States for fuel and machinery, and in various foreign countries in the form of wages sent home by laborers. The lift of 325 ft. is overcome by 7 locks of 46.5 ft. lift, 800 ft. long x 80 ft. wide x 30 ft. draft.

The St. Lawrence Canals enlargement has not been surveyed and no information is therefore available to indicate whether corresponding enlargement to suit that at the Welland Canal is physically possible at any cost of construction, and the people of Canada have not been informed of any treaty with the United States sanctioning such deepening of international dams, etc.

During 1913-14 contracts were let for construction of about 10 miles of the the Welland Ship Canal, including all the locks, at a cost of probably \$35,000,000 and the work of excavation is possibly half done.

Internationally considered, this question is of supreme national importance, as involving such questions as national defence and the very possibility of holding Canada for the Empire. In this connection, it must be borne in mind that New York State is enlarging the Erie Canal from Troy to Oswego and to Buffalo, from 6 or 7 ft. draft to 12 ft. with a lock length of 311 ft., and width of 45 ft., to accommodate barges of 1,500 tons capacity, and these canals will open Lakes Ontario and Erie to formidable U.S. war vessels, giving them absolute control of these lakes at all times, unless Canada be supplied with similar transport facilities apart from the boundary waters of the St. Lawrence River from Kingston to Prescott. The enlargement of the Welland Canal will also carry a great preponderance of large U.S. steel freighters into Lake Ontario, thus giving to that country an undisputed control of that lake. Canada has enjoyed a century of peace with her powerful southern neighbor, and it is the wish of all good

citizens to enjoy another one, even avoiding in the coming century such incidents as the Trent affair, the Fenian raids, Venezuela messages and the Panama Canal question, and serious boundary disputes, fishery disputes, international water power questions, etc., to say nothing of United States Senate Reports, 1889-1890 (testimony of Joseph Nimmo, Jr.), etc. Such questions having arisen in the past, however, they will naturally arise in the future, and the peaceful settlement of them depends largely upon the temper and temptations at the time. So long as an international boundary is to be retained, so long should the policy of Canada be to preserve peace while safeguarding her honor and interests.

It is not apparent to the public that this canal problem, probably Canada's most expensive commercial project under construction, has been considered by the Canadian people from the national point of view, though pamphlets have been published ad nauseam by boards of trade of various municipalities treating the subject in a spirit of parochial politics, each exaggerating the advantages of one route and the disadvantages of the other, the very apparent incentive in each case being the expenditure of public money on the construction in the immediate vicinity of the municipalities interested. If the question be approached from a purely economic point of view, it is probable that freight (and grain from the prairies to the Atlantic seaboard in Canada is the most important commodity at present) can most cheaply be handled by rail from Winnipeg to Fort William and Port Arthur, by ship to Georgian Bay, and by rail over a direct line with easy gradients to Montreal, cheaper than by any canal at present built or proposed. On this route the C.P.R. has a double track from the west to Fort William; the Grand Trunk Pacific and the Canadian Northern have each a single track between the same points. There is a large fleet of U.S. steamships engaged in the coal, grain and ore trade on the lakes, and the Canadian fleet is growing rapidly. The C.P.R. has a line with easy gradients from Port McNicoll, on Georgian Bay, where it has built large grain elevators, to connect with its Toronto-Montreal line, with a view to carrying grain in competition with the canals, and it probably has estimates of comparative cost warranting the expenditure, even under the unequal conditions that the traffic by the railway must pay interest, depreciation and upkeep, while the Government assumes these enormous sums in the case of the waterways, making the canals free to all ships alike, Canadian and foreign.

The people are educated to demand water transportation "to regulate rail freights," and to what extent a larger canal than the present 14 ft. Welland-St. Lawrence system will result in a reduction of rates is a question that can be figured in many different ways with varying results. Figures have been prepared by competent authorities showing that the maximum saving in freight on wheat from Fort William to Montreal by the enlargement of the Welland Canal will be ¾c. a bushel, which will amount to \$187,500 a year on 50,000,000 bushels at a cost in interest on \$50,000,000, of say

\$2,000,000 a year, plus depreciation, upkeep and operation. Return cargoes of coal are obtained in Lake Erie port. Probably few will contend that 14 ft. draft ships are not economical for package freight from Lake Ontario or St. Lawrence points. It would be of interest in this connection to have a report on the feasibility and cost from an engineering point of view of lengthening the existing locks on the Welland and St. Lawrence canals 100 ft., and the economic results of such lengthening if it be practicable.

To analyse and compare the respective advantages and disadvantages of these two routes. Assuming that the Government enlarges the Welland Canal and proposes to canalize the French River to North Bay only. The estimate for the enlargement of the Welland is generally stated to be \$500,000,000; which amount at 4% interest, together with amortization, upkeep and supervision of the two existing canals and the proposed canal, may be estimated at another \$1,000,000, or a total of \$3,000,000 a year, which sum is probably under the mark, unless all past experience in cost of Government contracts be reversed.

Assuming the distance from Port McNicoll to Montreal to be 400 miles, and a paying freight rate to be 4/10c. a ton mile, or \$1.60 a ton, or 5c. a bushel, then \$3,000,000 a year would pay the rail freight from Georgian Bay to Montreal on 60,000,000 bushels, which is much greater than the amount of grain and flour shipped in the past from Montreal in any one year, and 50% greater than the greatest Canadian tonnage through the Welland Canal bound down in one year.

This enlargement of the Welland Canal will not materially increase the water power development, as that is regulated by international treaty, and works out so that, though Canada owns two thirds of the water flowing over Niagara Falls, she gets the use of only one third of the power development therefrom, the U.S. getting two thirds. It is manifest that the only saving effected by enlarging the Welland will be that effected by the difference in freight rates between 2,000-ton ships from Port Colborne to Montreal vs. 8,000-ton ships from Port Colborne to Prescott, plus 2,000-ton ships from Prescott to Montreal, estimated above at 3/8c. a bushel on wheat.

Oswego is about 150 miles nearer by Erie Canal to Troy than is Buffalo, and, as the enlarged Welland Canal will be, by treaty, free to U.S. ships, their largest lake ships will deliver grain cargoes to 1,500-ton U.S. barges at Oswego, in the New York State Barge Canal, for New York, instead of into 200 or 300-ton barges at Buffalo as at present, and thus compete with large Canadian ships discharging into 2,000-ton barges at Prescott or Kingston for Montreal. In the past the little Erie Canal boats taking grain from Buffalo to New York have been very keen competitors against the St. Lawrence route. What will be the result of the new conditions when in operation? It would appear that the expenditure on the proposed Welland Canal enlargement when completed will be quite as much to the advantage of the U.S. as to Canada and during construction probably much more than half the cost goes to the U.S. for coal and machinery.

The canalization of the French River to North Bay to a depth of 22 ft., a distance of 82½ miles, is estimated to cost \$14,275,000, and would develop 35,000 h.p. It could bring coal and coarse

freight to North Bay for railway distribution, and return pulp-wood and probably ores from that district, and partially develop a lot of power for which there is probably no immediate market in sight, but the value of which will doubtless be very great in a few years if we judge from the phenomenal increase in the use and value of hydro electric power during the past 20 years. Probably this construction is warranted only in anticipation of the completion of the entire canal to Montreal.

Assuming that the appropriations in the estimates for the Welland and French River works are preliminary to the extension of each system through to Montreal. The Welland-St. Lawrence system, unless an entirely new route inland to the north of the St. Lawrence can be found, passes through international waters from Kingston to Cornwall, and probably nothing can be done toward enlarging this portion without international agreement, including a natural demand by the U.S. for a share of the power development, (loosely estimated at 20,000,000 h.p. by some writers in the press.) Would the U.S., having the free use of the enlarged Welland to carry their big ships to Oswego, the end of their Erie canal, consent to the enlarging of the St. Lawrence system to divert the trade from Troy and New York to Montreal? What share of the expense would they bear? What share of the power development would they demand? Sufficient information is not available to indicate the nature or cost of such an enlargement of the St. Lawrence canals, to a depth of 22 feet.

In the case of the Ottawa-French system, careful surveys and estimates have been made by the Public Works Department. The total length of the canal is 440 miles, of which 346 is free navigation, 66 in improved channels and 28 in excavated canal. The cost is estimated at \$100,000,000. The system is estimated to be capable of developing 1,000,000 h.p. on the direct route and 3,000,000 h.p., including the tributaries which probably within 2 years will, if carefully conserved and utilized by the nation be worth from \$20 to \$100 a year per horse power utilized, over the cost of production from coal, depending upon the purpose for which it is used.

In the absence of authentic estimates and reports on the St. Lawrence route, it is impossible to compare the two routes as to practicability, cost, time of transit and economy of operation. It is not known whether the St. Lawrence enlargement is at all possible due to international questions. If it be possible, then the two systems can be compared in regard to length and total height of locking only. From Lake Superior to Montreal the Ottawa route is 661 miles long, and the total lockage up and down is 780 ft. The Welland-St. Lawrence route is 943 miles long, and the total lockage is 578 ft. Both routes pass through U.S. waters in the St. Mary River. The St. Lawrence route passes through contracted international waters at St. Clair River, Detroit River and St. Lawrence River. The deepened Welland-St. Lawrence Canal would be found to have probably three times the length of actual excavated canal and about the same length of restricted river navigation, as compared with the Ottawa route. Much has been written about fogs, rock excavated channels and sharp curves on the Ottawa route. Any Canadian knows that the St. Lawrence probably suffers quite as much as the Ottawa from fogs. About

half of the existing Welland Canal is in rock excavation and the new canal will not have less. It is not known how much of such channels the proposed St. Lawrence enlargement will include. The Ottawa route has sharp curves, so has the Thames below London, and it is not known what curves will be required on the proposed St. Lawrence enlargement. There are, however, sharp curves in swift currents in St. Mary River at Neebish and other points. Without surveys the distances through restricted waters cannot be compared and therefore neither the time necessary to pass through, nor the dangers of navigation. The St. Lawrence route is known to be longer and will demand greater fuel consumption per ton of freight, and probably more time in transit. The weeks per year when they will open for navigation will probably not greatly differ, although the St. Lawrence system would doubtless have a slight advantage in this respect.

If, as shown above, the annual expense of enlarging the Welland Canal alone would pay the freight on double the quantity of wheat and flour at present carried per year from Lake Huron to Montreal, it is unnecessary to prove that, commercially speaking, neither scheme can be defended as a canal solely. Without further information they cannot be compared physically, nor is the possibility of the St. Lawrence enlargement even sure.

Pending the result of discussion the writer cannot avoid the following conclusions: 1.—Neither canal system can be made, as a canal, a commercial success; 2.—On account of the geographical position and abundance of power capable of being developed along the Ottawa-French River system, that canal and power development, if undertaken by the Government, could probably be made a commercial success in a few years and would be a very valuable asset in case of international disputes, giving Canada a chance for defence on the Upper Lakes that she can never enjoy without it. This canal might be considered by the Dominion Government on the same basis as colonization railways which have been freely encouraged all over Canada. 3.—The possibility of the enlargement of the St. Lawrence system is as yet undetermined, as it requires the co-operation of the U. S. 4.—The cost and value of the power development thereon is unknown as no international agreement, surveys or estimates have been prepared. 5.—The enlargement of the Welland Canal, without a corresponding enlargement of the Welland-St. Lawrence system, will at least benefit U.S. quite as much as Canadian interests, and it is questionable if it will not divert trade from Montreal to New York. 6.—It would give the U.S. control of Lake Ontario in case of international trouble, and be an important factor contributing to the probable loss of the wealthiest and most populous part of Canada.

The Dominion Government has appointed a Commission recently to report on the proposed Ottawa Ship Canal, which doubtless will add much to the present knowledge of the commercial feasibility of this project, and it is to be hoped of an alternative project of a 14 ft. barge canal. It is to be hoped that it will also give some similar information regarding the enlargement of the Welland Canal and the proposed extension of the enlargement to Montreal that will guide the Government in deciding on the wisdom of such vast expenditure of public money before the projects are actually

undertaken. It is to be regretted that a similar Commission had not been appointed before the Government committed the country to the expenditure of several hundred millions, on the simultaneous construction of two additional transcontinental railways, and numerous other expensive projects.

The following figures are added for reference. They have been taken from Canal Statistics, Department of Railways and Canals, 1911, and Report of Government Engineers on Georgian Bay Ship Canal, 1908. It is very difficult to get definite and accurate information regarding water transportation costs, which heretofore have not been obtained by the Government, and some of these figures are subject to correction; especially those relating to freight rates, insurance charges and interest, which are liable to change from year to year.

Distances—

	Miles

	Bush.
Rates	
Water rate on grain Fort William to Montreal	4½c.
Water rate Fort William to Buffalo	3½c.
Rail rate Buffalo to New York	5½c. 9c.
All water rate Fort William to New York. 5.3c.	
Water rate Fort William to Buffalo is at times as low as 1½c. per bush.	

Although distance and rates are in favor of Montreal, diversion to U.S. ports is due to the following reasons: Availability of ocean tonnage at New York. Lower ocean rates between New York and foreign ports. Lower insurance rates from New York.

Insurance—

Montreal, 65c. to \$1.10 per \$100.	
New York, 12½c. to 15c. per \$100.	
Cost of existing Canadian canals, Fort William to Montreal.....	\$80,000,000
Interest at 3½ per cent.....	\$2,800,000
Maintenance and operation. 1,400,000	4,200,000
Water freight rate per ton mile, Fort William to Montreal.....	0.163c.
Interest and maintenance.....	0.135c.
	0.298c.

Government contribution. 0.135c. per ton mile. Welland Canal traffic, 1912, 2,537,629 tons, of which 51 per cent. was Canadian and 49 per cent. U.S.

On the 51 per cent. of Canadian traffic the Government contribution would amount to 0.265c. per ton mile, as compared with a freight rate of 0.163c. per ton mile. Rail freight, Fort William to Montreal on grain 0.421c. a ton mile.

Water freight, Fort William to Montreal, including interest and maintenance, 0.428c. a ton mile.

It will be seen that the all water rate from Fort William to Montreal, including interest and maintenance of canals would exceed the all rail rate by 0.007c. a ton mile, based on the amount of Canadian traffic passing through the Welland

Canal, but in case tolls were charged to meet these interest and maintenance charges, the U.S. traffic would also have to contribute towards this revenue, and the ton mile charge for the all water route would be reduced to 0.259c. per ton mile.

Government contribution does not include cost and maintenance of harbors, lighthouses, buoys, etc.

The foregoing paper, which was prepared in 1914, was read before the Canadian Society of Civil Engineers in Montreal recently.

Discussion by H. K. Wicksteed.

H. K. Wicksteed, B.A.Sc., M.Can.Soc. C.E., Chief Engineer of Surveys, Mackenzie, Mann & Co., Ltd., Toronto, contributed the following to the written discussion of the paper: I have read with particular interest Mr. Leonard's paper on the economic aspect of canal enlargement and construction; the more so as for a time I was one of the few champions of the Ottawa-French River route. On the whole, I heartily endorse Mr. Leonard's views, and such fault as I have to find with his paper is rather as to his failure to emphasize some of his points. His estimate of the value of waterpower, for instance, to be controlled on the Ottawa is 1,000,000 h.p., which he values in the future at from \$20 to \$100 per h.p. per annum. This power would not be developed by the canal works, it would merely be made susceptible of development. Turbines and power houses, etc., would have to be added to the capital cost, and in an essay of my own on the subject, I was content with the very modest estimate of \$5 per h.p. per annum for the use of the water so controlled and rendered available. This is sufficient to pay 5% on the estimated cost of \$100,000,000. The canal could be made practically free to navigation without imposing any burden on the nation.

But this does not represent the whole of the interest which the public has in the development, by any means. The gathering of the iron ores of Minnesota, and the coal of Ohio, in one spot, which has resulted in the enormous steel production of the United States, was rendered possible by the navigation of the upper lakes; the railways alone could not have accomplished it. The conjunction of cheap power and cheap transport in the Ottawa Valley would inevitably result in industrial development quite impossible under ordinary conditions. There are numerous other natural products which, like iron ore, cannot pay for a long railway journey; and in such products the Laurentian wilderness is very rich; crystalline limestones, phosphates, marbles, graphites, feldspars, etc., etc. The carriage of grain to the sea is not the only useful purpose which our east and west lines of communication are intended to serve.

At the time my last essay was written, no one was thinking of the war, and allusions to what Mr. Leonard terms the strategic aspect of the question, merely provoked a smile. He points out that the enlargement of the St. Lawrence Canals, if feasible, would be carried out and operated within a stone's throw of the International Boundary, and would require a very large force, and probably permanent fortifications, to protect them, but he neglects to mention that it was this very consideration, 100 years ago, which led up to the construction of the Rideau Canal. While we are on terms of perfect amity with our friends to the south, as a nation, we do not consider it unnecessary to guard the Welland Canal,

and the time may come, it may even be close at hand, when an approach to Lake Huron and Lake Michigan and the outlet of Lake Superior may be worth to us many times the \$100,000,000 which he quotes, and which is somewhere about four days' expenditure of Great Britain on the present war. Our present treaty with the United States forbids the maintenance of armed vessels on the Great Lakes except such light armament as is necessary for revenue or police purposes. Consequently in time of trouble any attempt to run even a destroyer or submarine further up the river than Cornwall would be considered a hostile act or casus belli. In the case of the Georgian Bay Canal, on the other hand, no exception could be taken to the mustering of a fleet on Lake Nipissing, which could overrun Lake Huron and blockade the entrances to Lakes Michigan and Superior in 24 hours. We all hope it may be long before such a step is called for, but the mere possibility would be a deterrent to acts of hostility. One of the transcontinental railways is on the edge of boundary waters at a dozen points. Surely it is a matter of some importance to be able to take steps for the protection of such points. Even in these times, when we have ample evidence of the goodwill of the United States as a nation, a raid of Teuton sympathizers organized in the U.S. without the knowledge of the authorities, has not been considered an impossibility.

This is only one aspect of the question, and we will hope an unimportant one, although the events of the last few months have lent to it an importance which it was hard to realize as possible before. The main justification must be in the commerce which it would serve and foster. The people of Canada have decided that an enlarged waterway from the lakes to the ocean is worth a great deal of money, at least the \$100,000,000 of the Georgian Bay estimate, for however the necessity for the enlargement from Prescott to Montreal may have been ignored or kept in the background, there are few who have not realized that the enlargement of the Welland in itself could do little good to anyone or any seaport, except perhaps that of New York.

Like Mr. Leonard, the writer regrets extremely that vast expenditures such as are involved in these public works should have been determined on so largely as matters of local advantage, or as he puts it, "in the spirit of parochial politics," instead of the broad basis of national advantage. If a great artificial highway is to be built at the expense of the nation, it should surely be such a one as will do the nation the most good, and as will be completely within the territory and under the control of that nation; and it is a matter of surprise to the writer that the two communities which should be most vitally interested in the matter, the city of Montreal, and the farmers of the central plains, should have displayed such comparative indifference, and allowed the matter to be decided by Ontario politicians who had little to gain or lose, except while the expenditure was going on.

The arguments adduced against the Georgian Bay route, by some of the Toronto papers, for instance, dealing with sharp curves and high waves on the Georgian Bay, and early morning fogs on the Ottawa, are too unspeakably silly to be repeated; yet the writer was refused publication of a perfectly friendly letter of remonstrance against such childishness. Mr. Leonard's figures as to distances and lockages differ slightly from

the writer's, but are substantially correct. Yet in the face of them it has been claimed that the extra lockage on the Ottawa-Georgian Bay route, and some alleged construction of channel calling for reduction of speed, would offset the difference of 282 miles in distance, or 24 hours' steaming at 12 miles per hour. No one who has taken the slightest pains to study the alternative routes, or even the published reports, could possibly hold such an opinion.

J. S. Armstrong, B.A., M.Can.Soc.C.E., Fredericton, N.B., wrote suggesting that, in view of the subject's importance, the preliminary discussion be printed and discussed the second and third time at intervals of a month or so apart, the discussions to be published from time to time.

Grounding of the s.s. Frankier.

An investigation into the grounding off the Cranberry light, N.S., Dec. 10, 1915, of the s.s. Frankier, owned by Bryce and Galvin, London, Eng., was held at Halifax, N.S., Mar. 2, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. John Fleming and D. C. Stuart as nautical assessors. The Frankier, 3,336 tons gross, 2,443 register, sailed from Portland, Me., Dec. 7, with 215,000 bush. of grain. The weather from the time of sailing to the casualty was squally with snow and heavy seas, and no observations for compass adjustment were possible, but the standard compass had no more than 3 deg. deviation, and the vessel was well supplied with all necessary instruments. Yet it transpired that the vessel was navigated with a blue-black chart published in 1906, and without sailing directions. The master stated that he was unable to obtain a 1912 edition in Portland. He is a stranger on the coast, and his log, a cherub, was incorrect, but he did not know to what extent.

The court found that the evidence adduced was of such an extremely contradictory nature as to awaken suspicion, and that the master, John Trattles, in his evidence, made many statements not in accordance with entries in the logs or statements made by other members of the crew. The court wondered at his statement that he failed to secure an up to date chart or sailing directions in Portland, in view of the fact that so many Canadian vessels, and others, sail from that port. He admitted that his log could not be depended on. After steering a number of courses on the morning of the casualty, without keeping count of them as regards time and distance, he laid a course which would bring him about 6 miles from Cranberry light, in a neighborhood full of hidden dangers, and after obtaining a bearing, he deliberately left the bridge, leaving the second officer in charge until he was relieved by the mate, T. George at 4 p.m. He also signed the log, which did not include all the facts, thus showing additional indifference in the navigation of his vessel, and it is noted that certain entries were made and then erased, apparently with some purpose, by some person, whom the court was unable to ascertain. The court stated that while there was nothing to show that the grounding was premeditated, no better methods could have been adopted had it been the intention to lose the vessel. The court noted with interest the master's statement respecting his lack of confidence in the mate, whom he declared to be inefficient, and in view of this the lack of care the master showed

in not remaining on the bridge until the change of watches, and warning the mate to be very careful, and if in doubt, to call him, did not strike the court favorably.

The Frankier was carrying a precious cargo, which, though consigned to a private firm, would eventually have been forwarded to the allies, and being entrusted with this great responsibility, it behoved the master to adopt every precautionary measure to bring his vessel safely to its destination. For these reasons the court considers it a duty to prevent him from having any further responsibility with respect to this vessel on this mission and therefore suspends his certificate for three months from Mar. 3. Respecting the mate's share in the responsibility for the casualty, the court held that the moment he entertained a doubt as to the vessel's position, he should have given the danger he apprehended a wider berth, and communicated his doubts to the master, which would have relieved him from any responsibility. In view of his failing to call the master and meanwhile to adopt means of safety, the court suspended his master's certificate, for two months from Mar. 3. The court decided to retain the scrap log so that it may be forwarded to the British Board of Trade for its information.

Signalling Requirements for British Vessels.

The British Board of Trade's Marine Department has published the following regulations relating to signalling and signalling lamps, Under Regulation 37 of the regulations made under the Defence of the Realm Act, British vessels are required to comply with any orders given, whether by signal or otherwise, by any officer in command of any of His Majesty's ships, or by any naval or military officer engaged in the defence of the coast. Under regulation 37a, which came into effect, Mar. 1, British vessels of 500 tons and upward, must be provided, before going to sea, with suitable hand flags for signalling by the semaphore code, and with an efficient flash lamp for signalling by the Morse code. The lamp shall be of such power and size that the signals made with it may be distinctly visible at a distance of three miles on a dark night in clear weather. In view of these requirements and the penalties for noncompliance, all such vessels should be provided with the necessary lamp and flags, and there should be an officer or seaman on board competent to receive and transmit signals both in the Morse and semaphore codes.

Ice Patrol Service in the North Atlantic.

For the purpose of carrying on the ice observations and ice patrol service provided for by the International Convention for the Safety of Life at Sea, the s.s. Seneca left New York about Feb. 15 and proceeded to the Grand Banks of Newfoundland, to locate ice fields and icebergs, and to make such observations as might be practicable on the quantity of ice, its kind, extent and drift, and to obtain other information. The object is primarily to ascertain the location and progressive movement of the limiting lines of the regions in which icebergs and field ice exists in the vicinity of

Grand Banks, and to disseminate such information for the guidance and warning of navigators. Co-ordinately with these duties, the s.s. Seneca will make such oceanographical and meteorological observations as will contribute toward a knowledge of the causes why the limiting lines assume their observed locations. During the period of ice observations, the Seneca will be the only vessel employed on this duty, but when ice has moved southward so as to make a constant patrol necessary, an additional vessel will be detailed. The experience of previous years has shown that a continuous ice patrol should be established about Apr. 1, and continued throughout the season of dangerous ice conditions. Upon getting in touch with ice, the Seneca will report daily to New York, and endeavors will be made to communicate direct with coast radio stations, but should the Seneca be unable to communicate with any of these stations, the messages will be relayed through any vessel within reach. Endeavors will also be made to keep all vessels at sea advised by daily radio messages of the limits of the ice fields, etc.

Among the Express Companies.

The Canadian Ex. Co. has opened offices at Dugald, Man., and Coleville and Ferintosh, Sask.

The Dominion Ex. Co. has opened offices at Daaquam and English Lake, Que., and Speedwell, Ont.

The Dominion Ex. Co.'s office at Three Rivers, Que., was destroyed by fire, Mar. 20, together with other offices in the Page Block.

W. C. Webb has been appointed chief clerk to Superintendent, Canadian Northern Ex. Co., Winnipeg, vice Z. M. Middleton, whose appointment as agent, C.N.E. Co. at Vancouver, B.C., was announced in a previous issue.

J. R. Stone, who died at St. John, N.B., recently, aged 73, entered express service over 50 years ago as agent for the Eastern Express Co., there. He was later appointed agent for the American and Canadian Ex. Cos. there, and continued in that capacity until 1906, when he retired owing to ill health.

Mrs. V. G. R. Vickers, wife of the Manager Foreign Department, and Superintendent Atlantic Division, Dominion Ex. Co., Montreal, was attacked by a former maidservant, Mar. 17, a revolver shot being fired, but going wide of the mark, the bullet grazing Mrs. Vickers' thumb and burying itself in her clothing.

The Board of Railway Commissioners reserved judgment, Mar. 21, on the application of the Canadian Fisheries Association and the W. J. Guest Fish Co., of Winnipeg, to compel express companies to deliver shipments of fish to dealers' places of business without extra charge. Heretofore the companies have been carrying from coast points at \$3 per 100 lbs., and they desire to add 15c. per 100 lbs. for delivery.

The Canadian Ex. Co.'s receipts and expenditures for Oct. 1915 compared with those for Oct. 1914, were as follows:

	1915.	1914.
Mileage of lines covered	10,238	9,676
Transportation charges	\$351,416	\$280,551
Express privileges, Dr.	165,433	140,379
Operation other than transportation ..	5,612	5,565
Total operating revenue	191,595	145,737
Operating expenses	138,964	131,584
Net operating revenue	52,630	14,152
Express taxes	4,200	4,000
Operating income	48,411	10,152

Telegraph, Telephone and Cable Matters.

The Great North Western Telegraph Co. has deposited plans with the Public Works Department, for the laying of a subaqueous cable in the Cataraqui River, at the lift bridge opening of the Cataraqui bridge, Kingston, Ont.

The Great North Western Telegraph Co. has announced that the cost of cabling money to points in the British Empire has been reduced to the ordinary deferred cable rate. Hitherto such messages were charged at the usual full rate.

The Great North Western Telegraph Co. has opened offices at St. Adelaide de Pabos, Que., Odessa, Ont., and Brunkild, Man., and has closed its offices at Milneke, Que., Cumberland, Harrow and McGregor, Ont. The name of the office at La Tuque, Que., has been changed to Paquet.

In connection with the Dominion Government telegraph line between Ingonish Ferry and Meat Cove, N.S., it was stated in the House of Commons recently that a number of the poles have been erected and that the balance will be as soon as weather permits. The poles specified by the contract are a minimum length of 23 ft., and 5 in. diam. at the small end, and tenders were accepted for these at 90c. each for spruce and 85c. each for fir.

The estimates for the financial year ending Mar. 31, 1917, before the House of Commons, include the following items: half cost of reconstruction of telegraph lines jointly owned by the Anglo-American Telegraph Co. and the Dominion Government, \$17,000; revote; improvements to repair service in Quebec, \$3,000; repairs and improvements to office buildings in Saskatchewan and Alberta, \$3,100; Peace River line, offices and dwellings at Grande Prairie and Dunvegan, \$7,000; revote; general repairs and improvements to mainland telegraph and telephone lines in British Columbia and Vancouver Island, \$25,350; repairs and improvements in Yukon, \$11,350.

Replying to questions in the House of Commons recently, the Minister of Public Works stated that the cable between Magdalen Islands and Bay St. Lawrence, N.S., was laid Sept. 1, 1906, and its operation ceased Dec. 26, 1914, owing to a breakage about 9 miles from the Nova Scotia end. Some attempts were made to repair it but were abandoned owing to bad weather, and to the cable repair steamer Tyrian being laid up for repairs and overhaul. The cable between Bay St. Lawrence and St. Pauls Island, is also not being operated owing to breakage which took place Dec. 23, 1915. Efforts will be made to repair both cables in the spring.

In response to questions in the Saskatchewan Legislature recently, a member of the Government stated that two conferences had taken place between the Government and railway companies operating in the Province, respecting the railway companies allowing the Government to string telephone wires on railway poles in exchange for similar privileges to be granted to the companies, and the subject is being further considered. It was also stated that copper wire had increased 115% in price since the commencement of the war, and that the construction of telephone lines had increased about 40% in the same period. The Government has not decided what lines, if any, it will erect during this year.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Eastern Car Co., Ltd., New Glasgow, N.S., has appointed E. E. Forgeus as Purchasing Agent.

Fabrikoid Car Curtains.—The Wilmington and Philadelphia Traction Co., Wilmington, Del., is using curtains made of Fabrikoid, manufactured by the Du Pont Fabrikoid Co., on 31 new cars which are being put in use.

Chicago Car Heating Company.—Frank A. Purdy, Canadian Gold Car Heating & Lighting Co., has been appointed Canadian Manager, Chicago Car Heating Co., with office at Montreal. A. D. Bruce, Canadian Agent, Chicago Car Heating Co., Montreal, continues in the same position as heretofore.

The Franklin Railway Supply Co. announces that, due to the results secured by the use of the Stone-Franklin lighting equipment, it has appointed Ralph G. Coburn, Sales Manager of its electrical department. He has been associated with the Franklin Company for the past seven years, being formerly in charge of the Chicago office and for the last few years Eastern Sales Manager, with headquarters in New York, where he will continue in his new capacity.

Dominion Steel Corporation.—D. H. McDougall has been appointed General Manager at Sydney, N.S. He is 36 years old and during the company's construction period was on its engineering staff. Subsequently he spent two years in studying mining and steel work engineering in the United States and was for a time employed in the New York Central Rd's, Engineering Department. He returned to Nova Scotia to become Superintendent of the Steel Corporation's iron ore mining operations.

Franklin Railway Supply Co.—Joel S. Coffin, who has been President since the company's incorporation in 1901, has been elected Chairman of the Board, and S. G. Allen, who has been Vice President for the same period, has been elected President. Mr. Allen was born at Warren, Pa., in 1870 and was educated there and at Pennsylvania State College. He entered business life immediately after leaving college and found time to study law during a period of intense business activity. He was admitted to the Bar in Warren County, Pa., and practised law for 9 years.

Canadian Locomotive Co. Ltd.—At a meeting of directors at Kingston, Ont. Mar. 11, A. W. Wheatley, who has been elected President of the Lima Locomotive Corporation, Lima, Ohio, resigned as Vice President and General Manager, but remains a director. F. G. Wallace, formerly of Pittsburg, Pa., and latterly of Kingston, who has been a director for some years, was appointed General Manager; J. J. Harty, previously Secretary, was elected a director and appointed Vice President and Sales Manager; Wm. Casey, previously Assistant to Vice President and General Manager, was appointed Manager, and J. H. Birkett, formerly Treasurer, was appointed Secretary-Treasurer.

The Annual Report of the Winnipeg Electric Railway Company and Subsidiary Companies

For the Fiscal Year ended Thirty-first of December, Nineteen Hundred and Fifteen. Submitted at the Twenty-third Annual Meeting, Held on the Twenty-third Day of February, Nineteen-sixteen.

DIRECTORS:

SIR WM. MACKENZIE.....	President	Sir W. C. Van Horne	
A. M. NANTON.....	Vice President	D. B. Hanna	G. V. Hastings
F. MORTON MORSE.....	Sec. Treasurer	Hugh Sutherland	R. J. Mackenzie
Manager: WILFORD PHILLIPS			

Report of the President and Directors

For the Year Ended Dec. 31, 1915.

To the Shareholders—

Your Directors beg leave to submit a statement of the operations of your properties for the year ended December 31st, 1915, together with a Consolidated General Balance Sheet of the parent and subsidiary Companies and a Consolidated Income Account.

The net earnings from the operations of the combined properties amounted to \$1,331,737.28, in comparison with \$1,769,114.51 for the previous year. Of this amount, the fixed charges, including taxes, city percentages, car licenses, interest on the funded debt and other contingent charges, absorbed \$835,635.45. The surplus earnings for the year were \$496,101.83, which, when added to the surplus brought forward from the previous year, as adjusted, aggregate \$1,637,598.55.

Quarterly dividends were declared and paid by your Directors at an average rate of 9½ per cent. per annum, amounting to \$855,000.00.

The decrease in earnings was due to the general depression following the first winter of the war, coupled with the advent of the jitneys in the spring. The duration of the depression from both causes was temporary. The excellent crop prospects of the West, followed by an enormous yield, had a stimulating effect upon the business of the Company and caused a gradual advance toward normal conditions.

Your Directors are therefore pleased to be able to report that the net earnings for the months of November, December and January compare favorably with a similar period of previous years.

In order to verify the value of the physical properties of the Company as shown by the books, and to reclassify the capital expenditures to bring them into conformity with the classification prescribed by the Public Utilities Commissioner, your Directors are having the properties of the Company appraised by the J. G. White Engineering Corporation of New York. The appraised value of the properties, which is expected will exceed the book values, will be substituted for the book values shown in the Balance Sheet, when ascertained.

Further economies in the operation of your properties are in contemplation and your Directors confidently anticipate an increase in net earnings during the ensuing year.

During the year, in accordance with the orders of the Public Utilities Commissioner, changes in the system of accounting have been effected with the view of introducing a classification of accounts prescribed by the Commissioner. For this reason it is found impracticable to submit comparisons between operating figures of the current year and

the previous year, as adjustments in the figures of 1915 have been made to conform with the new classification.

Respectfully submitted,

WM. MACKENZIE, President.

Auditors' Report

To the Shareholders, Winnipeg Electric Railway Company, Winnipeg, Canada.

We have audited the accounts of the Winnipeg Electric Railway Company and its Subsidiary Companies for the year ended December 31, 1915, and have compared them with the accompanying consolidated Balance Sheet and Income Account, which are in accordance with the books.

The Balance Sheet and relative Income Account, in our opinion, correctly reflect the financial condition of the combined Companies, as at December 31, 1915, and the result of their operations for the year ended on that date.

The Directors report that, as in past years, the properties have been fully maintained. An appraisal of the physical properties is being made by The J. G. White Engineering Corporation of New York, and their valuation will be substituted for the book values which have been adopted in the accompanying statements.

MARWICK, MITCHELL, PEAT & CO.,
Chartered Accountants.

Winnipeg, February 8, 1916.

THE GRAND TRUNK RAILWAY COMPANY OF CANADA.

Notice is hereby given that the Ordinary General Meeting of the Grand Trunk Railway Company of Canada will be held at the Cannon Street Hotel, Cannon Street, London, E.C., on Tuesday, the 18th April, 1916, at 12 o'clock noon precisely, for the purpose of receiving a report from the directors, for the election of directors and auditors, and for the transaction of other business of the company.

Notice is also given that the Transfer Books of the company, except so far as regards the Transfer Books of the perpetual four per cent Consolidated Debenture Stock, will be closed from Wednesday, 29th March, to the day of meeting, both days inclusive.

By order,

ALFRED W. SMITHERS,
Chairman.

H. H. NORMAN, Secretary.

Dashwood House, 9 New Broad Street,
London, E.C. 21st March, 1914.

NOTICE.

C. F. Buchanan, of the United States of America, the owner of the exclusive rights to Canadian patent no. 153287, issued to J. B. Cox, and covering improvements in Smoke Jacks, wishes to advise that all possible users of Smoke Jacks covered by this patent can obtain them within reasonable time for use on any railway in the Dominion of Canada.

All enquiries regarding the above should be addressed to C. F. Buchanan, c-o Coleman Fare Box Co., Ltd., 70 Bond Street, Toronto, Ontario, Canada.

"The Toothless Wonder"

Designed Especially to handle pipes spaced closely as in coil work. No. 2 1/2 wrench illustrated requires but three-quarter inch space between pipes.

Positive Grip instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

Ratchet-like Action. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

Can't Chew. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

Can't Crush. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished and are available only by reputable wholesale jobbing, and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

Flange Lubrication Should be Automatic

Flange lubrication to be efficient should be automatic, absolutely independent of your engineer, and at the same time the device itself should be so simple and yet so accurate that it will be practically trouble proof. The

Detroit Automatic Flange Lubricator (Pendulum Type)

is absolutely automatic and at the same time simple. It is all in the pendulum. Any lateral movement of the locomotive causes the pendulum to swing. This oscillation rotates, rocker-like, the pendulum shaft, which produces alternating strokes of the two plungers in the pumping unit.

The use of the Detroit Automatic Flange Lubricator insures positive lubrication just when it is needed. May we send booklet F-O 81? It contains all the facts as well as drawings. Write to-day.

Good Motor Operation Demands Proper Brush Selection

No one grade of motor brushes will give the best results on all motors.

To fit the proper brush to suit operating conditions means motor efficiency. It means less commutator wear and lower brush up-keep cost.

We have a grade of brush to suit every condition met with in railway and stationary motor operation.

We have a staff of brush engineers who will gladly make recommendations.

Write for our brush data sheet.

Canadian National Carbon Co., Limited
99 Paton Road, Toronto, Ont.

Norfolk & Western Elkhorn Grade Electrification

The Heaviest Tonnage Mountain-Grade Electrification in the World

One-way freight traffic in excess of 1150 cars per day Eastbound, has been attained.

Normal tonnage-trains of 3250 tons, trailing, on the heaviest grade section.

4800-ton "Filled-Out" trains on the lesser grades.

Down-grade operation is controlled by automatic regenerative braking.

This electrified system involves :

THE GREATEST POWER HOUSE CAPACITY per engine operated.

THE GREATEST SUBSTATION CAPACITY per mile of line.

THE GREATEST LOCOMOTIVE CAPACITY in service per mile of line.

THE GREATEST AMOUNTS OF POWER EVER DELIVERED to individual locomotives.

THE GREATEST LOCOMOTIVE TRACTIVE EFFORTS by equipments of this type.

THE HIGHEST, HEAVY-TRAIN SPEEDS IN THE WORLD against similar conditions.

Figure the Saving Alone in Laying -

the time and money saving value of a culvert which may be graded, bedded and permanently placed with a few hours labor. Don't let your culvert work cost you more than it should. Build with

PEDLAR'S "PERFECT" TONCAN METAL CULVERTS

and make a definite saving—a worth-while saving—in the cost of laying your road.

Pedlar's TONCAN Culverts have the double advantage over concrete of being frost-proof and elastic, allowing the desirable "springy" road bed to be preserved.

Made to specifications in sizes from 8 to 84 inches. Supplied in any length up to 40 feet. Coupling bands supplied for large lengths. Safely and conveniently shipped in flat cars.

Write for complete Culvert Reference Book No. 4 R. M., giving valuable data and drainage tables.

The Wonderful Single Service Chilled Iron Wheel

The "Fins" at the sides of the steel rail are the result of cold rolling produced by heavy wheel loads which cause the metal in the rail to flow, producing tremendous internal stresses, sufficient in many cases to pull the metal asunder.

Eccentricity of the treads of soft wheels deliver intense impact blows to the rail, which in connection with the internal stresses of large proportions result in rail breakages.

On some types of wheels the "Fins" at the edge of the wheel "rims" are caused by the flowing of the metal because of the softness of the material.

No "Fins" can be found on Chilled Iron Wheels, because Chilled Iron is so hard that it will not crush or flow under heavy loads and the wheels retain their rotundity.

25,000,000 now running.

Association of Manufacturers of Chilled Car Wheels
1214 McCormick Building, Chicago, Ill.

Representing Forty-eight Wheel Foundries Throughout the United States and Canada. Capacity 20,000 Chilled Iron Wheels Per Day.

Ever Shaved by a Blunt Razor?

Remember how long it took; how you scraped away and were finally disgusted with the shave?

Well, that is how a workman feels when using a file that has reached its "inefficient point." He gets irritated—does not take the same pleasure in his work. The foreman thinks he is slow. There is no satisfaction anywhere.

But, give that man a new file and he puts new enthusiasm and new energy into the job.

This is a homely illustration, but it is true, for it is human nature.

The line of least resistance and greatest efficiency in shop practice to-day is to give men new files to work with when their files reach the "inefficient point."

Manufacturers, suggest to your superintendents,

Superintendents, instruct your foremen,

Foremen, tell your men

to turn in old files the moment they reach their "inefficient point." It costs less for a new file than it does to have a man slowed down and irritated by an old file.

Berry Brothers' Railway Varnishes

Represent Nearly 60 Years of Varnish Making Experience

Berry Brothers' extensive line of Railway Varnishes makes it possible for you to purchase the right varnish for any demand.

Here are a few finishes you should know.

Locomotive Black

A fossil gum varnish of the highest grade—for the best attainable finish on locomotives, tenders and valuable rolling stock, combines excellence with durability—efficient because its use is true economy—a case of the best being the cheapest.

Front End Black

For the front end of locomotives. It covers well, makes a handsome jet black finish, and stands a high degree of heat without injury.

Smoke Stack Black

Made especially for use on smoke stacks, producing a jet black and brilliant lustre, and resisting heat of a high degree without injury.

465 Railroad Shops in the United States and Canada Use the Thermit Welding Process

This comprises practically all the shops of importance in North America, and it can be said without exaggeration that the list of railroads using Thermit includes practically every system from the small road having only three or four locomotives to the largest system in the world having many thousand locomotives.

If by any chance your shop is not using Thermit, you should investigate the process and see how effectively and economically it will handle the many repairs on locomotive frames and other sections.

Remember that the greatest railway systems in the world use hundreds of thousands of pounds of Thermit. They do not use it for any reason except that it "delivers the goods" and has proven itself a profitable investment.

Let us mail you our new pamphlet, No. 2144, which contains full information on the use of Thermit in Railroad Shops.

We have a well equipped shop in Toronto, Ont., for the manufacture of Thermit and appliances used with it.

Scientific Treatment of Boiler Waters

Dearborn Service to Railroads

Every time an engine failure takes place it means a large expense in dollars to the railroad company in time lost, impairment of service, and cost to send another engine to the rescue. Every time a locomotive goes to shop for repairs, it represents many thousands of dollars invested capital which is earning no revenue.

By the use of Dearborn Treatment engine failures due to the boiler foaming or leaking can be entirely eliminated. Dearborn Treatment counteracts the foaming tendency in waters of that type, and prevents scale formation, and the corrosive and pitting action that results in leaks. By thus overcoming the bad effects of the waters used, and keeping the boiler tubes and sheets free from

incrustation, the engine may be kept in service longer between boiler washings, and the period between shop-pings for repairs of this character will be much longer. There are also great savings in fuel and lubricating oil, and the engine will always be in condition to haul full tonnage.

Dearborn Chemical Company of Canada, Limited

Office and Works: 1220-1230 Dundas Street, Toronto, Canada

THE ART OF STAYING—The locomotive fire box will advance in just that proportion as suitable and adequate means are provided to enable the fire box to expand under the least restriction.

STAYBOLTS BREAK—when the stress of fire box expansion is too severe, and fire sheets distort and crack when staybolts are too rigidly connected to same.

THE TATE FLEXIBLE STAYBOLT—is designed and made to give satisfactory results in the final measure of its usefulness, as an economic, safe and reliable factor in reducing the costs of fire box repairs and maintenance.

ANY ARTICLE THAT CONTRIBUTES—to the service value of the locomotive as an earning factor is well worth considering carefully. From the knowledge of what has been accomplished by the use of the Tate Flexible Staybolt, we feel confident that all our patrons are well aware of its true value.

**Garlock High Pressure Piston
 Rod Packing**

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

Fire Tube Marine Superheater -- Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler h.p. from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

"The Toothless Wonder"

Designed Especially to handle pipes spaced closely as in coil work. No. 2½ wrench illustrated requires but three-quarter inch space between pipes.

Positive Grip instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

Ratchet-like Action. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

Can't Chew. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

Can't Crush. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

A Clear Track To Promotion

How to get off the side track—how to break the couplings that hold them near the bottom of the pay roll—is the one big problem that troubles most railroaders.

There's a clear track to promotion—without grade or curve—open to the man that has the backbone and grit to take it. Before you can travel this track to promotion and bigger pay you must "coal up" with knowledge—you must be specially trained.

The Railway Instruction Department of the International Correspondence Schools is able and ready to give you the training you must have. You can get it right at home without losing an hour's time from your present job.

It will not cost anything to find out how the I.C.S. can train you for a better job. Put an "X" near the class of work you would like to follow, in the attached coupon, and mail it to the I.C.S. This won't obligate you in the least. It will simply bring full information by return mail.

Mark the Coupon NOW

May, 1916.

Methods Adopted in the Construction of Rogers Pass Tunnel.

By J. G. Sullivan, M. Can. Soc. C. E., Chief Engineer, Western Lines, Canadian Pacific Ry.

The Rogers Pass tunnel is in the Selkirk Mountains of British Columbia. It is double tracked, five miles long, and as shown on figs. 1 and 2, lowers the summit of the former line by 552 ft. It also

so rapidly that it was evident that if the rate of increase continued, the road would have to be double tracked. A very prominent consulting engineer, who reported favorably on the proposal to con-

three times as fast as any long tunnel had been driven on this continent, and he had, in a superficial way, an idea of the methods employed. In a circular letter sent to contractors April 8, 1913, the fol-

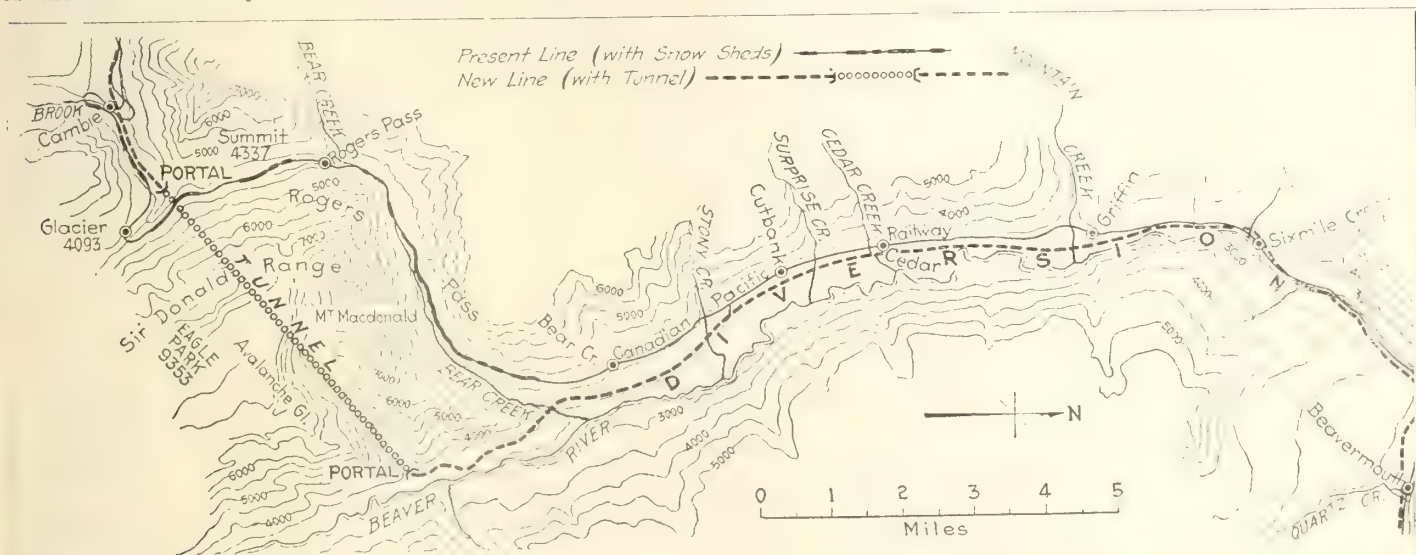

Fig. 1. Rogers Pass Tunnel. Map of Old and New Lines.

shortens the line by 4.3 miles, eliminates some 2,300 or 2,400 degrees of curvature and avoids the expense and danger of maintaining and operating 4.5 miles of snow sheds.

struct the tunnel, made a further suggestion that it might be necessary to double track the present line over the mountain and gauntlet the heavy bridges in order to handle the traffic during the

lowing statement appeared:—"The necessity for this tunnel is so great and the expenditure so large that it would be worth considerable money to this company to have the tunnel completed as

Fig. 2. Rogers Pass Tunnel. Profile of Old and New Lines.

In order that the plan adopted in the construction of this tunnel may be properly understood and appreciated, it is perhaps advisable to go somewhat into the history of the case. During the period from 1910 to 1913, C.P.R. traffic increased

period of construction. It can be readily understood, therefore, that the length of time required to complete the work became a matter of anxiety to the company. The author was aware that tunnels in Europe had been driven at a rate two or

soon as possible. Therefore, everything else being equal, the party who will guarantee completion in the shortest time will be the one who will receive the work. I would be glad if you would give us prices on the European method of tunnelling,

which is to drive a very small heading and take out the bench working from several headings into this small drift. Tunnels in Europe have been driven by this method at two or three times the speed that any tunnel was ever driven in the United States or Canada, and I would like to be able to place before the management figures for doing this work according to this method. I would be glad if you would state in your proposal the amount per day that you would be willing

been driven through the Alps. I have given the matter considerable study since and have come to the conclusion that the European method of driving a small lower heading and stoping out the remainder of the tunnel would be too expensive on this side on account of the difference in the cost of labor. I have been thinking out and studying methods that would tend to expedite this work. I first thought of driving a heading in the centre of the tunnel, about 9 ft. x 12 ft.,

have the proper credit for first suggesting a pioneer tunnel."

The sheets 1 and 2 referred to in this report are the accompanying figs. 3 and 4. These figures will serve to illustrate the methods which were adopted for the construction of the tunnel. A pioneer tunnel was driven entirely outside the regular section of the tunnel, and a centre heading was driven along the centre of the main tunnel. The functions of the pioneer tunnel were to provide a means of transporting the material from the heading to a point back of where the en-

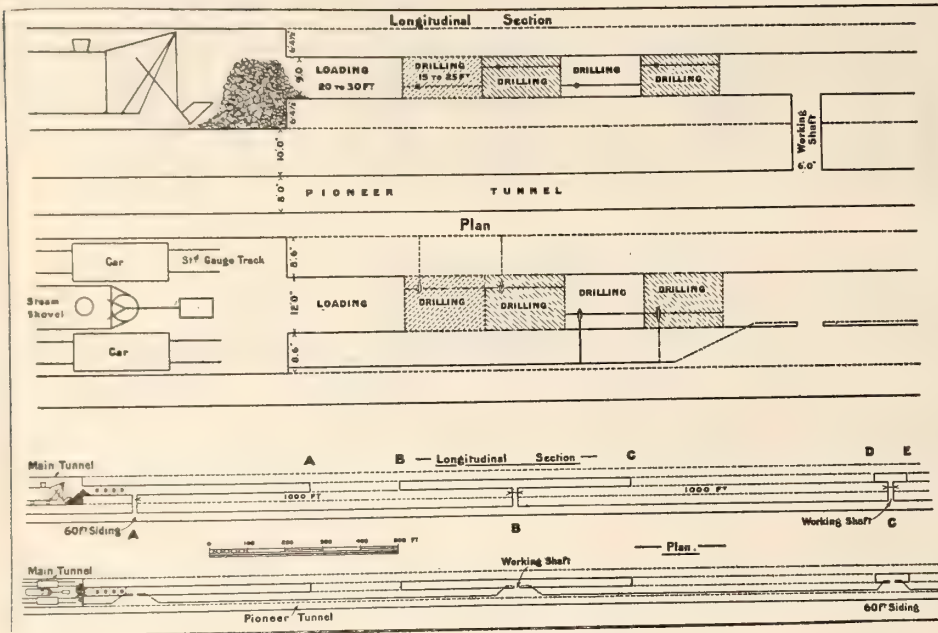

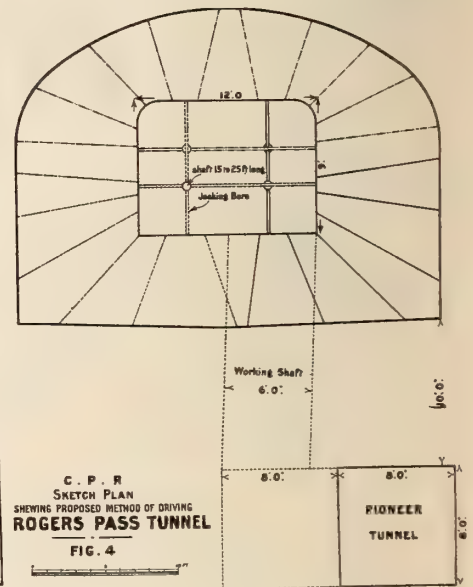

Fig. 3. Rogers Pass Tunnel. Proposed Method of Driving.

to have inserted in a contract to be paid as a bonus for time saved over the agreed time, the same amount to be exacted as a penalty for the time lost, being the time between the fixed day of completion and the actual date of completion. We are of the opinion that this should be about \$750 a day."

It was, however, considered unlikely that American contractors would tender at a reasonable figure on the European method, and after having studied some of

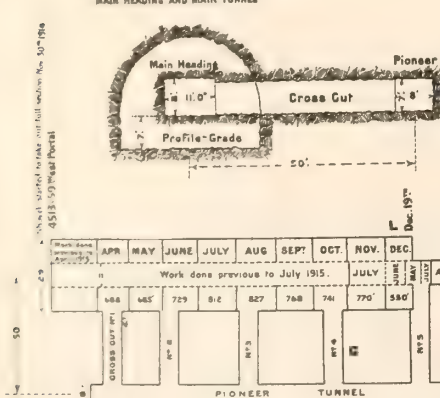

as is shown on sheet 1, and keeping this heading close to the bench, carrying the air pipes over the muck in front of the steam shovels. I pointed out to him that believe that this method in rock that will stand, is better than an upper heading. A. C. Dennis, however, suggested driving a pioneer tunnel and taking out an upper heading through shafts into this tunnel, taking out the rest of the bench with steamshovels. I pointed out to him that this was impracticable, for the reason

largement of the tunnel was being made, and to provide for the carrying of high pressure air pipes, water pipes, ventilating suction pipes, etc. In other words, to provide a means whereby the "shooting" at any one point in the tunnel would not interfere with operations at other points. In regard to the idea of carrying the drills on a horizontal shaft held in place by heavy jacks to enable these shafts and drills to be carried in narrow gauge tracks so that they could be moved backward and forward as required, it was

DIAGRAM SHOWING
MONTHLY PROGRESS.

FIG. 5.

that from an upper heading you cannot drill to the bottom of the tunnel, and therefore would have to clean up all the muck in the bench before you could put in a round of breast holes to break more rock. I have now made plans showing a combination of my ideas and Mr. Dennis', which I think is well worth studying. The plan is to drive a small working pioneer tunnel, 8 x 8 ft. underneath the main tunnel. I am sending you this for your information, and further, if this method should be adopted, that Mr. Dennis may

supposed that heavy drills, such as have been used in the past, would be required, but it was found that the Leyner drills actually used were so light that they could be operated by one man. The result has been that all drilling in the enlargement has been done from vertical shafts as shown in figs. 6 and 7.

Fig. 5 is a progress diagram, and shows the condition of the work to Dec. 19, 1915. The pioneer tunnel at the east end was located 50 ft. to the north of the centre line of the main tunnel. The mode of

the prices paid for labor on certain large Swiss and Italian tunnels, the author was forced to the conclusion that the same methods were not practicable in this country, where labor is so expensive. On Mar. 13, 1913, he reported his ideas on the subject to the company in the following terms:—"Referring to the progress that we hope to make in the driving of Rogers Pass tunnel. I advised you in my report of Oct. 22 regarding the relative speeds of driving tunnels on the American continent compared with those that have

operation was as follows: drilling in the small headings was done in the usual manner, using in general Leyner drills, making an advance of 6 or 7 ft. for each round of holes. The muck was shovelled by hand from steel plates into "half yard" cars and hauled back, either by a mule or small compressed air locomotive. The latter was used entirely when the haul had reached a considerable distance. The muck from the headings A and B on the progress diagram was carried out through the cross cuts E and D respectively into the pioneer tunnel, where it was carried back to cross cut C, and then out on a trestle over the standard gauge tracks through the main tunnel, and dumped into standard gauge cars. The material was then removed to the fills, as was also the muck loaded by steam shovels in the enlargement. The muck from heading F on the west end was in a similar manner conveyed into the pioneer tunnel at cross cut H and back to the main tunnel in cross cut G, where it was dumped into

which would require immediate timbering. As there was some 1,660 ft. of such ground, the time limit of the contract was extended into June, 1917.

The work completed up to Dec. 19, 1915, was as follows:—19,610 ft. of pioneer tunnel, 24,612 ft. of centre heading, 1,660 ft. of earth tunnel, and 14,342 ft. of tunnel enlargement in rock. At the same date there remained to be driven:—288 ft. of centre heading, 10,398 ft. of tunnel enlargement. The best progress made in driving the pioneer tunnel heading was in Jan., 1915, when 932 ft. in the west heading were completed. The best record for a week in the enlargement was 267 ft., and for a month was for Aug., 1915, in which the enlarging was 827 ft. in the west end.

From April 1, 1915, to Dec. 15, 1915, 12,346 ft. of tunnel enlargement was made. This was during the time that the shovels were both working in rock and at a normal rate of speed. Such a rate would require only a little over seven

up the muck, thus making an advance of from 30 to 35 ft. The shooting was usually continued until the tunnel became so full of muck that no more could be done. The largest amount shot at one time was 84 ft. in 11 hours, which was the record for Nov. 20, 1915.

All expectations as to speed in the execution of the work have been more than realized. For rock tunnelling where the rock is of sufficient hardness to stand until the mucking has been completed, the method described can be most successfully worked, and a speed of three miles a year can be easily made at a much less cost than tunnels driven at the same speed by the European method. Furthermore, the practice of radial shooting has given a great deal less overbreak than would have resulted had the holes been drilled parallel to the axis of the tunnel.

The work was laid out and commenced under F. F. Busteed, M.Can.Soc.C.E., Engineer in Charge of Double Tracking, with J. W. Sheppard as Assitant Engin-

Fig. 6. Rogers Pass Tunnel. Showing Method of Shooting in Enlargement.

Order of shooting: 1st shot—Ring 1. Holes 4, 5, 6, 7, 8 A.B. Ring 2. Holes 1, 2, 3. 2nd Shot—Ring 2. Holes 4, 5, 6, 7, 8 A.B. Ring 3. Holes 1, 2, 3. 3rd Shot—Ring 3. Holes 4, 5, 6, 7, 8 A.B. Ring 4. Holes 1, 2, 3. After sufficient number of shots have been made as above (usually 5 or 6 rings) the holes above the line X Y are shot (holes 9, 10, 11, 12, 13 C.) one or two rings at a time, depending on the nature of the rock.

standard gauge cars. In the enlargement of the main tunnel the drilling was done well ahead of the shooting. Figs. 6 and 7 show the manner in which the drilling was carried out. The radial holes were at first drilled at right angles to the axis of the tunnel, but the results were not satisfactory, and a change was made, to the method shown in fig. 6, in which the holes have an inclination of about 1 in 4 from the direction in which the tunnel was being driven. The muck was all loaded by steam shovels into standard gauge 12 yard capacity dump cars. The shovels had dippers of 1½ cubic yards capacity and were worked by compressed air. The cars were hauled to the mouth of the tunnel by standard gauge compressed air locomotives and taken from there to the dumps by standard steam locomotives.

The contract for this work was let on July 1, 1913. The limit of time for completion was 3½ years, which would end on Jan. 1, 1917. There was an allowance in extension of time of one day for every ten feet of soft ground encountered,

months in which to complete the tunnel. There will, however, be some slowing up in the enlargement between cross cuts H and F, which are at the ends of the pioneer tunnels, for the reason that, at present, fans are installed at these points. Doors were placed at the cross cuts between the pioneer and the centre heading, and those which were at the back of the shovel were kept closed. When shooting occurred in the enlargement, the door at the first cross cut beyond the point of shooting was opened and a strong draught was thus created over the pile of freshly shot muck, making it possible for the men to return to work in 10 or 15 minutes after a shot had been fired. The methods employed in shooting in the enlargement were as follows:—One round of holes was shot at a time, the holes in the bottom of the tunnel being shot in advance of the holes on the sides or on top (see fig. 6). In some cases the top holes were not shot until all the bottom holes were finished. Usually 6 or 7 rounds of holes were shot before the steam shovel began to take

eer. It has recently been under the supervision of W. A. James, M.Can.Soc.C.E., Engineer of Construction, Western Lines, with H. C. Barber as Assitant Engineer, T. Martin, Resident Engineer at the west end and J. R. C. Macredie, M.Can.Soc.C.E., Resident Engineer at the east end. The contractors are Foley Bros., Welch & Stewart. The construction work has been supervised for the contractors by A. C. Dennis, M.Can.Soc.C.E.

The foregoing paper was read before the Canadian Society of Civil Engineers recently.

Canadian Society of Civil Engineers.—At the regular monthly meeting in Montreal, April 13, John Murphy, chairman of the Ottawa Branch, gave an informal talk, illustrated by views, describing his trip over the Panama Canal, and referring particularly to the difficulties of earth slides in the Culebra Cut. Lt.-Col. F. A. Snyder described an original diagram for making military scales for interpolation of contours and reduction and enlargement of maps.

Birthdays of Transportation Men in May.

Many happy returns of the day to:—
Jas. Bain, General Superintendent, Halifax & South Western Ry., Bridge-water, N.S., born at Pictou, N.S., May 24, 1860.

W. R. Baker, Secretary, and Assistant to President, C.P.R., Montreal, born at York, Eng., May 25, 1852.

B. T. Chappell, Superintendent, Pacific Division, Canadian Northern Ry., Vancouver, B.C., born at Charlottetown, P.E. I., May 1, 1878.

W. G. Connolly, City Passenger and Ticket Agent, C.P.R., Vancouver, B.C., born at McAdam Jct., N.B., May 28, 1889.

M. Donaldson, M.Can.Soc.C.E., Vice

M. A. Fullington, A.M.Can.Soc.C.E., Superintendent, District 3, Eastern Division, C.P.R., Montreal, born at Johnson, Vt., May 12, 1880.

Edward Garrett, Superintendent, Park and River Division, International Ry., Niagara Falls, Ont., born at Cataraqui, Ont., May 24, 1868.

G. E. Graham, General Manager, Dominion Atlantic Ry., Kentville, N.S., born May, 1870.

J. Graham, Roadmaster, C.P.R., Nelson, B.C., born in Ontario, May 22, 1870.

G. H. Hedge, General Master Mechanic, Western Lines, Canadian Northern Ry., Winnipeg, born at Neath, Wales, May 26, 1865.

W. T. Huggan, Divisional Accountant and District Passenger Agent, Prince Edward Island Ry., Charlottetown, P.E.I., born at Halifax, N.S., May 24, 1851.

J. Irwin, Superintendent, Toronto District, Ontario Division, Canadian Northern Ry., born at Clinton, Ont., May 28, 1866.

S. McElroy, Trainmaster, Canadian Northern Ry., Rainy River, Ont., born at Lindsay, Ont., May 1, 1875.

W. Marshall, Assistant Manager of Telegraphs, C.P.R., Winnipeg, born at Garden Island, Ont., May 18, 1859.

J. N. Murphy, Trainmaster, C.P.R., Medicine Hat, Alta., born at Mooretown, Ont., May 10, 1879.

W. J. Rooney, Divisional Superintendent of Telegraphs, Alberta and British Columbia Lines, Grand Trunk Pacific Ry., Edmonton, Alta., born at Toronto, May 22, 1882.

A. C. Shaw, Passenger Department, C.P.R., Montreal, born at Detroit, Mich., May 12, 1865.

W. Stapleton, District Passenger Agent, Canadian Northern Ry., Saskatoon, Sask., born at Bristol, Eng., May 20, 1884.

E. Tiffin, General Western Agent, Canadian Government Railways, Toronto, born at Hamilton, Ont., May 5, 1849.

J. H. Walsh, General Manager, Quebec Central Ry., Sherbrooke, Que., born at Quebec, May 12, 1860.

H. K. Wicksteed, B.A.Sc., M.Can.Soc.C.E., Chief Engineer of Surveys, Mackenzie, Mann & Co., Ltd., Toronto, born at Quebec, May 25, 1855.

James Yeo, ex-Roadmaster, Intercolonial Ry., Riviere du Loup, Que., born at Bideford, Devonshire, Eng., May 1, 1830.

The Traveling Engineers' Association will hold its annual convention at Chicago, Ill., Sept 5 to 8, when discussions will take place on the following subjects: the effect of mechanical firing and lubricating of locomotives on the cost of operation; advantages of super-heater brick arches and other modern appliances on large locomotives especially those of the Mallet type; prevention of dense black smoke and its relation to the cost of fuel and locomotive repairs; make up and handling of modern freight trains on level and steep grades to avoid damage to draft rigging; and assignment of power from standpoints of efficient service and economy in fuel and maintenance. W. O. Thompson, N.Y.C.R. Carshops, East Buffalo, N.Y., is Secretary.

British Railway War Traffic.—Fifteen thousand special trains have been run over the London & South Western Ry. during the past year in connection with movements of troops. This was independent of the large number of trains for soldiers on leave, many trains run in connection with troop movements, and 2,500 ambulance trains.

ROGERS PASS TUNNEL.

B. A. Bourgeois, Assistant to Comptroller, and Treasurer, Canadian Government Railways, Moncton, N.B., born there May 24, 1869.

G. S. Cantlie, ex-General Superintendent, Car Service, C.P.R., Montreal, now in military service with Canadian Overseas Forces, born at Montreal, May 2, 1867.

President and General Manager, Grand Trunk Pacific Ry., Winnipeg, born near Edinburgh, Scotland, May 1, 1851.

A. E. Duff, ex-District Passenger Agent, G.T.R., Toronto, now of Winnipeg, born at Sherbrooke, Que., May 1, 1872.

G. C. Dunn, Division Engineer, Grand Trunk Pacific Ry., Winnipeg, born at Quebec, May 13, 1862.

Freight Cars for Paris, Lyons and Mediterranean Railway.

The Paris, Lyons & Mediterranean Ry. operates more than 6,000 miles of line, extending from Paris through Lyons, Marseilles and Monte Carlo to Ventimille on the Italian border, with a branch line running east from Macon to the Swiss frontier, making a direct route to Geneva. The National Steel Car Co., Ltd., Hamilton, Ont., has an order for 4,000 cars for this line and which represent a standard design of car as employed in the past for general freight traffic, yet being of a type especially adapted for military purposes, having a registered capacity of either 40 men or 18 horses in this service. The cars are of 20 tons capacity, weighing approximately 25,000 lbs. when empty, with the following general dimensions:

Length over buffers.....	28 ft. 6 ins.
Length over end sills.....	23 ft. 10 ins.
Length inside.....	23 ft. 7 1/2 ins.
Width over side sheathing.....	8 ft. 9 1/2 ins.
Width inside.....	8 ft. 7 ins.
Height over body roof.....	12 ft. 2 ins.
Height inside.....	8 ft. 1 in.
Gauge.....	4 ft. 8 1/2 ins.

pulling strains. A centre draw hook is connected up to the ends of the combination draft and buffing springs through suitable castings. The whole of the underframe is covered with flooring 1 9/16 in. thick by approximately 8 1/2 in. width of face.

The superstructure embodies the use of six side post tees, 4 x 4 x 5/16 in., to 3/8 in., each side and two door post angles 3 x 3 x 3/8 in. The lower ends of these posts are rivetted to steel strap brackets projecting from the pedestal sills.

The upper ends are tied by side plate of 2 1/2 x 1 1/4 x 5/16 in. angle, which is reinforced above the door opening by a plate 6 in. wide and 5/16 in. thick. The side posts are also tied by a diagonal steel strap brace 3 in. wide x 5/16 in. thick, extending below the shutter openings from the side post at end to the door post. The two end posts at each end of car are of special I section 4 in. high, with one flange 3 1/4 in. wide and the other

ing 4 in. beyond the side sheathing.

The brake equipment is hand operated and of high capacity screw actuated type, on account of the fact that in train operation employees are only stationed on a few cars, which have to do all the braking for the train. A cabin, projecting 18 in. above the body roof and approximately 27 1/2 in. beyond the end sheathing is located at one end of the car to receive the brake wheel, same being connected up to a shaft through gearing and delivering a braking force equivalent to 163% of the loaded weight of car. Steps are provided leading up to a door on each side. Windows are located on all four sides. There are two hinged seats inside, fitted with counter weights to keep them in a upright position when not in use.

All structural steel parts receive one coat of red lead on contact surfaces when assembling and one general coat of red lead after assembling, which, with a final coat of black, comprises the finish. The

Paris, Lyons & Mediterranean Railway Freight Car.

The general construction throughout is the usual composite type employed on the European continent and embodies the use of 4 wheels forming a rigid wheel base of 12 1-3 ft. The underframe is composed of a set of strong side sills and end sills, being firmly connected at the corners, forming a stiff panel frame, which sustains the lading and buffing shocks as a unit. The end sills and pedestal sills are of 10 in. rolled steel channels weighing 21.8 lbs. a foot; the four pedestal cross ties are only 7 in. deep, weighing 12.25 lbs. a foot. A single centre sill extends from cross-tie to cross-tie and is continued to the end sill by two pairs of 2 3/8 x 2 3/8 x 5/16 in. rolled steel angles, to which the draft rigging is connected. The upper pair of angles are rivetted in place, while the lower pair are bolted, in order to be removable to allow for the proper replacement of the semi-elliptic draft springs, which travel between the upper and lower pairs of angles, allowing the springs to function as a buffing element as well as taking

flange 1 1/4 in. wide, all being tied at the top by a rolled steel end plate 2 1/2 x 1 1/4 x 5/16 in., also by two diagonal steel strap braces 3 in. wide x 5/16 in. thick, the ends of which are connected to the end side post, through the angles, which are rivetted to the back of same, extending from top of end sill to end plate. There are 6 steel carlines of angle section, to which wood furrings are bolted. These are supplemented by 9 wooden carlines and covered with a layer of white pine boards, over which is spread a layer of canvas. The sides and ends are sheathed with yellow pine and the flooring throughout is oak for half the cars and yellow pine for the remainder. Four shutter openings are provided in each side of the car, size 3 1/2 ft. x 21 in. high. The side doors are designed to roll on trucks of angle iron section, whereas the shutters slide up and down between guides on the side posts. The shutter and door openings are protected at the top by a 3/32 in. pressed steel plate running the full length of side and project-

brake and running gear and all detachable metallic parts receive two coats of black paint. The entire surface of woodwork, inside and outside, receives one coat of red oxide of iron before assembling, another coat of same after assembling and final finishing coat of red, all lettering and stencilling being in white. Roof canvas is soaked in linseed oil, then applied to roof, and when dry it receives two coats of black paint.

A Maine Railway Story.—One of Canadian Railway and Marine World's esteemed subscribers, a well known railway civil engineer, has sent in the following story which he heard in Maine recently. When a certain railway was about to build a branch line to the north part of the state, it solicited bonuses from farmers along the line in the shape of right of way. One enthusiastic farmer said that he would either grade a mile of the line or give \$1,000. The railway accepted the money.

Railway Statistics for Year Ended June 30, 1915.

The following summary of Canadian railway statistics for the year ended June 30, 1915, has been prepared by the Comptroller of Railway Statistics, J. L. Payne:

Mileage.—An addition of 4,787 miles was made for the year. This brought the total up to 35,582 miles. By 10 year periods, railway mileage has grown as follows:—

1865	2,240	1895	15,977
1875	4,804	1905	20,487
1885	10,773	1915	35,582

By provinces, the railway mileage for 1915, with the increases for the year, is shown in the following statement:—

	Miles.	Increase.
Nova Scotia	1,367	2
Prince Edward Island	275	...
New Brunswick	1,962	123
Quebec	4,677	634
Ontario	10,703	1,448
Manitoba	4,898	422
Saskatchewan	5,327	238
Alberta	3,174	629
British Columbia	3,000	1,122
Yukon	102	...

In the United States	398	173
Total	35,582	4,787

There was a decrease in Prince Edward Island of 4 miles. The mileage in the United States relates to lines which merely form operating connections between points in Canada—like the Canadian Pacific short line across Maine.

There were on June 30, 1915, 1,593 miles of line actually under construction, apart from surveys and projections.

The addition to double track in 1915 was 158 miles, bringing up the total to 2,451 miles. Yard track and sidings increased 335 miles, making the aggregate 7,852. The total of all tracks was 45,885 miles.

Capitalization.—An increase of \$66,990,127 in railway capitalization for 1915 brought the total up to \$1,875,810,888, made up as follows:—Stocks, \$847,801,101; consolidated debenture stock (C.P.R.), \$176,284,882; bonds, \$851,724,905. There were also stocks to the amount of \$29,257,500 and bonds for \$52,224,004 outstanding against lines under construction. Dividend on stocks in 1915 amounted to \$32,341,337, against \$30,434,601 for 1914. Government owned and operated lines, which are not capitalized, showed a cost of \$293,542,201.

Government Aid.—Cash subsidies amounted to \$5,059,284 in 1915, of which the Dominion contributed \$4,644,664 and the provinces \$414,620. The whole account for aid in cash, constructed lines, loans, etc., stood as follows on June 30:—

By the Dominion	\$ 183,479,193
By the provinces	37,437,895
By municipalities	17,914,836

Total

Land grants by the Dominion and Provinces totalled 43,929,312 acres up to June 30. Guarantees have been authorized as follows:—

Dominion	\$ 188,965,063
Manitoba	25,221,580
Alberta	59,410,450
Saskatchewan	41,625,000
Ontario	7,860,000
British Columbia	80,332,072
New Brunswick	6,063,000
Quebec	392,000

Total

Under these authorizations, bonds for \$350,622,918 had actually been executed on June 30.

Public Service.—There were 46,322,035 passengers carried in 1915, and 87,204,838 tons of freight. As compared with the preceding year, there was a decrease of 380,245 in the number of passengers, and 14,189,151 in the tons of freight. The

history of freight traffic growth is shown in the following statement:—

	Tons.		Tons.
1885	14,659,271	1905	50,893,957
1895	21,524,421	1915	87,204,838

Per mile of line there were 1,299 passengers carried in 1915, or 217 less than for 1914. Average receipts per passenger per mile were 2.021c—an advance of 0.014 over 1914. The average receipts per passenger from the sale of tickets were \$1.083, which fell short of the record for 1914 by 0.245c. The average number of passengers per train declined from 59 to 50; but the average number of passengers per car remained at 14. The average journey was 54 miles, or 12 miles lower than the figures for 1914.

The average receipts per ton of freight were \$1.520, against \$1.614 for the preceding year; the average receipts per ton per mile were 0.751 cent, or $\frac{3}{4}$ c, against 0.742 for 1914. Each mile of line yielded an average of 2,451 tons of freight traffic, 842 tons less than for 1914. The average load per train was 344 tons, with an average of 18.1 loaded cars per train. The average carload was 18.43 tons. The average haul was 212 miles, which happens to be the longest in any country.

Following is a statement of the various classes of freight, and the ratio which each class bore to the total:—

	Tons.	Per cent.
Products of agriculture	16,385,909	18.79
“ animals	3,356,657	3.75
“ mines	33,127,535	37.89
“ forest	13,976,555	16.03
Manufactures	12,586,393	14.76
Merchandise	5,272,163	6.04
Miscellaneous	2,393,123	2.74
Total	87,204,838	

During the year 22,134,118 tons were received from United States roads, or 25%, against 23,553,833 in 1914.

Earnings and Operating Expenses.—Gross earnings fell from \$243,083,539 in 1914 to \$199,843,072 in 1915. This decline of 17.8% was due to the disturbed conditions created by the European war, and came after a sustained upward movement in traffic and revenue. That movement may be measured by the following facts with respect to gross earnings:—

1885	\$32,227,469	1905	\$106,467,198
1895	46,785,486	1915	199,843,072

Operating expenses also decreased. The total of \$147,731,099 for 1915 was \$31,244,159 less than for 1914. This aggregate was equal to 73.9% of gross earnings. The difference between gross earnings and operating expenses—which is popularly, but erroneously, regarded as net earnings—was \$52,111,973, as compared with \$64,108,280 in the year preceding.

Gross earnings in 1914 and 1915 were realized from the following sources:—

	1914.	1915.
Passengers	\$ 62,012,296	\$ 50,173,267
Mails	2,500,176	3,026,773
Express	6,444,214	6,059,385
Baggage, parlor cars, etc.	1,607,517	1,440,509
Freight	165,753,731	132,543,984
Station and train privileges	1,044,737	936,268
Telegraphs, rents, etc.	3,720,868	3,718,366
Total	\$243,083,539	\$199,843,072

Railways had further gross earnings from outside operations, amounting in 1915 to \$20,332,306, which, after deducting operating cost, were reduced to \$6,273,794. There were still other sources of income, and these in 1915 produced a net of \$14,111,483. The final gross corporate income was \$72,497,250, as against \$82,134,694 in 1914. Gross earnings per mile of line in 1915 averaged \$5,616.41—

a decrease of \$2,277.19 for the year. The large addition to operating mileage in 1915—and new mileage is invariably low in earning power—had the effect of diluting many averages. Operating expenses were equal to \$4,151.57 per mile of line, compared with \$5,811.83 in 1914. Notwithstanding the heavy loss of gross earnings during the year, the returns show that Canadian railways made normal expenditures for the maintenance of roadbed and equipment.

Equipment.—Although there were additions to motive power and to cars in passenger service during 1915, there was an actual decrease of 2,500 in the number of cars available for freight service. It would seem that railways, after several years of unprecedented expansion in equipment, took advantage of the conditions prevailing in 1915 to cut out of commission a considerable number of old and much worn units.

Employees.—The extraordinary conditions of 1915 also had the effect of reducing the number of employees by 35,000—from 159,142 to 124,142. The salaries and wages bill declined from \$111,762,972 to \$90,215,727. There was no perceptible reduction, however, in the average rates of remuneration.

Accidents.—Railway operations resulted in 384 persons being killed and 3,161 injured. Of these, 360 were killed and 1,578 injured from the movement of trains. The record in this regard was as follows:—

	Killed.	Injured.
Passengers	17	304
Employees	102	946
Trespassers	168	147
Non-trespassers	73	167
Postal clerks, etc.	14
Total	360	1,578

One passenger in every 2,724,825 was killed, and one in every 140,369 was injured. This was an exceptionally good record. The toll at highway crossings was 66 killed and 112 injured, compared with 81 killed and 122 injured in 1914. The movement toward the protection of crossings progressed satisfactorily during the year.

Frictionless Rails.—The C.P.R. had about 500 tons of frictionless rails rolled by the Algoma Steel Corporation last year, which have been laid for trial purposes at a number of points, but particularly on the hill west of Galt, Ont.

Restaurant Cars.—The Pennsylvania Rd. has discontinued the use of the name “dining car.” All its cars formerly called “dining cars” are now known as “restaurant cars.” In announcing the change, the Pennsylvania management states that the term “dining” is a misnomer, as the word “dining” properly applies to a place to eat dinner. As breakfast and luncheon, as well as dinner, are served in the so called “dining car,” it is actually a “restaurant car” and the Pennsylvania has taken the initiative on this continent in abolishing the misnomer and in giving its proper title.

Delaware, Lackawanna & Western Rd. Connection.—In the discussion on the extension of the charters for railways in the Niagara Peninsula of Ontario, controlled by Canadian Northern interests, the rumor has been revived that when the C.N.R. builds to the Niagara frontier it will connect with the D.L. & W. and thus secure direct connection with New York. The D.L. & W. mileage from Buffalo to New York is 411 miles.

Railway Mechanical Methods and Devices.

Vacuum Cleaner on Canadian Northern.

A useful and inexpensive type of portable vacuum cleaner as used by the Canadian Northern Ry. is shown in the accom-

Piston Rod Drift Pin.

panying plan. The ordinary shop or yard air line is employed to form a jet which causes a vacuum to be set up in the hose line connecting with the vacuum tip. The air jet is throttled by use of a 1 in. globe

Piston Rod Drift Pin on Grand Trunk Pacific.

A practical type of shop kink for removing piston rods from crossheads, as used in the Grand Trunk Pacific shops at

thereby avoiding any damage to the motion work, and is bevelled to receive the sloping face of the wedge, which is inserted through the hollow shank of the wrist pin opening sleeve. The material used throughout is of common stock as regularly carried at the shops. We are indebted to W. W. Yeager, Locomotive Foreman G.T.P. at Biggar, Sask., for the foregoing information.

Machining Bushings in Grand Trunk Shops.

Bushings are machined in the G.T.R. shops, at Stratford, Ont., at one setting of the blank in the vertical boring mill. The method of operation is shown in the accompanying illustration. The bushing blank pattern is made about 1 in. longer at the lower end than the finished blank requires, and has four projecting pronged feet on which the blank sits and is bolted to the table or parallel strips as shown. It is first centred and held lightly in place by the three vise jaws, after which it is bolted down by the lug bolts. The heavy cut is then taken over the whole inside and outside surfaces, with the blank secured by both the vises and bolts. Following the heavy cut, the vise jaws are released, leaving to the lugs the holding of the blank, the final finishing cut then being taken. The object of doing this

Portable Vacuum Cleaner.

valve, located so as to be convenient of operation. Two lengths of cleaning outfits are employed, one for use of seats, etc., and the other for cleaning carpets and floors. The apparatus shown has already given more than two years satisfactory service.

the standard crosshead and is provided with a hollow tapered steel sleeve, which is fastened through the wrist pin opening in the crosshead by a 3/4 in. hexagon nut and plate washer. The sleeve is recessed to hold a 2 in. diameter driving block in line with the piston rod to be removed.

is to eliminate the springing strains set up in the blank by the compression caused by the vise jaws. A cutting off tool finally removes the bushing to the desired length, leaving about $\frac{1}{2}$ in. of waste stock attached to the bolting lugs.

The same system of lugged blanks is

employed for piston rings, the blank for the first cut being held both by the vises and bolts, and for the final cut, by the bolts alone. The rings are then severed by the cutting off tool. Bushings of different sizes are all handled in the same way.

Vise for Triple Valves, Canadian Pacific Railway.

J. Anthony, Air Brake Inspector, C.P.R., Winnipeg, has designed a vise for repairing and cleaning triple valves. Before it was used, it was customary to use an ordinary bench vise for the work. Owing to the irregular shape of the triple valve, it is only possible to grip it in a vise in certain positions; these are not the most advantageous for the work, and the new vise overcomes this difficulty. The arrangement consists of a special disc suited for each type of triple valve to which the triple is attached through the bolt holes in the flange by cotter pins. The disc is placed in the stand position of the

Machining Bushings from Blanks with Bolting Lugs.

vise and the stop pins dropped into position; the second position is attained by rotating the valve in the socket until pins drop into position 180 degrees from first place. The advantage is taken to raise height of triple so as to be most convenient for the operator. The introduction of these vises has made possible more output with less labor than before. We are indebted to E. T. Spidy, Shop Engineer, C.P.R., Winnipeg, for the foregoing information.

Rogers Pass Tunnel Progress.

The following table, for which we are indebted to J. G. Sullivan, M.Can.Soc.C.E., Chief Engineer, C.P.R., Winnipeg, shows the progress made from Feb. 26 to March 30, and the total progress to March 30:—

	Progress.	Total.
EAST END—		
Main tunnel	828 ft.	10,979 ft.
WEST END—		
Main tunnel	1,006 ft.	12,258 ft.

Canadian Railway Club.—At the monthly meeting in Montreal April 11, S. J. Sarjant, M.I.C.E., ex-Locomotive Superintendent, Great Indian Peninsula Ry., read a paper on the railways of India, which was illustrated by stereoptican views.

Report on Economics of Railway Location.

The American Railway Engineering Association's committee on economics of railway location, of which J. G. Sullivan, Chief Engineer, Western Lines, C.P.R., is chairman, and of which A. S. Going, Engineer of Construction, G.T.R., and A. C. Dennis, Superintendent for Foley Bros., Welch & Stewart, contractors, Rogers Pass tunnel, C.P.R. are members, has reported that it is not in shape to submit any conclusions or recommendations this year and therefore reports progress.

The report continues: "Sub-committee no. 4, under Prof. E. C. Schmidt, as

the amount of work done and the other varying with the locomotive miles run. As a result of these studies, the following formulae have been adopted for Western Lines.

"Single-Track Operation. — Fairly busy lines, 3.5 lbs. coal per calculated horsepower hour, plus 70 lbs. coal per engine miles run.

"Double-Track Operation.—3 lbs. coal per calculated horsepower hour, plus 60 lbs coal per engine miles run.

"The above figures are an average for the year, for conditions on the Western Lines, C.P.R., using locomotives equipped with superheaters, and having drawbar pull varying from 36,000 to 42,000 lbs. each. The calculated horsepower is the work done overcoming resistance."

Vise for Triple Valves.

chairman, did some work and sent out a circular, but is not in position at present to present information from which we can draw conclusions. Sub committee no. 5, under P. M. LaBach, chairman, made a study and submitted the result of freight locomotive tests on the Pennsylvania Lines, Logansport Division, made in 1912. This shows results for special conditions and is very instructive. It was thought advisable, however, not to publish this report at this time.

"The chairman of the committee made a careful study of the statistics of coal consumption in freight services on the Western Lines of the Canadian Pacific for the past eight years. These studies have convinced him that instead of attempting to base coal consumption directly on the amount of work done, that it is better to divide the coal into two factors, one varying directly with

Columbia & Western Ry. Land Grant Taxation.—Answering questions in the British Columbia Legislature recently, the Minister of Finance stated that the late F. A. Heinze's interests in the C. & W. R. subsidy lands were assessed at \$11,556 in each of years 1914, 1915 and 1916, but no taxes had been collected. The taxes for 1914 and 1915 were subject to 6% interest from the day they became delinquent, and the 1916 taxes were subject to a discount of 10% if paid before June. The solicitor for the Heinze estate had informed the Government that the taxes would be paid before the Government took any steps to advertise the lands for sale. The subsidy lands of the railway, now in the C.P.R.'s control, had been assessed at \$43,094.45 for 1912, but no taxes had been collected.

The G.T.R. handled 1,376,189 car loads of freight during 1915.

Spring and Summer Track Work.

By William Downey, Roadmaster, Minneapolis St. Paul and Sault Ste. Marie Ry.

All work should be authorized and mapped out before the spring work starts and estimates prepared of the cost. Every foreman should be given a certain allowance to spend on his section as should also the extra gang foreman. When the recapitulation sheet is made out at the end of the month each foreman should get a copy of it so that he can see how the cost of his work compares with other foremen's on the division. When there is any promotion in line, it should be given to the man who gives the best service.

The secret of handling work consists in selecting, organizing and training men and doing the right thing at the right time. A roadmaster should have a small extra gang to lay the rail, put in sidings and go over his division and do the work on sections where labor is scarce. He should pick out a good foreman for the gang, a man who is well posted on all kinds of track work and who is in line for position as roadmaster. When this crew is working at laying steel, or at other work, it is a good idea to put in two or three section forces with them. The roadmaster should be on the work as much as possible and give the foreman the benefit of his experience. He in time would train the section foremen and their men to carry out his instructions.

A section foreman should be allowed a force large enough to put in the ties, gauge, pick up and dress the track and burn the old ties between the time that the track dries out in the spring and the season of cold rains in the fall. This is the time he should devote to fixing up his track and he should not be allowed to take his force off of this work as long as any of it is left unfinished. Repairing fences, cleaning right of way and all other work should be done at other times. Using the section men for other work at this season is responsible for a great deal of rough track work.

A roadmaster should get what rail is required to take care of his division for the coming year, have it distributed and laid before the tie season commences so that when the new ties are put in, track picked up and gauged, it will not be necessary to tear up the track to lay the rail. An extra gang crew of about 25 to 30 men with the help of two or three section crews and the three man track laying machine will take care of all track laying on any division. The machine does away with 9 or 10 extra men and most of the heavy lifting.

All ties should be bought peeled, thus saving the section men the work of peeling and cleaning up the bark. It will also give the ties a better chance to dry out before they are put in the track while the cost of doing this work is naturally much less at the mills than on the section. The ties should be delivered by Feb. 1, which would force the lumber mills to turn them out before the sap gets up in the timber.

Ties should be distributed, placed and ready to be put in by the time the frost is out of the ground. Every tie that is to be removed from the track should be tested. This can be done by using a good lining bar and block, placing bar under the end of the tie, using it as a lever, or by using a pick under the end of the tie. Ties which raise the track by applying this leverage under them without breaking and have a good tie on each side of them, should be left in the track for another year.

When there are several poor ties at one place which are serviceable for but another year, some good ones should be put in so that all the ties do not give out at the same time. The foreman should go over his track as soon as the frost is out and tie up the places where the ties are the poorest and the track rough. As soon as the ground is dry and the weather hot, he should use two track jacks, picking up all low joints and rough spots and with the use of a spot board, bring all sags to grade. The ties should be slipped in without disturbing the old bed any more than is absolutely necessary and should be tamped while the work is going on so that each will have an equal gearing. This will help to prevent the rails from breaking in the winter.

In spiking, the gauge should be used in every case and each portion of the track put in perfect condition. If the old ties were spiked to gauge at the time they were put in, the inside row will still be in their proper place. By spiking the new ties to gauge, it will bring the rail tight against the inside row on the old ties and all that is necessary to be done is to pull those on the outside that are spread, plug the holes and drive them back in the same place. You will then have your track in gauge without any extra labor. If there is any place where gravel is needed to dress it up to standard, it should be unloaded at selected points so the section men can go back and finish this work.

The ditcher should clean out all ditches and widen all cuts to a standard. The material taken out should be used to widen the fills and should be unloaded with the Lidgerwood and side ploughs, one right and one left. The material should be cleaned out between the ties in cuts down to the under side and should be thrown out so that the ditcher can get it. The roadbed ought to be made to slope from the centre of the track to the ditch, about 1 in. to the foot.

A crew of sufficient force should then be started to raise the track to subgrade, using a 6 in. hanger on a spot board. If sufficient material is not obtained from the ditches to raise the track to subgrade and to widen it out to the standard, and if the ballast is not close by, a steam shovel can place in some other good material close by, using the poorest for widening the fill and the best for raising the track. The track should then be raised to subgrade and widened out to the standard width. Then the distribution of gravel should be started, working from the farthest end so as to make the longest haul first. This material should be unloaded with centre dump cars, unloading enough in a place for a 6 in. raise.

The track is now ready to be raised to grade with a uniform raise of 6 in. A crew of about 30 men and a water boy will be found economical. The spot board should be set upon the top of the grade stakes and the track raised, using 6 track jacks, 3 on a side. One man will raise the track for the crew while another will go ahead and dig the jack holes. Joint tampers can be dispensed with but let the track rest on the jacks until tamped. One man will carry the level board and space the ties. He will be followed by 24 tampers with 3 men to fill in the centres. Whatever ballast is required to fill it out to standard should be unloaded from flat cars with the Lidgerwood and side plough,

keeping the shaper set behind the plough so as to get the right amount of ballast unloaded. The best time to do this is when the surfacing gang is working between switches or in yards. While they are working on main line at these places the unloading crew can go by them on the passing tracks or sidings and when working on the sidings they can go by on the main line without causing any delay to themselves or the surfacing gang. By this method, the material can be unloaded in proper place and the dump line be kept as straight as the rail without any push car work or other expense in moving material. The section men should keep after their track, picking up low places and rough spots, until it is thoroughly settled in perfect grade and surface and then dress it down to a standard. Tracks should not be dressed and surplus gravel removed until it is thoroughly settled and up to grade and surface. If work is handled in this way, whenever you decide to put in rock ballast, or something better than what you have been using, you do not have to make any changes in your roadbed or waste any of the material and labor that you have been using.

Places in the track which heave a great deal each winter should be marked and during the summer holes should be bored from 3 to 4 ft. deep or below the frost line, and filled with cinders. They should be drilled at the end of the ties and between them if there is much heaving. When the ground freezes the following winter and expands, much of the movement will be towards the holes filled with cinders, as they are not packed tightly, instead of forcing upwards and raising the track.

On roads that are not troubled with much snow and frost, it should be so arranged that all double tracks, passing tracks, house tracks and yards be laid in the winter, all ties loaded and distributed, engine wood unloaded and ice houses filled. This work could be taken care of by the section men thus keeping a regular force busy during the entire year. None of the men would have to be laid off in the fall and the trouble with green men in the spring would be overcome.

Canadian Ticket Agents' Association.—

E. de la Hooke, Secretary-Treasurer, has issued a circular outlining arrangements for the annual outing and business meeting which will be held at Port Arthur, Ont. The eastern members will leave Sarnia, Ont., on June 10 at 4 p.m., on a Northern Navigation Co.'s steamship, arriving at Port Arthur early on June 12. They will stay at the Canadian Northern Ry. hotel, the Prince Arthur, and will be given an automobile ride round Port Arthur and Fort William by the Port Arthur City Council and Board of Trade and a steamboat trip round the harbor, and the Canadian Northern will take them by special train to Kakabeka Falls. Port Arthur will be left on June 14 at 8 a.m. by C.P.R. steamship. A short stop will be made at Sault Ste. Marie, and Port McNicoll should be reached on June 16 about 8 a.m., whence a special train will take them to Toronto. Members preferring to make the whole trip by rail may do so. The transportation companies will provide free passage on both trains and steamships, the only charges being for meals and berths. On sleeping car berths there will be a reduction of 50.

The G.T.R. has supplied, at the request of the British military authorities, a series of motion pictures of Canadian scenery and industries, for use in France and Belgium, at the military rest camps.

Canadian Northern Railway Construction, Betterments, Etc.

Canadian Northern Ontario Ry.—The agreement, dated Oct. 1, 1915, entered into between the company and the C.P.R., respecting lines in North Toronto, and the use of the station being erected on Yonge St., has been ratified by the Dominion Parliament.

The Dominion Parliament has ratified an agreement between the Canadian Northern Ontario Ry and the Canadian Northern Ry. on the one hand, and the C.P.R. on the other, respecting the construction, maintenance and operation of a joint section, to connect the C.N.O.R. east of Current River, Ont., with the C.P.R., the operation of trains over the C.P.R. for about two miles, and a connection with the C.N.R. at Arthur St., Port Arthur, Ont. The agreement is to run for 20 years, and at the end of that time may be renewed for a term of 999 years in all from Oct. 1, 1915. The rental to be paid for existing properties of the C.P.R. is \$312 a month for land, \$73 a month for a specified piece of land on which tracks are to be built, and \$220 a month for existing improvements; for further improvements, a rental at the rate of 4½% on half the ascertained value of the land and the cost of improvements, payable monthly. The cost of putting in connections and crossover is to be borne by the C.N.O.Ry. and the C.N.R., the work being done by the C.P.R. One half of the cost of maintenance and operation of the joint lines is to be borne by the C.N. companies, together with the entire cost of the maintenance of crossover and connections, and the special interlocking apparatus and other protection appliances.

A press report states that the company proposes to start at once to extend the C.N.O.R. from the present terminus at Current River, to Stephen St., Port Arthur, which work includes a bridge over the Current River. In the agreement above referred to, there is a section providing that within 10 years the C.N.O.R. may withdraw in respect such piece of line as will make the eastern terminus of the joint lines at Stephen St. This report would indicate that the C.N.O.R. is about to build its own line within that area.

Canadian Northern Ry.—The Dominion Parliament has extended the time within which the company may build the projected line from near Grosse Isle on the Oak Point branch, northerly and westerly to Grand Rapids, with a branch to Sturgeon Bay, Man.

The company is applying to the Brandon, Man., City Council for permission to close a number of streets in the south end of the city.

The Minister of Railways for Saskatchewan, is reported to have said on April 10 that he was about to take up with the company the question of the work to be done in the province on the lines for which guaranteed bonds had been issued.

A press report states that the Premier of Saskatchewan has been informed by M. H. MacLeod, General Manager and Chief Engineer, Western Lines, that it is expected to lay 35 miles of steel on the extension of the Macrorie Branch westerly from Eston, this year.

Canadian Northern Pacific Ry.—Replying to questions in the British Columbia Legislature recently, the Minister of Finance stated that the province guaranteed the company's bonds for \$21,000,000. Of these guaranteed bonds, \$18,286,573 had been sold, realizing \$17,310,037.40,

which amount had been paid out to the company as the work progressed.

Vancouver Terminals.—The general plan for the station to be erected on the False Creek property, east of Main St., was tentatively approved by the Vancouver City Council's bridges and railway committee, April 4. Detail plans and estimates are being worked out. The City Engineer estimates that the station building will cost about \$1,050,000. The company was not required by its agreement with the city to submit plans for approval. It is expected a contract will be let for the foundation work within a few weeks. Referring to the plans, the Vancouver Province says:—

"The drawings presented show a structure of classical Doric design, 321 x 120 ft., of modern fireproof construction. Twelve Corinthian columns stand at intervals across the entire front. The centre portion of the proposed structure reaches to a height of 100 ft. from the ground, the tower proper being 96 ft. high. The ends of the building stand 64 ft. high, and the portions between the centre and the ends, 60 ft. high. These sections are three stories in height, and the ends and the centre portion are four stories high. The building is designed for white or grey stone. Many modern features are embodied in the interior design. A large main entrance is provided in the central portion through which a passage runs into a very wide lobby leading into the general waiting room, 150 x 50 ft. wide. In this are the ticket offices, etc. Adjacent to the ticket offices is the baggage room and on the opposite side of the building, with means of access from the waiting rooms, are the lunch and dining rooms. There are numerous lobbies off the waiting room. A barber shop is provided, a men's waiting room and a women's waiting room and retiring room; a government mail room and the dining and sleeping car department; C. N. Ex. Co. and commercial telegraphs. The upper stories are devoted to traffic offices. A passage-way leads from the waiting room to the train tracks at the back of the station. Here a large covered concourse is provided, 50 ft. wide and covered platforms from 1,200 to 1,500 ft. long. Provision is made for 16 tracks. The basement is to be utilized for storage purposes, etc. The floors throughout are of terrazzi and marble; the stairways are marble and the finish throughout is in natural wood."

Reply to a question in the Legislature as to the station building and terminals, the Minister of Railways said, April 8:—"The work has been proceeded with slowly, evidently from a desire to modify and revise the proposed works. This is a matter that is receiving very careful consideration before a final decision is arrived at. It appears probable that the work will not be further delayed. The filling in of the land surrounding the station at Vancouver will be started immediately, and as soon as the plans and specifications are completed, tenders will be called for at once, and it is hoped that the excavation and basement will be put in within six weeks."

Replying to questions in the Legislature, the Minister of Finance said recently that the proceeds of the \$8,614,000 of C.N.P.R. terminal bonds issued amounted to \$7,954,814.43, of which there had been expended to Dec. 31, 1915, at Port Mann,

\$360,331.60; New Westminster, \$1,376,361.15; Vancouver, \$330,249.80; Steveston, \$344,541.11; Patricia Bay, \$37,430.76; total, \$2,448,914.42. The government held drawbacks of \$37,436.74 on these accounts, making the amount at the credit of the account, \$5,543,336.75.

Lines on Victoria Island.—The Minister of Finance informed the B.C. Legislature recently that up to Feb. 10, the company had paid \$4,100,105 to contractors on the line from Victoria to Port Alberni, 136.50 miles. About 65% of the work had been completed and the government had paid out of the proceeds of the guaranteed bond issue, \$2,879,259, or 58%. An expenditure of \$861,294 will be required to complete the grading and bridging, and a total of \$1,380,662 to complete the line ready for operation as far as already graded. About six miles of grading is required to be done at the Victoria end. (April, pg. 145.)

Canadian Government Railways Rolling Stock.

The acting Minister of Railways, in discussing Departmental estimates for 1916-17 in the House of Commons recently, in referring to the condition of the rolling stock, said: "The sums which had been transferred to the three renewal accounts, viz.: \$600,000 to the renewal of equipment account, \$400,000 to the rail renewal account, and \$100,000 fire renewal account, will be used entirely for the providing of new equipment. At no time in the history of the Government Railways has new equipment been needed more than at the present time, owing to the fact that we have taken over 2,000 miles of railway on which there was very little, if any, equipment. During the past year new rolling stock has been delivered as follows:—

10 passenger locomotives and 15 consolidated locomotives, Canadian Locomotive Co.
250 steel gondola cars, Eastern Car Co.
250 flat cars, Nova Scotia Car Co.
6 first class steel cars, Canadian Car & Foundry Co.
6 baggage and postal cars, being built in Moncton shops are about 55 per cent. completed.
2 wrecking cranes and one steam shovel delivered.

The following amounts were set aside for renewal of equipment account: 1912-13, \$777,863.74; 1913-14, \$179,362.78; 1914-15, \$36,465.08; 1915-16, \$900,000. The following work had been done so far as repairs are concerned:—

	1913-14	1914-15	Increase	Decrease
Locomotives	173	392	119	
Freight cars	19,208	14,065		5,143
Passenger cars	472	505	33	

To organize the initial service on the National Transcontinental, there were transferred from the Intercolonial, 98 locomotives, 33 passenger cars and 1,000 freight cars. "We were able to transfer locomotives from the Intercolonial," said the acting Minister, "for the reason that during the dull times last winter we repaired all our Intercolonial locomotives, and were able at the opening of the National Transcontinental to utilize 95% of our power on the two railways. Ordinarily, 20% of the locomotives of a railway are out of commission for repairs or other causes. These locomotives, with the assistance of 13 rented from the G.T. Pacific, have enabled us to handle the grain situation as well as we have. In addition to this equipment loaned, much of which will be absorbed permanently by the National Transcontinental, we purchased 1,000 steel frame box cars, at a cost of \$1,095,000, which were delivered in September.

Traffic Orders by Board of Railway Commissioners.

Interchange Facilities at Moose Jaw.

24797. Mar. 16. Re application of Board of Trade of Moose Jaw, Sask., for an order directing the Grand Trunk Pacific Branch Lines Co. and the C.P.R. to install interchange tracks for inter-switching purposes at Moose Jaw, it is ordered that the G.T.P. Branch Lines Co. be directed to construct interchange tracks between its spur to the Government Elevator and the C.P.R. Outlook Branch at Moose Jaw, that detail plans showing the proposed interchange tracks be filed for the approval of an engineer of the Board within 30 days from date, the work to be completed by June 1, 1916; and that the question of the cost of constructing and maintaining the tracks be reserved to be disposed of at the next sittings of the Board in Moose Jaw.

Nanaimo Not Terminal Freight Rate Point.

24808 Mar. 18, the complaint of Nanaimo, B.C., Board of Trade against the proposed C.P.R. new tariff eliminating Nanaimo as a terminal freight rate point. It is ordered that the complaint be, and it is hereby, dismissed.

The Chief Railway Commissioner, Sir Henry Drayton gave the following judgment. Nanaimo for many years has had the benefit of coast terminal rates. This benefit has been taken from it. As the lower rate was of course entirely out of line and lower than rates fixed as reasonable for the service, the difficulty of ordering the company to restore the old rate was obvious. On the other hand, there is no doubt that more or less inconvenience and sometimes real hardship results from changes in rates; and judgment was reserved, so that the matter could be looked into with a view of ascertaining whether or not the Board could consistently order a restitution of the rate. I am unable to find any ground on which such an order could be based. The principle that a railway may meet water competition or not just as it pleases is of general acceptance and so well known that it need not be emphasized. If the railway does not choose to meet the water competition, the Board's whole right to interfere with the rate is confined to a case where the rate as charged is unreasonable for the service rendered. It is impossible to say such is here the fact. It appears that the C.P.R. for years maintained its car ferry at Ladysmith, giving Nanaimo terminal coast rates involving a rail movement from Ladysmith to Nanaimo of 14 miles without charge. The Ladysmith facility was not owned by the company, and in view of the transfer charges which were being exacted, the C.P.R. now runs its car ferry to Esquimalt. The rail haul from Esquimalt to Nanaimo is 69 miles. The result is that to give Nanaimo the benefit to the terminal rate, the Board must say that the C.P.R. shall carry Nanaimo shipments 69 miles for nothing. Of course, if the railway company was performing a similar service for nothing for a similar or considerable distance, the Board could order that Nanaimo should get the benefit of this 69 mile haul for nothing, on the ground of discrimination. Such is not the case, the only points enjoying terminal rates being Esquimalt and Victoria, and as Esquimalt, of course, adjoins Victoria, there is no discrimination; and no order can be made.

Specifications for Cheese Boxes.

24837. Mar. 28. Re order 24188, Sept. 18, 1915, approving Supplement 5 to Canadian Freight Classification 16, to become effective not later than Nov. 1, 1915, with the exception of the item on pg. 9 giving specifications for cheese boxes, which was to become effective not later than Dec. 1, 1915: It is ordered that the effective date of the said item be finally extended until Aug. 1, 1916. No further suspension will be permitted.

Minimum Weight for Lumber.

24840. Mar. 29. Re application of R. H. H. Alexander, Secretary-Treasurer, British Columbia Lumber & Shingle Manufacturers, Ltd., of Vancouver, B.C., and the Riverside Lumber Co., Ltd., and A. B. Cushing Lumber Company, Ltd., both of Calgary, Alta., for an order postponing the effective date of the increased minimum weight for fir, spruce, hemlock, and common cedar lumber, when loaded in cars under 36 ft. in length, from 30,000 to 35,000 lbs. per car, which, as appearing in C.P.R. Supplement 59 to its Tariff, C. R. C. W. 1806, was, on the application of the said Alexander, suspended until further order by order 24550, Dec. 13, 1915: It appearing that the said minimum weight has been republished by the C.P.R. in its Supplement 68 to Tariff C. R. C. W. 1806, so as to give the notice required by the Railway Act, and has been continued in Supplement 69 to the said tariff: It is ordered that the effective date of the said increased minimum weight be postponed until further order.

Interswitching at Chatham, Ont.

24868. April 5.—The complaint of N. H. Taylor and Canada Flour Mills Co. of Chatham, Ont., against the interswitching charge of 2c per 100 lbs. on grain, ex-lakes, milled in transit at Chatham: Upon hearing the complaint at Toronto, Feb. 22, the complainants and the C.P.R. being represented; upon the report of the Chief Traffic Officer of the Board, it is ordered that the complaint be dismissed.

Question of Rights at False Creek, Vancouver.—Champion & White are owners of a wharf on False Creek, Vancouver, where the Canadian Northern Pacific Ry. and the Great Northern Ry. are carrying out large reclamation works, under an agreement with the city. Part of this work consists of a seawall which is in course of erection by the Canadian Northern. An interim injunction to prohibit the building of the seawall was dissolved, some time ago, on the ground that it did not interfere with the carrying on of complainants' business, but in the action on the main question, Champion & White, who hold title under an old Crown grant, claim that they have riparian rights on the south side of their wharf, which they will be entirely cut off from by the seawall. This, the trial judge held to be the case, and an injunction was granted against the city. It is expected that while there will be an appeal, a settlement will be reached, under which the work will proceed on the understanding that arbitrated damages will be paid if the city is ultimately found to be liable.

British Soldiers and Railway Equipment Repair.—The British military authorities have released a number of soldiers to repair locomotives and cars, owing to the great number out of service for necessary repairs, which had caused congestion of traffic.

Railway Finance, Meetings, Etc.

Algoma Eastern Ry.—There have been deposited with the Secretary of State at Ottawa, and with the Provincial Secretary at Toronto, duplicates of contract and mortgage dated April 1, entered into between the company and the Algoma Rolling Stock Co., evidencing a sale of rolling stock, the mortgage securing the payment for the same being made to the National Trust Co.

Canadian Northern Ry.—A recent press report states that the company has secured \$2,500,000 in New York to retire a loan about to mature in London, Eng.

Diamond Coal Co.—Under an order of the Supreme Court of Alberta, this company's property was offered for sale by auction at Lethbridge, Alta., April 27, under proceedings instituted by the Trusts and Guarantee Co. The property offered includes the collieries opened, the coal lands, the mining plant, together with the rails, mining cars and electric hauling motor used in the collieries.

The Diamond Ry. & Coal Co. built a line in 1909 from Kipp, six miles west of Lethbridge, on the C.P.R., to Diamond City, where the Diamond Coal Co.'s first collieries were situated. In 1910, a number of sidings and spurs were built connecting up other collieries with the line. This railway does not appear to be included in the schedule of the property ordered to be sold.

Grand Trunk Ry.—The annual meeting was held in London, Eng., Apr. 18, when the report was presented and adopted. In reply to questions from shareholders as to the Dominion Government's intentions regarding the Grand Trunk Pacific Ry., the Chairman, A. W. Smithers, stated that he had put the company's case fully before the ministers when in Ottawa recently, and their reply was being awaited.

Minneapolis, St. Paul & Sault Ste. Marie Ry.—It was stated in New York, April 8, that \$6,000,000 of the company's bonds which were being transferred were part of a consignment of bonds mobilized by the British Government in Great Britain and sent over to the U. S. in connection with Imperial financial plans.

Morrissey, Fernie & Michel Ry.—The report for 1915, presented at the annual meeting at Toronto, Apr. 14, showed a profit from the year's operations, of \$17,932.83, which, with the balance brought forward from 1914, makes a credit to profit and loss, of \$61,419.88. The directors for the current year are: Elias Rogers, President and Treasurer; E. C. Whitney, Vice President; H. B. McGiverin, C. A. Thompson and W. H. Robinson. R. M. Young is Secretary.

Temiscouata Ry.—Earnings for January, \$17,123; operating expenses, \$14,635; net earnings, \$2,488. The net earnings for Jan., 1915, were \$2,969.

Treated Ties Save Growing Trees.—Of the 3,000,000 cross-ties used every year by the Chicago, Burlington & Quincy Rd. for replacement purposes, over 70% are treated with a preservative. According to the Superintendent of the company's wood preserving plant, the millions of treated ties in their tracks now last from 12 to 20 years, whereas untreated they last an average of eight years. In each of the 20 divisions of the Burlington system there are tracks for experimental purposes containing 26,000 treated ties of different species, which are all carefully inspected at least once a year for the actual results of treatment as shown by the service test.

Canadian Built Freight Cars for French State Railways.
